The war now recommenced after Stephen had recovered from an illness which confined him for some months, and Gloucester had returned from the Continent, whither he had gone to endeavour to persuade Matilda's husband to come over to her assistance, an attempt in which he met with no success, although Geoffrey consented to entrust his eldest son Henry to the earl's care. In the end of September 1142 Stephen laid siege to the castle of Oxford, in which Matilda resided; but when the garrison, from want of provisions, could hold out no longer, the empress, on the 20th of December, in a severe frost, and while the ground was covered with snow, slipped out at an early hour in the morning attended by three knights, made her way through the posts, crossed the Thames on the ice, walked to Abingdon, and thence rode to Wallingford. Other sieges, battles, and skirmishes followed, and the kingdom remained subject generally in the eastern counties to Stephen, in the western to Matilda, till the death of the Earl of Gloucester, the main support of the latter, in 1146, upon which she retired to Normandy. But her absence brought little more quiet to Stephen. The next two or three years of his reign were disturbed by a formidable rebellion of a confederacy of the barons headed by Ranulf, earl of Chester, and also by another quarrel with the clergy, whose hostility Stephen brought upon himself this time by his support of their old leader his brother Henry, when that intriguing and

ambitious prelate, whom the pope, at the instigation of Theobald, archbishop of Canterbury, had deprived of his office of legate, sought to avenge himself on the primate by the aid of the royal authority. Matters proceeded so far that Theobald at last published a sentence of interdict, the first of which this country had ever been the object, against all the dominions of the English king; and Stephen, assailed by the cries of the alarmed people, found himself forced to yield. But his last and worst antagonist now appeared in the person of Matilda's son Henry, who, having by the death of his father, in September 1151, become Earl of Anjou, and having soon after added to his paternal dominions the territories of Poitou and Aquitaine by his marriage with Eleanor, the divorced wife of Louis VII. of France, landed at Wareham, on the 6th of January 1153, at the head of a force of only 3000 foot and 140 knights, which however was soon augmented by the junction of considerable numbers of his mother's friends. Yet no swords were crossed by these rival claimants of the same crown. Henry having forced his way into the town of Malmesbury, lay there, while the Avon, rendered impassable by the rains, prevented Stephen from attacking him. Stephen then retired to London, on which Henry advanced to Wallingford; but when Stephen had also marched to this point, and both parties were preparing for battle, the principal persons in the two armies, at the suggestion of the Earl of Arundel, interfered, and an agreement was made, by which the effusion of blood was prevented, and which was confirmed in a great council held at Winchester in November following. By this compact, Stephen, whose eldest son Eustace, fortunately for the peace of his country, died suddenly at Canterbury during the negotiation, having been seized, it is said, with fever and phrenzy, while he sat at table, constituted Henry, whom he styled duke of Normandy, "his successor in the kingdom of England, and his heir by hereditary right." Henry in the meantime did homage and swore fealty to Stephen; Stephen's surviving son William did homage to Henry, and received from him a grant of all the lands and honours held by his father before his accession to the throne; and, lastly, the bishops and abbots, the earls and barons, and the inhabitants of all the boroughs in the kingdom, swore fealty to both the king and the duke. One of the most strenuous supporters of this arrangement was the Bishop of Winchester. Stephen survived its ratification not quite a year; he died suddenly in a convent at Dover, on the 25th of October 1154, being in the fiftieth year of his age, and having reigned nineteen years all but two months. [HENRY II.]

England during the whole reign of Stephen was probably in a state of greater anarchy and misery than it had ever known since the first settlement of the Saxons, or has ever experienced in the worst of the intestine wars and confusions of which it has since been the theatre. Indeed the country appears to have got far back towards barbarism. "In this king's time," says the Saxon Chronicle, "all was dissension, and evil, and rapine. . . . Thou mightest go a whole day's journey, and not find a man sitting in a town, nor an acre of land tilled. The poor died of hunger; and those who had been men well to do begged for bread. Never was more mischief done by heathen invaders. . . . To till the ground was to plough the sands of the sea. This lasted the nineteen years that Stephen was king, and it grew continually worse and worse."

Yet Stephen personally appears to have had many qualities which would have adorned a throne more fortunately circumstanced. The party zeal of the old historians has given very opposite representations of his character; but his general conduct, and the best or most impartial authorities, bear out what has been said of him by Stow:—"This was a noble man and hardy, of passing comely favour and personage: he excelled in martial policy, gentleness, and liberality towards all men, especially in the beginning; and, although he had continual war, yet did he never burthen his commons with exactions." His valour and clemency indeed, as well as the beauty of his person, are admitted on all hands, and are attested by the whole of his career, and by many remarkable incidents. He is especially spoken of in terms of the warmest eulogy by one contemporary writer—the author of the *Life of St. Cuthbert*, lately printed by the Surtees Society, 'Reginaldi Monachi Dunelmensis Libellus de Admirandis Beati Cuthberti Virtutibus,' 8vo, Lon., 1835. See his 6th chapter.

By his queen Matilda, who died May 3, 1151, Stephen had the following sons and daughters:—1, Baldwin, who died in infancy; 2, Eustace, after his father's acquisition of the crown styled Earl of Boulogne, who was born in 1125, married in 1140 Constance, daughter of Louis VI. and sister of Louis VII. of France (afterwards the wife of Raymond III., earl of Toulouse), and, as already mentioned, died 10th of August, 1153, without issue; 3, William, who married Isabel, daughter and heiress of William, earl of Warren and Surrey (afterwards the wife of Hamlyn Plantagenet, natural son of Geoffroy, earl of Anjou), became Earl of Mortagne and Boulogne after the death of his elder brother, and died without issue in October 1160; 4, Maud, who died in childhood; 5, Mary, who, after becoming a nun and abbess of the nunnery of Romsey in Hampshire, succeeded, on the death of her brother William, to his honours of Boulogne and Mortagne, and some years afterwards married Matthew, son of Theodoric of Alsace, earl of Flanders, with whom she lived ten years, and was then (in 1189) divorced by the pope and sent back to her convent, after having borne Matthew two daughters, the youngest of whom,

Maud, through her granddaughter Elizabeth, the wife of Albert I., duke of Brunswick, is among the ancestors of the present English royal family. Two natural sons are also attributed to Stephen: William, of whom nothing is known except the name; and Gervais, by a lady named Daneta, made by his father abbot of Westminster, which dignity he held till his death August 26th, 1160. Stephen's youngest brother Henry, the bishop of Winchester, who figures so conspicuously throughout the reign, died August 6th, 1171.

The chief contemporary chroniclers of the time of Stephen are—the writers of the 'Saxon Chronicle,' the anonymous author of the 'Gesta Stephani' (published in Duchesne), Richard, prior of Hexham (Hagulstadensis), Serlo, and Ailred, abbot of Rievaulx (all in Twysden's 'Decem Scriptores'), William of Malmesbury, and Henry of Huntingdon. Many additional facts are also mentioned by Ralph de Diceto, Brompton, Gervas of Canterbury, and other later writers.

STEPHEN, BATHORI, one of the most remarkable individuals of the 16th century, and the greatest king that Poland ever had. He was born in 1533 at Shomlo in Hungary, of an old and noble family of that country. The agitated state in which his native land continued during the 16th century—being torn by domestic factions, and troubled by the Turks and the Austrians, presented a vast field for the display of great talents, united to a daring and adventurous character, and Stephen Bathori rose after many vicissitudes to the sovereignty of Transylvania in 1571. In 1575 he was elected to the throne of Poland, vacant by the flight of Henry of Valois (Henry III. of France); and he owed this elevation to the renown of his valour and wisdom. He took possession of the crown; married, according to the conditions of his election, the Princess Anna Jaguillon, sister to the deceased king Sigismund Augustus; repressed by his vigour the party which supported his competitor Maximilian of Austria; and pacified the country by conciliatory measures.

After having regulated the internal affairs of the country, he settled its foreign relations in a satisfactory manner, particularly by ensuring the friendship of the Sultan of Turkey. He then turned his attention towards Muscovy. This power had recently obtained an extraordinary development under the celebrated Ivan Vasilovich, who invaded a part of Livonia belonging to Poland, shortly after the accession of Stephen. His first care was to organise a military force adequate to encounter such a formidable enemy, and to secure at the same time the tranquillity of the borders. He formed the Cossaks of the Ukraine into a regular force, allowing them the choice of their own hetman or supreme commander, and conferring on them many advantages as a reward for the services which they were obliged to perform. The castles were repaired and provided with permanent garrisons; a formidable ordnance was created; and a body of life-guards and a regular infantry were organised.

Having completed his military preparations, he took the field in the summer of 1579 with a numerous army composed of national troops, German mercenaries, and five thousand Hungarians, commanded by Bekesh. Bekesh, a countryman of Bathori, had been his enemy and competitor for the throne of Transylvania, but finally, struck with admiration of the superior qualities of Bathori, he disclaimed his enmity and requested the honour of serving under his command. These sentiments were fully responded to by Bathori, who placed in his former enemy an unlimited confidence, which Bekesh justified by his services.

On commencing the campaign, Bathori issued a proclamation to the people of Muscovy, declaring that he was making war against their tyrannical sovereign, and not against them, and promising protection to their lives and property. The Russian historians bear evidence that this promise was strictly fulfilled, and that this campaign was free from all those atrocities by which war was usually accompanied in those times. The Muscovites were defeated in several battles. Polotzk was taken after a desperate resistance; but the garrison and inhabitants were spared by the conqueror, who immediately granted to the town the liberties enjoyed by the cities of Poland, and the same privileges and security to the Greek church which he had enjoyed under the dominion of Moscow. Having restored that important place to Poland, from which it had been taken several years before, he obtained some other advantages during the same campaign, and returned in the winter to Warsaw to attend the diet, which received him with great enthusiasm, and willingly granted the necessary means for the continuation of the war. Bathori resumed it with great vigour in the summer of 1580; the town of Veliki Luki and several others were taken; and in the next year, 1581, the city of Plescow was besieged by Zamoyiski, one of the greatest statesmen and warriors that Poland had produced [ZAMOYSKI], and to whom Bathori had entrusted the command of the army. The progress of the Polish arms was arrested, and the fruits of so many triumphs were destroyed, by the intrigue of the Jesuit Possevinus, who, deceived by the promises of the czar Ivan Basilovich to acknowledge the supremacy of the pope, induced Stephen Bathori to conclude peace with Muscovy on the 6th of January 1582, by which the Polish conquests were restored to the czar, with the exception of Polotzk and a few other towns and castles. Bathori employed the interval of peace in introducing different improvements, and was making preparations for another war with Muscovy, the dangers of which his policy could easily foresee. The pope, Sixtus V., deceived by the czar, who as soon as the danger was

over thought no more about submitting to Rome, granted the Polish king a considerable subsidy. The projects of Bathori against Muscovy, which are supposed to have had for their object a change in the form of the government of that country, were cut short by his death, after a short illness at Grodno, on the 12th of December 1586, at the age of fifty-four.

The wars in which he was engaged did not prevent Bathori from paying due attention to the civil affairs of the country, in which the following improvements were introduced during his reign. The province of Mazovia, which had hitherto been governed by a separate code, was induced by Stephen to adopt the general laws of Poland, with some few exceptions. The statute-book of Lithuania was enlarged by the addition of many new articles. The statute of Culm, by which the towns of Prussia were governed, was revised. Many salutary laws respecting the property of the crown and the privileges of the nobles were enacted. But the most important civil act of this king was the establishment of tribunals or supreme courts of justice for Poland and Lithuania. They were composed of members elected for the session by the same voters who returned the nuncios, or members of the diet. This institution, which supplanted the administration of justice by the king, and rendered it independent of the crown, continued till the dissolution of Poland.

Stephen Bathori was very fond of learning and a great patron of learned men. In his early life he was imprisoned for two years in a fortress, by the emperor of Austria, which time he spent in the study of the classics, and particularly in that of the 'Commentaries' of Caesar, which he is said to have known by heart. He is supposed to have been originally a Protestant, but to have been induced by the representations of a Roman Catholic bishop to abjure secretly his creed and become a Roman Catholic on his accession to the crown of Poland, so that many believe that he had always conformed to the Roman Catholic church. Some learned Jesuits having gained his confidence, he became a great patron of their order, and founded for them the University of Wilna and the College of Polotzk, which he richly endowed. He was however strongly opposed to religious intolerance, and maintained evenhanded justice amongst the various denominations which prevailed in Poland. He left no issue, and resigned, on his election to the throne of Poland, the principality of Transylvania to his brother Sigismund.

\*STEPHEN, THE RIGHT HON. SIR JAMES, K.C.B., LL.D., is the son of James Stephen, Esq., Master of Chancery, (well known for his writings and exertions between 1815 and 1830 on the subject of colonial slavery) and was born about the year 1790. He was educated at Trinity Hall, Cambridge, where he graduated B.A. in 1812. Having chosen the legal profession, he was called to the Bar at Lincoln's-Inn. He had hardly begun practice as a Chancery barrister, when, in 1812 or 1813, he became connected officially with the public service as counsel of the Colonial Department. For eleven years he was at once counsel for this department and a Chancery barrister in extensive practice. He then retired from the Bar, and became at the same time both counsel to the Colonial Department and counsel to the Board of Trade. He held these offices jointly for ten years; after which, during the Whig government which succeeded the Reform Bill, he left the Board of Trade and became assistant-under-secretary for the Colonies. From the assistant-under-secretaryship he was subsequently promoted to the permanent under-secretaryship; spending fourteen years in the two offices together. He was thus connected with the civil service thirty-five years in all, during the whole of which time his relations were mainly with the Colonial Department. His impressions of the state of our government offices, and of the colonial office in particular, derived from this long experience, were published, with other opinions on the same subject, in a Blue-book in 1855, when the question of the re-organisation of the civil service, by the adoption of the system of appointments, by competitive examination instead of by patronage, was first agitated. The opinion there expressed on the condition of the public service, as regards the intellectual capacity and culture of the majority of those comprising it, is by no means favourable; but the writer speaks of splendid exceptions. Of these exceptions the writer himself was certainly one. While in the Colonial Office he was one of the ablest and most efficient public servants that the state possessed; and his final retirement from the colonial under-secretaryship in 1847 was a great loss to that department. He then received the honour of knighthood. It was not only however as a public official that he had up to that time distinguished himself. A man of general thought and culture, he had all along employed his leisure in studies ranging beyond the topics that interested him as an official; and he had latterly contributed extensively to the 'Edinburgh Review' on subjects relating to the History of the Church and the development of religious opinions. A collection of these articles, already widely known and appreciated in their scattered shape, was published in two volumes in 1849, under the title of 'Essays in Ecclesiastical Biography.' In the same year Sir James Stephen was appointed to succeed William Smyth, M.A., as Regius Professor of Modern History in the University of Cambridge; which office he still holds. In 1851, he published in two volumes, 'Lectures on the History of France.' This work is now in a third edition; and there have been several editions of its predecessor. The two together have given the author a high and peculiar place in our graver con-

temporary literature. Among other slighter things which Sir James has published, are one or two lectures delivered to popular institutions. One of Sir James's sons, who has followed the legal profession, is likewise known by various writings. His brother, SIR GEORGE STEPHEN, is also known as the author of 'Adventures of a Gentleman in Search of a Horse,' 'Adventures of an Attorney,' 'The Juryman's Guide,' 'The Clerk,' and 'The Governess,' in C. Knight's series of 'Guides to Trade;' of a novel, entitled 'The Jesuit at Cambridge;' and of a pamphlet on 'The Niger Trade and the African Blockade,' as connected with the slave-trade, a subject in which he has always taken much interest.

STEPHENS (French, ETIENNE or ESTIENNE; Lat., STEPHANUS) is the name of a family of the most illustrious scholars and printers that has ever appeared. Several of the members of this family bore the same Christian name, which has produced much confusion in the accounts that have been given of them. We shall give the lives of them in a chronological succession, and distinguish those of the same name by the epithets the first, the second, &c. The earliest among them who distinguished himself is—

HENRY STEPHENS I., who was born at Paris; the year of his birth is uncertain, though it is generally supposed that it was about 1470. He had his printing establishment at Paris, in a place which he calls "e regione scholæ decretorum," which is now called "Rue de l'École de Droit." The earliest work which is said to have been printed by him is of the year 1502, the year before that in which his son Robert was born. The works which he printed were mostly on theological, philosophical, mathematical, and medical subjects, and he published very few editions of the classical writers. On the title-page of his publications are represented two men looking at a shield which stands between them, and contains three lilies, and above them a hand holding a closed book. Above the heads of the two men is the device—'Plus olei quam vini.' At the bottom of the title-page he sometimes gives only his initials, H. S., and sometimes his full name. All the works that came from his press were very correctly printed, as he always revised the proofs. A list of his publications is given by Maittaire ('Historia Stephanorum,' ii. 1, p. 1-9, and by Renouard, vol. i.), from which we extract the following:—In 1512 he published the 'Itinerarium Antonini;' in 1519 the works of Dionysius Areopagita; in 1521 an extract of the 'Arithmetica' of Boethius. In 1522 his son Robert was engaged in the printing establishment of his father-in-law Simon de Colines, who calls himself the successor of Henry Stephens, and married his widow. From this fact we must infer that Henry Stephens died in 1521 or 1522. He left three sons, Francis, Robert, and Charles.

FRANCIS STEPHENS I., was the eldest of the three sons of Henry Stephens. He was a partner of Simon de Colines; there are very few books known to be printed by him. The earliest is a work called 'Vinetum,' printed in 1537. In 1543 he published a 'Palæstrum Græcum,' in 16mo, in which the titles and initials of the verses are printed in red. The last of the publications is the 'Andria' of Terence, in 8vo. His mark on the title-page is a tripod, which stands upon a book, and from which a vine-branch rises. The year of his birth as well as of his death are unknown. A list of his publications is given by Maittaire, p. 31, and by Renouard, vol. i.

ROBERT STEPHENS I., the second son of Henry Stephens I., was born at Paris in 1503. In his youth he studied the Latin, Greek, and Hebrew languages, and he made such progress, that at an early period of his life he gave extraordinary proofs of his learning, and was subsequently placed by his contemporaries above the greatest scholars that had ever lived. After the death of his father, he was for some time engaged in the printing-office of Simon de Colines, his father-in-law, and he appears, as early as his nineteenth year, to have had the entire management of the printing, correcting, and editing of several works, for in 1522 there appeared from the establishment of De Colines, an edition of the New Testament (Novum Testamentum, Latinæ, 16mo), which, although a copy of the Vulgate, was more correctly printed than any previous edition, and also contained some corrections by Robert Stephens. The professors of the Sorbonne, alarmed at the appearance of a new edition of a book which they wished to keep from the public, especially at a time when Protestantism was making rapid progress, inveighed in their lectures against the audacious youth, and declared that the book should be burnt. But their anger produced little effect. A short time after this he married Petronella, a daughter of the celebrated scholar and printer Jodocus Badius, a woman of great talents, who understood and spoke Latin as well as her mother-tongue. As the house of Stephens was visited by scholars and eminent men of all countries, Latin became the ordinary language of conversation; and it is said that the children and even the servants acquired some facility in speaking it. After his marriage he established a separate printing-office for himself, though he remained in the same street in which his father's office was situated. The earliest publication from his own establishment was 'Apuleii Liber de Deo Socratis,' 8vo, 1525. Others believe that he had no separate establishment till two years later, and that Cicero's 'Partitiones Oratoriæ' and 'Persii Satyræ' (1527) were the first works that were issued from it. These works were followed by a great number of Roman authors, and Latin translations from the Greek and other languages, some of which were made by himself. For many

years scarcely a month passed without some new publication, and if we recollect that in most of the works he acted as editor, and corrected the proofs with the most anxious care, it appears marvellous that so many works could be produced in so short a time; the mere list of his publications in Maittaire from 1527 till 1560, which is not by any means complete, fills twenty large octavo pages (p. 10-30). His device on the title-page of his publications was an olive tree with one or more branches broken off, while new branches are engrafted on the tree, and the motto was 'Noli altum sapere,' to which he sometimes added 'sed time.' Until the year 1532 he used the same types as his father, but in this year he used a larger and more elegant type for his 'Biblia Latina,' of which he had published the first edition in 1528, under the title 'Biblia utriusque Testamenti Latina, ex veteribus MSS. exemplaribus emendata,' fol. This edition was not only in appearance the finest that had ever been printed, but that he might be able to give the text with the utmost correctness, he had examined all the libraries of Paris, St. Germain, St. Denis, and had got over from Spain at his own expense a very valuable Spanish Bible.

In 1531 Stephens published his first great original work: 'Dictionarium, seu Latine Linguae Thesaurus,' fol. The second (1536) and the third or last edition (1545) of this dictionary are in 2 vols. fol., and contain numerous corrections and improvements by Robert Stephens. The work has often been reprinted in other countries. In the year 1539 Stephens was appointed printer to the King of France for Latin and Hebrew works, and henceforth he always added on the title-page of his publications, to his name, Regius Typographus, or Regius Librarius, or some other similar title. Soon after this honour was conferred upon him he received the same distinction for Greek works, whence he calls himself sometimes 'Regius Typographus in Græcia.' Stephens appears to have thought that he ought to produce his publications in a form worthy of his new rank, and it was on his suggestion that Francis I. had new Hebrew, Greek, and Roman types made by Claude Garamond. These types, which were of exquisite beauty, were afterwards known under the name of Characteres Regii. In 1540 Stephens published a new edition of the Latin Bible with various readings. On its appearance the divines of the Sorbonne renewed their attacks, but owing to the king's liberal protection he was enabled to continue his labours unmolested. The king had such a high esteem for his learned printer that he frequently visited him in his office, and on one occasion, when he found him correcting a proof sheet, he stopped behind him and waited silently till Stephens had finished his task before he began to converse with him. The first Greek book that Stephens printed in the capacity of Regius Typographus in Græcia, belongs to the same year, 1540, and bears the title 'Ἡρώδης Μονότρηχτος, sive Sententia singulis versibus contenta juxta ordinem Literarum ex diversis Poetis, cum Interpret. Latina.' In 1543 he published a little work called 'Alphabetum Græcum,' which only contained sixteen leaves, and was afterwards frequently reprinted. This is supposed to be the first book that was printed with the Characteres Regii. In the following year Stephens edited, in one folio volume, a collection of the most eminent Greek ecclesiastical historians, under the title 'Ecclesiastica Historia Eusebii, Socrates, Theodoriti, Theodori, Sozomeni, Evagrii, Græco.' This work was soon followed by 'Eusebii Preparatio Evangelica,' in Greek. These two volumes contain the earliest specimens of the device subsequently adopted by all royal printers: a thyrsus with an olive branch and a serpent wound round it, and the motto, βασιλεὺς τ' ἀγαθὸν κερταρεῖ τ' αἰχμηρεῖ. In 1545 he published a new edition of the Latin Bible, which he had been preparing for several years. It contains notes which are ascribed to Vatablus, and which are said to have been communicated to Stephens by the pupils of this theologian. But the authorship of the notes is a point which even at the time appears to have been the subject of much dispute. In the year following he published his first Hebrew Bible, and also a new edition of the Latin Bible in folio, with a preface which shows the immense pains that he took to give the text as correctly as possible.

These repeated editions of the Bible and the notes ascribed to Vatablus, which were in some parts supposed to savour of the reformed doctrines, to which Stephens himself was attached, involved him again in disputes with the professors of the Sorbonne. He offered publicly to acknowledge any errors which he might have committed, and to print them in an appendix to his Bible to guard the readers against them. The king several times required the professors to draw up a list of the errors or heresies, but they never did it. Their object was not to prevent the propagation of any particular errors, but to get the Bible and the commentary put into the 'Catalogus Librorum Prohibitorum,' and thus to stop its sale altogether. The matter was constantly deferred, and all attempts to bring it to a close were fruitless. Stephens, in the meantime, regardless of the clouds which were gathering over his head, continued as active as ever. In 1547 he published his Editio princeps of the 'Antiquitates Romanæ' of Dionysius of Halicarnassus, which is still highly valued as a very beautiful and correct edition. It was soon followed by the Editio princeps of Dionysius of Alexandria, 'De Situ Orbis,' with the Greek scholia of Eustathius.

In this year (1547) King Francis I. died, and Stephens lost his greatest patron and protector. His successor, Henry II., was at first favourable to Stephens, and required the divines of the Sorbonne

speedily to produce their 'censuræ,' threatening to punish them if they made any further delay. The professors, who knew the vacillating and weak character of the king, promised obedience; but nothing was done, and new charges were brought against Stephens, and new attempts were made to suspend the sale of his Bible. At last it was agreed that Stephens and the learned divines should meet at the king's palace at Fontainebleau, where several bishops and cardinals likewise appeared. Stephens was acquitted of the charge of having printed anything that impugned the Roman Catholic faith. The divines, thus disappointed, suddenly contrived to give another turn to the matter, and to get an order from the king for a temporary suspension of the sale of Stephens's Bible, and for the matter to be investigated afresh by a commission, whose duty it was to take cognisance of cases of heresy. After eight tedious months, Stephens at last obtained from the king another order that his case should be tried by the king's privy council only. When Stephens had thus, for a time at least, secured his tranquillity, he produced, in 1548, the Editio princeps of Dion Cassius, libri xxiil., and several other works. In this year he had occasion to travel to Lyon, and in this journey he is said to have made the subdivision of the chapters of the Bible into verses, which was subsequently adopted in nearly all editions of the Scriptures. King Henry II. happened to be at Lyon, and when Stephens, availing himself of the opportunity, presented himself before the king, and at the same time thanked Cardinal de Guise for the services he had done him, Stephens was informed, to his utter astonishment, that a change had taken place in the king's mind, in which he could not mistake the secret and intriguing workings of his adversaries: the sale of his Bibles was prohibited. Stephens, indignant at such proceedings, declared that he would leave his country; but the king requested him to retain his office of royal printer, and promised that the matter complained of (the censuræ) should be speedily produced.

Stephens was persuaded to remain; but, owing to the king's vacillation, he was still subjected to various disappointments and vexations. Some of his biographers state that in this year he visited Zürich and Geneva; and if this be true, he perhaps undertook this journey with a feeling that it would soon be necessary for him to seek a refuge in a foreign country. In 1550 he published his beautiful edition of the Greek Testament, with a 'nova translatio Latina.' Stephens presented this work to bishop Du Chastel, who had hitherto pretended to be his friend, but who now courted the favour of the Sorbonne, and declared that every sort of protection which he had formerly given to Stephens had arisen from his not knowing the real character of his offences. Hereupon the Sorbonne again began to annoy Stephens; and after a tedious and ludicrous trial, held by men who found fault with the various readings in the margin of Stephens's Bible, which they took to be an heretical commentary, he was forbidden to sell his impressions of the Bible, and commanded to promise that he would print no more copies of the Scriptures without the sanction of those learned divines.

Stephens was now convinced that no reliance could be placed either on the king, his counsellors, or the great prelates, and that he must be prepared for the worst. He however made preparations for a step which his enemies did not expect. He finished the numerous works which were at the time going through the press, and at the end of the year 1551, or at the beginning of 1552, he escaped with his family to Geneva, where he hoped to find that liberty of conscience which he had so long wished for. Stephens is charged by some writers with having taken with him some of the materials belonging to the royal printing establishment, but his biographers have shown that there is not a shadow of ground for this charge. There is also a tradition, which does not seem at all improbable, that the professors of the Sorbonne vented their impotent rage by burning Stephens in effigy.

Stephens began his new career at Geneva with the publication of some books of the Old Testament, and of the whole of the New Testament in Latin and French. In 1552 he also published 'Ad Censuram Theologorum Parisiensium, quibus Biblia à Roberto Stephano, typographo regio, excusa calumniose notarunt, eiusdem Roberti Stephani responsio.' This book, which was also published in French, gives us a clear insight into the nature of his disputes with the Sorbonne, as well as into his own character. The other works which he published during a period of seven years at Geneva are almost exclusively of a theological and controversial nature, consisting of works written by Calvin, Beza, and other distinguished reformers. He retained his former device, but under it he printed, 'Oliva Roberti Stephani.' The name of Geneva seldom appears on the title-page of his books. He died on the 13th of September 1559, leaving behind him, it is said, a numerous offspring and considerable property. But only three of his sons are known, Robert II., Henry II., Francis II., and a daughter of the name of Catherine.

There is perhaps no man in modern times to whom literature and learning are more indebted than to Robert Stephens. His unbiassed contemporaries not only place him on a level with the greatest scholars, but declare that he excelled them all.

CHARLES STEPHENS appears to have been about a year younger than his brother Robert. His education was sound and classical; but he also applied himself to the physical sciences, and took his degree of Doctor of Medicine, which he practised for some time. He wrote several treatises on subjects connected with medicine, natural history, and agriculture, which however are less scientific than historical, for

he treated his subjects chiefly in relation to antiquity. His earliest productions are abridgements of works by Lazarus Baifus, such as 'De Re Vestiaria,' 'De Vasculis,' and 'De Re Navali,' which were published by Robert Stephens (1535 and 1537). Lazarus Baifus (Lazare Baif) engaged Charles Stephens as tutor to his son, and in 1540 took him with his son to Germany, and afterwards to Italy, to which countries he was sent as ambassador of the King of France. In Italy Stephens became acquainted with Paulus Manutius, who in one of his letters (v. 17) speaks of him in high terms. On his return to Paris he appears to have continued the practice of medicine, but in 1551, when Robert removed to Geneva, the whole of his printing establishment, with the exception perhaps of the department for printing Hebrew, which appears to have been undertaken by Martinus Juvénis, passed into the hands of Charles Stephens, for the Editio princeps of 'Appiani Alexandrini Historiarum Romanarum Celtaica, Libyca vel Carthaginiensis, Illyrica, Syriaca, Parthica, Mithridatica, Civilis quinque libris distincta,' which appeared at Paris in 1551, 'Cura ac Diligentia Caroli Stephani,' is probably the first book which he printed, though it had been prepared or commenced by Robert Stephens. It is a beautiful specimen of typography. There is a French translation of a treatise of Plutarch, called 'Traicté sur la Honte vicieuse,' by F. Legrand, which is by some referred to the year 1544, and is supposed to be the first book printed by Charles Stephens; but it probably belongs to the year 1554. Soon after Robert left Paris, Charles appears to have been appointed Royal Printer, for this title is mentioned on his last two publications of the year 1551. Henceforth he continued to be very active in his new sphere till the year 1561, for in these ten years there issued from his press 97 works, on a great variety of subjects, some of which he had written himself. Charles Stephens seems to have been a man who knew something of everything, but nothing very well. His character as a man has been attacked in a letter of Maumontius addressed to J. Scaliger, in which he is called a "malus" and a "male volens homo," and is charged with unkind conduct towards his nephews, the sons of Robert. But as we hear of no accusations of this kind from any other quarter, the impartiality of the writer may be doubted. Charles Stephens died in the year 1564. Some say that he was persecuted for his religious opinions, and died in prison; others state that he was imprisoned for debt in the Châtelet, and that he remained there for the last three years of his life. It may be that both causes combined to bring this misery upon him; for we know that he lost a great deal of his capital in 1557, by the publication of his 'Thesaurus Ciceronianus,' which was a very expensive undertaking, and did not sell. It is also certain that during the last three years of his life no work appeared from his press. He left one daughter of the name of Nicole, who was no less celebrated for her beauty than for her talents and accomplishments.

Lists of the works which were written or printed by Charles Stephens are given by Maittaire and Renouard. All the works of C. Stephens are very beautifully printed.

HENRY STEPHENS II., the greatest of the whole family, was the son of Robert and grandson of Henry. He was born at Paris in 1528. Even as a child he showed extraordinary talents. The numerous engagements of his father did not allow him to spend much time upon the education of the boy; but he carefully watched and regulated it. Latin he learnt naturally, as it was constantly spoken in the family, but before he seriously studied it the father made him learn Greek. He received his first instruction in Greek from a schoolmaster, who while reading the 'Medea' of Euripides with his boys, made it the practice to assign a part to each of them; and as soon as Henry had made sufficient progress to join them, he read this play with the greatest avidity, and soon knew it all by heart. After he had spent some time at this school, he was instructed in Greek by Petrus Danesius, who was then, next to Budæus, perhaps the ablest Greek scholar of the time; and who, on account of his intimate friendship with Robert Stephens, took great interest in the progress of his pupil. At the age of about fifteen Henry also enjoyed the instruction of Jacobus Tusanus (Jacques Toussain); and subsequently, when this scholar died (1547), that of Adrianus Turnebus, who succeeded Tusanus in the professorship of Greek in the Royal College. Although he had been chiefly instructed in Greek by these men, he did not neglect Latin; for even when a boy he is said to have known by heart the first book of Horace's 'Epistles.' He also studied mathematics; and as soon as he heard something of astrology, he conceived a strong desire to become acquainted with it, and in taking lessons in it wasted much money and time, but he soon became aware of the futility of these pursuits, and gave them up altogether.

In 1546 Robert Stephens thought his son qualified to assist him in his printing establishment, and in this year Henry collated a manuscript of Dionysius of Halicarnassus, whose works Robert was preparing for publication. In the year following, when the death of Francis I. deprived Robert of his chief patron, Henry undertook a journey to Italy, the main object of which was to search the libraries and examine the manuscripts in that country. Three years were spent in visiting the various places of Italy. In several towns his exertions were rewarded with discoveries; at Florence he found in a manuscript of the Medicean library a number of Greek poems not known before, which were the 'Epitaphia Homericorum Heroum.' He afterwards printed them in his 'Florilegium Epigram. Græc.,'

1566, and also in his 'Homeri et Hesiodi Certamen,' 1573. At Naples and Venice he examined several manuscripts. At Rome he was very kindly received by Cardinal Sirlet, who communicated to him a manuscript of Athenagoras, and corrections of several passages in Xenophon, of which he subsequently made use in his edition of Xenophon, 1561. It appears that during this journey he also made a collation of a manuscript of Athenæus in the Farnesian library, the various readings of which he communicated to I. Casaubon, who used them in his edition of Athenæus (1597). At the same time he made the acquaintance of the most distinguished scholars of the age, such as Muretus, P. Manutius, C. Sigonius, P. Vettori, Cardinal Maffeo, and many others. On his return, in the year 1549, he brought with him the treasures which he had discovered and collected. This was just at the time when his father was finishing his folio edition of the Greek Testament, for which Henry wrote sixty Greek verses which were prefixed to it. About the same time he wrote notes and arguments for the edition of Horace, which Robert published in 1549. In 1550 Henry Stephens set out on a journey to England, where he was kindly received by Edward VI. His stay was not long, but he appears to have paid great attention to everything that came in his way, and turned it to good account. He himself mentions some interesting circumstances connected with his visit to England in his 'Apologia pro Herodoto,' and in the preface to his edition of the 'Poetæ Heroici Græci.' On his return from England he visited Flanders, Brabant, and the University of Louvain (Loewen). During his short stay in the Netherlands, he made himself master of the Spanish language. On his return to Paris towards the end of the year 1551 his father was preparing to quit France, and it is not improbable that Henry accompanied him to Geneva. This is however not quite certain, for in 1554 we find him at Paris, where he published the Editio princeps of Anacreon, in 4to, with a Latin translation and notes by himself. Whether at this time he had a printing establishment of his own, or whether he printed his book in that of his uncle Charles, is uncertain, although the latter is more probable, for in the same year he edited 'Dionysii Halicarnassei Responso ad Cn. Pompeii Epistolam,' &c., the title-page of which expressly states that it was printed by Charles Stephens.

The first indication of a printing establishment belonging to Henry Stephens occurs towards the end of the year 1556, when 'Davidis Psalmi aliquot Latino Carmine expressi a Quatuor Illustribus Poetis, quos Quatuor Regiones, Gallia, Italia, Germania, Scotia, genuerunt,' &c. appeared, with the addition, 'Ex officina Henrici Stephani.' Towards the end of the year 1554 he made a second journey to Italy, and discovered at Rome a considerable part of the historical work of Diodorus Siculus, which had not then been printed, and which he afterwards inserted in his edition of 1559. In 1555 he went from Rome to Naples in search of something which appears to have been of importance to the king of France, and to his ambassador at Venice, Odet de Selve, but it is not stated what the object of his search was. The circumstance that the king of France was then at war with the Emperor Charles V., brought H. Stephens into great danger at Naples, for he was there discovered by some Italian who had met him at Venice in the house of the French ambassador, and when Stephens was on the point of being arrested, he only saved himself by insisting upon his being an Italian, and he spoke the language so well that the Italian was at last persuaded, and let him go. On his return to Venice he rendered an account of his mission to the ambassador, who was well pleased with the manner in which he had executed his instructions. At Venice Stephens made a collation of a manuscript of Diogenes Laertius in the library of St. Mark, which had originally belonged to Cardinal Bessarion, and which he used for his edition of Diogenes of 1570. He also examined two manuscripts of Xenophon, one of which he made use of in his edition of 1561.

During the year 1557, when Stephens was in the full possession of a printing establishment, he published seven new works, some of which had never been printed before; among them are the Editio princeps of 'Maximi Tyrii, Philosophi Platonici, Sermones, sive Disputationes XLI., Græce, nunc primum editæ,' with a Latin translation; 'Æschylus, with notes by P. Victorius and H. Stephens; 'Ex Ctesia, Agatharchide, Memnone excerptæ Historiæ; Appiani Iberica. Item, de Gestis Annibalis: Græce. Omnia nunc primum edita, cum H. Stephani Castigationibus;' and 'Ciceronianum Lexicon Græco-Latinum,' &c. Henry adopted the emblem (an olive-tree) and the device of his father, 'noli altum sapere,' to which is sometimes added, 'sed time.' Another device of his which sometimes occurs is, 'ut ego insererer, defracti sunt rami,' which contains an allusion to the branches which are represented as engrafted upon the olive-tree. The travels of Stephens and the printing of expensive books had embarrassed his affairs, and after the year 1557 he found himself in great difficulties, but he was assisted by Ulrich Fugger, a wealthy merchant of Augsburg, who, besides a large sum which he gave or advanced to him, gave him an annuity of 150 thalers. Stephens from gratitude for this munificent liberality, henceforth called himself Typographus Huldrici Fuggeri, or Fuggerorum Typographus, which appears on most of his publications down to the year 1568. The Fuggers assisted Stephens also in other respects; they had an excellent library and some valuable manuscripts, which they allowed him to use for his editions of ancient works, as in that of 'Imperatorum

Justiniani, Justini, Leonis, Novellæ Constitutiones,' &c., Græce, the only work that he edited in the year 1558. After a series of years the Augsburg merchants appear to have become tired of supporting the great printer. In a collection of letters of Stephens, published by Passow in 1830, there are some which show that Stephens wanted them to advance him a small sum of money which they had promised, and that at length after much correspondence they did not keep their promise. In consequence of this his connection with the Fuggers ceased in 1576.

In the year 1559 H. Stephens published his edition of Diodorus Siculus in fol., in which ten books of this historian were printed for the first time. The manuscript which he used for this edition is now in the public library of Geneva. Other publications of this year are, Appian's 'Hispanica et Annibalia,' with a Latin translation by Beralduus, in 8vo, and 'Gentium et Familiarum Romanarum Stemmata,' &c., in fol. In this year his father Robert died at Geneva, and Henry was appointed executor of his will, in which he was also enjoined to take care of his brothers. Robert, one of his brothers, had been, as it appears, disinherited by the father because he would not abandon the Roman Catholic faith and follow his father to Geneva. Accordingly the printing establishment of Robert, the father, came into the hands of Henry, who continued to publish theological works and several editions of the Bible. H. Stephens appears now to have given up his establishment at Paris, and to have devoted himself to the management of that at Geneva.

In the year 1555 H. Stephens married for the first time, but in 1564 or 1565 he himself states that his wife died. He afterwards married again, for the letters published by Passow show that about the year 1581 he became a widower a second time. On his death in 1598, he left a wife surviving, from which it appears that he was married thrice. By his three wives he had altogether 14 children, ten of whom died at an early age.

In 1560 he published a collection of the lyric poets of Greece with a Latin translation in 16mo, which has been often reprinted. In the year following appeared his edition of Xenophon in fol., for which he had collated a great number of manuscripts, and to which he added a commentary and a Latin translation. An improved edition was published in 1581. During the last two years H. Stephens was in bad health and subject to melancholy, arising from over-exertion and the heavy cares that devolved upon him after his father's death. In this state he scarcely worked at all; he almost conceived a disgust for literary occupations, and could not bear the sight of a book. But the renewed activity into which he was drawn unconsciously in 1562, restored him to health. The work which roused him to fresh exertion was a Latin translation of 'Sexti Philosophi Pyrrhoniæ Hypotyposon Libri Tres.' The Greek original of this work was not printed until 1621. It must have been soon after his recovery that Stephens began his greatest work, the 'Thesaurus Linguae Græcæ,' upon which he spent ten years. In 1564 he wrote and published a 'Dictionarium Medicum, vel Expositiones Vocum Græcarum Medicinalium, ad Verbum, excerptæ ex Hippocrate, Aretæo,' &c., cum Latina Interpretatione, in 8vo. In this work he received some assistance from J. M. Gesner; it was highly spoken of by contemporary scholars, with the exception of Jos. Scaliger, who censured it severely, but he appears to have had a personal pique against Stephens. In this year Stephens edited a still-useful collection of 'Fragmenta Poetarum Latinorum, quorum Opera non extant,' &c. in 8vo, and an edition of Thucydides with the Scholia, and a Latin translation by L. Valla. In 1566 he published, among other books, his 'Florilegium' of Greek Epigrams; 'Poetæ Græci Principes Heroici Carminis et alii nonnulli,' &c., in fol., which is most beautifully printed, and his edition of Herodotus with Valla's translation and his own 'Apologia pro Herodoto,' which he himself afterwards translated into French. Passing over a great number of valuable publications which appeared from 1566 till 1572, we proceed to the year 1572, in which the Greek Thesaurus was published under the title 'Thesaurus Græcæ Linguae ab Henrico Stephano constructus. In quo præter alia plurima quæ primus præstitit (paternæ in Thesaurio Latino Diligentia) semulcus Vocabula in certas Classes distribuit, multiplici Derivationum Serie ad Primitivum tanquam ad Radices unde pullulant revocata,' with the appendix and index, 5 vols. fol. This work made an epoch in the history of Greek philology, as well as in the life of the author, who had embarked in it nearly all his property. The price of this prodigious work was necessarily high, and accordingly it could not have many purchasers. When Scapula some years afterwards published his cheap abridgement [SCAPULA], the sale was nearly stopped, and Stephens became involved in great difficulties. It has been supposed by some that Stephens soon after published a second edition of his Thesaurus, but this opinion has merely arisen from the fact that he cancelled a number of pages of the original edition, and inserted new ones in their place. In 1745 Daniel Scott published, in 2 vols. fol., 'Appendix ad Thesaurum ab H. Stephano constructum.' A new edition of the Thesaurus was published in London (1815-28) in 7 vols. fol., with numerous additions by Barker, which however have not increased the value of the book. A new edition is now in course of publication at Paris, which is edited by Hase, and L. and W. Dindorf, and of which 7 vols. fol. and some parts of an 8th vol. have been published. (1857.)

It appears to have been owing to the pecuniary difficulties in which Stephens was involved after the publication of his 'Thesaurus,' that, in order to divert his mind, he made various excursions in France and Germany, but he always took the opportunity of exploring libraries and comparing manuscripts, and thus collected vast quantities of materials for works which he was publishing or projecting. In 1573 he published an edition of all the extant works of M. Terentius Varro in 8vo, and a collection of the fragments of the philosophical poets of Greece. The year following he produced an excellent edition of Apollonius Rhodius with the ancient scholia and a commentary by himself. In 1575 there appeared his collection of the Greek orators, some of which are accompanied by a Latin translation; and Arrian's 'Expositio Alexandri Magni,' &c., with a Latin translation. In 1577 he published, among other books, an edition of Cicero's 'Epistolæ ad Familiares,' in 2 vols. 8vo; the second volume contains the commentaries of P. Manutius, Lambinus, Sigonius, Canter, and of Stephens himself. In 1578 he brought out his magnificent edition of Plato's works, in 3 vols. folio; and in the same year he wrote a little French work, 'Deux Dialogues du Nouveau Langage François, Italianizé et autrement desguizé, principalement entre les Courtisans de ce Temps,' &c. (printed without name and date). This was an attack upon the fashion, very common at the time, of introducing Italian words into French. Stephens, after the manuscript had received the 'imprimatur' from the state-council of Geneva, had taken the liberty of making some additions, for which he was severely reprimanded by the council. Not thinking himself quite safe, or wishing to escape the annoyance to which this affair subjected him, he went, towards the end of 1578, to Paris, where he remained during the whole of 1579. Henry III. received him very kindly, and interested himself so much on Stephens's behalf, that he demanded of the council of Geneva permission for Stephens to return, and to clear himself from the charges which were brought against him. Stephens returned to Geneva, and was placed at the bar of the consistory, where he was treated with rigour and harshness, and for some days was put into prison. When Stephens at last owned that he had acted wrong, he was set at liberty.

During the stay which H. Stephens had made at Paris in 1579 he had a conversation with the king, in which he expatiated very ingeniously on the superiority of the French language over other modern tongues; and the king, delighted with this eulogy on the French language, persuaded him to write a book on the subject. This book was published in the course of the same year, 'De la Précellence du Langage François,' 8vo, Paris, 1579. The king, pleased with the performance, ordered 3000 francs to be paid to Stephens from the public treasury, and also granted him an annual pension of 300 francs; but from the manner in which Stephens, in his 'Musa Principum Monitrix,' speaks of this affair, it appears that he never received anything at all, for the treasurer at that time was a person of much more consequence in such matters than the king.

In 1581 Stephens published 'Juris Civilis Fontes et Rivi,' &c., in 8vo; and, as is commonly supposed, also 'Sigonii Fasti Consulares.' The latter he printed without the sanction of the Council of Geneva, and was in consequence fined 25 thalers. This edition of the 'Fasti' of Sigonius, if it was really published by Stephens, must have been suppressed, for there is no trace of it now. H. Stephens spent the year 1585 again at Paris, where he published an excellent edition of A. Gellius and of Macrobius, both in 8vo. The former is preceded by a very interesting letter to his son Paul, from which, besides many other things, we learn that about this time his country-house had been destroyed by an earthquake, a loss which he bore with stoical indifference. In 1588 he published an edition of the 'Iliad' and 'Odyssey,' with a Latin translation.

During the time that Stephens enjoyed the friendship of the King of France, he spent a great part of his time at Paris. His publications during this period greatly decreased in number, and some of them were executed by Paris printers. His own establishment at Geneva was neglected. He was constantly travelling about, and he published his works wherever he happened to be, as at Paris, Frankfurt, Basel, &c. From this fact it has been erroneously supposed that he had separate printing-establishments in these places. He often resolved to give up this wandering life, and was seriously exhorted by his friends to attend to his business; but the charms of a court life and the habit of travelling had now become strong, and he was dazzled by splendour and deceived by the hopes which he placed in the great. The years 1588 and 1589 he appears however to have spent at Geneva, and several works again issued from his press; but in 1590 no work came out at Geneva, and only one ('Principum Monitrix Musa') at Frankfurt, where he appears to have spent some time. In this year Henri III. of France was murdered. The affairs of Stephens now grew worse and worse: his warehouses were full of books which he could not sell. In the year 1597 he left Geneva for France. He first stayed for some time at Montpellier, where Florence, one of his daughters, resided, who was married to Isaac Casaubon. Casaubon was just preparing his edition of Athenæus, and Stephens offered his assistance, which was refused. He then proceeded through various other places to Lyon, where he was taken ill; and feeling solitary and forlorn, and having no friends there, he was carried to a public hospital, where he died, in the beginning of March 1598, at the age of nearly seventy years. Some writers say that he died out of

his mind, a statement which, if true, can only apply to the last few days of his life. It is a mistake to suppose that Stephens died in poverty because he died in an hospital; for the proceeds of his books alone, which were publicly sold and fetched low prices, were sufficient to pay his creditors and to leave something for his wife and children. Stephens died without a will; and Casaubon, who went to Geneva to receive his wife's dowry, which was still owing, together with her share of the inheritance, was generous enough to leave Henry's library, manuscripts, and printing-establishment, in the hands of his son Paul.

There is no scholar to whom the Greek language and literature is under greater obligations than it is to Henry Stephens. He knew his superiority, and sometimes showed that he felt it. The number of books which he printed, edited, or wrote, is immense; and it is truly astonishing that, even during the rambling life of his latter years, he was continually producing new works. During the earlier part of his life he was a man of inflexible resolution, and never rested till he had effected his purpose; and he was always planning something, even to the last days of his life. He has often been censured for his alteration of passages in ancient writers without being supported by the authority of manuscripts, and without even assigning a reason for his alterations. This has been said more especially in regard to his edition of Plutarch, which came out in the same year that he published his *Thesaurus*; but Wyttienbach, on examining several manuscripts for his own edition, found that H. Stephens was in most cases supported by manuscript authority.

ROBERT STEPHENS II., the youngest son of Robert Stephens I., and brother of Henry Stephens II., was born at Paris in 1530. The first time that we find him taking part in the publication of a work was in 1556, when he and Morel, who was then royal printer, published the edition of *Anacreon* prepared by H. Stephens. The title of 'royal printer' was conferred upon Robert in 1561, as appears from some books printed by him in this year, at the same time that he came into possession of the printing-office of Charles Stephens. In this office he continued till his death. In activity and accurate and beautiful printing he was worthy of his father, but this is all that we know of him. As royal printer he was much employed in printing edicts and ordinances, as may be seen from the list of his publications by Renouard. He died in 1571. Among his publications we only mention the following:—a reprint of the *Historical Dictionary* ('*Dictionarium Proprium Nominum Virorum, Mulierum, Populorum, &c.*') of Charles Stephens, 4to, 1560; 'Josephi Scaligeri Conjectanea in M. Terent. Varronem,' 1565; and several editions of Donatus, '*De Partibus Orationis*.'

After his death his wife married again, and kept up the printing establishment. There are publications down to the year 1588, '*Ex officina Roberti Stephani*.'

ROBERT STEPHENS III., son of Robert Stephens II., was educated by the poet and abbé Desportes, who inspired him with a love for poetry, and with whom he appears to have stayed at least till 1584. He did not commence printing till 1606, so that eighteen years elapsed without a publication appearing from the press of Robert Stephens. His first publication was '*D. Gregorii Nysseni ad Eustathiam, Ambrosiam, Basilissam, Epistola, Græce*. I. Casaubonus nunc primum publicavit, Latine verit et notis illustravit,' 8vo, Lutetiae, 1606. He probably worked in the printing establishment which had belonged to his father, and continued to print until 1631. He distinguished himself also by his Latin, Greek, and French verses, and by a French translation of the first two books of Aristotle's '*Rhetoric*,' which was printed in 8vo, 1630. In his publications he generally added to his name the letters R. F. R. N., that is Roberti Filius, Roberti Nepos, to distinguish himself from his father and grandfather. He printed a great number of books; the principal are, '*Menandri et Philistionis Sententiæ Comparatæ, Græce, ex Bibliotheca Regia; cum notis, cura N. Rigaltii*,' 8vo, Lutetiae, 1613; '*D. Junii Juvenalis Satyrarum Libri v. Sulpiciæ Satyra, Cura Rigaltii, &c.*,' Lutet., 1616; '*Dictys Cretensis, De Bello Trojano, et Dares Phrygius De Excidio Trojæ, &c.*,' 16mo, 1618.

There are several other members of the Stephens family of the name of Robert, but none of them were distinguished. During the last century there was a French writer of the name of Robert Stephens (Robert Etienne), who claimed a descent from the illustrious family of printers.

PAUL STEPHENS, a son of Henry Stephens II., by his second wife, was born at Geneva in 1566. He received his early education at home, and was then sent out by his father to visit the principal towns of Europe, and the distinguished scholars with whom his father was acquainted. Lipsius, whom he visited at Leyden, was much pleased with him, and in one of his letters calls him '*mitis adolescens*.' On his return to Geneva he assisted his father in printing and editing. He afterwards made several other journeys, partly perhaps in connection with the business of his father. In 1594 he spent some time in London, where, among other distinguished men, he made the acquaintance of John Castolius. In 1595 he was at Heidelberg, and in 1596 at Frankfort, where he stayed in the house of the jurist Dionysius Gothofredus. He had married in 1589. His first literary production was '*Pauli Stephani Versiones Epigrammatum Græcorum Anthologiæ, Latinis versibus*,' 8vo, Geneva, 1593. He was always fond of

BIOG. DIV. VOL. V.

making Latin verses, but his poetry is stiff and unanimated. His best is perhaps the poem on the death of his father.

After the death of his father, when the affairs of the family were settled, and Casaubon had left Geneva, Paul was placed at the head of his father's printing establishment (1599), which he conducted with great energy. He first reprinted a number of classical authors which had been edited by his father, and were then out of print, such as Virgil, Horace, the letters of Pliny, and the Latin panegyriasts and others. The two works which do him most credit are '*Euripidis Tragædiæ quæ extant, cum Lat. Guil. Canteri Interpretatione, &c.*,' containing the Greek scholia and commentaries of several scholars, 2 vols. 4to, 1602; and '*Sophoclis Tragediæ Septem, una cum omnibus Græcis Scholiis et Latina Viti Windemii ad verbum Interpretatione, &c.*,' likewise containing the scholia, and also notes by H. Stephens. In 1619 he printed a folio edition of Herodotus, founded upon that of his father, with a Latin translation and notes by Sylburg. No other publication issued from his press till 1626, when he published a fifth edition of the lyric Greek poets: '*Pindari et ceterorum Octo Lyricorum Carmina*.' This was his last publication. The inactivity in his establishment during the last years appears to have been the consequence of his want of capital, to which we may perhaps also attribute the fact that most of his works are printed on very bad paper. In 1626 or 1627 he sold his whole establishment to the brothers Clouet. It is not known what became of him after this, and the time of his death is also unknown. He had eight children, two of whom only, Anthony and Joseph, survived their father.

FRANCIS STEPHENS II., son of Robert Stephens I., and an elder brother of Henry Stephens II., followed his father to Geneva, and is said to have been a good Greek and Latin scholar. After the death of his father he established at Geneva a printing-office of his own, which he conducted from 1562 to 1582, with an interruption however of nearly ten years. Even during the remaining ten years he printed very few books, and most of them for publishers: this appears to have been owing to his want of capital. The first work, and almost the only one that he printed on his own account, was Calvin's '*Commentaries on the Psalms*,' fol., 1563. His last publication was Amyot's French translation of the '*Moralia*' of Plutarch, 2 vols. fol., 1581-82. After this time he gave up printing and settled in Normandy, and we hear no more about him.

ANTHONY STEPHENS, son of Paul Stephens, was born at Geneva in 1592. He studied at Lyon, and afterwards finished his education at Paris, where he abjured Protestantism before Cardinal du Perron. In 1612 he obtained letters-patent of naturalisation in France, and at the same time the office of *huissier de l'assemblée du clergé*, with a salary of 500 francs, which he held until the year 1635. Long before this time however he had been in the possession of a printing establishment. Some writers mention a work by Perron, which Anthony Stephens is said to have printed in 1605. But this cannot possibly be correct, as Anthony was then only thirteen years old. The earliest work which he printed belongs to the year 1613, and henceforth he conducted his establishment with an activity worthy of his great ancestors until the year 1664. He was also honoured with the title of royal printer, through the influence of Cardinal Perron, and he received a pension of 600 francs, but the time when he first received it is uncertain. The pension was stopped when Perron died, and Anthony after this was several times in great pecuniary difficulties. Among his numerous publications, which comprise all the works of Perron, there are several valuable editions of ancient authors, such as Casaubon's edition of Strabo, 1620; of Plutarch's Works, with Xylander's translation, 2 vols. fol., 1624; Leunclavius's edition of '*Xenophon*,' 1625; Aristotle's Works, 2 vols. fol., 1629. For many years after the death of his patron Anthony was in very straitened circumstances, and was supported by his son Henry, who, from the year 1646, had a printing-office of his own, where, among other works, Montaigne's '*Essays*' were printed. When his son died in 1661, and Anthony was deprived of his last and only support, he sank rapidly: he became infirm, and at last lost his sight. In this state he dragged on a wretched existence until the year 1674, when he died in the *Hôtel-Dieu* at Paris, at the age of eighty-two. He had six children, all of whom died before him.

Besides the members of the Stephens family whom we have mentioned above, there are two more, who however were never engaged in printing. The one is Henry Stephens, a son of Robert Stephens II., who was treasurer of the royal palaces; the other likewise called Henry, and a son of the former, acquired some reputation as a poet, and also wrote some other works in French.

Respecting the lives of the Stephens, see Th. Jansonii ab Almeloveen, '*Dissertatio Epistolica de Vitis Stephanorum*,' Amsterdam, 1685; Maittaire, '*Stephanorum Historia*,' 2 vols. in 4 parts, London, 1709, which contains a list, though not complete, of their publications; Greswell, '*A View of the early Parisian Greek Press, including the lives of the Stephani*,' Oxford, 1833; Ant. Aug. Renouard, '*Annales de l'imprimerie des Etienne, ou Histoire de la Famille des Etienne et de ses éditions*,' 2 vols. 8vo, Paris, 1837. This last work contains in the first volume a very complete list of all the publications of the Stephens, and various interesting and important facts, derived from the public records of Paris and Geneva, which were unknown to former biographers.

STEPHENS, JAMES FRANCIS, a distinguished British entomologist, was born at Shoreham, Sussex, on the 16th of September 1792. He was for many years a clerk in the Admiralty Office in Somerset House. Whilst holding this position he devoted his leisure hours to the study of natural history, and was a remarkable example of the knowledge that may be gained by the cultivation of the small portion of time allotted for rest in a government office. In the course of a long life he made one of the most complete collections of British insects extant. This collection was the admiration of foreigners and the constant resort of the British entomologist. Mr. Stephens's taste for entomology led early to his employment in the British Museum, where he assisted Dr. Leach in commencing the present collection of insects in that institution. The literature of entomology is largely indebted for his contributions. In 1829 he commenced the publication of his 'Illustrations of British Entomology,' which was produced in parts and completed in 10 vols. This is one of the largest and most comprehensive works on British entomology, and must secure for its author a lasting name amongst the cultivators of the natural history of his own country. In addition to this splendid work, he published several papers on entomological subjects, which appeared in the 'Transactions of the Entomological Society.' He also was engaged at the time of his death in writing a catalogue of the British *Lepidoptera* in the collections of the British Museum. He also published separately 'The Systematic Catalogue of British Insects,' and 'A Manual of the British Coleoptera.' Although distinguished as an entomologist, he took an interest in all branches of natural history, and was the author of a continuation of Shaw's 'Zoology' comprising an account of the Birds, published in 1827. He was a fellow of the Linnean Society, and president of the Entomological Society. He died on the 22nd of December 1852, at his house in Kennington, after a few days' illness of inflammation of the lungs.

STEPHENSON, GEORGE, the inventor of the locomotive steam-engine, was the son of Robert Stephenson and Mabel Carr, and was born June 9th, 1781, at Wylam, a village in Northumberland, where his father was employed as fireman at a colliery; he afterwards removed to Dewley Burn in the same county, where George's first employment was to herd cows, occupying his leisure in modelling clay engines, and even constructing a miniature windmill. He soon began to be employed about the colliery, during which time he displayed a great affection for birds and animals, particularly rabbits, of which he acquired the reputation of having a fine breed. At fourteen years of age he was appointed assistant-fireman to his father, who soon after removed to another colliery at Jolly's Close, where George, then only fifteen, was engaged as fireman to an engine in the neighbourhood. Ambitious of becoming an efficient workman, he strove to attain a thorough knowledge of the engine, and he succeeded so well that at seventeen he was promoted to be a 'plugman,' whose duty it was to see that the engine was in proper working condition, and that the pumps drew off the water effectually, repairing such accidental defects as might occur. To do this he felt required an intimate knowledge of its construction, and at his leisure hours he would take the machinery to pieces, that he might the better understand it. His father, who had six children, of whom George was the second, had been unable to give them any education, though by example a sound foundation of good principles and morals had been laid, and at eighteen, whilst employed for twelve hours a day in his labours, and earning only twelve shillings a week, George Stephenson commenced a course of self-culture. He attended a small night-school at Walbottle, where in a year he learnt to read, and to write his own name, for which instruction he paid threepence a week. He next, in 1799, placed himself under a Scotchman named Robertson, at Newburn, who, for fourpence a week, taught him arithmetic, which he acquired with remarkable facility. At twenty he had been advanced to the superior office of brakesman, with increased wages, to which he added, in his leisure hours, by learning to make and mend shoes. At that time he was a big, raw-boned fellow, fond of displaying his strength and activity at the village feasts, but remarkable for his temperance, sobriety, industry, and good-temper, yet on one occasion he fought a bully who would have oppressed him, and his victory on that occasion secured him ever after from a repetition of the offence.

When by the most rigid economy Stephenson had saved sufficient money to furnish a small home, he determined to settle, and on the 28th of November 1800 he married Fanny Henderson, with whom he removed to Willington, where he had been appointed brakesman to the engine employed for lifting the ballast brought by the return collier ships to Newcastle. In his new abode, at the Ballast Hills, he continued to occupy himself with mechanical experiments, expending much time and great ingenuity in a fruitless effort to obtain perpetual motion; until an accident having obliged him to repair his own clock, he became the general clock-cleaner and mender for the neighbourhood, thus improving his own mechanical skill whilst adding to his income. On the 16th of December 1803 his only child Robert was born, and soon after he removed to Killingworth, where his wife died. In 1804 he was engaged to superintend the working of one of Boulton and Watt's engines at Montrose; but after continuing there a year—during which time he saved about 28*l.*, a considerable sum in his circumstances, and during a period of war-prices of provisions—he returned to Killingworth to find his father in extreme distress,

having been accidentally scalded and blinded by a discharge of steam let in upon him while repairing an engine. Stephenson paid his father's debts at the expense of more than half his savings, and settled his parents in a cottage, where they lived during many years entirely supported by him. He was immediately re-engaged in his old position at Killingworth, but being drawn for the militia, the obtaining a substitute absorbed the remainder of the produce of his economy, and he seriously contemplated emigrating to America, whither his wife's sister and her husband went; but he could not raise money enough to accompany them. He therefore continued his various labours, attending the engine, mending clocks, making and mending shoes, and studying mechanics. His acquired knowledge and mechanical skill enabled him to suggest improvements to his employers, and in 1810 a new engine in the neighbourhood having failed in its work, Stephenson was called in to mend it, which he did most effectually. He received for this job a present of 10*l.*, and was promoted to the post of engineman at good wages. Whilst thus engaged he formed an intimacy with a farmer named Wigham, at Long Benton, whose son John proved of great assistance to him by increasing his acquaintance with arithmetic, and with some of the principles of mechanism and chemistry; and in 1812 his merit was so far recognised that he was appointed engineer of the colliery, at a salary of 100*l.* a year. He was now elevated above the rank of a mere labourer, but he was not less busy. He projected and carried out many improvements, and among others constructed at the coal-loading place at Willington, the first self-acting incline used in that district, by which the descending laden wagons on the tram-road were made to draw up the empty wagons.

The most important epoch of Stephenson's life was now approaching. Many attempts had been made to construct a locomotive steam-engine, and some had attained a certain degree of success, but none had succeeded in uniting economy with efficiency. Mr. Stephenson carefully examined all within his reach, and at length declared his conviction that he could make a better than any yet produced. He communicated his proposal to his employers: one of them was Lord Ravensworth, who, after giving him a patient hearing, commissioned him to make a trial of his skill. His object at first was only to make an engine for the colliery tramways, but even thus early he told his friends "that there was no limit to the speed of such an engine, if the works could be made to stand it." The difficulties he encountered were great; the engine was built in the workshops at West Moor, Killingworth; the chief workman was the colliery blacksmith, tools had to be made, and everything rested upon the designer of the machine. In ten months it was completed, and on July 25, 1814, it was placed on the railway, and was decidedly successful, drawing eight loaded carriages, weighing thirty tons, at the rate of four miles an hour. It was however a cumbrous affair, and he speedily saw in how many parts it could be improved. Accordingly, in February 1815, he took out a patent for a locomotive, and in the same year constructed an engine, which (with certain mechanical improvements, that though conceived by him to be necessary, could not be supplied by the manufactories at that time), may be considered as the model of all that have been since produced.

From Mr. Stephenson's connection with collieries he could scarcely avoid having his attention painfully excited, by the frequent explosions arising from fire-damp, and in 1814 one of the collieries under his care having taken fire, he, at great risk of his life, and with the assistance of the workmen, who trusted to his knowledge and skill, succeeded in extinguishing it by bricking up the passage where the foul air was accumulated. The constant danger from the use of exposed candles in coal-mines was so well known, that many inventors had attempted to produce lamps to meet the difficulty; and as early as 1813 a safety lamp was invented by Dr. Clanny, but it was found to be unmanageable. Sir Humphry Davy was invited to attempt something; for which purpose, among others, he visited Newcastle in August 1815, and on November 9 he read a paper on the construction of his lamp before the Royal Society of London. Mr. Stephenson was at the same time occupied on the same subject. In August he made a drawing for a lamp, which on October 21 had been made and tested; a second and a third were made, for the purpose of increasing the amount of light; and on November 30, before he could by any possibility have heard of Davy's invention, his third lamp was finished and tried in Killingworth pit, where it was found thoroughly effective, and has ever since been in use. A controversy has arisen, into which we shall not enter, as to priority of invention. There is however every reason to believe that Stephenson invented his lamp and tried it a few days previous to Davy having announced his discovery; and the natural conclusion is, that, urged by the want of a safety-lamp, and reasoning from the same facts, the inventors arrived at the results independently of each other; for the two lamps, although different in construction, are founded upon identical principles, but arrived at by different trains of thought.

We cannot attempt to trace all the improvements in details which Mr. Stephenson introduced in the locomotive, but he very early perceived that, for its proper working, the railway required equal attention, and that a firm bed and a regular level were essential requisites. Very little attention had hitherto been paid to this, and the tramroads were carelessly laid out and not kept in good repair.

In 1816 therefore he took out a patent for an improved form of rail and chair, and for further improvements in the locomotive engine, one of which was placing it on springs, and they were attended with marked success.

The construction of railroads had for some time occupied much of the public attention. The first contemplated was the Stockton and Darlington, for which an act of parliament was obtained by Mr. Pease in 1820, to be worked "with men and horses, or otherwise." In 1819 the owners of Hetton Colliery, desiring to turn their tramroad into a railway, employed Mr. Stephenson in its construction. The length was about eight miles, and being over a hilly country he took advantage of the heights to form self-acting inclines, the locomotive working on the level part; and on the 18th of November 1822 it was opened for traffic. He was next employed to construct the Stockton and Darlington line, which the proprietors had agreed, on his recommendation, to make as a railroad and not as a tramroad, with stationary engines for the steep gradients, but horse-power was to be used for the levels, for Mr. Stephenson's confident anticipations of the success of his locomotive engines were still regarded with suspicion. He began the work in May 1822, in 1823 an amended Act was procured for working the line with locomotives, and Mr. Stephenson was appointed resident engineer at a salary of 300*l.* per annum, upon which appointment he removed to Darlington. The line was opened in September, 1825, and an engine driven by Mr. Stephenson himself drew a load of ninety tons at the rate of a little more than eight miles an hour. It proved highly remunerative, for besides a far larger amount of goods traffic than had been calculated on, a passenger traffic arose that had been wholly unthought of; the passengers however were for a time conveyed in carriages drawn by a horse at a speed of ten miles an hour. It may be mentioned, that this railway has created the town and port of Middlesbrough-on-Tees, then the site of a farm, but now containing 15,000 inhabitants.

In 1824, while the Darlington line was in progress, Mr. Stephenson, feeling the difficulty he had experienced in constructing his engines in a blacksmith's shop, proposed to Mr. Pease, of Darlington, his firm friend and great patron, the establishment of an engine-factory at Newcastle. The proposal was adopted, and for a considerable time it was the only manufactory for locomotives in the kingdom; it is now increased to an enormous extent, and has been the training-school, whence has issued a vast number of skilled workmen and eminent practical engineers.

In 1824 the project of a railway, or tramroad between Liverpool and Manchester began to be agitated. Increased facility of communication was imperatively required, but there was much controversy as to the means. At length a railway was decided on, Mr. Stephenson was employed to make the survey, and application was made to parliament for an Act. A strong opposition was raised both within the House of Commons and without. Landowners drove the engineers off their grounds, and before the Committee the most absurd objections were urged against the whole scheme, the idea of any quick transit being a subject for especial ridicule. The Bill was however carried on a second application, and Mr. Stephenson was appointed principal engineer. The work was commenced in June 1826, and after struggling through many difficulties—one, and not the least, being the carrying the railway over Chat Moss—it was opened on Sept. 15, 1830. During its progress eminent engineers had reported against locomotives being worked on the line, recommending horse-traction; but at length Mr. Stephenson prevailed on the Directors to offer a prize for a locomotive engine, conforming to certain conditions, which was done, and the prize of 500*l.* was won by the Rocket engine, in the construction of which he had availed himself of the assistance of his son Robert.

From this moment his fortune was made. Employment of a most remunerative character poured in from all sides. Railways were projected in every direction, and he became the chief engineer of several of them. With these he was incessantly engaged till 1840, when he resigned most of them, and settled at Tapton in Derbyshire, where he commenced a fresh pursuit in working the Clay Cross collieries. At this time he took much interest in the well-doing of the Mechanics' Institutes in his neighbourhood, and on more than one occasion related to them the circumstances of his own career, as an encouragement to the members to adopt a course of steady and persevering industry. His interest in railway extension however continued unabated, and he took an active part, either as engineer, chairman, or shareholder, in the Whitehaven and Maryport, the Yarmouth and Norwich, and the Newcastle and Edinburgh East Coast Line, with which the stupendous work of the High Level Bridge at Newcastle (designed by his son), is connected; he was one of the committee of management, but he did not live to see it completed. He was also employed in Belgium, and he travelled into Spain to inspect a proposed line from the Pyrenees to Madrid, but the project was fruitless. On his return from Spain in 1845 he relinquished still more his attention to railway matters, and occupied himself almost entirely with his collieries and lime-works, with the cultivation of his farm and gardens, and indulged in his old fancy for keeping birds and animals. With the exception of promoting the Ambergate and Manchester Railway, inventing a new self-acting break, of attending the ceremony of opening the Trent Valley Railway (when Sir Robert Peel made a speech complimentary to him), and of being considerably troubled by applica-

tions for assistance and advice from projectors and inventors of all kinds, to whom however he was invariably attentive and kind, he passed the remainder of his days in ease and peace, and died after a short illness on August 12, 1848, leaving a name rendered illustrious by the patient perseverance of a high-minded industry, and the widely-developed productions of a remarkable genius. A valuable biography of this eminent man has been written by Mr. S. Smiles, to which we are indebted for many of the facts in this notice.

\*STEPHENSON, ROBERT, the son of the preceding, was born, as we have already said, at Willington, on December 16, 1803. His father, who had felt the want of early education, resolved that his son should not suffer from the same cause, and accordingly, though at the time he could ill afford it, sent him to a school at Long Benton, and in 1814 placed him with Mr. Bruce at Newcastle. Robert soon displayed a decided inclination for mechanics and science, and becoming a member of the Newcastle Literary and Philosophical Institution, was enabled to take advantage of its library; so that, as the Saturday afternoons were spent with his father, the volume which he invariably took home with him, formed the subject of mutual instruction to father and son. Robert's assiduity attracted the attention of the Rev. Wm. Turner, one of the secretaries to the Institution, who readily assisted him in his studies, and was also of much service to his father with whom he soon after became acquainted. Under Mr. Bruce, Robert acquired the rudiments of a sound practical education, and under his father's direction was always ready to turn his acquirements to account. There still exists in the wall over the door of the cottage at Killingworth, a sun-dial of their joint production, of which the father was always proud. In 1818 Robert was taken from school and apprenticed to Mr. Nicholas Wood as a coal-viewer, acting as under-viewer, and making himself thoroughly acquainted with the machinery and processes of coal-mining. In 1820 however, his father being now somewhat richer, he was sent to Edinburgh University for a single session, where he attended the lectures of Dr. Hope on chemistry; those of Sir John Leslie on natural philosophy; and those of Professor Jamieson on geology and mineralogy. He returned home in the summer of 1821, having gained a mathematical prize, and acquired the most important knowledge of how best to proceed in his self-education. In 1822 he was apprenticed to his father, who had then commenced his locomotive manufactory at Newcastle, but after two years' strict attention to the business, finding his health failing, he accepted, in 1824, a commission to examine the gold and silver mines of South America, whence he was recalled by his father when the Liverpool and Manchester railway was in progress, and he reached home in December 1827. He took an active part in the discussion as to the use of locomotives on the line, and in conjunction with Mr. Joseph Locke, wrote an able pamphlet on the subject. He also greatly assisted his father in the construction of the successful engine, which we believe was entered in his name, though he himself ascribes the merit entirely to his father and Mr. Henry Booth, on whose suggestion the multitubular boiler was adopted.

Robert Stephenson's next employment was the execution of a branch from the Liverpool and Manchester Railway, near Warrington, now forming a portion of the Grand Junction Railway, between Birmingham and Liverpool. Before this branch was completed, he undertook the survey and afterwards the construction of the Leicester and Swannington Railway, and on the completion of that work he commenced the survey of the line of the London and Birmingham Railway, of which he was ultimately appointed engineer, and removed to London. Under his direction the first sod was cut at Chalk Farm on June 1, 1834, and the line was opened on Sept. 15, 1838. Fully aware of the vital importance of obtaining good means of rapid transit, he still continued to devote much of his time to improvements in the locomotive engine, which were from time to time carried out under his direction at the manufactory in Newcastle, which for some years was exclusively devoted to engines of that class, and still supplies larger numbers than any other factory in the kingdom, independent of many marine and stationary engines. His engagements on different lines of railway have since been very numerous, but he is more remarkable for the magnificent conceptions and the vastness of some of his successfully-executed projects, such as the High Level Bridge over the Tyne at Newcastle, the viaduct (supposed to be the largest in the world) over the Tweed valley at Berwick, and the Britannia tubular bridge over the Menai Strait—a form of bridge of which there had been previously no example, and to which, considering its length and the enormous weight it would have to sustain, the objections and difficulties seemed almost insuperable. With the assistance however of Professor Hodgkinson, Mr. Edwin Clark, and Mr. Fairbairn in experiments on the best forms of the various portions of the structure, the difficulties were triumphantly overcome, and in less than four years the bridge was opened to the public on March 18, 1850.

Mr. Stephenson has also been employed in the construction of many foreign railways. He was consulted, with his father, as to the Belgian lines; also for a line in Norway between Christiania and Lake Mjøsen, for which he received the grand cross of the order of St. Olaf from the king of Sweden; and also for one between Florence and Leghorn, about sixty miles in length. He visited Switzerland for the purpose of giving his opinions as to the best system of railway communication. He designed and is now constructing the Victoria tubular bridge

over the St. Lawrence, near Montreal, on the model of that over the Menai Strait, in connection with the Grand Trunk Railway of Canada, for uniting Canada West with the western states of the United States of America. He has recently completed the railway between Alexandria and Cairo, a distance of 140 miles, and has, during its construction, several times visited Egypt. On the line there are two tubular bridges;—one over the Damietta branch of the Nile, and the other over the large canal near Birket-al-Saba. The peculiarity of the structures is that the trains run on the outside upon the top of the tube instead of inside, as in the case of the Britannia Bridge. He is now constructing an immense bridge across the Nile at Kaffre Azzayat, to replace the present Steam Ferry which is found to interfere too much with the rapid transit of passengers.

In addition to his railway labours Mr. Stephenson has taken a general interest in public affairs and in scientific investigations. In 1847 he was returned as member of parliament, in the Conservative interest, for Whitby in Yorkshire, for which place he continues to sit. He has also acted with great liberality to the Newcastle Literary and Philosophical Society, paying off in 1855 a debt amounting to 3100*l.* in gratitude, as he expressed it, for the benefits he derived in early life from that establishment, and to enable it to be as practically useful to other young men. He has most liberally placed at the disposal of Mr. Piazzi Smyth, his yacht and crew, to facilitate the interesting investigations undertaken by that gentleman at the Island of Teneriffe, and very valuable results have been obtained. He has been an honorary but active member of the London Sanitary and Sewerage Commissions; he is a Fellow of the Royal Society, a member of the Institution of Civil Engineers since 1830, of which institution he was member of council during the years 1845 to 1847, vice-president during those from 1848 to 1855, and president during the years 1856 and 1857. He has received a Great Gold Medal of honour from the French Exposition d'Industrie of 1855, and is said to have declined an offer of knighthood in Great Britain. He is also the author of a work 'On the Locomotive Steam-Engine,' and another 'On the Atmospheric Railway System,' published in 4to by Weale.

STEPNEY, GEORGE, descended from an ancient family in Pembrokeshire, was born in Westminster, in 1663. In 1676 he was sent to Westminster School, where he continued his studies till 1682, when he removed to Trinity College, Cambridge, where he distinguished himself in 1683 by a Latin ode on the marriage of the Princess Anne to Prince George of Denmark. He took the degree of M.A. in 1689. At Westminster he had formed a friendship with Charles Montague, afterwards Earl of Halifax, which was continued at Cambridge. They came to London together, and were both introduced into public life by the Earl of Dorset. Stepney's life, which was short, was chiefly spent in diplomatic employments. In 1692 he was sent as envoy to the Elector of Brandenburg; in 1693, to the Emperor of Germany; in 1694, to the Elector of Saxony. In 1695 he published a poem, dedicated to the memory of Queen Mary; in 1696 he went as envoy to the Electors of Mentz and Cologne, and to the congress at Frankfurt; in 1698 to Brandenburg, in 1699 to the King of Poland, in 1701 to the Emperor, and in 1706 to the States-General. He was made one of the commissioners of trade in 1697. He died at Chelsea in 1707, and was buried in Westminster Abbey.

Stepney's poems are few, and of little value. He was one of the 'eminent hands' who were united with Dryden in the translation of 'Juvenal' in 1693. Johnson says, "he is a very licentious translator, and does not recompense the neglect of his author by beauties of his own."

STERLING, JOHN, was born at Kaimies Castle, in the island of Bute, Scotland, on the 20th of July 1806. Both his parents were Irish by birth, though of Scottish descent; and his father, Edward Sterling (afterwards well known as a leading writer in, and editor of, the 'Times' newspaper, but then pursuing the occupation of a gentleman-farmer, after having been educated for the Irish bar, and having served for some time as a captain in the army) had rented Kaimies Castle a short time before his son's birth. John was the second child of seven, five of whom died while he was still a youth, leaving only himself and an elder brother, who yet (1857) survives. In 1809, the family removed to Llanblethian, in Glamorganshire, Wales; and here John Sterling received his first school-education. His father about this time began to contribute to the 'Times' as an occasional correspondent; and the interest he thus took in politics, led him, on the peace of 1814, to remove again with his family to Paris. Driven from Paris by the return of Napoleon from Elba and the resumption of the war, the family in 1815 settled in London, where gradually the father rose to his eminent position in the world of politics and journalism. He was destined to outlive his son.

After having been at various schools in or near London, Sterling was sent to the University of Glasgow; whence, after a brief stay, he was removed in 1824 to Trinity College, Cambridge. Here Julius Hare, afterwards Archdeacon of Lewes, was his tutor, and here he formed the acquaintance of various young men afterwards distinguished, including Frederick Maurice, Richard Trench, Spelding, J. M. Kemble, Venables, Charles Buller, and Monckton Milnes. In the Union Debating Club of Cambridge, of which these and others were members, Sterling was one of the chief speakers; and it was here perhaps that he first exhibited the qualities of intellect and character

which made him afterwards socially celebrated. From Trinity College, Sterling removed, along with his friend Maurice, to Trinity Hall, with an intention of studying law; but in 1827 he left Cambridge altogether, without taking his degree. In 1828 the 'Athenæum,' then recently started by Mr. Silk Buckingham, was purchased by Sterling, or at his instance, and he and Maurice conducted it and wrote in it for some time. The speculation however in their hands did not answer commercially, and the journal was sold to its present proprietor. Sterling, to whom it was not absolutely necessary that he should engage in any employment for his living, continued to reside in London, the centre of a circle of ardent and thoughtful young men, including not only his college friends, but such additions as John Stuart Mill. An eager radicalism of opinion was then Sterling's characteristic. It was about the year 1828 that he first became acquainted with Coleridge, then living his reclusive life at Highgate; and Coleridge's influence on Sterling was great and enduring. It was evident in a three volume novel, entitled 'Arthur Coningsby,' which he wrote in 1829-30, but which was not published till a year or two later. In November 1830 he married; and shortly after, being in ill-health, he and his wife went to the West India island of St. Vincent, where a valuable sugar estate had been bequeathed to him, his elder brother, and a cousin, by one of his mother's uncles. He stayed about fifteen months in St. Vincent, returning to England in August 1832. In the spring of 1833 his novel was published, but obtained little recognition except among the few. Chancing in that year to meet again his tutor, the Rev. Julius Hare, at Bonn, the effect of their conversation on Sterling's mind, then vibrating under the prior influence of Coleridge, was that he resolved to take holy orders in the English Church. He was ordained deacon at Chichester, on Trinity Sunday, 1834, and immediately became curate of Hurstmonceaux in Sussex, where his friend was rector.

Sterling retained his curacy only eight months, resigning it in February 1835, on account of delicate health. It is not improbable that at the same time there was a change, or a tendency to change, in his opinions. From this time, at all events, there was a gradual divergence in his views from the fixed creed of the Church of England, though his relations to many of its most excellent members continued to be as intimate and affectionate as ever. It was in 1835 that he first became acquainted with Mr. Carlyle, then recently settled in London; and it seems evident that gradually the influence of Mr. Carlyle modified the results of that of Coleridge. "Coleridge," says Mr. Carlyle himself, in his memoir of Sterling, "was now dead, not long since; nor was his name henceforth much heard in Sterling's circle; though, on occasion, for a year or two to come, he would still assert his transcendent admiration, especially if Maurice were by to help. But he was getting into German, into various inquiries and sources of knowledge new to him, and his admirations and notions on many things were silently and rapidly modifying themselves." Literature was thenceforward Sterling's chief occupation; though, from all the accounts that remain of him, what he accomplished and has left behind him in literature gives but a faint idea of the influence he exerted in intellectual society, and especially in that of London, by his frankness and powers of talk. Very few men had so many friends or was so loved by them. It was unfortunate for them and him that his extremely precarious health caused him every now and then to absent himself from London and seek a warmer climate. In 1836 he went to the south of France; and in the following year he went to Madeira. While at Madeira he wrote much, and sent some contributions, in prose and verse, to 'Blackwood's Magazine.' In the spring of 1838 he returned to England, and for a time he resided on the southern sea coast, making frequent visits to London. He began to write for the 'Westminster Review,' then under the charge of Mr. John Stuart Mill; he was also busy privately with various compositions in prose and verse. It was at this time too that, in order to secure Sterling's meeting with as many of his friends as possible on his flying visits to London, the famous so-called "Sterling Club" was formed. A list of the members of this club is given in Mr. Carlyle's 'Life of Sterling,' at page 203.

Part of the years 1838 and 1839 were spent by Sterling in Italy; and on his return he took up his abode in Clifton. It was while residing here that he published under the general title of 'Poems, by John Sterling' (Moxon, 1839), a collection of his metrical effusions up to that time. The two next years were spent in migrations from place to place, including a second visit to Madeira, on account of health. In 1841, while living at Falmouth, he published 'The Election: a Poem, in Seven Books'—a poem of English life and society. He was then engaged on what he intended to be his best work—'Strafford, a Tragedy,' which however was not published till 1843. This year, 1843 (he had again been absent in Italy in the interim), was one of calamity to him and his. His wife died in April, and his own always feeble health was rendered more precarious than ever by the accidental bursting of a blood-vessel. Sterling retired to Ventnor in the Isle of Wight in June 1843, where his last labours were on a poem on the subject of 'Cour de Lion,' still unpublished. Here he sank gradually, and on the 18th of September 1844, he died at the age of thirty-eight. A collection of his 'Essays and Tales' from the 'Athenæum,' 'Blackwood,' and other periodicals, was edited in two volumes, with a memoir prefixed, by Archdeacon Hare, in 1848; the well-

known 'Life of Sterling' by Mr. Carlyle, representing the man less in his ecclesiastical than in his general human relations, appeared in 1861; and in the same year 'Twelve Letters by John Sterling' were edited by his relative Mr. Coningham of Brighton.

STERNE, LAURENCE, was the great-grandson of Dr. Richard Sterne, who died archbishop of York in 1683. His father, Roger Sterne, second son of Simon Sterne of Elvington and Halifax, having entered the army, became a lieutenant in Handaside's regiment, and on the 25th of September 1711, o.s., married in Flanders, Agnes, the widow of Captain Herbert, and stepdaughter of a person of the name of Nuttle, whom Sterne himself, in a memoir written for the information of his daughter a short time before his death, describes as "a noted sutler in Flanders in Queen Anne's wars." His mother's own family name he professes to have forgotten. Roger's first child, born at Lisle, in July 1712, was a daughter, Mary, who grew up to be a very beautiful woman, but made an unfortunate marriage, and died early of a broken heart. Laurence was brought into the world on the 24th of November 1713, at Clonmel in Ireland, where his father and mother had arrived with the regiment from Dunkirk only a few days before. "My birthday," says Sterne, "was ominous to my poor father, who was, the day after our arrival, with many other brave officers, broke, and sent adrift into the world, with a wife and two children." The lieutenant upon this betook himself with his wife and family to the family seat at Elvington, near York, where his mother, who had inherited the property from her father, Sir Roger Jaques, resided, her husband having died ten years before; here they all sojourned for about ten months, after which, the regiment being re-established, they set out to join it at Dublin, whence Lieutenant Sterne being within a month ordered to Exeter, his wife and her two infants followed him thither. They remained a twelvemonth in England, and then the lieutenant, with his family increased by another boy, born at Plymouth, was forced once more to turn his face to Ireland. This must have been about the end of the year 1715, if the chronology of the account is to be depended upon. Having got to Dublin, they continued there till the year 1719, which however would be for above three years, instead of only a year and a half, as Sterne seems to state. In that year, he says, "all unhinged again." The regiment was ordered to the Isle of Wight, to embark for Spain on the *Vigo* expedition. On their journey thither from Bristol the younger boy died, but his place was supplied by a girl (who died however in childhood) born in September 1719, in the Isle of Wight, where the lieutenant left his wife and children till the regiment got back to Wicklow, in Ireland, whither he then sent for them. They lived a year in the barracks at Wicklow, where Mrs. Sterne gave birth to another boy; and then they spent six months with a relation of hers, a Mr. Fetherston, parson of a place called Annamoe about seven miles from Wicklow. "It was in this parish," says Sterne, "during our stay, that I had that wonderful escape, in falling through a mill-race whilst the mill was going, and being taken up unhurt; the story is incredible, but known for truth in all that part of Ireland, where hundreds of the common people flocked to see me." The incident, it seems, is still traditionally remembered in the district. After this they were in barracks for another year in Dublin—the year 1721—in which, Sterne tells us, he learned to write. The regiment was next ordered to Mullingar, where a collateral descendant of Archbishop Sterne found out his relations, or was found out by them, and, taking them all to his 'castle,' entertained them kindly for a year, and then sent them after the regiment to Carrickfergus. On the journey thither, which took six or seven days, and is described as most rueful and tedious, or shortly after, the youngest boy died, and also another infant, a girl, which had been born when they were last in Dublin. In the autumn of this year (1723), or the spring of the next, Laurence, now ten years old, was sent over to England, and put to school, near Halifax, "with an able master," says he, "with whom I stayed some time, till, by God's care of me, my cousin Sterne of Elvington became a father to me, and sent me to the university." It will be perceived from this detail, that, although Sterne was of English descent and parentage, he was not only by accident a native of Ireland, but spent in that country a considerable part of his early boyhood. No doubt some effect was produced upon his opening powers of thought and observation, by his having been allowed to run wild, as it were, in that land of wit and whim from his seventh to his tenth year.

His father next followed his regiment to Londonderry, where, says the autobiographical sketch, "another sister was brought forth, Catherine, still living, but most unhappily estranged from me by my uncle's wickedness and her own folly." From Londonderry the regiment was sent out to defend Gibraltar at the siege (in 1727), where Lieutenant Sterne was run through the body by a brother officer in a duel, and only recovered with much difficulty, and with so shattered a constitution, that when, shortly after, he was sent out to Jamaica, he speedily fell a prey to the country fever, dying at Port Antonio, in March 1731. "My father," says Sterne, "was a little smart man—active to the last degree in all exercises—most patient of fatigue and disappointments, of which it pleased God to give him full measure; he was in his temper somewhat rapid and hasty, but of a kindly, sweet disposition, void of all design, and so innocent in his own intentions, that he suspected no one; so that you might have cheated him ten times in a day, if nine had not been sufficient for your purpose."

Meanwhile Sterne remained with his master at Halifax, to whom, from an anecdote which he relates, his dawning genius seems to have been already clearly discernible, till he was sent by his kinsman to the University of Cambridge, in 1733. He was admitted of Jesus College on the 6th of July in that year; and he took the degree of B.A. in January 1736; and that of M.A. at the commencement in 1740. On leaving the university, in what year has not been stated, he took orders, and his uncle, the Rev. Jaques Sterne, LL.D., a younger brother of his father's, and a well-beneficed clergyman, being a prebendary of Durham and of York, and rector of Rise and of Hornsea cum Riston, procured him the living of Sutton, in Yorkshire. It was in the city of York that he met with the lady whom he married in 1741, after having courted her, as he tells us, for two years. Her name is not known; all that appears is that her Christian name began with L., being probably Lydia, like that of her daughter. She brought him some fortune, but probably of no great amount. Sterne's uncle now procured him a prebend in York cathedral; "but he quarrelled with me afterwards," says Sterne, "because I would not write paragraphs in the newspapers: though he was a party man, I was not, and detested such dirty work, thinking it beneath me: from that period he became my bitterest enemy." Notwithstanding all this virtuous indignation however, Sterne appears to have gone on doing this "dirty work" for his uncle for a very considerable length of time—not much less than twenty years. In a letter to a Mrs. F—, written in November 1759, on the eve of the publication of the first two volumes of his 'Tristram Shandy,' he says, in reply to an inquiry his correspondent had made as to the reason of his turning author, "Why truly, I am tired of employing my brains for other people's advantage. 'Tis a foolish sacrifice I have made for some years to an ungrateful person." It has been asserted that he wrote, or conducted for some time, a periodical electioneering paper published at York in the Whig interest. Soon after his marriage, a friend of his wife's presented him with the living of Stillington, also in Yorkshire; and he tells us he remained near twenty years at Sutton doing duty at both places, which seem to have been within a mile and a half of each other. "I had then," he says, "very good health: books, painting, fiddling, and shooting were my amusements." During all this space, his only publications, or all at least to which he put his name, were two sermons: the first, entitled 'The Case of Elijah and the Widow of Zarephath considered,' in 1747; the second, entitled 'The Abuses of Conscience,' in 1750. This latter is the same which he afterwards introduced in the second volume of his 'Tristram Shandy' as a Sermon of Yorick's: in the preface to the first two volumes of his collected sermons, which appeared the following year, he says, "I suppose it is needless to inform the public that the reason of printing these sermons arises altogether from the favourable reception which the sermon given as a sample of them in 'Tristram Shandy' met with from the world:—that sermon was printed by itself some years ago, but could find neither purchasers nor readers." Both sermons were republished in the collection.

The first two volumes of 'Tristram Shandy' were originally published at York, towards the end of 1759, and were reprinted at London early in 1760. Although anonymous, the work seems to have been known to be Sterne's from the first; and it raised him at once from obscurity to universal notoriety and high literary fame. This and his subsequent publications—two volumes of Sermons in 1760, vols. 3 and 4 of 'Tristram Shandy' in 1761, vols. 5 and 6 in 1762, vols. 7 and 8 in 1765, two more vols. of Sermons in 1766, the 9th vol. of 'Tristram Shandy' in 1767, and the 'Sentimental Journey' in 1768—probably also brought him a good deal of money; and his circumstances were further improved by his being presented by Lord Falconbridge, in 1760, with the curacy of Coxwold, also in Yorkshire, which he calls "a sweet retirement, in comparison of Sutton." His celebrity also, it is to be feared, introduced the Yorkshire parson to new habits of life, and to some kinds of dissipation not quite so innocent as "fiddling and shooting." In 1760 he took a house at York for his wife and his only child, a daughter; but his own time he seems from this date to have spent mostly either in London or on the Continent. In 1762, before the conclusion of the peace, he went to France, whither he was soon after followed by his wife and daughter. Leaving them both in that country, he seems to have in the first instance returned to England, whence, in 1764, he proceeded to Italy, with a view to the recovery of his health, now greatly impaired. He returned to England in the earlier part of 1767, and, having after some time persuaded his wife to come over to him with their daughter, he remained at York till he had written all that we have of his 'Sentimental Journey,' the first part, which he then brought up with him to the metropolis, and published, as has been already stated, in the beginning of the following year. He lived merely to see the work brought out; having died, at his lodgings in Bond-street, on the 18th of March 1768 (not the 13th of September, as is stated on his monument erected some years after in the burying-ground of St. George's, Hanover-square, where he was interred). He had saved nothing, if he did not die in debt; but it is said that, soon after, his wife and daughter being at York during the races, a collection which amounted to a thousand pounds was made for them by some gentlemen there; and they also received a liberal subscription for three more volumes of his Sermons, which were afterwards published. In 1775, after he

mother's death, Sterne's daughter, who calls herself, at the end of the dedication to Garrick, Lydia Sterne de Medalle (having been married to a person of the latter name), published three small volumes of his 'Letters to his Friends,' along with the short autobiographical memoir from which many of the above facts have been taken. Some of the letters in this collection are of a very extraordinary character to have been either published by a daughter, or left for publication, as we are assured they were, by a wife. The same year there appeared, under the title of 'Letters to Eliza,' ten letters addressed by Sterne, in March and April 1767, to an East Indian lady, who is described by the editor as a "Mrs. Elizabeth Draper, wife of Daniel Draper, Esq., counsellor at Bombay, and at present chief of the factory at Surat." Having come to England for the recovery of her health, she and Sterne became acquainted and were greatly taken with each other. Sterne's letters however do not warrant us in concluding that they were attached by any other feelings than those of a very warm friendship. The lady had been dead some years, as well as Sterne himself, when his letters to her were published; and the latter part of her life, the editor tells us, had been attended with circumstances which were "generally said to have reflected no credit either on her prudence or discretion." But whether there is any real ground for this slander we greatly doubt. Mrs. Draper returned to her husband in India after her correspondence with Sterne, and, then making a second visit to England, died at Bristol, and was interred in the cathedral, where there is a marble monument erected to her memory. With the exception of one or two fragments, the only other remains of Sterne that have been printed consist of a second collection of letters, in one volume, which also appeared in 1775; with the addition of a piece of humorous satire entitled 'The History of a Watchcoat,' which however had been published separately about seven years before.

In 1793 Dr. Ferriar, of Manchester, published an Essay in the third volume of the 'Memoirs of the Manchester Literary and Philosophical Society,' afterwards enlarged and published separately in 1798, and again in 1802, under the title of 'Illustrations of Sterne,' with the view of showing that many passages in his writings were suggested by or imitated from various old and commonly neglected authors, especially Rabelais and Burton's 'Anatomy of Melancholy.' In a literal sense, the charge is sufficiently established; there are some passages in Sterne which may be fairly said to be copied from Burton, Rabelais, and others; and the germs of a good many of his thoughts and expressions may be found in their pages. Of course also the general spirit of his wit and turn of writing must have taken something from the sources with which he is thus proved to have been familiar. But however these detections may affect Sterne's reputation for honesty, the question of the originality of his genius is not touched by them. A writer of original genius, under the pressure of haste or indolence, may, if not a scrupulous man, borrow or steal occasionally, as well as the most common-place writer. Sterne, we know, was the reverse of scrupulous; but he may also have had no very felonious intention in the appropriations that are laid to his charge; it will be admitted that he has for the most part really put a new life into what he has thus resuscitated; and he probably thought that in all such cases he gave more than he took. The nature of his writings, it is to be remembered, precluded him from making any formal acknowledgment of his obligations; he could not finish off a chapter in 'Tristram Shandy' with a list of references such as might be appended to a chapter of a history or an article in a dictionary. Beyond all controversy, he is, in his conceptions and delineations separately considered, as well as in his general spirit and manner, one of the most original of writers. His humour is quite as much *sui generis* as that of either Rabelais or Cervantes or Swift. Whatever he may have in common with any or all of these, he has much more in which he differs from them, and that is wholly his own. He is, of all English humourists at least, the airiest and most buoyant. And it is wonderful what a truth and real humanity there is even in his most startling and eccentric creations; how perfectly unity of character and every artistic probability is preserved in each of them; how they all draw our sympathies towards them; how they live like actual existences in our memories and our hearts. It is rather a simple fact than an opinion that the first class of Sterne's *dramatis personæ*, his Uncle Tobys, his Corporal Trims, his Yoricks, rank in that department of our literature next to the Launces and Touchstones, the Malvolios and Justice Shallows, of Shakspeare, and far apart from all else of the same kind in the language. In the mere art of writing also, his execution, amid much apparent extravagance, is singularly careful and perfect; it will be found that every touch has been well considered, has its proper purpose and meaning, and performs its part in producing the effect; but the art of arts, the *ars celare artem*, never was possessed in a higher degree by any writer than by Sterne. His greatest work, out of all comparison, is undoubtedly his 'Tristram Shandy;' although, among foreigners, the 'Sentimental Journey' seems to stand in the highest estimation. But that will hardly be the judgment of any Englishman,—though it may be of some English women.

STERNHOLD, THOMAS, was a native of Hampshire. The date of his birth is not known. He was educated at Oxford. He was groom of the robes to Henry VIII., and retained the same office under Edward VI., in whose reign he died, August 1549.

Sternhold's only claim to distinction is that he was the principal

author of the first English metrical version of the Psalms attached to the Book of Common Prayer. He had undertaken to versify the whole of the Psalms, but completed only fifty-one: the rest were translated by John Hopkins and others. Sternhold's version was not published till after his death—"All such Psalm of David as Thomas Sternholde did in his Lyfe drawe into English Metre," 8vo, London, 1549. He was also the author of 'Certain Chapters of the Proverbs of Solomon, drawn into Metre,' 8vo, London, 1549. The complete version of the Psalms by Sternhold and Hopkins was not published till 1562, when it was first annexed to the Book of Common Prayer, with the title of 'The whole Booke of Psalmes, collected into English Metre, by T. Sternhold, J. Hopkins, and others, conferred with the Ebrue, with apt Notes to sing withal.' The printing was in black letter, and the music consisted of the melodies only, without base or other part. Many of the best melodies were adaptations from the German and French.

The Reformation introduced metrical versions of the Psalms. The Earl of Surrey, who was beheaded on the 19th of January 1546-7, translated some of the Psalms and Ecclesiastes into verse, which, together with a few poems, were printed by Dr. Percy, but never published, the whole impression having been consumed in the fire which destroyed the printing-office of Mr. Nichols in 1808. Sir Thomas Wyatt also published 'Certayne Psalmes, chosen out of the Psalmes of David, commonly called vij. Penytentiall Psalmes, drawn into Englyshe Metre; whereunto is added a Prolog of the Authore before euery Psalm, very pleasant and profettable to the godly Reader,' 8vo, London, 1549. In the same year was published 'The Psalter of David, newly translated in Englyshe Metre, in such sort that it may more decently and with more delight of the mynd be reade and songe of al men; whereunto is added a Note of four parts, wyth other thynges,' &c., London, 1549. "Then," as Campbell, in his 'Specimens of English Poetry' (vol. i., 'Essay on English Poetry'), observes, "then flourished Sternhold and Hopkins, who, with the best intentions and the worst taste, degraded the spirit of Hebrew Psalmody by flat and homely phraseology; and mistaking vulgarity for simplicity, turned into bathos what they found sublime. Such was the love of versifying holy writ at that period, that the Acts of the Apostles were rhymed and set to music by Christopher Tye." Tye's book is entitled 'The Actes of the Apostles; translated into Englyshe Metre, and dedicated to the Kynge's moste excellent Majestye, by Cristofer Tye, Doctor in Musyke and one of the Gentylnen of his Grace's most honourable Chappell; wyth Notes to eche Chapter, to synge and also to playe upon the Lute, very necessary for students after theyr studye to fyle theyr wyttes, and also for all Christians that cannot synge to read the good and godlie storyes of the Liues of Christ hys Apostles,' sm. 8vo, Lond., 1553. See further, Warton's 'Hist. of English Poetry,' vol. iii., 149-57, &c., ed. 1840.

STESICHORUS, one of the earliest and most celebrated lyric poets of ancient Greece. The few and fragmentary accounts which we have of him, are not only in direct contradiction to one another, but are manifestly interwoven with various mythical elements. All accounts however agree that he was a native of Himera in Sicily, and son of Euphemus. (Plat., 'Phædr.', p. 244; Steph. Byz., s. v. *Μαραυπός*.) Among the various statements of the date of his birth, the most probable is that it was about B.C. 643. He lived to the age of eighty-three, his death having probably taken place in B.C. 560. In his later years therefore he witnessed the tyranny of Phalaris, against whom he is said to have cautioned his fellow-citizens in an apologue called the 'Horse and the Stag.' (Aristot., 'Rhet.', ii. 20; Conon, 'Narrat.', 42; comp. Horat., 'Epist.', i. 10, 34, &c.) The population of Himera consisted of Zancleans and Syracusans, but the family of Stesichorus had come to the colony from Metaurus. He is said to have been blind for some time, and, according to the story, this punishment was inflicted on him for having offended by his poems the shade of Helen. His original name was, according to Suidas (s. v. *Στεσιχορος*), Tisias, and he assumed the name of Stesichorus as indicating the art to which he mainly devoted his life, that is, the art of training and directing the solemn choruses at the religious festivals. This art appears to have been hereditary in his family, which may be inferred from the fact that, according to some writers, he was descended from Hesiod, and that after his death there occur two Himeræans of the same name, who were likewise distinguished in this art. (Marm. Par., 'Ep.', 50 and 73.) But Stesichorus Tisias was the most celebrated of the family. It was he who gave to the choral songs the artistic form which was subsequently brought to perfection by Pindar. Before his time a chorus simply consisted of strophes and antistrophes. Stesichorus added the epode, during the recitation of which the choruses stood still. The movements and arrangement of the chorus-dancers were likewise settled by him in a manner which was afterwards observed by other teachers of the chorus and poets, and lastly, he introduced a greater variety of characteristic metres than had been hitherto used in the composition of choruses, and had them accompanied by the cithara. In short, Stesichorus was regarded by the ancients as the creator of the perfect form of this species of poetry, although his choruses were much more simple than those of later times, and bore greater resemblance to epic poetry. The dialect which he used was that of the Epos, interspersed with Dorisms. The subjects of his poetry were all taken from the mythical and heroic ages of Greece, as

Quintilian (x. i. 62) states, and as is clear from the titles and fragments still extant. Some of these epico-lyrical choruses were very long: thus the 'Oresteia' is said to have consisted of two books, and the series of scenes representing the taking of Troy, on the so-called Iliac Table, was taken from this poem. The greater part of these choruses must have consisted of epic narrative; but owing to the solemn character of choral poetry in general, the tone of the narrative is more exalted than in an ordinary epic poem. Quintilian says that he represented his heroes with their appropriate dignity, and that he might have rivalled Homer himself if he had kept within bounds, and not indulged in an exuberance of words, and not given the reins too much to his imagination. This censure is perfectly justified by the extant fragments.

Besides his choruses Stesichorus composed peans and hymns which were of a more purely lyrical character. He is also the first Greek poet who wrote erotic poems containing celebrated love stories. The bucolic poetry of Sicily was likewise indebted to him, as he raised it from a rude and unpolished state to classical perfection.

Stesichorus, whom the ancients always mention with high admiration, is as a lyric poet totally different from what we usually understand by this term, for his works did not contain any effusions of his own feelings and thoughts, nor did they even, as it would appear, bear any relation to the time and circumstances in which he lived; the subjects were stories belonging to past ages, and taken either from the early traditions of Greece, or from the legends current among the Sicilian peasantry.

After his death the Himeræans erected a statue, which represented him as a man weighed down by old age, with a book in his hand. (Cic., 'c. Verr.', ii. 35.) Catana disputed with Himera the honour of possessing the tomb of Stesichorus, and magnificent monuments in honour of him were erected in both places.

The fragments of Stesichorus have been collected by J. A. Suchfort, 4to, Göttingen, 1771, and by Blomfield, in the 'Mus. Crit.', No. 6. The best collection however is that by Kleine, which was published in 8vo, Berlin, 1828, under the title, 'Stesichori Himerensis Fragmenta collegit, Dissertationem de Vita et Poesi Austeris præmisit, C. Fr. Kleine.' The yare also contained in Gaisford's 'Poet. Græc. Minor.' (Müller, *Hist. of the Lit. of Ant. Gr.*, i. p. 197-203; Bode, *Gesch. der Lyrischen Dichtkunst der Hellenen*, ii., p. 40-85.)

STEUART, SIR JAMES, born at Edinburgh, October 21, 1712, was the only son of Sir James Steuart, solicitor-general for Scotland, under Queen Anne and George I. After being admitted at the Scotch bar at the age of twenty-four, he proceeded to the Continent, where he spent several years, and at Rome was introduced to the young Pretender. He was unfortunately called to Edinburgh by the illness of his wife at the period of the rebellion of 1745, where his intercourse with Charles Edward was resumed, though he took no part in promoting his designs. After the battle of Culloden he found it prudent to retire to the Continent, where he remained for the next seventeen years. In 1763 he was permitted to return to his native country on the understanding that he would not be molested so long as he remained quiet, but it was not until 1771 that he received a free pardon. Having settled at Coltness, the seat of his family, in the county of Lanark, he finished the most important of his works, on which he had been engaged during his long exile. It was purchased by Andrew Miller, the bookseller, for 500*l.*, and appeared in London, in 1767, in two quarto volumes, entitled 'An Inquiry into the Principles of Political Economy.' As the British law of copyright did not extend to Ireland, an edition in three volumes octavo was published in Dublin in 1770, which is said to have been circulated rather extensively in the British colonies; and in 1770 a second edition of the work was called for in England. He wrote also on the coinage of Bengal; on a plan of uniform weights and measures; and while on the Continent published in French, a 'Vindication of Sir Isaac Newton's Chronology;' and he was also the author of several metaphysical disquisitions, the two principal ones being on Beattie's 'Essay on Truth,' and Mirabaud's 'System of Nature.' He died in November 1780, aged sixty-seven. His only son, General Sir James Steuart, erected a monument to his memory in Westminster Abbey, and in 1805 he published a complete edition of his father's works, in six volumes octavo.

It is remarkable that Adam Smith, whose work on the same subject appeared nine years after Steuart's, has not once referred to his predecessor. He is stated to have said that he understood Sir James's system better from his conversation than his volumes ('Life of Sir J. Steuart'); and Mr. McCulloch remarks, that his statements and reasonings are "singularly perplexing, tedious, and inconclusive," though he adds that his work "is by no means destitute of enlarged and ingenious views." The first book treats of population and agriculture; the second, of trade and industry; the third, of money and coin; the fourth, of credit and debts, and incidentally of interest and banks; and the fifth book relates to taxes. At the end of each book there is a useful resumé of the argument. The first book has the merit of placing the theory of population in nearly the same light as that in which it is now generally viewed. The author's want of confidence in the efficacy of the commercial principle is in striking contrast with the views of Adam Smith. He proposed that granaries should be established for the purpose of collecting stores of corn in cheap years and selling them in dear years. But the work is now entirely super-

seded, and is interesting chiefly in connection with the history of political economy.

STEVENS, GEORGE ALEXANDER, was born in London, and brought up to a trade, which he deserted at an early age for the profession of a strolling player, in which he continued several years, chiefly in the Lincoln company. In 1751 he had an attack of illness, and published a poem entitled 'Religion, or the Libertine Repentant.' In 1752 the Libertine had ceased to be repentant, and obtained an engagement at one of the Dublin theatres, where he produced a burlesque tragedy, called 'Distress upon Distress.' In 1753 he was engaged for Covent Garden Theatre, and came to London. Stevens was not a good actor, but he wrote songs which he sang at convivial societies, where he and his songs were much admired. He led a life of dissipation, was generally necessitous, and always extravagant. In 1760 he published a novel, 'The History of Tom Fool,' 3 vols. 12mo.

The first sketch of the work by which Stevens is chiefly known, the 'Lecture on Heads,' was intended for Shuter the actor, to be used at his benefit; but he did not avail himself of it. Stevens then enlarged the plan and improved the details, and having furnished himself with the necessary apparatus of heads, &c., in 1763, or thereabouts, he began to perform it in the principal towns of England and Scotland with great success and a large profit. He afterwards went to North America, where he was not less successful than he had been in England. After a stay of about two years he returned, and then proceeded to Ireland. In a few years he realised about 10,000*l.* In 1766 he produced a 'Supplement; being a New Lecture upon Heads.' It was only performed six nights. In 1770 he brought out a burletta, 'The Court of Alexander,' which was set to music by Dr. Fisher, but added nothing to the fame of either author or composer. In 1772 he published his 'Songs, Comic and Satirical,' 12mo, Oxford. In 1773 he exhibited 'A Trip to Portsmouth.' After giving his 'Lecture' a few times more, he sold it to Lee Lewis, who, with the assistance of Mr. Pilon, made some improvements, and continued to perform it with tolerable success for some years. Meanwhile Stevens's faculties began to fail, and he sank into a state of fatuity, in which he continued several years, till his death, which took place September 6, 1784, at Biggleswade, in Bedfordshire, or, according to the 'Biographia Dramatica,' at Baldock, in Hertfordshire. After Stevens's death was published, in 1788, 'The Adventures of a Speculist; compiled from the Papers of G. A. Stevens: with his Life, a Preface, and Notes, by the Editor.'

Stevens's 'Lecture on Heads' has a thin sprinkling of wit, many bad puns, much caricature, and a good deal of satire more extravagant than forcible; but the absurdities of dress, manners, modes of speaking, and other peculiarities of the day, were exhibited with so much liveliness, if not truth, as to render the performance exceedingly attractive. One of the best bits is perhaps the report of the trial, 'Bullum versus Boatum,' 'Daniel versus Dishclout' is not so good. Stevens's 'Songs, Comic and Satirical,' amount to more than a hundred. They were considered classical by the choice spirits of that time, being filled with heathen deities, Venus, Cupid, Mars, Bacchus, and so forth, together with personifications of the virtues and vices. They are chiefly bacchanalian and amatory, several are satirical, a few licentious, but not one 'comic.' Only one has retained its popularity, 'The Storm,' which is indeed the only one which deserves to be popular. It appears in Stevens's Songs as 'The Marine Medley,' but it has since been considerably altered. (*Life*, attached to Stevens's Works; Baker, *Biographia Dramatica*.)

STEVENS, RICHARD JAMES SAMUEL, a composer of numerous glees, many of which display the most brilliant traits of genius, was born in London, about the year 1753, and educated in St. Paul's Cathedral, under Richard Savage, almoner and master of the choristers. His first appointment was as organist to the Temple Church. In 1795 he succeeded Mr. Jones in the office of organist of the Charterhouse; and in 1801, on the death of Dr. Aylward, was elected professor of music to Gresham College. In 1782 he gained the prize-medal from the Catch Club for a serious glee, and another in 1786 for a cheerful glee. These, with many more compositions of the same class, particularly his five-voiced glee, from Ossian, 'Some of my heroes are low,' in which the poetry and science of music are equally blended, speedily and deservedly obtained the stamp of public approbation, which they will never lose so long as vocal harmony shall be admired. Mr. Stevens published three sets of glees and some songs, and edited a useful collection of anthems, &c., in three folio volumes. He died in 1837, leaving one son.

STEVENSON, ROBERT, the celebrated engineer of the Bell Rock Lighthouse, was born at Glasgow on June 8, 1772. His education was conducted under the care of his mother (his father having died when he was young), and when completed he was placed with Mr. Thomas Smith, of Edinburgh, who had projected the mode of improving the illumination of lighthouses by the substitution of oil lamps with parabolic mirrors for the open coal-fires. When that gentleman was appointed engineer to the Northern Lighthouse Commissioners, Stevenson became his assistant; and when only nineteen had the superintendence of the construction of the lighthouse on the island of Little Cumbray, in the Frith of Clyde, between the southern point of the isle of Bute and Kilbride on the coast of Ayr. In 1797, having a short time previously succeeded Mr. Smith as engineer to the Northern

Lighthouse Commissioners, he made his first tour of inspection, and afterwards introduced a still greater improvement on the illumination of lighthouses by means of the catoptric principle, and by adopting various means to distinguish one lighthouse from another. In 1807, an Act having been obtained in the previous year, he commenced the construction of the Bell Rock Lighthouse, on a rock in the North Sea, a few miles off Arbroath in Forfarshire, on which the light was exhibited for the first time on Feb. 1, 1811. The rock being extremely small, and almost entirely covered, even at low-water, except in spring-tides, offered great obstacles to the construction, but they were successfully overcome, and an account of the details of the erection and structure, illustrated with plates, was published at Edinburgh in 1824. A controversy has arisen as to the originality of Mr. Stevenson's plans, into which we cannot enter, but it is certain that much of the merit arises from the mechanical means adopted to secure a firm and enduring foundation, and this was undoubtedly done by Mr. Stevenson. In 1814, on another tour of inspection, Sir Walter Scott was a companion of the engineer and commissioners in the voyage, which afforded many materials for descriptions in Scott's poem of 'The Lord of the Isles,' and in the novel of 'The Pirate.' Mr. Stevenson held the situation of engineer till 1842, during which time he erected no fewer than 23 lighthouses. He was also employed in numerous engineering works in various parts of the United Kingdom, but chiefly in Scotland, in connection with the improvement of rivers and harbours, and the erection of piers and bridges, into which latter class of works he introduced some new principles of construction. He likewise surveyed a line of railway between Edinburgh and Glasgow, which, though not adopted, was admitted to be extremely clever. He was employed to report on other lines of railway, and he suggested the use of malleable iron rails instead of the cast-iron rails and tramplates previously in use. In 1828 he became a member of the Institution of Civil Engineers, and while he lived was looked upon as an authority of great weight on all questions connected with the improvements of ports, harbours, and rivers. He died on July 12, 1850, when the Commissioners of Northern Lighthouses passed a resolution acknowledging his great services and merits. He left sons, whom he had brought up to his own profession, who worthily sustain the reputation of their father.

STEVIN, SIMON, a celebrated Flemish mathematician, was born about the middle of the 16th century, at Bruges; it has been ascertained that he went to reside in Holland, where he obtained the title of mathematician to Prince Maurice of Nassau, and that he was made civil-engineer to the States, the charge of constructing and repairing the dykes being confided to him. It is to be regretted that no other particulars concerning his life have been preserved: even the year of his death is unknown.

He wrote a treatise on arithmetic, which was printed at Antwerp in 1585; and in the same year he published a collection of geometrical problems in five books. He appears to have studied algebra with great attention, and to have made in that branch of science several improvements. The principal of these consist in the employment of fractional indices, as exponents of the roots of quantities (the use of integers as the exponent of powers had previously been introduced by Stifel [STIEFEL, MICHAEL]), and in a general but laborious method of approximating in numbers to the root of any equation. He represented the unknown quantity by a small circle; and a number, either integral or fractional, contained within the circle, indicated a power or root of that quantity.

In 1586 Stevin published in quarto, and in the Dutch language, his tract on statics and hydrostatics, in the preface of which he endeavours to prove that the Dutch language is more ancient than any other; and in the same year he published, also in Dutch, his 'New System of Fortification.' In 1589 he brought out a tract entitled 'De Motu Cœli,' and ten years afterwards, in Dutch, a treatise on navigation: the latter was translated into Latin by Grotius, and published at Leyden in 1624.

In 1605 W. Snell translated into Latin, and published in two volumes, folio, the greater part of the works of Stevin, but he did not live to complete the undertaking. In 1634 however Albert Girard published, at Leyden, the whole of the works in French: this edition contains the treatise on arithmetic; the six books of the algebra of Diophantus (the first four books were translated from the Greek by Stevin, and the others by Girard), and an explanation of the tenth book of Euclid; tracts on cosmography, geography, and astronomy, the practice of geometry, statics, optics, castrametation, a new system of fortification, and a method of fortifying places in which manœuvres of water, by means of sluices, were to contribute to the defence.

The work on statics contains a simplification of the demonstration of Archimedes relating to the fundamental property of the lever. Stevin represented the two weights at the extremities of the lever by parallelopipeds suspended horizontally by strings applied at their middle points: the breadths and depths of these parallelopipeds were equal, but the length of each was double the distance from the fulcrum of the lever to the point from which the other was suspended. When the parallelopipeds were placed end to end, the middle of the whole was vertically under the fulcrum of the lever, and therefore the latter was necessarily in equilibrio, while the weights of the separate parallelopipeds were inversely proportional to the lengths of the arms from whose extremities they were suspended.

In order to exhibit the conditions under which a body is in equilibrio on an inclined plane, Stevin supposes a triangular prism to be placed with one side parallel to the horizon, so that the other sides may form a double inclined plane; and he imagines a string, on which are placed a number of equal weights, at equal distances from one another, to be laid on those sides across the upper edge of the prism: each part of the string of weights extends from the edge to the base of the prism; or the two extremities of the string are at equal distances below that base. He concludes that the string so placed would be at rest on the two planes, because if it were to begin to move (the string of weights being of infinite length) it would move for ever, which he supposed to be absurd, so that the tendency of the weights to descend on one side must exactly counterbalance the like tendency of those on the other side; and evidently the sum of the weights lying on one plane is to the sum of the weights lying on the other, in the same proportion as the lengths of those planes respectively, the lengths being measured in directions perpendicular to the edge of the prism. Hence he infers that the same power is required to support different bodies on single inclined planes of equal heights, when the weights of the bodies are proportional to the lengths of the planes. If one side of the prism is in a vertical position, the tendency to descend is evidently equal to the weight; and hence, on every inclined plane, the sustaining power, in a direction parallel to the plane, is to the weight of a body, as the height of the plane is to its length.

From this theory, also, Stevin discovered that an equilibrium between three forces acting at one point in a body, takes place when the forces are parallel and proportional to the three sides of a triangle. His demonstration however extends only to the case in which the directions of two of the forces are at right angles to one another; for he states that when a body is supported on an inclined plane, and retained by a force acting parallel to the plane, it is in the same circumstances as if it were suspended by two strings, one perpendicular and the other parallel to the plane; and he concludes that the ratio of the weight of the body, to a force parallel to the plane, is as the hypotenuse to the base of a right-angled triangle formed by three lines, one in a vertical direction, another perpendicular to the plane, and the base or third side being in a horizontal position.

Stevin is said to have contrived a car which moved by means of sails, on the flats of Holland, with more rapidity than any carriage drawn by horses.

STEWART, MATTHEW, D.D., a mathematician of North Britain, who attained great distinction by his researches in the higher branches of science, and the success with which he cultivated the ancient geometry. He was born at Rothsay, in the Isle of Bute, in 1717; and having received the best education which a grammar-school afforded, he prosecuted his studies in philosophy and theology at the University of Glasgow, into which he was admitted in 1734. Dr. Simson, who then occupied the chair of mathematics in that university, is said to have early discerned the predilection of Stewart for mathematical researches; and his lectures appear to have given his pupil that decided preference for the ancient over the modern analysis, which he retained to his death.

On going to reside in Edinburgh, Mr. Stewart attended the lectures of Maclaurin, till, having adopted the church as a profession, he was appointed to the living of Roseneath, in the west of Scotland. In 1747 however, on the death of that mathematician, he was elected to succeed him; and he held the post of mathematical professor in the University till 1772, when his health began to decline. His son, the late Dugald Stewart, from that time began to assist him by occasionally delivering lectures; and three years afterwards the young mathematician and philosopher was appointed joint professor with his father. In 1775 he retired to an estate in Ayrshire, where he spent nearly all the rest of his life in cultivating science as an amusement. He was elected a Fellow of the Royal Society in 1764; and he died in 1785, being then sixty-eight years of age.

The first efforts of Dr. Stewart in science were to extend the subject of what is called the 'locus ad quatuor rectas' to the powers of any number of perpendiculars drawn to an equal number of lines. While engaged in this pursuit, after his removal to Roseneath, he discovered most of those propositions which, in 1746, he published under the title of 'Geometrical Theorems.' These, which are mostly porisms, are sixty-nine in number, but five only of them are accompanied by demonstrations. Dr. Stewart is said to have suppressed, for the sake of brevity, the proofs of the others; but several of the theorems were afterwards demonstrated by Dr. Small, and Mr. Lowry has given, in Leybourne's 'Mathematical Repository,' demonstrations of all those which admit of investigation by the processes of the ancient geometry.

In the first volume of the 'Essays of the Philosophical Society of Edinburgh,' there is a paper by Stewart containing some propositions founded on a theorem in the fourth book of Pappus; and, in the second volume of the same work, he gave a solution of 'Kepler's problem,' in accordance with the methods of the ancients. This he accomplished by the application of a property of curves, from which the approximations may be carried to any degree of accuracy in a series of rapidly converging results. In 1761 he published his 'Four Tracts, Physical and Mathematical,' in which there is an attempt to investigate the higher parts of mixed mathematics in a manner con-

formable to the spirit of the Greek geometry. The first tract contains the theory of centripetal forces in a series of propositions, which, admitting the quadrature of curves, are rigorous; and in the remainder of the work Dr. Stewart considers the intricate subject of the perturbations. His design was to carry on the approximations for determining the elements of the orbits according to the method in which Newton, Machin, Walsley, and other eminent mathematicians had begun the investigations; but the work stops far short of the ends now proposed in the researches of physical astronomy.

In the following year he published a series of geometrical propositions, which are investigated analytically, and afterwards demonstrated by synthetical processes: they are entitled, 'Propositiones More Veterum demonstratæ,' and this designation is said to have been given to them by Dr. Simson. His last work was an 'Essay on the Sun's Distance;' and this problem he endeavoured to treat according to the method of the ancients, but the subject is too intricate to admit of their analysis being applied to it, though the work exhibits all the ingenuity which might be expected from the learned author. Making use of the movement of the moon's apses as an effect of solar perturbation, he determined the parallax of the sun to be 6'9", and it is now known to be about 8". Being obliged, in order to diminish the complexity of the investigation, to reject quantities which were supposed to have but small influence on the result, considerable errors exist in the steps; and, except that compensations occurred, the parallax might have appeared to be three times as great as it is in reality. The 'Essay' was much animadverted on by Dawson and Landen during the life of the writer; and since the true parallax of the sun has been ascertained from the transit of Venus, in 1769, it is admitted that no reliance can be placed on the determination of such an element by inductions drawn from the effects of the mutual attractions exercised by the bodies of the solar system.

STEWART, DUGALD, the son of Dr. Matthew Stewart, the subject of the preceding article, was born in Edinburgh, on the 22nd of November 1753. He was educated at the high school of Edinburgh, and the progress he made in classical and mathematical attainments was such as to excite the warmest expectations of future success. In the winter of 1772, having that year attended the course of lectures delivered by Dr. Reid at Glasgow, his love for metaphysical speculation was roused, and he wrote and read to a literary association an 'Essay on Dreaming,' which he afterwards incorporated in his 'Elements of the Philosophy of the Human Mind' (vol. i. chap. v., § 5). He was then in his nineteenth year. But still more decisive was the fulfilment of his early promise a short time afterwards, when, having completed his Glasgow studies, he assumed the charge of the mathematical classes hitherto taught by his father in the University of Edinburgh, and on coming of age he was appointed joint mathematical professor with his father.

He taught with great success until his five and twentieth year, when an occasion presented itself for his resuming his favourite studies under the most advantageous position. Dr. Ferguson, the then professor of moral philosophy at Edinburgh, having been sent as secretary to the commissioners to conclude peace with North America, Dugald Stewart was called upon to fill his place during his absence. He accepted the invitation and during the session 1778-79, besides teaching his own classes of mathematics, and one on astronomy, he lectured on ethics for Dr. Ferguson; thinking over every morning the subject of lecture for the day, and addressing his pupils extempore. His amiable and elegant manner was much relished, and his lectures gave so much satisfaction, that on the retirement of Dr. Ferguson, in 1785, he was appointed his successor. He had previously had the care of a few private pupils of rank whom he received into his family. He was thirty-two years of age when he entered upon his new professorship. His mind had become enlarged and enriched with a discursive, desultory, but valuable erudition, his opinions had become fixed, and the habitual grace and mildness of his manner had become still more winning from his increasing confidence and facility of exposition. He became very popular. His lecture-room was crowded, his fame spread over Great Britain before he had published anything, and, as Sir James Mackintosh truly remarks, "without derogation from his writings it may be said that his disciples were among his best works." His first work therefore came heralded by fame, and it scarcely disappointed anticipation. It was the first volume of his 'Elements of the Philosophy of the Human Mind,' which appeared in 1792. The subject was treated with an elegance and eloquence of diction and a richness of illustration which more than compensated the majority of readers for its deficiencies in profundity and logical sequence of ideas; indeed its very faults were helps to its popularity, because it satisfied the current tendency to reaction against the sensualist school, and at the same time made no great demand on the speculative faculty of its reader. The philosophy was that of Reid, but rendered attractive by those arts of composition to which Dugald Stewart paid such fastidious attention; yet of this philosophy, and of Dugald Stewart's works generally, we may say with Professor Cousin, "it was an honourable protestation of common sense against the extravagancies and extreme consequences of sensualism. But it proceeded no further in its path than did Locke in his. The Scotch philosophy limited itself to the re-establishment of some of the forgotten elements of human nature, and some of the fundamental ideas of reason, which it described such

as they now incontestably appear; but it did not attempt to account for them, nor to ascend to their origin, nor to follow them in their legitimate applications; it had a commencement of psychology, but no regular logic; it had neither a metaphysic, nor a theodicea, nor a cosmology; it had a little of morals and politics, but no system. The merits of the Scotch, as of Locke, are clearness and good sense; their faults are the absence of any speculative ability, the want of comprehensiveness and of rigorous precision." (*Cours de Philosophie, Intro. à l'Hist. de Phil., Leçon XII.*)

In the following year (1793) Dugald Stewart published his 'Outlines of Moral Philosophy,' a text-book for his pupils: and the 'Life of Adam Smith,' which appeared in the 'Transactions' of the Royal Society of Edinburgh; and which was followed by the 'Life of Dr. Robertson' in 1796, and the 'Life of Dr. Reid' in 1802. They have been subsequently reprinted. His activity was unceasing; and in 1800 he added a series of 'Lectures on Political Economy' to his heavy professional duties, but they were not continued. On several occasions when his colleagues were ill, he gave temporary lectures for them on natural philosophy, logic, and rhetoric. In the winter of 1808-9, from grief at the loss of his younger son, which brought on a severe indisposition, he was obliged to have a deputy to discharge his duties. In the following session, seeing little prospect of recovering his health, he resigned altogether; and in May 1810, Dr. Thomas Brown, his late assistant, was appointed in his place. Dugald Stewart having now retired from public life, lived constantly at Kinneil House, on the Frith of Forth, about twenty miles west from Edinburgh, where he devoted himself to the prosecution of his favourite studies. The fruits of his retirement were not slow in manifesting themselves: in 1810 appeared his first volume of 'Philosophical Essays,' in the preface to which he says, "The state of my health having interrupted, for many months past, the continuation of my work on the human mind, I was induced to attempt, in the meantime, the easier task of preparing for the press a volume of Essays." Yet it is in this work, which he considered the "easier task," that he has best proved his claim to the title of a metaphysician, which is noticed both by Sir James Mackintosh and Professor Cousin ('*Fragmens Philosophiques*,' p. 78); indeed his chief work, as he frankly owns, is rather a collection of such theories pointing towards the common end of throwing light on the structure and functions of the mind, than a systematic treatise, such as might be expected from the title of elements. "It is in essays of this kind," says Mackintosh, "that he has most surpassed other cultivators of mental philosophy. His remarks on the effect of casual associations may be quoted as a specimen of the most original and just thoughts conveyed in the best manner." ('*Dissertation prefixed to Ency. Britan.*,' p. 329.) The 'Philosophical Essays' reached three editions in seven years; the contents of the volume are various and interesting,—on Locke, Berkeley, Influence of Locke on the Philosophy of France; Metaphysical Theories of Hartley, Priestley, and Darwin; on Philological Speculations; on the Beautiful, Sublime, Taste, and Culture of Intellectual Habits. In 1814 the second volume of his 'Elements of the Philosophy of the Human Mind' appeared; but was not so well received, and never, we believe, reached a second edition. In 1815 appeared his celebrated Preliminary Dissertation to the Supplement of the 'Encyclopædia Britannica,' entitled 'A General View of the Progress of Metaphysical, Ethical, and Political Science since the Revival of Letters;' a work for which his discursive reading well fitted him. It enjoys considerable popularity, and chiefly owing to these very qualities, for as a philosophical view of the progress of the metaphysical sciences it is almost worthless. He never once rises to any comprehensive principle. There is no unity in that mass of writing, of criticism, and notes. He never attempts to seize the spirit of each age, and to show how it influenced others. All is isolated. Pleasant and clever as the *adversaria* of some student, but very inefficient if looked on as a treatise or consulted as a history. As a specimen of his carelessness, we may mention the entire omission of Spinoza, a man whose influence on speculative philosophy has been only second to that of his master Des Cartes. His extreme carelessness as to any systematic comprehension of what he was to perform, and his neglect as to arrangement of materials, are, as is remarked by a writer in the 'Quarterly Review,' shown in the author's 'advertisement,' wherein we are told that his original design (as is well known to his friends) was to comprise in ten or twelve sheets all the preliminary matter which he was to contribute to the 'Supplement.' It has now extended to six times this length, and we are informed that he has only discussed one of the three divisions under which he had projected to arrange his subject. We cannot but observe that this fact sufficiently justifies all that we had ventured to say on the desultory and unpremeditated manner in which the work must have been prepared. Yet in the face of this, and of the internal evidence of its desultory nature, Sir James Mackintosh declares this discourse to be "the most splendid of Mr. Stewart's works." ('*Edin. Review*,' Sept. 1816, p. 191. See also a second article by the same hand on this Discourse, '*Edin. Review*,' October 1821, pp. 220-267.)

Stewart remained silent from this period till 1821, when the second part of his 'Discourse' was published, and attracted as much attention as the former, and more hostility, because it was principally occupied with a weak and cavilling attack on Locke and his school. The following year he suffered from palsy, which interrupted his labours till 1827,

when he published the third volume of his 'Elements.' In 1828, a few weeks before his death, he published his 'View of the Active and Moral Powers,' by far the least exceptionable of his works. It is more systematic and contains more new truths than any of his metaphysical writings, and his long acquaintance with the world and with letters enabled him to suggest many obvious but overlooked analyses. It is not a profound, but it is an agreeable book.

Dugald Stewart died on the 11th of June 1828, in the seventy-fifth year of his age, and was buried in the Canongate churchyard, Edinburgh.

We have also to add to the list of his philosophical writings an interesting 'Account of a Boy born blind and deaf,' to which no date is affixed.

The admirers of Dugald Stewart style him the Plato of the Scotch school, to which title he has undoubtedly as much claim as Reid has to that of Socrates. But without having himself discovered any important elements which others had overlooked, without even reducing to a system the discoveries of his predecessors, it cannot be denied that his influence was a beneficial one, for he not only strengthened the weaker parts of the ethical doctrines of Ferguson and Reid (Victor Cousin, 'Fragments Philosophiques,' p. 78), and rendered the metaphysical doctrines of Reid less objectionable and confused, by substituting the "laws of human thought or belief" for the absurd "common sense" or "instinct" which Reid assumed as final arbiters, but he also adorned the school by every charm of mild enthusiasm and elegance of diction, and rendered the study attractive, by enlisting in its cause the aid of much elegant literature and an exquisite taste, at least such as was in those days regarded as exquisite, when an exclusive regard to diction was the exercise of the most refined taste. "Few writers," remarks his friendly critic, "rise with more grace from a plain groundwork to the passages which require greater animation or embellishment. He gives to narrative, according to the precept of Bacon, the colour of the time, by a selection of happy expressions from original writers. Among the secret arts by which he diffuses elegance over his diction, may be remarked the skill which, by deepening or brightening a shade in a secondary term, by opening partial or preparatory glimpses of a thought to be afterwards unfolded, unobservedly heightens the import of a word, and gives it a new meaning without offence against old use." ('Edin. Rev.' 1816.) Sir James Mackintosh afterwards repeated this verbatim in his 'Preliminary Dissertation,' p. 321; so that it may be regarded as his deliberate judgment. A want of depth, indeed of speculative power, is everywhere manifested in Stewart's writings, and the most glaring contradictions to his own principles impeach his logical rigour; but the style and his calm earnestness always render his works interesting to students.

STIEGLITZ, CHRISTIAN LUDWIG, was born on the 12th of December 1756, at Leipzig, in which city both his grandfather and father were persons of station, the former, who died in 1758, having been burgo-master, and the other holding the office of proconsul. Surrounded at home with objects of art—for his father possessed both a collection of pictures and a cabinet of medals and minerals—Stieglitz imbibed from them almost in his childhood those tastes which he so assiduously cultivated throughout life, although they were altogether remote from his other studies and occupations. Though he lost his father early (May 4th, 1772), in conformity with his wishes he applied himself to jurisprudence and other studies at the university of his native city, where he attended the courses of all the most eminent professors of that day—Ernesti, Winkler, Platner, &c. He took his Bachelor's degree in 1777, and in 1784 that of Doctor of Laws, on which latter occasion he produced his dissertation 'De Causis cur Jus Feudale Germanicum in Germania neglectum sit.' In the meanwhile he devoted all his leisure to literature and art, and in 1775 made his first essay in poetry, in which, if he did not distinguish himself, he continued occasionally to exercise his pen, for he contributed many pieces to a collection of *Kriegslieder*, or War-Songs, published in 1778; and in 1801 he published 'Wartburg,' a poem in eight cantos, long since forgotten. He also published some tales of romance and chivalry; but it was in a very different field from that of the poet or novelist that he gained his reputation and rendered essential service to a branch of literature which is more indebted to the labours of non-professional writers in it than of those who practise the art. It was in 1786 that he appeared, though then anonymously, as an architectural writer, with his 'Versuch über die Baukunst.' He next contributed to the 'Neue Bibliothek der Schönen Wissenschaften' several essays and minor treatises on various subjects relative to the æsthetics of architecture and decoration, one or two of which appear to have been also published separately. In 1792, the same year in which he was made a member of the *Rathsschule*, or Council of Leipzig, he first brought out his 'History of the Architecture of the Ancients' ('Geschichte der Baukunst der Alten'), and immediately afterwards engaged in a work of some extent, namely, his 'Encyclopædia of Civil Architecture,' in 5 vols, the first of which appeared in 1792, the last in 1798. In the interim he brought out a work upon Modern Gardening, which came to a second edition in 1804. His next production was his 'Artistische Blätter' (1800), a collection of papers on Decoration. In 1804 he began to publish, under the title of 'Zeichnungen aus der schönen Baukunst,' a series of engravings, plans, and elevations,

intended as select specimens of modern architecture; but though it was exceedingly well received—for not only did it reach a second edition, but there was also a French one—the choice compromised both his judgment and taste, the majority of the specimens partaking of that feeble and insipid mannerism which had just before prevailed in this country; and a great many of the subjects were taken from English publications—those for instance of Adam and Lewis—or showed English buildings, and among others such examples as the Trinity House, London, and the County Hall at Chelmsford. How he could reconcile them with his own theoretical principles is difficult to be understood.

Whether it was owing to his being satisfied with what he had then done for architecture, or afterwards dissatisfied with his last work, some years elapsed before he again published anything on the subject, turning in the interim to studies more professedly archaeological; the fruits of which were an essay on 'Medals and Collections of Coins' (1809), a treatise on the 'Pigments employed by the Artists of Antiquity' (1818), and 'Archæologische Unterhaltungen' (1820). In the same year with the last-mentioned publication came out his excellent work on 'Ancient or Mediæval German Architecture' ('Alt-Deutsche Baukunst'), which contributed not a little to direct attention to and inspire that taste for mediæval art and its monuments which has since struck root and grown up in Germany. His next work was his 'Geschichte der Baukunst,' a valuable compendium of the history of architecture from the very earliest periods, and among all nations; the first edition of which appeared in 1827, and the second, a greatly enlarged one, in 1837. Contrary to the opinion of Hirt [HIRT, ALOYSIUS], Stieglitz contends very strongly that Grecian architecture must have derived its principles and characteristics from an original construction of stone, and not of timber or wooden framing. The list of his literary labours is farther extended by his 'Distributio Nummorum familiarum Romanarum,' 1830, and his 'Beiträge zur Geschichte der Ausbildung der Baukunst,' 2 vols., 1834; and it would be prodigiously increased were it possible to enumerate all the various articles which he contributed to the 'Hermes,' the 'Kunstblatt,' and other journals, and to Ersch and Gruber's *Encyclopædia*. After having held the office of proconsul in the magistracy of Leipzig, and other appointments connected with the town government, Stieglitz retired from public duties in 1830, though he retained the title and distinction of proconsul; and in 1834 the 'jubilee' or fiftieth anniversary of his obtaining his Doctor's degree was celebrated by his townsmen, and a silver medal was struck and presented to him on that occasion. He died on the 17th of July 1836.

In Förster's 'Bauzeitung' for 1838 there is a portrait of Stieglitz accompanying a full memoir of him, which we have made use of for this article.

STIFEL, or STIFELIUS, MICHAEL, a celebrated German algebraist of the 16th century, was born at Eisingen, in Saxony; the year of his birth is not known with certainty, but, according to Vossius, it was in 1509. He was a Lutheran clergyman, and a contemporary of Cardan; and it may be mentioned as a remarkable circumstance, that algebra should at the same time have been diligently studied both in the north and south of Europe, apparently without any intercourse being maintained among the persons who were engaged in the pursuit. Of the men who distinguished themselves in the north may be mentioned Rudolph, Stifel, Scheubel, and Stevin; and among those of the south were Ferreus, Cardan, Tartaglia, and Ferrari. The notation employed in Germany differed in some respects from that which was used in Italy; and from this circumstance it has been imagined that the mathematicians of the two countries obtained the first principles of the science from distinct sources.

Stifel's first publication was a treatise on algebra, in German; but in 1544, that is, a year before Cardan's rule concerning cubic equations came out, he published at Nuremberg, in Latin, the 'Arithmetica Integra,' which is his principal work. It is divided into three books, of which the first is a treatise on arithmetic; the second, a commentary on Euclid's tenth book; and the third, a treatise on algebra. He appears to have been the first who used the signs + and - between quantities, in order to indicate addition and subtraction: the first power of the 'res' (the unknown quantity) in an equation he designates the root of the equation, and represents it by a letter of the alphabet: he employs the initial letters of the words, and also the numbers 2, 3, &c., both positive and negative, to denote the corresponding powers of the quantities to which they are affixed, and he calls the numbers so applied the exponents of the powers, as they are called at present. He uses the radical sign to designate a root, but he has no mark to denote equality, the word itself being employed for that purpose.

In one of the chapters he demonstrates, from the nature of arithmetical and geometrical progressions, that the addition and subtraction of the exponents of powers correspond to the multiplication and division of the numbers whose power they indicate; and this may be considered as one step towards the discovery of logarithms; but in expressing the exponents of the higher powers of quantities, he combines those of the lower powers by multiplication instead of addition: this last method was that of Diophantus. Thus, in order to denote the sixth power of any quantity, he uses terms indicating the square of the cube, instead of terms expressing the sum of two third powers.

His method of resolving quadratic equations is by completing the square, as is done at present.

He treats at some length of what are called triangular numbers, that is, of adjacent columns of numbers constituting various progressions: thus the numbers in the first column may form an arithmetical progression beginning with 1, and having unity for the common difference; the second column may begin with 3, and the successive differences of the numbers may be 3, 4, 5, &c.; the third column may begin with 10, and the successive differences may be 10, 15, 20, &c., and so on, the head of each column being opposite to the like number in the adjacent column preceding it. He explains the use of the table in discovering the coefficients of the several terms in any powers of a binomial quantity, and in extracting the roots of numbers; and it may be observed that such tables have since been made to serve several other useful purposes in mathematics.

Stifel wrote also a treatise on the calendar, and a tract on 'Magic Squares.' Like many other learned men of that century, he appears to have spent much time in studying the 'Apocalypse,' and he is said to have predicted that the end of the world would take place in the year 1553. One of his countrymen, also a mathematician, had previously assigned for the time of that event the year 1524; and in Britain, the celebrated Napier found out that it would occur between the years 1688 and 1700. Stifel died at Jena, in 1567.

STIGAND, a Saxon prelate, in great favour with Edward the Confessor, who made him bishop of Elmham, or more properly of the East Angles, the seat of which bishopric is now at Norwich. This was in 1043. Four years after he was translated to Winchester; and in 1052 the Archbishop of Canterbury, Robert "Gemeticensis," being driven into exile, but not formally deposed, Stigand was made archbishop. This was considered an intrusion and irregularity; but the scandal was the greater, inasmuch as Stigand retained his bishopric of Winchester, holding at the same time both those high dignities. He is charged, in consequence of this, with having been inordinately avaricious and ambitious; but this defence has been made for him, that his hold was firmer on the bishopric of Winchester than on the archbishopric, from which he might have been removed had Robert returned. It is said to have been by a stratagem, of which he was the contriver, that the people of Kent obtained from the Conqueror a ratification of some of their ancient customs. The Conqueror disliked him; refused to allow him to place the crown on his head; and forced him in 1067 to accompany him when he returned to Normandy. Finally, the king prevailed upon the pope to send three cardinals to England to inquire into the conduct of Stigand; and several things being proved against him, he was deprived of his dignities and degraded from the clerical order. He was also condemned to perpetual imprisonment; but soon died, being, as is said, starved to death, either by the cruelty of others or by his own voluntary act. He died at Winchester, and was buried there. Lanfranc succeeded him.

STIGLMAYER, JOHANN BAPTIST, the distinguished director of the Royal Bronze-foundry of Munich, was born October 18, 1791, at Fürstenfeldbruck, a small market-town near Munich, where his father carried on the business of a blacksmith. At Fürstenfeldbruck is an old convent founded by Ludwig the Strong, of Bavaria, in atonement for the hasty execution of his innocent wife Mary of Brabant, in 1250. This convent, which had undergone various changes, and had been at various times extensively decorated, was the school and academy of the bare-footed blacksmith's son, though in his time it was a military stable for foals (Militär-fohlenhof). It contained stucco decorations by E. Asam, frescoes by Appiani, statues by Roman Boos, and other works of the last century. The woodcuts of a book on natural history, which, with a catechism and prayer-book, constituted the whole library of his father, and the decorations of the convent were diligently copied by Stiglmayer, who, after many untiring visits (he was obliged to go daily for milk), at length ventured to introduce himself to the superintendent of the establishment, Herr Pfeiffer, who he had heard was not only himself a draftsman, but possessed also a collection of prints. Pfeiffer admired the boy's energy, and gave him some regular elementary instruction in design. After this he was placed by his parents with a goldsmith at Munich, of the name of Streisl, and he attended in the meanwhile the holiday school (Feiertagschule), in which he obtained the first prize for industry and good conduct, amounting to 100 florins (8 guineas), by which he attracted the notice of M. Leprieur, the director of the Bavarian mint, who from this time took much notice of Stiglmayer, procured him admission into the academy in 1810, and became in a manner his patron. From the date of his admission into the academy, he pursued the regular course of study requisite for a statuary and sculptor, and at the same time practised seal and medal engraving. He was very successful in 1814 in a medal with Von Langer, the director of the Academy, on one side, and Moses making the water flow from the rock on the other, for which he was appointed one of the engravers of the mint, and he was sent in 1819, at the king's expense, to Italy to complete his studies.

It was in Rome that Stiglmayer's patron, Ludwig, the late King of Bavaria (then crown prince), first became cognisant of his high abilities, and appears himself to have directed Stiglmayer's attention principally to metal-founding, in preparation for his own great undertakings already projected by him. In reference to this future occupation

Stiglmayer repaired to Naples, to witness the casting of the bronze colossal equestrian statue of Charles III., to be directed by Francesco Righetti and his son Luigi, from the model by Canova; the Italian sculptor's reserve and jealousy however rendered Stiglmayer's journey in vain as regarded its principal object; he did not allow him to see the casting. But in another respect he was fully recompensed; after considerable trouble he obtained permission to erect a smelting-oven in his cellar, and having procured the assistance of Becali, an experienced founder, then to be found in few even of the principal cities of Europe, he undertook the casting of several works himself. The first wholly failed, but the second, a cast from Thorwaldsen's bust of Ludwig I., then crown prince, was completely successful, so much so, that the journeyman, Pasquali, in his ecstasy kissed the lips of the bust before they were cool, and seriously burnt his own. After casting a few other works, and thus perfecting his practical acquaintance with the art, he left Naples for Germany, but on his road he had the misfortune to fall in with some banditti who robbed him even of his sketch-books. He returned to Munich in 1822, but was at this time employed chiefly in his capacity as engraver for the mint, and on some unimportant works of sculpture for the new Sculpture Gallery or Glyptothek then in progress. To the medals of this time belong that in commemoration of the marriage of the Queen of Prussia, for the minister Von Zentner, and the historical medal of the royal family of Bavaria. Among his busts were those of King Maximilian I. and the Queen Theresa, Count Döring, the ministers Baron Von Zentner and Lerchenfeld, Bishop Streber, and others.

In 1824 he commenced preparations for his great series of metal castings, and from this time he was exclusively employed in founding the numerous monumental works which have been executed for Ludwig I., king of Bavaria, some of which are the most extensive castings of modern times. In order to be as well prepared as possible for his arduous tasks previous to casting any great monument, he visited Berlin in 1824, to witness the casting of Rauch's statue of Blücher, by Reisinger, who showed him everything in his power. Stiglmayer's great activity commenced with the reign of Ludwig I., in 1826, in the foundry established and afterwards much enlarged by the king, expressly for his own numerous undertakings in that important branch of art; and he left many, and the most considerable, still unfinished, at his death. He was created in 1839 Knight of the Bavarian order of St. Michael.

The following is a brief summary of his labours: From his own designs—the monument to the Brazilian children Juri and Isabella, and the reclining figure of the Fräulein Von Mannlich, in the cemetery at Munich; the monument of Maximilian I., in Bad Kreuth; and the monument of the parting of Otto, king of Greece, from his mother Theresa, queen of Bavaria, at Aibling; after Schwanthaler—the twelve colossal fire-gilded statues of the ancestors of the King of Bavaria, ten feet high, set up in the new throne-room of the palace of Munich; the statue of General Bekkers for his monument in Munich; the colossal monumental figures of Jean Paul in Bayreuth, Mozart in Salzburg, the Margrave Frederic of Brandenburg in Erlangen, and the Grand-Duke Ludwig of Darmstadt; and the gilt bronze pieces of table-service, with designs from the Nibelungen and Amelungen, for the crown-prince of Bavaria: after Thorwaldsen—the statue of Schiller at Stuttgart, and the colossal equestrian statue of the elector Maximilian I. of Bavaria, at Munich: and after Rauch—the monument of King Maximilian I. of Bavaria, before the theatre at Munich. He executed also the following architectural casts from models made in the foundry, chiefly from the designs of Von Klenze; the obelisk, 100 Bavarian feet high, in commemoration of the 30,000 Bavarians who fell in the Russian campaign of Napoleon in 1812; the bronze gates of the Glyptothek and the Walhalla; the great constitutional column at Gaibach; the interior pediments of the Walhalla, with the northern deities; the gilded candelabra in the new throne-room in Munich; the monument to the brave Oberländer, who fell at Sendling, in the cemetery at Munich; and the tomb of King Maximilian in the royal vaults (Fürstengruft) at Munich, after a design by the architect Ziebland. Besides the above works, which are completed, are the following important monuments which were in progress at Stiglmayer's death:—The colossal statue of Göthe, for Frankfurt, after the model by Schwanthaler; and from the model of the same sculptor, the enormous colossal figure of Bavaria, the largest statue in the world, being nearly sixty feet high, to be placed before the Bavarian temple of Fame, or Ruhmeshalle, which was inaugurated October 8, 1850 [SCHWANTHALER]; also, by Schwanthaler, the monument of the late Grand-Duke of Baden, with a pedestal and four allegoric figures of the four circles of the dukedom; and the statues of Marshals Tilly and Wrede, for the new marshals' Loggia or Feldherrnhalle at Munich; and casts from Tenerani's models of the statues of Ferdinand, king of Naples, for Naples, and of Bolivar, for Bolivia, in South America.

Stiglmayer died March 2, 1844, on the day on which the statue of Göthe was cast by his nephew and assistant Ferdinand Miller, who succeeded him as director of the foundry. Stiglmayer had suffered from illness two years previous to his death, and many supposed it was owing to the unhealthy system of gilding by fire; but he died of cancer in the stomach, which Breslau, the king's physician, had previously declared to be the cause of his illness.

(Kunstblatt, 1844; Soeltl, *Bildende Kunst in München*.)

STILICHO, FLAVIUS, was of Vandal origin, and his father had been a military officer in the reign of Valens. Concerning his early life and youth we know nothing beyond the vague eulogies of Claudian ('De Laud. Stilich.', i. 42, &c.). According to the poet's account he distinguished himself in early life in a manner which announced his future greatness. He was of an unusually tall stature, and his appearance commanded respect. When he had scarcely arrived at the age of manhood, he was sent by the Emperor Theodosius to negotiate a treaty with Persia. His discharged his duties as ambassador, and maintained the dignity of the Roman empire; and after his return the emperor rewarded him with the hand of Serena, his niece, whom he had adopted as his daughter. (Claudian, 'Laus Seren.', De Laud. Stilich.', i. 71, &c.) Stilicho was raised from one high office to another, until at last he became master-general of all the cavalry and infantry of the Western empire. In all his military undertakings he set a noble example of honesty, integrity, and valour, combined with wisdom. Even his enemies owned that he was inaccessible to bribes. The distinctions which were conferred upon him excited the envy and hatred of Rufinus, to whom Theodosius had entrusted the administration of the East, and Stilicho would perhaps have fallen a victim to his intrigues, if Serena had not protected her husband at the court while he was at the head of the armies of Rome.

In the year A.D. 393, when Theodosius made war upon Eugenius, who with an army of Franks and Alemanni occupied the passes in the Alps between Pannonia and Italy, he placed Stilicho and Timasius at the head of the Roman forces. Eugenius was defeated and slain in the year following in a battle near Aquileia. (Oros., vii. 35; Gregor. Turon., ii. 9.) Before his death Theodosius divided the empire between his two sons, Arcadius and Honorius, the former of whom, then eighteen years old, was to govern over the East under the guidance of Rufinus; and the latter, only eleven years old, over the West, under the guardianship of Stilicho. According to the flattering account of Claudian, the emperor entrusted to Stilicho alone the care of his two sons and of the empire. (Zosim., v. 1.) Young Honorius trifled away his time in the palace of Milan, and Stilicho was in reality the sovereign of the Western empire. Stilicho has been blamed for having neglected the education of Honorius, but there is not the slightest evidence of any talent or intellectual capacity in the prince. After the death of Theodosius, Stilicho hastened through Rhaetia and down the Rhine, inspected the country and the garrisons, and renewed the treaties with the Alemanni and Franks. With the exception of Count Gildo in Africa, who even during the last years of the reign of Theodosius had endeavoured to make himself independent in his province, the whole of the Western world acquiesced in Stilicho's authority. Rufinus was the enemy from whom Stilicho had to fear most. Great numbers of the troops who had been employed in the war against Eugenius, were still in Italy, and Rufinus, anxious that they should be withdrawn from that country, is said to have invited Alaric, king of the Visigoths, to invade Thracæ and Moesia, which would oblige Stilicho to send these troops to the East. Stilicho appears to have entertained the design of uniting the two empires again, and he determined to lead the troops to Constantinople himself. But Rufinus, alarmed at the approach of his rival at the head of an army, induced the Emperor Arcadius to declare that Stilicho should be considered an enemy of the empire if he advanced any further. Stilicho retired, but secretly he determined to revenge himself upon Rufinus. His soldiers were attached to him, and he could place full confidence in them; he left the command to Gaina, a Gothic prince, and at the same time gave him instructions to seize Rufinus, and to put him to death. The soldiers were easily persuaded to lend their assistance in the execution of this design. When Gaina and his army had reached Constantinople, and Rufinus with the emperor was reviewing the troops, he was surrounded by the soldiers and cut down on the spot (November 395). The people of Constantinople rejoiced at their deliverance from the oppressor. Stilicho thus got rid of his mortal enemy at Constantinople, but a new one sprang up in his place. Eutropius, a eunuch, gained the unlimited confidence of Arcadius, and Gaina, the faithless barbarian, also deserted the cause of Stilicho, and was rewarded for it with a high office in the Eastern empire. These two new enemies of Stilicho, as long as they were united, left no means untried to deprive their adversary of the confidence of Honorius, and of the attachment of the subjects of the Western empire. His life was repeatedly endangered by assassins, and a decree was issued by the senate of Constantinople, by which he was declared an enemy of the empire. Stilicho was wise and moderate enough not to involve the two empires in a civil war on this account.

Alaric, who had in the meanwhile invaded, ravaged, and plundered Greece, had penetrated as far as Peloponnesus in 396. Stilicho went with a fleet to Peloponnesus; but Alaric escaped with his Goths, was received by Arcadius into the service of the East, and made commander of all the forces of Illyricum, as far as it belonged to the Eastern empire. (Zosim., v. 7; Claudian, 'De Bell. Get.'). On his return to Italy, Stilicho began, in 397, his preparations for the war against Gildo in Africa. Thinking that his presence was necessary in Italy, partly to protect the northern and eastern frontiers, and partly to provide Italy with supplies of corn, he entrusted the command to Gildo's own brother Mascezil, who was the bitterest enemy of his brother. The army of Mascezil amounted to about 5000 men, but they were mostly

veterans who had served under Eugenius. Gildo had assembled a numerous undisciplined body to repel the attack, but it was routed, and Mascezil gained an almost bloodless victory. Gildo was seized, and sentenced to death, with a great number of his adherents. (Oros., vii. 36; Claudian, 'De Bell. Gildonico.'). This important campaign was completed in one winter. Soon after his return to Milan, Mascezil, while riding by the side of Stilicho, was thrown from his horse into the river and drowned, and the enemies of Stilicho spread the report that by a peculiar look he had prevented the attendants from saving the unfortunate prince. According to other accounts, Mascezil was put to death for having violated the sacred character of a church. Soon after these events Honorius was married to Maria, the daughter of Stilicho and Serena. (Claudian, 'De Nupt. Honor. et Mariæ.')

Alaric had availed himself of his position in Illyricum to strengthen himself, and secretly matured his designs, while externally he kept up a good understanding with the courts of the East and of the West. At length, in 400, he set out on his march against Italy. The immediate cause of this invasion is not known. When Alaric advanced towards Aquileia, all Italy was in consternation, and the counsellors of Honorius advised him to seek a refuge in some foreign land. Stilicho alone did not share their despair. But the difficulty was to raise an army, as most of the troops were engaged in Rhaetia. Stilicho hastened thither, and was soon enabled to send the troops from Rhaetia to Italy. He also drew reinforcements from Gaul and other parts of the empire, and engaged some of the nations with whom he made peace to assist Honorius. Alaric appears to have been checked in his progress by the siege of Aquileia, and to have withdrawn towards the Danube to reinforce himself; but before Stilicho returned from his expedition, in which he assembled his forces, Alaric, in 402, advanced towards the imperial residence of Milan. Honorius fled to Asta in Liguria, where he was besieged by the Goths, and would have fallen into their hands if Stilicho had not arrived at the critical moment with his army. He forced his way through the camp of the enemy, and saved his sovereign. The Goths withdrew, and pitched their camp near Polentia, and while they were engaged here in celebrating the feast of Easter, Stilicho attacked them unexpectedly in their camp. A bloody struggle ensued, in which the barbarians were defeated (403). The whole camp of Alaric, and even his wife, fell into the hands of the Romans. Claudian ('De Bell. Get.') compares this victory with that of Marius over the Cimbri, although from other sources we learn that Stilicho gained the victory with great loss, while some authors even state that he was defeated. These latter accounts are the more probable, as Alaric marched from Polentia towards the Apennines to attack Etruria and Rome. This induced Stilicho, according to Claudian, to enter into negotiations for peace with Alaric, as he was unwilling to stake the existence of the empire on another battle. A peace was concluded, and Alaric retreated across the river Po. Stilicho however, mistrusting the Goth, sent a small corps of observation after him, and appears to have carried on a secret correspondence with some of the Gothic chiefs in Alaric's army, so that he was informed of all that was going on. Alaric intended on his march to make himself master of Verona, but when he approached this city he found himself suddenly surrounded by the imperial troops whom Stilicho had sent thither. Alaric is said to have lost here as many of his men as at Polentia, and he himself was nearly made a prisoner. Stilicho concluded a fresh treaty with him, and allowed him to depart from Italy.

After the delivery of Italy, Honorius and Stilicho solemnised a triumph at Rome with great pomp and splendid games. The hostile machinations against Stilicho were still going on at the court of Constantinople, and he saw no better way to secure himself against them than by entering into an alliance with Alaric and engaging Honorius in a war with his brother. Stilicho intended to acquire for his sovereign possession of the eastern part of Illyricum, and Alaric was to assist him in carrying out this design, on condition that he should receive certain subsidies. (Zosim., v. 26.) The execution of these plans was interrupted, in 405, by the invasion of Radagaisus, who entered Italy at the head of several Germanic tribes, which formed an army of above 200,000 men. The safety of Italy rested again in the sword and the wisdom of Stilicho. He again drew all the military forces from the provinces to Italy, and reinforced their numbers by fresh levies. But with all his exertions he could not raise more than 40,000 men, exclusive of some foreign auxiliaries consisting of Huns under Uldin and Goths under Sarus. Radagaisus and his hordes crossed the Po and the Apennines, and marched into Etruria. Stilicho assembled his forces in the neighbourhood of Pavia. Many cities were pillaged and destroyed by the barbarians, but the siege of Florence checked their progress towards Rome. At the moment when Florence was on the point of being reduced, Stilicho surrounded the barbarians, who were encamped on the heights of Fiesole, with strong lines of circumvallation, while plentiful supplies were introduced into Florence. The enemy was finally reduced by famine, thirst, and disease. Radagaisus fell into the hands of Stilicho, and was put to death, and his barbarians were sold as slaves. (Oros., vii. 37; Zosim., v. 26; Augustin., 'Serm.' cv. 10; 'De Civit. Dei,' v. 23; Marcellin., 'ad A.', 406.)

The province of Gaul, from which Stilicho had been obliged to withdraw the garrisons, was invaded and ravaged, about the end of

406 and the beginning of 407, by Vandals, Alani, Suevi, Burgundians, and other Germanic tribes. In Gaul these barbarians were opposed by Constantine, a man who had shortly before been raised from the condition of a common soldier to the rank of emperor by the soldiers in Britain, and now made himself master of Gaul and Spain by entering into a league with some of the barbarians. Stilicho indeed sent Sarus, the Goth, to Gaul, but without success, and Honorius was for a time obliged to leave the rebel in the undisturbed possession of his conquest.

Alaric in the mean time became impatient, and having advanced with his army as far as Emona on the frontiers of Italy, he sent ambassadors to Ravenna to demand the promised subsidies. When the ambassadors arrived, Stilicho left them at Ravenna and went to Rome, where Honorius was then staying. Stilicho, who was convinced that it was dangerous to make such a formidable neighbour as Alaric an enemy, was willing to continue the peace with him, and to grant his requests. He laid the matter before the Roman senate, which, with a spirit not unworthy of ancient Rome, declared that the demands of the Goths should not be complied with, and that destruction would be preferable to such disgrace. The influence however of Stilicho and his party, whose object only was to preserve Italy from new devastations at a moment when Gaul was in the hands of a rebel and of barbarians who might easily be induced to march southward, was so great, that nearly all the senators at length were obliged to give way, and 4000 pounds of gold were granted to Alaric under the name of a subsidy. (Zosim., v. 29.) The desire of Stilicho to maintain peace with Alaric was interpreted by his enemies as a treacherous partiality for the enemy of the empire, and all the calamities under which Italy had been suffering were imputed to Stilicho. Even Honorius now began to fear and suspect his minister; and this feeling was fostered by a cunning hypocrite of the name of Olympius, whom Stilicho himself had introduced to the court, and who had gained the confidence of the emperor.

In May 408, Arcadius died, leaving a son, Theodosius, eight years old. Honorius proposed a journey to the East to regulate the administration. Stilicho represented to him the difficulties and dangers of such an undertaking, and in consequence it was determined that Stilicho should go to Constantinople. An army, which was to march against Constantine, was assembled near Pavia, and Honorius went thither to inspect it, while Stilicho was making preparations at Bologna for his departure. The eunuch Olympius represented to the emperor that Stilicho was conspiring with Alaric, that he intended with his assistance to raise his son Eucherius to the throne, and that it formed part of their design to restore paganism in the empire. (Olympiodorus, 'ap. Phot. Cod.', 80.) He also contrived to influence the soldiers at Pavia, who revolted, and on a given signal killed several of their principal officers, who were represented to them as the friends of Stilicho. As soon as the intelligence of the revolt at Pavia had arrived, Stilicho's friends advised him to march against his enemies; but he hesitated till it was too late. His friends, for the most part barbarians, left him with indignation at his want of resolution. At midnight, Sarus, the faithless Goth, made an attack upon Stilicho's tent, and cut down his guards. Stilicho escaped to Ravenna, and took refuge in a church. He was treacherously induced to come out, and as soon as he had left the threshold he was put to death by Count Heraclian, who was waiting for him with a band of soldiers, on the 23rd of August, 408. His family and his friends were persecuted, and many of them put to death. (Zosim., v. 34.)

The history of Stilicho has come down to us in a manner which scarcely enables us to choose a due medium between the extravagant praise of Claudian and the charges of his enemies, or of such writers as were obliged to join in the general clamour that was raised against him after his fall.

(Mascow, *History of the Antient Germans*, vol. i., book viii., sect. 2, 19, English translation; Gibbon, *History of the Decline and Fall of the Roman Empire*, chap. 29 and 30; C. F. Schultz, *Flavius Stilicho, ein Wallenstein der Vorwelt, ein Beitrag zum letzten Theile der Röm. Geschichte*; &c.

STILL, JOHN, the son of William Still, of Grantham, in Lincolnshire, was born in 1543, and became a student of Christ College, Cambridge, where he took his degree as Master of Arts. In 1570 he was appointed Lady Margaret's Professor in the University: he afterwards held livings in Suffolk and Yorkshire, and was successively Master of St. John's and Trinity Colleges. In 1588 he was chosen prolocutor of the Convocation; and in 1592, he was raised to the bishopric of Bath and Wells, which he held till his death in 1607. Bishop Still is said by Fuller to have been "one of a venerable presence, no less famous for a preacher than a disputant." He left a large fortune, chiefly derived from lead mines discovered in the Mendip Hills during his possession of the see. The historians of the drama concur in believing him to have been, in his youth, the author of a coarse but humorous play, which, till the discovery of 'Ralph Royster Doyster,' was held to be the earliest extant work known in England by the name of a comedy. It is called, 'A ryght pithy, pleasaunt, and merie Comedie, intytuled, Gammer Gurton's Needle; played on stage not long ago, in Christe's Colledge in Cambridge. Made by Mr. S., Master of Art,' 1575. 'Gammer Gurton's Needle' is in Hawkins's 'Origin of the English Drama,' and in the second volume of Dodsley's 'Old Plays.'

STILLING, JUNG JOHANN HEINRICH, a celebrated German Pietist, was born at Gründ, in Westphalia, in 1740. His father Wilhelm Jung was a charcoal-burner, to which trade he was also destined, but circumstances favouring his becoming a tailor, he chose that business, though he soon relinquished it for a situation as teacher at a school. Dissatisfied with this, he returned to tailoring, and continued it till several of the gentry befriended him, and took him as private tutor to their children. He contrived to save a little money, which enabled him to pursue his studies, and went in consequence to Strassburg, and studied medicine there. It was there he became acquainted with Göthe, who took a great liking to him, and has sketched his character with great fondness in several passages of the 'Dichtung und Wahrheit' (books ix. and x.). It was at Göthe's suggestion that he wrote his interesting autobiography ('Lebensgeschichte'), to whom he had often related it. Stilling practised as physician for some time in Eberfeld, and in 1778 was appointed professor at the Kameralsschule of Lautern, and in 1787 at that of Marburg, and in 1803 at that of Heidelberg. He died in Karlsruhe, 1817.

As a physician, Stilling's great talent was in diseases of the eye, and he is said to have restored upwards of 2000 persons to better sight. As a writer, he was very popular, and the sect of Pietists in Germany (somewhat similar to our Methodists) look up to him with great affection. "The great element of his character was an invincible and intense faith in God and an immediate providence, ever at hand in the time of trouble, and which momentarily preserved man from evil." The most celebrated of all his works is the 'Theorie der Geisterkunde,' which, as well as his autobiography, has been translated into English by Mr. Jackson. A complete edition of his works was published at Leipzig, in 13 vols. 8vo, in 1835, edited by Dr. J. Grollmann.

(Stilling's *Lebensgeschichte*; Göthe's *Dicht. und Wahrheit*; *Conversations Lexicon*.)

STILLINGFLEET, BENJAMIN, grandson of Dr. Stillingfleet, bishop of Worcester, was born in 1702. His father, originally a physician, and one of the professors at Gresham College, afterwards entered into holy orders, and held the livings of Wood Norton and Swanton, in Norfolk, at the time of his death in 1708. His widow was left with four children in very straitened circumstances, but Benjamin was so fortunate as to obtain a good education at Norwich grammar-school, where he made considerable proficiency. In April 1720, he entered as subsizar at Trinity College, Cambridge, where he took the degree of B.A. in 1723. Soon afterwards he quitted the University, and became tutor to the son of Mr. Wyndham of Felbrig, in whose family he remained till 1726, when he became a candidate for a vacant fellowship in his own college, but was not successful, owing, as he believed, to the opposition of Dr. Bentley. After this disappointment he spent many years at Felbrig, and in 1737 accompanied the son of Mr. Wyndham to the Continent. On his return to England the father of his old pupil settled on him an annuity of 100*l.*, on which sum and the produce of his literary labours he subsisted for three years. The friendship of Mr. Price, whose acquaintance he had made when at Rome, now enabled him to take up his abode in a small cottage near that gentleman's seat at Foxley, in Hertfordshire. An indifferent state of health first led him to pay attention to natural history, which he afterwards cultivated with great success. In 1759 he published a collection of 'Miscellaneous Tracts on Natural History,' which consisted of translations from the writings of Linnæus and his pupils, calculated to develop the principles of that great botanist. Mr. Stillingfleet's preface to this work did much towards rendering the Linnæan system popular in this country, and constitutes his chief scientific merit.

'A Treatise on the Principles and Power of Harmony,' published in 1771, which is an abridgement of Tartini's 'Trattato di Musica,' was the only other work which appeared during his life; but he left at his death six volumes in manuscript, of a collection towards a 'General History of Husbandry,' of which an analysis is given in his biography by Mr. Coxo. Mr. Stillingfleet died in London, on December 16, 1771, leaving behind him, besides his scientific reputation, the character of an excellent scholar, an elegant poet and musician, and a most amiable and estimable man.

For further information concerning him the reader may consult Mr. Coxo's very interesting work, 'The Literary Life and Select Works of Benjamin Stillingfleet,' London, 1811.

STILLINGFLEET, EDWARD, son of Samuel Stillingfleet, was born at Cranbourn, in Dorset, on the 17th of April 1635. He was educated at the grammar-schools of Cranbourn and Ringwood, and at St. John's, Cambridge. He entered the college in 1648, and obtained a fellowship in 1653. After taking his degree of M.A. he was private tutor successively in the families of Sir Roger Burgoin, at Wroxhall, in Warwickshire, and of the Hon. Francis Pierrepont, of Nottingham. Here he began his 'Irenicum.' In 1657 he was presented to the rectory of Sutton by Sir R. Burgoin.

Stillingfleet commenced his public life as the advocate of moderate, almost of latitudinarian opinions on ecclesiastical affairs. In the year 1659 he published his first work, which was entitled 'Irenicum, or the Divine Right of particular Forms of Church Government examined.' A second edition appeared in 1662, with an appendix on the Power of

Excommunication. This work which was intended to prove that no particular form of church government is appointed in the New Testament, was thought by the high church party to savour of Presbyterianism; and in deference to them, according to Bishop Burnet, Stillingfleet afterwards retracted it. Stillingfleet himself says, that "there are many things in it which, if he were to write again, he would not say; some which show his youth and want of due consideration; others which he yielded too far, in hopes of gaining the dissenting parties to the Church of England." (Stillingfleet's 'Life,' p. 12.) The work on which his reputation mainly rests is his 'Origines Sacre, or Rational Account of the Christian Faith as to the Truth and Divine Authority of the Scriptures,' which was published in 1662. He meant to have continued it, but died before he could do so. The additions to the folio edition, published after his death are of little value. This work is still one of the most valuable defences of the truth of the Scriptures, though it is more adapted to the theologian than to the general reader.

Stillingfleet was a fierce and indefatigable polemic. During the greater part of his life, he had his hands full of controversy, with the Romanists on the one side, and the Nonconformists on the other. In 1664 he engaged, at the request of Dr. Henchman, bishop of London, in the defence of the views maintained by Laud in his conference with Fisher the Jesuit. A work having been published on this subject in Paris, entitled 'Labyrinthus Cantuariensis,' with the design of proving the Church of England to be schismatical in her separation from Rome, Stillingfleet defended the Church of England, and retorted upon Rome the charge of schism in 'A rational Account of the Grounds of the Protestant Religion,' which was received with great favour by Protestants.

In 1665 he was presented by the Earl of Southampton to the rectory of St. Andrew's, Holborn, having been already appointed preacher at the Rolls chapel. This preferment was speedily followed by his appointment as lecturer to the Temple, and also as chaplain in ordinary to Charles II. In 1668 he took the degree of D.D., and was nominated by Charles, in 1670, canon residentiary of St. Paul's, and in 1678 dean of the same cathedral. In the meantime he published his 'Discourse concerning the Idolatry practised in the Church of Rome, and the Hazard of Salvation in its Communion,' 1671; and other tracts against the Roman Catholics, and also against the Socinians, as well as 'A Letter of Resolution to a Person unsatisfied about the Truth and Authority of the Scriptures.' In 1680 he plunged into a new controversy, by preaching before the lord mayor a sermon, on Philipp. iii. 16, which he afterwards published, entitled 'The Mischief of Separation.' This sermon consisted of a violent attack on the Nonconformists, which was little expected from the author of the 'Irenicum.' Mr. Orme justly observes that "the rector of Sutton, who wrote the 'Irenicum' when the Church of England was but a sect among other sects, was a very different person from the dean of St. Paul's exposing the unreasonableness of separation from an apostolic church in all its glory. The one publication breathes a spirit of moderation, and uses the language of entreaty; the other is stern, severe, and uncompromising." (Orme's 'Life of Baxter,' p. 632.) In this discourse Stillingfleet maintains the curious position, that "though the really conscientious Nonconformist is justified in not worshipping after the prescribed forms of the Church of England, or rather, would be criminal if he did so, yet he is not less criminal in setting up a separate assembly." The sermon was replied to by Owen, Baxter, Howe, and other eminent Nonconformists. Howe directed his attention chiefly to the above position, and added some remarks concerning Stillingfleet himself, giving him such full credit for piety, purity of motive, and general moderation, that the dean confessed "that Howe had discoursed gravely and piously, more like a gentleman than a divine." (Rogers's 'Life of Howe,' pp. 251-266.) Stillingfleet replied to his opponents in a large quarto volume, entitled 'The Unreasonableness of Separation,' 1681, in which he traces the history of Nonconformity; and Baxter rejoined in 'A second true Defence of the mere Nonconformists, against the untrue Accusations, Reasonings, and History of Dr. Edward Stillingfleet,' 1681, to which the dean made no reply, though several writers carried on his side of the argument. A full account of this controversy is given by Mr. Orme in his 'Lives of Owen and Baxter.'

In 1685 Stillingfleet published his 'Origines Britannicæ, or Antiquities of the British Churches,' which gives a full account of the early ecclesiastical history of Britain, from the first introduction of Christianity to the conversion of the Saxons. He rejects many of the traditions respecting the British churches, but is disposed to believe in the alleged visit of Paul to Britain.

When James II. revived the court of ecclesiastical commission, Stillingfleet refused to be a member of it; and after the Revolution he published 'A Discourse concerning the Illegality of the Ecclesiastical Commission, in answer to the Vindication and Defence of it,' 1689. Under Charles and James he was prolocutor of the convocation. After the revolution of 1688, Stillingfleet's services to the Protestant cause were rewarded with the bishopric of Worcester, to which he was consecrated in 1689. He immediately addressed himself, with his usual ardour, to correct the irregularities which had arisen in the diocese; he appeared with distinction in the House of Lords; and he still found leisure for polemics. In 'A Vindication of the Trinity, with an Answer

to the late Objections against it from Scripture, Antiquity, and Reason,' he made some objections to Locke's definition of substance, and to his theory of ideas in general, which gave rise to a sharp contest between him and Locke.

Stillingfleet died of gout, at Westminster, March 27, 1699. His remains were interred in the cathedral of Worcester, where a monument was erected to him by his son, with a long and highly eulogistic Latin epitaph by Bentley, who was his chaplain.

The character of Bishop Stillingfleet has always commanded the praise even of his opponents, and perhaps many will find a more genuine expression of his worth in Howe's testimony than in Bentley's epitaph. His works prove his industry and learning. Besides the works noticed above, he wrote several theological pamphlets, and a very able defence of the jurisdiction of the bishops as peers in capital cases. His works were printed in 1710, in 6 vols. folio, and a volume of his miscellaneous works was published in 1735 by his son, the Rev. James Stillingfleet, canon of Worcester. Stillingfleet had collected a splendid library, which Dr. Marsh, archbishop of Armagh, purchased, in order to throw it open to the public in Dublin. The manuscripts were bought by the Earl of Oxford, and are now in the Bodleian library.

(Life of Dr. Edward Stillingfleet, late Lord Bishop of Worcester, &c., London, 1710, 1735.)

STILPO (Στίλπο), a native of Megara, was a philosopher of the Megarian school, who flourished about B.C. 300. Respecting his life we know very little. He appears to have enjoyed the highest estimation among his countrymen both as a man and a philosopher. Ptolemæus Soter, when he was at Megara, endeavoured to persuade him to come to Egypt, but Stilpo refused, and withdrew to Ægina until Ptolemæus had left Megara. When Demetrius Poliorcetes took Megara, he commanded his soldiers to spare the habitation of the philosopher, who, in his eyes, was the wisest of all the Greeks living. Cicero ('De Fato,' 5), apparently on good authority, states that Stilpo, who was naturally fond of wine and women, exercised such control over his passions, that no one ever saw in him any sign of indulgence in sensual pleasures.

As a philosopher, Stilpo, on the whole, followed the doctrines of the Megarian school, but he went further, and denied the objective reality of the ideas of species and genera. He asserted that the character of a philosopher consisted in perfect freedom from passions; and in this theory he was followed by his disciple Zeno, the founder of the Stoic school of philosophy. Diogenes Laertius, in his account of Stilpo (ii. c. 12), states that he wrote nine dialogues, which he characterises by the epithet "frigid" (ψυχροί); no part of them is now extant.

(G. L. Spalding, *Vindiciæ Philosophorum Megaricorum*, p. 20, &c.; Ritter and Preller, *Hist. Philos.*, p. 131, &c.)

STIRLING, JAMES, an English mathematician of considerable eminence, but of whom, except the works which he published, scarcely any thing is known. He must have been born near the end of the 17th century, and he was a student in the University of Oxford; in 1726 he was elected a fellow of the Royal Society, and his death must have taken place subsequently to the year 1764.

Mr. Stirling's first work is entitled 'Lineæ Tertii Ordinis Newtonianæ, sive, &c.:' this work, which was published at Oxford, in 8vo, in 1717, contains a commentary on Newton's tract on the subject of lines of the third order. In this tract it is shown that all such lines may be expressed by four different equations, of the third degree, between two variable quantities  $x$  and  $y$ ; and that of these equations one, which consists of terms involving the three first powers of  $x$  and the two first powers of  $y$ , comprehends sixty-five species of hyperbolic curves. Stirling discovered that the same equation contained two additional species, and the Abbé De Gua ('Usage de l'Analyse de Descartes') subsequently detected in it four others which had been overlooked by Stirling, probably because he directed his researches almost entirely in the steps of his author. The English mathematician has the honour of being the first who observed, if the value of  $y$  in the given equation be found in an infinite series of terms containing descending powers of  $x$ , that on taking one term only of such series for the value of  $y$ , there is obtained an equation of the first degree, which determines the position of a rectilinear asymptote to the curve: that on taking two terms, there is obtained an equation of a curve, which may be considered as an asymptote to the original curve, and which approaches nearer to it than the rectilinear asymptote; and so on. It may be observed however that the division of curve lines into classes and species is arbitrary; Newton, Euler, and Cramer having made the number of curves of the same order very different: it is also now of small importance, since when the equation of any curve is given, the rules of analysis enable the mathematician to determine immediately its tangents, asymptotes, normals, and 'singular' points.

The work which contributed most to Stirling's reputation is his 'Methodus Differentialis, sive Tractatus de Summatione et Interpolatione Serierum Infinitarum:' this work was published in London, in 4to, in 1730; and in the first part of it there are investigated general formulæ, expressing the sums of given series by means of a factor, by which each term in a series being multiplied, the product is equal to the next following term: the factor itself is in the form of a series consisting of terms arranged according to the ascending or descending

powers of a variable quantity; and for this variable are to be substituted different numbers increasing from unity. When the given series is not susceptible of having its sum expressed in finite terms, the factor is an infinite series, and then the formula expressing the sum is also an infinite series; but being highly convergent, the summation of a few of its terms gives a very near approximation to the value of the given series. The second part of the work relates to the interpolation of terms between those of any given series: the values of the interpolated terms are found agreeably to the method of Newton, and there are added several theorems for facilitating the processes by which they are obtained. There are also given various formulae for approximating to the quadrature of curves by the method of equidistant ordinates.

In the 'Philosophical Transactions' for 1735 there is a paper by Stirling 'On the Figure of the Earth and on the Variations of the Force of Gravity at its Surface;' and a second edition of the 'Methodus Differentialis' was published in 1764.

STIRLING, WILLIAM, EARL OF. [ALEXANDER, WILLIAM, EARL OF STIRLING.]

\*STIRLING, WILLIAM, author and M.P., is the only son of the late Archibald Stirling, Esq., of Keir, Perthshire, by Elizabeth, daughter of the late Sir John Maxwell, Bart., of Pollock. He was born at Kenmure, near Glasgow, in 1818, and finished his education at Trinity College, Cambridge, where he graduated B.A. in 1839 and M.A. in 1843. Inheriting ample wealth, and at liberty to follow the bent of his own tastes, he turned his attention to subjects not commonly much studied by Englishmen—the art, literature, and history of Spain. He travelled and resided in the Peninsula, in order to study these thoroughly. In 1848 he published in three volumes his 'Annals of the Artists of Spain;' this was followed in 1852 by 'The Cloister Life of the Emperor Charles the Fifth,' an interesting account of the occupations of Charles after his resignation of the cares of empire and retirement to the monastery of Yuste; and in 1855 appeared Mr. Stirling's last work, entitled 'Velasquez and his Works.' While these writings and his intimate knowledge of Spanish art and Spanish history have given Mr. Stirling a high reputation in literature, he has also connected himself with politics. In July 1852 he was returned to parliament as member for Perthshire, which county he has since continued to represent as a moderate Conservative.

STJERNSTOLPE, JONAS MAGNUS, was born on the 8th of December 1777, in the parish of Stenquist, in the province of Södermanland, in Sweden, of respectable parents, but who were so poor that they could afford to give him only the most ordinary education. His unusual abilities however attracted the notice of Baron Fletwood and some of his friends, who put him to school at Strengräs, where he soon distinguished himself, and whence he was afterwards sent to finish his studies at Upsala. He seems to have been very scantily provided for, since, in order to eke out his means of support, he was obliged to give lessons and employ himself in translating novels for booksellers. At length an event occurred in 1802 which he himself has described as a most propitious revolution of fortune, namely, his being taken into the family of M. Beskow, a merchant, as tutor to his two sons, one of whom (Bernhard) has distinguished himself as a poet, and has edited some of Stjernstolpe's posthumous pieces, with an interesting biography of their author. From this event however no permanent advantage to his circumstances seems to have resulted, for notwithstanding his attachment to his studies, he determined to renounce his prospects in any of the learned professions, and to accept a small appointment in a public office (the Krigs-Expedition), devoting only his leisure time to literary occupations. These consisted at first merely of translations of Müller's 'Siegfried' and other German romances, to the extent of about 30 volumes. It was then that Beskow, wishing to assist him, offered him a situation in his own counting-house, with a salary more than double of what he then had; but he rejected the well-meant proposal, saying, that he preferred drinking water and writing verses to drinking wine and casting up accounts. Though he himself might not consider the labour of translating drudgery, that kind of it in which he first engaged was certainly unworthy of his talents. Therefore although it is to be regretted that he did not undertake some original work of similar extent, it was not without advantage to the literature of his own country that he afterwards transplanted into it some of the productions of such writers as Cervantes, Wieland, and Voltaire. Besides 'Don Quixote,' 'Oberon,' and some of the tales of Voltaire, his translations of this class include those of Pope's 'Rape of the Lock,' and Blumauer's 'Æneis' (which latter poem he completed by adding the three last books, and which is considered to be in many respects even superior to the original); not to mention a number of minor pieces, both from ancient and modern poets. Among his original productions, which are comparatively few, the principal are, 'Lunkentus,' a dramatic popular tradition; the 'Argonauts;' and his comic tales in verse.

Notwithstanding his decided taste for works of fancy and humour, satire, and wit, his reading extended to others of a very different class, to mathematics and the physical sciences, geology, and astronomy, to which last study he was greatly attached. According to his biographer Beskow, the same remarkable sort of contrast displayed itself in his conversation, for he would pass alternately from the gayest and liveliest topics to the most serious—from the most playful to the most

profound. His conversational powers were in fact of the highest order: it was there that the originality of his mind fully displayed itself, for he possessed such extraordinary *improvisatore* talents, that he would delight his auditors almost an entire evening by a continual flow of wit and eloquence, which carried away both himself and his hearers. These captivating qualities and the amiableness of his personal character, his frankness and his disinterestedness, caused his society to be greatly sought after by all who were distinguished in literature and art; whence it was said of him that he was not only known to all Sweden, but intimate with one half of it. He constantly refused however to become a member of any literary society, for which institutions he entertained no great respect. His epistolary correspondence was very extensive, and was marked by the same qualities as his conversation, though hitherto but a few specimens of it have been published by his biographer. He had commenced a translation of Ariosto, but did not live to make any great progress with it, being carried off by a paralytic attack on the 17th of September 1831.

(Beskow, *Minnesteckning*.)

STOBÆUS, JOANNES, a native of Stobi in Macedonia, whence he derives his name Stobæus, lived either at the end of the 5th or in the 6th century of our era. Respecting his life no particulars are known. We possess through him a number of extracts from ancient Greek writers. He collected them in the course of his extensive reading from more than five hundred authors, both in prose and in verse, and put them together, and arranged them according to subjects for the use and instruction of his son Septimius. We are thus indebted to Stobæus not only for an immense number of fragments of well-known ancient writers, but some authors would be altogether unknown to us if Stobæus had not preserved their names, together with some of their sentiments. The words of Greek poets are of course quoted verbatim, but in regard to prose writers he followed two different methods; sometimes he quotes the author's own words, and gives us real extracts, and sometimes he gives a mere summary or epitome of what his author contained. He himself called this anthology from Greek literature, 'Ἀνθολόγιον ἐκλογῶν, ἀποφθεγματῶν, ὑποθηκῶν, and divided it into four books. But the work has come down to us in a somewhat different form. In our manuscripts it is divided into three books, which form two separate works. The first and second books are usually called 'Ἐκλογαὶ φυσικαὶ, διαλεκτικαὶ, καὶ ἠθικαὶ, and the third 'Ἀνθολόγιον, or Sermones. It has therefore been supposed that one book of Stobæus is lost, but it is more probable that the 'Sermones' contain the third and fourth books in one, according to the original division. It is true that the third book at present consists of 127 or 128 chapters, while in the time of Photius the two last books together only contained 100 chapters. This difference in number however may be accounted for by supposing that some of the larger chapters were divided by copyists into two or more smaller ones.

The editio princeps of the 'Eclogæ' is that by W. Canter, fol., Antwerp, 1575, with a Latin translation. It was reprinted, together with the 'Sermones' (the first edition of which was edited by Trincavelli, 4to, Venice, 1536), in fol. Geneva, 1609. C. Gesner published three editions of the 'Sermones,' under the title, 'J. Stobæi Sententiæ,' Tigur., 1543; Basil., 1549; and Tigur., 1599, with many arbitrary alterations. The best modern edition of the 'Eclogæ' is that by A. H. L. Heeren, with notes and a Latin translation, 2 vols. 8vo, Göttingen, 1792-1801; and the best edition of the 'Sermones' is that by T. Gaisford, 4 vols. 8vo, Oxford, 1822, reprinted at Leipzig, 1823 and 1853, in 4 vols. 8vo. A complete edition of both works of Stobæus has been published by Tauchnitz, 3 vols. 16mo, Leipzig, 1838.

(Schöll, *Geschichte der Griech. Lit.*, iii., p. 395-414.)

STOCKS, JOHN E., M.D., was born in 1822. He was educated for the medical profession at University College, London. Here he distinguished himself in his classes, and especially attached himself to the study of botany. He obtained an appointment in the East India Company's service, and soon distinguished himself for his acquaintance with plants. He was sent to Scinde and Beloochistan to report on their vegetable riches, and returned laden with specimens and information. He came back to England about the year 1854, intending to work up his numerous materials for publication. His health however failed him, and after having deposited his collections at Kew, he retired to Dottingham, near Hull, where he died in September 1854.

STODART, JAMES, F.R.S., a maker of surgical instruments and superior articles of cutlery in London, who, like his fellow tradesman Mr. Pepps [PEPPS, WILLIAM HASLEDINE] acquired distinction as a man of science, chiefly however by its application to his own business, for he did not make philosophical researches, though he became the companion and friendly assistant of those who did. Mr. Stodart's public history is connected, in a remarkable manner, with that of a peculiar description of steel. Some years prior to the beginning of this century, Dr. Helenus Scott, of Bombay, afterwards first member of the Medical Board of that Presidency, transmitted to the President of the Royal Society, Sir Joseph Banks, specimens of a substance called by the natives of India, by whom it was manufactured, *Wootz*, which was considered to be a kind of steel. Its nature and properties were investigated by Dr. George Pearson, F.R.S., a leading chemist of the time, whose results were read before the Royal Society and published in the 'Philosophical Transactions' for 1795. Various professional and other persons, at the instance of Sir Joseph Banks, concurred

with Dr. Pearson in this inquiry, by which it was ascertained that wootz was in fact steel of a particular kind. Among these was the subject of the present article. "That ingenious artist, Mr. Stodart," Dr. Pearson states in the paper alluded to, "forged a piece of wootz at the desire of the president, for a penknife, at the temperature of ignition in the dark. It received the requisite temper" ["at the temperature of 450° of Fahrenheit's scale," Dr. Pearson adds in a note from Mr. Stodart's letter to Sir Joseph.] "The edge was as fine, and cut as well as the best steel knife. Notwithstanding the difficulty and labour in forging, Mr. Stodart from this trial was of opinion that wootz is superior for many purposes to any steel used in this country. He thought it would carry a finer, stronger, and more durable edge and point. Hence it might be particularly valuable for lancets and other surgical instruments." Wootz subsequently received the appellation of Indian steel, further information showing it to be a variety of cast-steel. The observations thus made appear to have constituted the germ of its future application to the manufacture of surgical instruments, and others in which great perfection and durability of edge was required, and which, for a long period, rewarded Mr. Stodart's skill and sagacity. It is a remarkable illustration of the manner in which intellectual endowments are distributed among different minds, that his contemporary, Mr. Pepps, who also had an opportunity of making himself acquainted with wootz, though possessing equal professional skill, and probably greater scientific qualifications, failed to recognise its superiority.

Like other artists practically experienced in the production and use of certain substances, or skilled in the conduct of peculiar processes and operations, Mr. Stodart at various periods gave valuable assistance to experimental philosophers. Thus, the knife-edges of Capt. Kater's [KATER, HENRY] original invariable pendulum were forged by him from a piece of fine wootz. Dr. Thomas Thomson and Sir H. Davy having united in concluding that the changes of colour produced by heat on the surface of polished steel, probably did not depend on the oxidation of the metal, Mr. Stodart, who had made many accurate experiments on the tempering of steel, and was therefore familiar with those changes and their relations to the temperatures at which they occur, sent specimens to Sir Humphry Davy, indicating that when the air was excluded the colour of the steel did not change. On receiving these, the great chemist invited him to assist in some new trials on the subject, in which it was found that when polished steel was heated in pure hydrogen or azote, or in pure olive-oil, no change of colour took place. This proved the correctness of Mr. Stodart's previous opinion, that the changes of colour produced during the tempering of steel are owing to the formation and increase of a plate of oxide. Sir H. Davy's letter describing the experiments was inserted by Dr. Thomson in the 'Annals of Philosophy' for February 1813, vol. i., p. 131. Sir H. Davy records Mr. Stodart's assistance, with that of Messrs. Pepps, Allen, and Faraday, in the experiments made at the Royal Institution and at the London Institution, which are in his paper on the magnetic phenomena produced by electricity, forming part of the 'Philosophical Transactions' for 1821. On the 7th of June in that year Mr. Stodart was elected a Fellow of the Royal Society.

Mr. Stodart was one of the earlier appreciators and friends of Mr. Faraday [FARADAY, MICHAEL], who, when chemical assistant in the Royal Institution, was engaged with him in a series of experiments on the alloys of steel, which were pursued for several years in the laboratory of that establishment, of which Mr. Stodart was an active member. In the earlier part of these researches, Mr. Faraday analysed a specimen of the Indian steel cut from one of the cakes which had been originally presented to Mr. Stodart by Sir Joseph Banks. Besides iron and carbon (the well-known constituents of steel), it yielded nothing but very minute proportions of the earths, silica, and alumina, to the presence of which, or rather that of their bases, silicon and aluminium, its peculiar excellence has accordingly been referred. The results of the united researches of the cutler and the chemist were first published in the 'Quarterly Journal of Science' for July 1820 (vol. ix.), pp. 319-330, in a paper entitled 'Experiments on the Alloys of Steel, made with a View to its Improvement.' The authors, in the course of these experiments, formed artificial wootz, at a time when this was not the object of research, and also succeeded, by the addition of alumina to pure steel, in producing a specimen which had all the appreciable characters of the best Bombay wootz. "Together with some others of the metals, the following," it is stated, "have been alloyed with both English and Indian steel, and in various proportions: platinum, rhodium, gold, silver, nickel, copper, and tin." The alloy of steel with a minute portion of silver ( $\frac{1}{500}$ th) was found to be decidedly superior to the very best unalloyed steel; that with rhodium was superior in a still higher degree, but as the scarcity of that metal would operate against its introduction to any great extent, it is probable, the authors conclude, that the alloy of silver with steel is the most valuable of those they had made, and they announce intended trials with that metal in the large way. In the year 1822 they produced another paper 'On the Alloys of Steel,' which was communicated to the Royal Society, printed in the 'Philosophical Transactions' for that year, and reprinted in the 'Annals of Philosophy' for 1823. It commences with the information, that, "the alloys of steel, made on a small scale in the laboratory of the Royal Institution, proving to be good, and the experiments having excited a very considerable degree

of interest both at home and abroad, gave encouragement to attempt the work on a more extended scale, and we have now the pleasure of stating," say the authors, "that alloys similar to those made in the Royal Institution, have been made for the purpose of manufacture; and that they prove to be, in point of excellence, in every respect equal, if not superior, to the smaller productions of the laboratory. Previous however, to extending the work, the former experiments were carefully repeated, and to the results were added some new combinations, namely, steel with palladium, steel with iridium, and osmium, and latterly steel with chromium." The principal results of these extended researches, as well philosophical as practical, are then minutely described, and in the conclusion it is announced that the alloys of silver and platinum with steel had been to some considerable extent in use at the Royal Mint, and that several of the alloys had been diligently and successfully made on the Continent. Before a year however had expired after the publication of this paper, Mr. Stodart died. His private residence was in Russell-square, London, but his decease took place at Edinburgh, on September 11, 1823, at the age of sixty-three. He bequeathed a portion of his collection of philosophical apparatus to Mr. Faraday. The further improvements in the manufacture of steel, in the direction they had taken, would appear to have been stopped by his demise.

STODDART, SIR JOHN, KNIGHT, was born in 1773 in the parish of St. James's, Westminster, but his father, who was a lieutenant in the navy, residing in Wiltshire, he received his early education in the grammar-school at Salisbury under Dr. Skinner. His proficiency in Greek at this school occasioned his being sent to the University of Oxford, where he was entered at Christchurch College in 1790, and graduated as B.A. in 1794. He at first studied divinity, but feeling an inclination for the law he proceeded B.C.L. in 1798, and D.C.L. in 1801. In the meantime he had not neglected general literature, and in 1796 and 1798 he had published translations of Schiller's two dramas of 'Fiesco' and 'Don Carlos,' in conjunction with Dr. Noehden, but to which only their initials appeared on the title-page. At this period he took a favourable view of the French revolution, and in 1797 published a translation from the French, entitled 'The Five Men; or a View of the Proceedings and Principles of the Executive Directory of France, with the Lives of the present members.' In 1801 he was admitted a member of the College of Advocates, and published 'Remarks on Local Scenery and Manners in Scotland, during the years 1799 and 1800,' in 2 vols. 4to. In 1803, on the recommendation of Sir William Scott, he was appointed king's advocate and admiralty advocate in Malta, in which situation he remained nearly four years, when he returned to England, and resumed his practice in the courts of Doctors' Commons. In 1810 he commenced writing on political subjects in the 'Times' newspaper, his contributions being marked J. S., and this led to his becoming the political editor in 1812. His writings in this paper were distinguished by great energy, the possession of much varied knowledge, a clear style, with a power of fulmination, too often founded on mere prejudice, that occasioned his receiving the sobriquet of Dr. Slop, and as such he was burlesqued by George Cruikshank in the parodies and satires published by Hone. Dr. Stoddart is said to have taken Burke as his model, but he failed in reaching to any greater similarity than that arising from their dislike to the course taken by the French revolution, which, in the doctor's case, displayed itself in his rancorous denunciations of Bonaparte and his policy. He held this important post till the close of 1816, when, in consequence, it is said, of the disapproval of the proprietors of the continued violence of his attacks on the now imprisoned emperor, his connection with the 'Times' was dissolved, and in 1817 he started an opposition paper called 'The New Times.' It was unsuccessful, and in a short time he left it, retired to private life, and to his practice as an advocate. In 1826 he was appointed chief-justice and judge of the Vice-Admiralty Court of Malta, being knighted at the same time, and in that office he distinguished himself by the able and conscientious manner in which he discharged his duties, until his return to England in 1839. From that time till his death he led a private life, in which he was much and widely esteemed; but occasionally published pamphlets on legal subjects, and took considerable interest in the reform of the law, being one of the earliest members of the Law Amendment Society. He also wrote 'An Introduction to General History,' and a 'Universal Grammar; or Science of Language,' which were printed in the 'Encyclopædia Metropolitana,' but have likewise appeared as separate works. A 'Statistical, Administrative, and Commercial Chart of the United Kingdom, compiled from parliamentary and other authentic documents,' was another of his productions. He died at Brompton-square, near London, on February 16, 1856; and on the first meeting of the Law Amendment Society after his death, Lord Brougham pronounced a warm eulogium on his memory.

STOFFLER, JOHN, a celebrated German astronomer, who was born December 10, 1452, at Justingen in Swabia. He was appointed professor of mathematics in the University of Tübingen (in Wirtemberg), where, besides pure mathematics, he taught astronomy and geography, and he appears to have been successful in gaining the esteem of his numerous pupils, among whom are said to have been Melancthon and Sebastian Münster. In the year 1530 he made a journey to Vienna, in order to be present at the installation of a pro-

fessor of mathematics in the university of that city; and, according to Melchior Adam, he died of a contagious malady at Blaubeuren, February 16, in the following year, being seventy-nine years of age.

According to the practice of astronomers in that age, Stöffler spent much of his time in the computation of ephemerides, and he appears to have been first brought into notice by continuing the series which Müller (Regiomontanus) had commenced. He constructed an astrolabe, which was intended to be used as an instrument for making celestial observations, and on the plane of which were projected the circles of the sphere: an account of the astrolabe was given by him in a tract which was published at Tübingen in 1513; and in the same tract there is given an account of an instrument for determining the hour of the day by an observed altitude of the sun.

Stöffler employed himself on the subject of reforming the Julian Calendar, and it is stated that he was the first who proposed to rectify the error of that calendar by the omission of ten days in one year, in order to make the succeeding days of the year correspond, as at first, to the place of the sun in the ecliptic. It is said also that Stöffler offered his project to the Lateran council, and that it was not accepted. Besides the ephemerides, and the above-mentioned tract on the use of the astrolabe, Stöffler published astronomical tables (Tübingen, 1500); a tract on the calendar (Oppenheim, 1518); and a commentary on the Sphere of Proclus (Tübingen, 1531).

\*STOKES, GEORGE GABRIEL, M.A., D.C.L., F.R.S., who has taken a very high rank among mathematicians and physicists of the age, is of Irish origin, but was educated at the school of Christ's Hospital, London, whence he was sent to Pembroke College, Cambridge, where, as senior wrangler, he took the degree of B.A. in 1841, and became a fellow of his college. He succeeded Dr. King as Lucasian Professor of Mathematics in the University in the year 1849.

On the 5th of June 1851, he became a Fellow of the Royal Society, and received the Rumford Medal by an award of the Council of that body in the following year, for his capital "discovery of the change in the refrangibility of light." The researches of which this discovery was the principal, though by no means the only result, originated in a consideration by Professor Stokes of the very remarkable phenomenon discovered by Sir John Herschel in a solution of sulphate of quinine, which, though it appears to be perfectly transparent and colourless like water, when viewed by transmitted light, exhibits nevertheless, in certain aspects, and under certain incidences of the light, a beautiful celestial blue colour. This had been shown by Sir David Brewster to be a particular case of the general phenomenon of the chromatic dispersion of light within the substance of transparent bodies; whether solid or liquid. But Professor Stokes determined that in the phenomenon of internal dispersion so called the refrangibility of light is changed, incident light of definite refrangibility giving rise to dispersed light of various refrangibilities; also that the colour of light is in general changed by internal dispersion, the new colour always corresponding to the new refrangibility; and it being a matter of perfect indifference whether the incident rays belong to the visible or invisible part of the spectrum. And further, that the phenomena of internal dispersion are perfectly conformable to the supposition that the production of light, of chemical changes (attributed to a special radiation termed actinic), and of phosphorescence (when excited by the previous action of light,) are merely different effects of the same cause. The experiments and inductions on which these conclusions are founded are detailed in a paper in the 'Philosophical Transactions' for 1852, of which it occupies 100 pages. An abstract will be found in the 'Proceedings of the Royal Society,' vol. vi., p. 195, and in the 'Philosophical Magazine' for November 1852. The subject is continued in a shorter memoir in the 'Philosophical Transactions' for the following year. Having in his first paper suggested the term *fluorescence* (from fluor-spar, which exhibits the same phenomenon), to denote the general appearance of a solution of sulphate of quinine, as already described, and of similar media, the author now substitutes that term, a single word not implying the adoption of any theory, for that of internal dispersion, which he shows to be inconvenient, even if not untrue.

At the anniversary meeting of the Royal Society in 1854, Professor Stokes was elected one of the two secretaries, to which office he has been annually re-elected, and which he now holds (June 1857).

Professor Stokes has instituted a series of experiments for the purpose of determining the index of friction in different gases, which are in progress, under his direction, at the Physical Observatory of the British Association for the Advancement of Science at Kew, near London. To defray the expenses of these experiments 175*l.* was appropriated in 1851 from the annual grant of 1000*l.* to the Royal Society by the government, to be employed in aiding the promotion of science in the United Kingdom. He is the author of papers on various subjects of mathematical physics in the 'Transactions of the Cambridge Philosophical Society,' and in the third and fourth series of the 'Philosophical Magazine;' in vols. xxi. and xxii. of the third, for the years 1842 and 1843, he discusses the analytical condition of the rectilinear motion of fluids, with his colleague Professor Challis, with whom he has in the same work discussed various other subjects. In recent volumes will be found supplementary papers on the change of the refrangibility of light and on fluorescence.

It is important to notice here the remarkable view—in fact, a dis-

covery in itself—which the theory of transversal vibrations has led Professor Stokes to take, of what it is not incorrect to term, in one respect, the physical nature of the luminiferous ether. While conceiving it to be a fluid, as regards the motion of the earth and planets through it, he finds that it must be regarded as an elastic solid in treating of the vibrations of light. This conclusion is one of the highest importance in connection with the philosophy of the nature of matter, and the relations to space and to each other of different orders of matter. We may hope, from the sagacity of the mind which has arrived at it, much further progress in the same direction. Nor is the fact that it is an independent re-discovery of a result long previously attained by Young [YOUNG, THOMAS] any diminution of the merit of its second discoverer.

In his own University Professor Stokes gives annually a course of lectures on the sciences of Hydrostatics, Mechanics, and Optics, which is both theoretical and practical, and has particular reference to the physical theory of light. By the admirable provision of the late Sir Henry de la Beche, he has for several years past delivered lectures on general physics, elementary and practical, to the students of the Metropolitan School of Science applied to Mining and the Arts, at the Museum of Practical Geology in London.

STOLBERG, CHRISTIAN, COUNT, was the son of Count Christian Gunther, a branch of the house of Stolberg-Stolberg, one of the most ancient families in Germany, but who had accepted an office in the household of Sophia Magdalena, the widow of Christian VI., king of Denmark. Christian was born in Hamburg on October 15, 1748, and was educated at the University of Göttingen, where, with his brother, he soon distinguished himself by his love of literature, and by his poetical talents. His works were published in connection with those of his brother, and may be best mentioned with them, but we may say here that in style he was a follower of Klopstock, and an admirer and imitator of the classics. He was the author of 'Belsazer,' and 'Otanés,' dramas in blank verse with lyrical unrhymed choruses; a translation of Sophocles; and 'Gedichte aus dem Griechischen' ('Poems from the Greek'). The dramas have no great merit, and were not adapted for theatrical representation. His reputation rests on his miscellaneous poems, which contain interesting pictures of domestic life and manners, and a pleasing expression of tender feelings, which is peculiarly shown in those poems written on his brother's death. After filling a few unimportant public offices he retired, on his marriage in 1777 to the Countess of Reventlow, to his estate of Windeby, near Eckernförde in Schleswig, and died on the 18th of January 1821.

STOLBERG, LEOPOLD FRIEDRICH, the brother of the preceding, was born in November 7, 1750, at Bramstedt in Holstein. He prosecuted his studies with his elder brother, and like him became early associated with the band of poets, Bürger, Voss, and Holty, then flourishing. Like his brother, he was an ardent admirer of the Greek poets, and his first literary production was a translation of the Iliad, which, though not rendered with scrupulous accuracy, reproduces much of the fire and vigour of the original. He then with his brother made a tour in Switzerland, a part of which was performed on foot in company with Goethe and Lavater, and having visited Milan, Piedmont, and Savoy, they returned to Copenhagen. In 1777, soon after their return, the prince-bishop of Lübeck constituted Friedrich his minister plenipotentiary at the Danish court, and the marriage of Christian in the same year having separated the brothers for a time, Friedrich employed himself on his translations of four of the dramas of Æschylus, which contain the same defects and the same merits as his translation of the Iliad. He also composed his dramas of 'Theseus' and 'Der Säugling,' both formed upon classical models; the latter containing some vigorous passages expressive of a mother's grief for the loss of an infant. In 1782 he married Agnes von Witzleben, a lady whom he had celebrated in some of his poems, and whose death in 1788 he commemorated in others. During their union, in 1785, he was entrusted with an important mission from the court of Denmark to that of Russia, which having fulfilled, he retired to Neuenburg, in Prussia, where he wrote 'Der Island,' a novel as it is called, but of which only a slight fiction of plot is used to introduce his own and his brother's family with a few young friends, and the rest is entirely dialogue on all sorts of subjects, containing many sound observations on morals and manners, vivid recommendations of religion and virtue, pleasing descriptions of scenery occasionally, and literary judgments on various authors. Among these the admiration of the Greek authors is warmly expressed, and to Ossian, whom he subsequently translated, is assigned a very high rank. On the death of his wife Friedrich went to reside with his brother in Holstein, and in the spring of 1789 he was again selected as minister from Denmark, then menaced by an invasion from Prussia, to the court of Berlin to divert the impending storm. He was successful, and he continued to reside at Berlin, where in 1790 he married the Countess Sophie von Redern, with whom he set out on an extensive tour, comprising a considerable part of Germany, Switzerland, and Italy, including Sicily, an account of which was published in 1794 under the title of 'Reise durch Deutschland, die Schweiz, Italien, und Sicilien,' in 4 volumes. It contains some well-painted descriptions, and much poetical enthusiasm, but is extremely discursive. In it are inserted his poetical epistles to Ebert which he denominated 'Hesperides.' After an absence of eighteen months, he returned, and

was made chief-minister of the prince-bishop of Lübeck, of which office he fulfilled the duties with zeal and ability; but the concerns of this small state could not occupy all his attention, and he translated the last discourse of Socrates, and some of the dialogues of Plato, the notes to which gave great offence to the admirers of the French revolution then in progress. On the death of Catherine of Russia in 1797 he was sent as ambassador to Russia to compliment the emperor Paul on his accession. Friedrich had been hitherto a zealous Protestant, and in his 'Sendeschreiben an einen holsteinischer Kirchspielvogt in Schweden,' ('Epistles to a Holstein Parish-beadle in Sweden') had defended Lutheranism vigorously; but apparently alarmed at the course the revolution was taking in France, on which the Protestant section of Germany, in his opinion, looked with too favourable an eye, he relinquished his office, repaired to Münster, and with his whole family was there admitted into the Roman Catholic Church. His conversion produced a great sensation in Germany, and embroiled him with many of his friends, particularly with J. H. Voss, but not with his brother, who continuing a Lutheran remained as attached as ever. On his conversion he commenced his 'Geschichte der Religion Jesu Christi,' of which the first edition was published in 15 volumes in 1806. It commences with the creation, and comprises much of secular as well as ecclesiastical history. It was considered so able that Pope Pius VII. caused it to be translated into Italian, which was performed by J. G. de Rossi and Henri Keller, and published in 1824. Count von Stolberg also translated two treatises of St. Augustin, and a few other small works on religious subjects, but his chief production at this period was his 'Leben des Alfreds des Grossen,' published in 1815, a monarch whom he indirectly claims as an ancestor of his own family, in which work he displays an intimate acquaintance with Anglo-Saxon history. After visiting a married son in the summer of 1819 at his residence in Söder, where he completed his last work, 'Ein Büchlein von der Liebe' (translated by J. Dalton into English under the title of 'A little Book of Love of God'), he returned to his own home at Sondermühlen near Osnabrück, where he died on December 5, 1819. His works are even more varied than we have indicated, for they include odes, satires, hymns, elegies, &c., but all his productions are full of the noblest sentiments, the kindest feelings, and the holiest aspirations, while the language and the imagery are of a bolder character than those of his brother. It may be remarked of both the brothers that they are among the number of German poets whose lyrical productions are in by far the greatest portion, unrhymed. They also in their dramas have introduced a great variety of the classical metres.

STONE, EDMUND, a mathematician of North Britain. He was of humble origin, having been the son of a gardener in the service of the Duke of Argyll, and he was born near the end of the 17th century, probably on one of the duke's estates. A servant of the family taught him, when a boy, to read; and with no other guide than his own genius he at length became learned in the higher branches of mathematical science. The duke, happening accidentally to become acquainted with the extent of his scientific acquisitions, took an opportunity of drawing from him an account of the steps by which he had attained them, and learned with surprise that, from a desire to understand the use of a rule and compass, and how to make computations relative to the art of building, the youth from books only had taught himself arithmetic and geometry, together with as much of Latin and French as enabled him to read scientific works in those languages.

It will be readily imagined that the young man was not left in his then obscure situation: in fact the duke, his master, generously gave him an employment which allowed him to have sufficient leisure for his studies; and he continued to cultivate the mathematical sciences to the end of his life. He was elected a Fellow of the Royal Society in 1725, and there is inserted in the 'Philosophical Transactions' (vol. xli.) a paper by him in which is an account of two lines of the third order, which are not mentioned by Sir Isaac Newton or by Mr. Stirling. It is not known from what circumstance Mr. Stone lost the support of the noble family which had patronised him, but it appears that in the latter part of his life he subsisted by giving lessons in mathematics, and that he died in poverty in 1768.

Mr. Stone published in 1723 a translation of Bion's 'Treatise on Mathematical Instruments'; in 1726 a 'Mathematical Dictionary,' in 1 vol. 8vo; and in 1730 a translation of the Marquis de l'Hôpital's 'Analyse des Infiniment Petits,' together with a treatise by himself on the 'Method of Fluents, or the Inverse Method of Fluxions.' This work has been criticised by John Bernoulli; but the mistakes which occur in it are candidly ascribed to the circumstances under which it was written. In the following year Stone published 'The Elements of Euclid,' in 2 vols. 8vo; and in 1735 a translation from the Latin of Dr. Barrow's 'Geometrical Lectures.'

\* STONE, FRANK, A.R.A., was born at Manchester on the 23rd of August 1800. The son of a cotton-spinner and manufacturer, he was educated at Manchester, and at Prestbury in Cheshire, with a view to commercial pursuits. On leaving school he entered his father's factory, and continued in business until his twenty-fourth year, when he adopted the profession he has since so honourably pursued.

In 1831 Mr. Stone came to London, and in the following year he was elected a member of the (Old) Society of Painters in Water Colours; and thenceforth, for some fifteen years, his pictures—whether illustrations of texts from Shakspeare, original fancies, or the quiet, graceful

female studies which generally found a place on the 'screen'—were among the more attractive of those contributed to the annual exhibitions of that society. But, like many other painters who have commenced their career by practising in water-colours, he became ambitious of excelling in a vehicle which allowed a freer and wider development of his powers. It was in 1840 that he sent to the Royal Academy his first subject oil-picture, 'The Legend of Montrose.' It obtained a good place, and was a decided success; and every year since then—with the exception of 1855, when he did not exhibit—Mr. Stone has had the rare fortune to maintain his position on the line of the Royal Academy exhibitions. In 1841 his picture from Henry Taylor's 'Philip Van Artevelde,' afterwards engraved under the title of 'The Heart's Misgivings,' obtained the prize at the British Institution. His standing as a painter in oil-colours being secured, he gradually gave up his practice in water-colours, and, looking forward to academic honours, he in 1847 resigned his connection with the Water-Colour Society, that step being rendered necessary by the requirement of the Royal Academy, that candidates for admission to that body "shall not be members of any other society of artists established in London." He was elected an Associate of the Royal Academy in 1851.

The following comprise the more important of Mr. Stone's pictures painted subsequently to those noticed above—all of them, with the exception of the second, being exhibited at the Royal Academy in the years mentioned:—'The Interview of Charles I. with the Infanta of Spain,' 1841; 'The Bashful Lover and the Maiden Coy' (British Institution, 1842); 'Admonition,' 1842; 'The Last Appeal,' 1843; 'Cross-Purposes,' 1844; 'Scene from Hamlet—the Queen and Ophelia,' and 'The First Appeal,' 1845; 'Evening,' 1846; 'The Impending Mate,' and 'Mated,' 1847. These were the last of a series of sentimental subjects which were engraved and had an immense popularity, but which are undoubtedly far from worthy examples of Mr. Stone's pencil. In 1848 he essayed a loftier flight, his chief work being 'Christ and the Woman of Bethany,' a production displaying very considerable artistic skill and fine feeling. 'The Duet' appeared in 1849; in 1850 'The Gardener's Daughter,' a very charming reading from Tennyson's well-known poem; and a larger piece from the 'Tempest.' A more important and more successful Shakspearian rendering, 'The Merchant of Venice—Bassanio receiving the Letter announcing Antonio's Losses and Peril,' appeared in 1851, and secured the artist's election into the Royal Academy. His contribution for 1852 consisted of a characteristic portrait of 'Dr. Hooker in the Himalaya, surrounded by his Collections,' and three small pictures. In 1853 he sent another Scriptural subject—'The Master is Come,' a work which in its calm solemnity of style afforded a remarkable contrast to the piquant grace of his other picture, a group of lively girls apparently engaged in the concoction of some arch-plot, entitled 'Now I'll tell you what we'll do.' In 1854 he produced 'The Old, Old Story,' and the 'Mussel Gatherer,' and in 1856 'Doubt.' In the present year (1857) his pictures are, Faust's 'Margaret,' a grave and even sombre painting, and 'Bon Jour, Messieurs,' a hilarious group of French peasants in a rustic cart, painted with a thoroughly genial humour and truth, which render it one of the most charming little works of its kind we remember to have seen; and in it Mr. Stone has struck upon a vein which every one will rejoice to see him pursue further. We have indicated the leading characteristics of Mr. Stone's pictures—a choice of subject of considerable range, but for a time tending strongly towards sentimentalism, and in the realisation of his theme, along with a lucid manner of telling his story, constant grace and beauty of form and feature, refinement of style, delicacy of touch, occasionally rich, and always pleasing, colour; but we ought also to add that, like every other painter who loves his art, his later works evince growing carefulness of execution and expansion of view, and that in respect alike of their technical and their mental qualities his latest works are his best.

STONE, NICHOLAS, master mason to Charles I., was born at Woodsbury, near Exeter, in 1586. He lived three years in London with one Isaac Jones, his master, and then went to Holland, where he worked for Peter de Reyser, whose daughter he married. He returned to England about 1614, and was for many years chiefly employed in making monuments for the nobility and gentry. In 1619, he was appointed master mason for building the new Banqueting House of Whitehall, on which he was engaged two years at 4s. 10d. per day; and in 1626, at the commencement of the reign of Charles I., he was appointed master mason of Windsor Castle. The patent is in Rymer's 'Fœdera,' vol. xviii. p. 675. The history of Stone's works is fully recorded by himself in a pocket-book, which was in the possession of a Mr. Hawksmore, and of which Vertue obtained a copy. This pocket-book contained a full account of the various monuments he had executed, with the sums of money he received for them, and the names of the persons for whom they were constructed.

According to this book, Stone erected in 1611 a monument to the Earl of Ormond, at Kilkenny, for which he received 400l. He received in the following year 500l. for a monument to Henry Howard, earl of Northampton, erected in Dover Castle. For a tomb made for Lucy Harrington, countess of Bedford, 1616, he bargained for 1020l., besides the charges for carriage and iron and setting up. This year he went to Scotland: and he gives the following account of his trans-

actions there:—"July 1616, I was sent to Scotland, where I undertook to do work in the King's Chapple and for the King's Clossett, and the organ, so much as came to 450*l*. of waincot-works, the which I performed and had my money well-paid, and 50*l*. was given to drink, whereof I had 20*l*. given me by the king's command." He mentions drink-money on other occasions. Stone made several monuments for Westminster Abbey; among them one to Spenser, the poet, for which the Countess of Dorset paid him 40*l*. In 1625, he made for the old Exchange of London four statues—Edward V., Richard III., Henry VII., and Queen Elizabeth, which was afterwards removed to Guildhall-gate. For the three kings he received 25*l*. each, for the queen, 30*l*.; 25*l*. appears to have been Stone's ordinary charge for a statue, including the pedestal.

The various sums received by Stone for monuments erected by him, noted in his pocket-book, amount altogether, according to his kinsman, Charles Stoakes, from whom Vertue acquired his information concerning Stone's family, to 10,889*l*. Walpole has given a list of the principal monuments, and mentions some architectural works by Stone. He died August 24, 1647, aged sixty-one, and was buried in St. Martin's Church, where there is a slab to his memory with an inscription and his profile. His wife and his son Nicholas are buried in the same grave: they both died in the same year a few months after him. Stone had three sons, Henry, Nicholas, and John.

HENRY STONE, known as *Old Stone*, probably because he was the eldest, was a statuary and painter, but he was chiefly engaged in painting. He studied in Italy and the Netherlands, and made many excellent copies of celebrated Italian and Flemish pictures; there is a large copy at Hampton Court of the celebrated picture, by Titian, of the Cornaro Family, now in the possession of the Duke of Northumberland. He lived in Long Acre in the same house that was his father's, which he rented of the crown for 10*l*. per annum. He died in 1653, and was buried near his father; and the following inscription to his memory was placed in the church by his brother John:—"To the memory of Henry Stone of Long Acre, painter and statuary, who, having passed the greatest part of thirty-seven years in Holland, France, and Italy, achieved a fair renown for his excellency in arts and languages, and departed this life on the 24th day of August, A.D. 1653, and lyeth buried near the pulpit in this church." Here follows some laudatory verses. *Old Stone* wrote a book, entitled the 'Third Part of the Art of Painting,' taken mostly from the ancients. Vertue, who saw this book, was uncertain whether the two former parts were composed by Stone, or by some other author.

NICHOLAS STONE, the second son, who was a statuary, also studied abroad and modelled many excellent copies of celebrated works. Mr. Bird, the statuary, says Walpole, had the 'Laocoon' and Bernini's 'Apollo and Daphne' in terra-cotta by him. He returned to England in 1642, and died in the same year as his father, as noticed above. Vertue saw a book of drawings by him of many buildings in Italy.

JOHN STONE, the youngest, was also a statuary, though he was originally designed for the church, and was educated at Oxford. In the civil war he entered the king's army, and narrowly escaped being taken. He concealed himself for a year in his father's house without his father's knowledge, and at length contrived to escape to France, where he probably took to the arts, as he was afterwards engaged in partnership with his brother Henry. He wrote a manual on Fortification, which he called 'Enchiridion;' it contained many small cuts etched by himself, but without his name. He died soon after the Restoration. In St. Martin's Church, below the inscription to Henry Stone, is the following addition, with the date June 1699:—

"Four rare Stones are gone,  
The father and three sons.

In memory of whom their near kinsman, Charles Stoakes, repaired this monument."

STONHOUSE, SIR JAMES, who was originally a physician, afterwards a clergyman, and who became a baronet late in life, on the death of a distant relation, was born July 20, 1716, at Tubney, near Abingdon. His father was a country gentleman, and died when his son was only ten years old. He was educated at Winchester School, and afterwards at St. John's College, Oxford, where he took his degree of M.A. in 1739, that of M.B. in 1742, and that of M.D. in 1745. He was indebted for much of his medical knowledge to Dr. Frank Nicholls, with whom he resided for two years in his house in Lincoln's-inn-fields. He attended St. Thomas's Hospital for two years under Sir Edward Wilmot, Dr. Hall, and Dr. Letherland, and carried on his medical studies for two years more at Paris, Lyon, Montpellier, and Marseille. On his return he settled at Coventry, where he married the eldest daughter of John Neale, Esq., member of parliament for that city. This lady, who died in 1747, soon after their marriage, in the twenty-fifth year of her age, is introduced as one of the examples of frail mortality in Hervey's 'Meditations,' and is further commemorated there in a note. In 1743 Dr. Stonhouse removed to Northampton, where his practice became very extensive. He was in all respects a great benefactor to the poor, and, among other schemes for their relief, founded the County Infirmary. During his residence at Northampton the celebrated Dr. Akenside in vain attempted to get a footing, for he found that Dr. Stonhouse, as Johnson observes, in his Life of Akenside, "practised with such reputation and success, that

a stranger was not likely to gain ground upon him." After twenty years' practice in Northampton, Dr. Stonhouse quitted his profession, assigning as his reason that his practice was too great for his time and health; but neither the natural activity of his mind nor his unceasing wish to do good would permit him to remain unemployed. As he was particularly fond of the study of divinity, he determined to take orders, and was ordained deacon by the special favour of the Bishop of Hereford in Hereford cathedral, and priest the week after, by letters dismissory to the Bishop of Bristol, in Bristol cathedral. In May 1764 he was presented to the living of Little Chevel, and in December 1779 to that of Great Chevel, where he applied himself to the duties of his station with fervour and assiduity, and became very popular as a preacher. About ten years before this, he had married his second wife. Dr. Stonhouse's piety, for which he was most admired, had not always been uniform. He tells us that he imbibed erroneous notions from Dr. Nicholls, and that he was for seven years a confirmed infidel, and did all he could to subvert Christianity. He went so far as to write a keen pamphlet against it; the 'third' edition of which he burnt. He adds, "for writing and spreading of which, I humbly hope, as I have deeply repented of it, God has forgiven me, though I never can forgive myself." His conversion to Christianity (which he attributes to some of Dr. Doddridge's writings), and the various circumstances attending it, were such, that he was persuaded to write the history of his life. This he intended for publication after his death, but, in consequence of the suggestion of a friend, and his own suspicions lest a bad use might be made of it, he was induced to destroy it. He died at Bristol-Wells, December 8, 1795, in the eightieth year of his age. Among other ways of doing good, Sir James Stonhouse was convinced that the dispersion of plain and familiar tracts on important subjects was one of the most important; and he accordingly wrote several of these, some of which have been adopted by the Society for Promoting Christian Knowledge. Much of his general character and conduct, his sentiments, and the vicissitudes of his professional employment, may be learned from his correspondence, published in 2 vols, 12mo, 1805, with the title, 'Letters from the Rev. Job Orton and the Rev. Sir James Stonhouse,' &c. (See also *Gent. Mag.*, lxxv, lxxvi, and lxxxi; and Chalmers, *Biog. Dict.*)

STORACE, STEPHEN, a composer, whose brilliant career was arrested by death just as he had attained the age when most of those who are destined to distinguish themselves are but beginning to be generally known, was born in London, in 1763. His father, a Neapolitan (who added a *t* to his name on his coming to England), played the double-bass at Drury Lane Theatre, and married a sister of the well-known Dr. Trusler (who was famous by her manufacture of plum-cakes at Marylebone Gardens), the fruits of which union were, the subject of the present sketch, and *Anna*, the justly celebrated singer.

When about twelve years old Stephen was placed by his father in the Conservatorio St. Onofrio, at Naples, where his progress fully justified the sanguine expectations excited in London by the budding of his genius. After completing his studies, he visited the different cities of Italy, giving various proofs of his talents, accompanied by his sister, a pupil of Sacchini, who at once was recognised as a first-rate vocalist. They then proceeded to Vienna, and reached the imperial city at the time that the Duke of York (then Bishop of Osnaburg) arrived there, who immediately honoured them by his notice, and never after withdrew his patronage. Signora Storace was speedily engaged at the emperor's Italian theatre, at a salary then thought prodigious—500*l*.; and her brother composed for the same an opera, 'Gl' Equivoci,' the substance borrowed from Shakspeare's 'Comedy of Errors.' Portions of the music he afterwards used in his 'Pirates,' and in 'No Song, no Supper.'

In March 1787 Storace and his sister returned to England, and were immediately engaged at the King's Theatre, the lady as first comic singer, and her brother as director of the music. Her success was most decided; but the intrigues of the Italian performers were too harassing for his sensitive nature, and he withdrew in disgust to Bath, devoting his time to drawing—an art for which he had much talent. In 1789 he produced his first opera at Drury Lane, 'The Haunted Tower,' his sister appearing in the principal character, and this was performed no less than fifty times during the season. In 1790 he brought out 'No Song, no Supper,' written by Prince Hoare. In 1791 appeared 'The Siege of Belgrade,' altered by Cobb from 'La Cosa Rara,' in which much of Martini's music is mixed up with Storace's. 'The Pirates' was given for the first time in November 1792; the performers were Kelly, Dignum, Sedgwick, Suett, John Bannister, Parsons, Mrs. Crouch, Miss de Camp (afterwards Mrs. C. Kemble), Mrs. Bland, and Signora Storace. The picturesque scenery was from designs made at Naples by the composer himself. 'The Prize' was brought out in 1793; 'Lodoiska,' translated from the French by John Kemble, the music selected from the rival operas of the same name by Kreutzer and Cherubini, with additions by Storace, in 1794; and the same year also produced 'The Iron Chest,' by George Colman the younger, the incidental music by Storace. The composer's attendance on the first rehearsal of this, while under the influence of a severe attack of gout and fever, cost him his life. He returned from the theatre to his bed, whence he never rose again, dying on the 19th of March, in the thirty-third year of his age.

"At the time of his death he had a new opera, 'Mahmoud,' in preparation. He had been to Bath to hear Braham, who then had not made his appearance on the London stage, and engaged him for Drury Lane. This however, by the assistance of Signora Storace and friends was completed, and performed for the benefit of the widow and child of the composer, on the 30th of the month in which he breathed his last, and, supported by John Kemble's admirable acting and Braham's not less admirable singing, was most successful."

Our space will not allow us to particularise the other works of this highly-gifted amiable man; but it is only just to say of those here enumerated, that they "abound in spirit, taste, science effectively but not pedantically displayed, strong feeling, and good sense;" and to add, that their author, in these as in other matters evinced a vigorous and cultivated mind. "His opinion on literary subjects was much respected by the best critics, and he was often consulted on points unconnected with his professional pursuits." ('*Harmonicon*,' vol. vi.)

STORK, ABRAHAM. Notwithstanding the great merits of this eminent marine painter, and the high estimation in which his works have always been held, we cannot find that any author has been able to ascertain the year of his birth or the master under whom he studied, or indeed whether he had any instructor. It is certain however that he was a most assiduous student of nature. He made accurate sketches of such objects, suited to his department of the art, as he thought might be introduced into his compositions, and hence every object in his pictures has the impress of truth. He was equally successful in representing ships, either at sea or at anchor in port, either in calms or in storms. In his views of seaports there is an extraordinary variety of ships, boats, and barges, with a great number of figures. This extraordinary number of figures engaged in every kind of employment incidental to a seaman's life, is in fact one of his chief characteristics. His most celebrated picture is that representing the reception of the Duke of Marlborough in the river Amstel, in which he has introduced an inconceivable number of vessels, barges, yachts, &c., superbly decorated, and crowded with figures, in a variety of costume, according to their rank and condition. Notwithstanding the extent of this composition, there is no confusion. It is painted with great spirit, and highly finished. The colouring of this artist is very agreeable; his touch light, firm, and spirited; and his figures, though small, are designed with correctness. He died at Amsterdam, the place of his nativity, in 1703.

STORM, EDWARD, a Danish poet of some note, was the son of a clergyman at Guldbrandsdalen in Norway, where he was born August 21, 1749, on the very same day with his literary contemporary Thomas Thaarup, whose mother is said to have dreamt that a rival to her own child would be born about the same time at Guldbrandsdalen. Storm began his literary career at the age of twenty-five, with a short heroic poem in six cantos, entitled 'Bræger.' Being written in hexameters, it recommended itself at the time as a novelty, nor is it without merit in regard to that minute descriptive painting of familiar objects and circumstances which stamps the 'Idyls' of Voss; but it will bear no comparison with Holberg's 'Peder Paars,' with which it inevitably forces a comparison. He was far more successful with his 'Fables and Tales,' which are some of the best in the language, and acquired considerable popularity. They first appeared in 1783, and in the following year a second edition of them was published. His 'Infödretten,' a poem in four cantos, of the didactic class, and one or two other productions of a similar kind, have many fine passages and poetical beauties; his reputation however now rests chiefly on his lyrical productions, which have obtained for him a place in Danish literature by the side of Thaarup. Storm was for some time manager of the theatre at Copenhagen, which post he held at the time of his death in 1794. ('*Skilderic af Kiøbenhavn*')

STORY, JOSEPH, a judge and juridical writer known to law students as Mr. Justice Story, was born on the 18th of September 1779, at Marblehead, in the State of Massachusetts, U. S., where his father, Elisha Story, practised as a physician. He received the rudiments of learning in his native town; entered Harvard University in 1795, and took a degree there in 1798. He commenced his law studies under Mr. Sewall, of the bar of Marblehead, subsequently chief justice of Massachusetts, and continued there under Mr. Putnam, of the bar of Salem, who became a judge of the same court. In 1801 he was called to the bar, and speedily obtained extensive practice. In an article in the '*Law Review*,' the author of which enjoyed his friendship, it is stated that, "from political considerations, he was very early engaged in important cases, in which he had to combat with the most eminent lawyers as his opponents; and, not unfrequently he sustained the contest alone. His reputation at the bar has never been surpassed by that of any of the eminent lawyers of whom the United States can boast." In 1805 he became a member of the State Legislature of Massachusetts, as representative of Salem. He continued a representative until his accession to the bench; and he then was elected to the office of Speaker. In 1809 he was chosen a member of Congress, as representative of the Essex South District. He acquired a high reputation as a politician and a forensic debater. In November 1811, he was appointed an associate justice of the Supreme Court of the United States, being then only just thirty-two, and the youngest man who had received such an appointment. "The jurisdiction of this court," says the authority already cited, "both

original and appellate, embraced an infinite variety of subjects. It had to administer, besides the municipal laws of the States, the common, and much of the statute law, as well as the system of equity jurisprudence of England; it had to administer parts of the law of Spain, and of the code civil adopted in the State of Louisiana. Again, it reviewed the final sentences of courts deciding questions of maritime and prize law. Its decisions therefore would be of still greater and more general importance, for they would contribute to the exposition of the law of nations. The peculiarities which in some important particulars distinguish the local laws of the different States also required a correct application of the principles which determined, when any case presented a conflict of those laws, the law which ought to be selected and govern the decision of the case." These special advantages were an addition to the opportunities which the general character of the legal practice of America afforded, to one able to grapple with the subject, to treat the philosophy of international law with a wide view to its practical application. The American lawyers having to deal with a system of which the roots were diversified, although undoubtedly the law of England formed the principal proportion; requiring to adapt their practice to the mutual relations of the citizens of several states, each, to a great extent, entitled to make its own independent code of laws, while all were bound together by a mutual tie, and the usual means of finding redress where there were important legal conflicts—force—was inconsistent with the principles of their Union; inheriting, at the same time, that spirit of the strict interpretation of precedent which is so dear to English lawyers, and living among a free people, whose institutions could not easily be bent to meet expediency—it was clear that the American bar afforded the best opportunity for inquiries regarding international law on practical principles, whenever a genius sufficient for the task should there appear. It appeared in the person of Story, whose '*Commentaries on the Conflicts of Laws*,' published in 1834, have passed through several editions, and have carried his reputation over all Europe. Even, in England, where, owing to the vast extent of the domestic legal literature, that of other countries is less esteemed than in France, Germany, and Scotland, Story's work has obtained a high reputation; and on the occasion of his being expected to pay a visit to Britain, which bad health prevented, the masters of the benches of the Inns of Court in London resolved to invite him to a public entertainment. He wrote several other legal treatises—one on the Law of Agency, in 1839; on the Law of Partnership, in 1841; on the Law of Bills of Exchange, in 1843; and on the Law of Promissory Notes. In 1830, he was appointed to fill the newly founded chair of jurisprudence in Harvard University. It was during the time that he held this professorship that he wrote his numerous legal treatises; which besides those mentioned above comprehend an elaborate and very valuable treatise, entitled '*Commentaries on the Constitution of the United States*,' 2 vols. 8vo, 1833, of which he made an abridgement to serve as a text-book in schools; and a work on the Law of Bailments; one on Equity Jurisprudence; a work on Equity Pleading; and a Selection of Pleadings in Civil Actions, with Annotations; and Reports of Cases. Mr. Story was accustomed to devote his leisure hours to literature, and after his death there was published a volume of his '*Miscellaneous Writings*, edited by his son William W. Story.' He died, after a brief illness, at Cambridge, near Boston, on the 10th of September 1845.

(*Life and Letters of Joseph Story, Associate Justice of the Supreme Court of the United States, and Dana Professor of Law at Harvard University.* Edited by his Son William W. Story, 2 vols., 1852; *Law Review*, No. VI. 366, 380.)

STOTHARD, THOMAS, an eminent painter, the son of a publican who kept the 'Black Horse' in Long-acre, was born there on the 17th of August 1755. When little more than five years of age he evinced a taste for drawing in copying some of Houbraeken's heads and other engravings, which were found in the possession of a person at York, with whom he had been placed to nurse. At eight years old he was placed at school at Stretton, near Tadcaster, the birth-place of his father. There he remained till his thirteenth year, when he was placed for a year in a boarding-school at Ilford, Essex, whence he was removed on his father's death, and bound apprentice to a pattern-drawer for brocaded silks in London. The last year of his apprenticeship was given up to him in consequence of the decline of the trade. During the period of his service, Mr. Stothard exercised himself diligently in the study of nature from flowers and other subjects of still-life. His first efforts in a higher branch of art were designs for the '*Town and Country Magazine*,' published by Harrison, in Paternoster-row; and soon after he gained high repute by his admirable compositions for Bell's '*British Poets*,' and the '*Novelist's Magazine*,' works which caused him to be employed in the illustration of almost every publication which for many years issued from the press in England requiring pictorial ornament. During this period he diligently studied at the Royal Academy. The first picture that he exhibited at that institution was the subject of Ajax defending the body of Patroclus. In the year 1785 he was elected an associate of the Royal Academy, and advanced to the rank of Royal Academician in 1794. In 1810 he was appointed deputy librarian to Mr. Birch, and on the death of that gentleman, in 1812, succeeded as librarian. Among the more important of his works may be enumerated his designs for 'Boydell's' Shakspeare, his

Canterbury Pilgrims, the Flitch of Bacon, Fête Champêtre, and the Wellington Shield, of the last of which he made an etching. His largest performance is the painting of the staircase at Burleigh, the seat of the Marquis of Exeter, the figures of which are eight feet high, while in all his easel pictures the figures are of small size. He also designed the ceiling of the Advocates Library at Edinburgh. Among the best of his book illustrations are his designs for the Complete Angler, and Rogers's Poems, and Italy. The first style of painting adopted by Mr. Stothard was that of Mortimer, whose chief characteristics he closely imitated, indeed so exactly that many of his early works are mistaken for those of that vigorous painter. In his later productions however he followed the bent of his own genius, which was essentially gentle. He is supposed to have made upwards of five thousand designs, three thousand of which have been engraved, and although, as might be expected in so large a number, there is a sameness and mannerism of style, yet truth, nature, simplicity, and grace are always apparent. In his comic subjects he was very happy, without in any one instance descending to vulgarity, whilst in his representations of female beauty his drawing is replete with purity of design and delicacy of execution. For several months before his decease, though Mr. Stothard's bodily infirmities prevented his attending to his labours as an artist, he would not relinquish his attendance at the meetings and lectures of the Royal Academy and in the library, notwithstanding extreme deafness prevented his hearing what was passing. He died on the 27th of April 1834, at his house in Newman Street, where he had resided more than forty years, and was buried in Bunhill-Fields burial-ground. He had a numerous family, the most eminent of whom was Charles Alfred, the author of 'Monumental Effigies of Great Britain,' noticed below. A great number of his works have been engraved by Collins, Heath, Parker, Cromek, and Medland, and there are several engraved portraits of him, the principal of which are by Worthington, after Harlowe, and by Bond, after Jackson. A very complete list of his works, with the prices he received for them, is given in Mrs. Bray's very elegant 'Life of Thomas Stothard, R.A., with numerous Illustrations from his Works,' (sm. 4to, 1851); among these illustrations is the design he made for Chantrey's celebrated monument, known as the 'Sleeping Children,' in Lichfield Cathedral.

STOTHARD, CHARLES ALFRED, an antiquarian draughtsman, son of the preceding, was born in London, on the 5th of July 1786. In 1807 he was admitted a student of the Royal Academy, where he was soon distinguished for the chasteness and elegance of his copies from antique sculpture. In the following year he became a student in the Life Academy of the same institution, and attended at the British Institution, Pall Mall, to study from the pictures by the old masters. In 1810 he executed his first historical picture, 'The Death of Richard II. in Pomfret Castle,' in which the costume of the period was strictly adhered to, and the portrait of the king taken from his effigy in Westminster Abbey. As early as the year 1802, Mr. Stothard had been accustomed to make drawings from the monuments in the churches at Stamford and other places near Burleigh, the seat of the Marquis of Exeter. This occupation he undertook at the recommendation of his father by way of improving his knowledge of costume, as being valuable to a painter of historical subjects. This practice, together with a sight of some unpublished etchings by the Rev. P. Kerrieh, of Cambridge, from monuments in the Dominican and other churches in Paris, suggested to him the idea of a work on the monumental effigies of Great Britain, of which the first number appeared in June 1811. The work was accompanied by an advertisement, stating that the objects of the undertaking were, to give the historical painter a complete knowledge of the costume adopted in England from an early period of history to the reign of Henry VIII., to illustrate history and biography, and to assist the stage in selecting with propriety the costume for the plays of Shakspeare. The success of the work was complete, and at once established the reputation of the author both as an antiquarian and an artist. In successive years he occupied himself in making excursions in search of monumental antiquities; and during the summer of 1815 he proceeded so far northward as the Pic's Wall to make drawings for Lysons' 'Magna Britannia.' In the same year he was appointed historical draughtsman to the Society of Antiquaries, and in 1816 was deputed by that body to make drawings from the tapestry at Bayeux. He left England for that purpose in September, and after having visited Paris, proceeded to Chinon, and discovered in the adjacent abbey of Fontevraud those interesting works the existence of which since the first French revolution had been matter of doubt, namely, the monuments of Henry II., his queen Eleanor of Guienne, Richard I., and Isabella of Angoulême, wife of King John. The abbey had been converted into a prison, and these effigies were placed in a cellar, where they were subject to injury from the prisoners. He made accurate drawings from these figures, and succeeded not without difficulty in discovering the painting on their surface. When visiting the abbey of L'Espan, near Mons, which he found converted into a barn, he discovered, under a quantity of wheat, the effigy of Berengaria, queen of Richard I. At Mons he also discovered the beautiful enamelled tablet of Geoffrey Plantagenet, which he considered the earliest specimen of sepulchral brass, and of armorial bearings depicted decidedly as such. On his return to England, he suggested to govern-

ment the removal of the Fontevraud effigies to Westminster Abbey, a suggestion which, though not acceded to, had the effect of causing them to be removed to a place of security.

In 1817 he made a second, and, in 1818, a third journey to Bayeux, in company with his wife, whom he had recently married. After completing his drawings of the tapestry, he made a tour in Normandy and Brittany, when he discovered at Ploermel the effigies of the dukes of Brittany, at Josselin, those of Sir Oliver de Clisson and his lady, and at Vannes several others in a mutilated state. In 1819 he laid before the Society of Antiquaries the complete series of drawings from the Bayeux Tapestry, together with a paper, in which he proved that the tapestry was really a work coeval with the Norman invasion, a period assigned to it by tradition, and not, as attempted to be shown by the Abbé de la Rue, a work of the time of Henry I. The paper was printed in the nineteenth volume of the 'Archæologia;' and on the 2nd of July Mr. Stothard was elected a Fellow of the Society of Antiquaries. He soon after visited various places in Norfolk and Suffolk, for the purpose of making drawings for his monumental subjects, and whilst so engaged, he accidentally saw in a newspaper of the day an account of the discoveries then recently made on the walls of the painted chamber in the House of Lords. He immediately proceeded to London, and made a series of drawings from the paintings, of which, not long before his death, he prepared a paper, in which he investigated their age. In 1820 he travelled in the Netherlands, and, on his return, published the ninth number of his 'Monumental Effigies.' Early in 1821 he prepared a tenth number for publication, and also finished a large plate of the Royal Effigies at Fontevraud. He also began a work on seals, and left behind him about thirty unpublished drawings of the scarcest of our regal and baronial ones. Another of his undertakings was a work illustrative of the age of Queen Elizabeth. In May in the same year he left London for Devonshire, for the purpose of making drawings for the Rev. D. Lysons' account of that county. He arrived at Beer-Ferrers on Sunday the 27th, and after attending church, commenced a tracing of the portrait of Sir William Ferrers in the east window. For this purpose he stood on a ladder about ten feet from the ground, but one of the steps having broken, he was thrown with such violence against a monument, that he was killed on the spot. The most important work of Mr. Stothard is that before mentioned—the monumental effigies. The writings of Mr. Gough on the same subject are extremely valuable, but the delineating part contains so many errors, and bears so little resemblance to the style of the originals, that the labours of Mr. Stothard were appropriately devoted to the preservation of accurate as well as tasteful representations of those relics of antiquity.

Mr. Stothard's work on monumental effigies was completed by his widow and her brother Mr. Kempe. Some time after his death his widow published 'Memoirs of the Life of C. A. Stothard,' from which most of the above facts are taken. Mrs. Stothard, whose maiden name was Anne Eliza Kempe, by her subsequent marriage with the Rev. E. A. Bray, rector of Tavistock, is now Mrs. BRAY, and by that name has become known to the readers of our current literature. Besides the Memoirs of her first husband, she has written several historical and other novels, some of which obtained considerable popularity; she has also written some extremely pleasing descriptions of Devonshire scenery (and Devonshire legends) in her 'Borders of the Tamar and Tavy,' and other works; some books of foreign travel; and the 'Life of Thomas Stothard, R.A.,' noticed above.

STOW, JOHN, was born in the parish of St. Michael, Cornhill, London, in the year 1525. His father, Thomas Stow, belonged to the company of Merchant Tailors, and both his father and his grandfather appear to have been tradesmen of credit and substance. Both had monuments in the church of St. Michael's, Cornhill, in which parish they dwelt, and which has also the honour of having given birth to the subject of the present article.

It is certain that Stow, in the earlier part of his life, followed some trade, and he is expressly called a tailor in at least one document of the time. It appears that in his own day he was regarded as secretly attached to the old religion, and he was more than once exposed to some danger on that account: he was certainly however no bigoted Romanist; his inclination in that direction was an antiquarian rather than a theological feeling; he did not sympathise much with the destructive work of the Reformation; but he does not deny that both doctrine and practice were purer under the new than under the ancient system; and his chief patrons and friends were some of the heads of the Established Church, to which also there can be no doubt that he always professed to belong.

He had probably been given from early life to the investigation of the national antiquities; but about his fortieth year, as we learn from himself, he left his business and applied himself altogether to this his favourite study. The different accounts he gives however vary somewhat as to the time at which he took or acted upon his resolution. Thus, in the edition of his 'Summary,' published in 1567, he describes the compilation of the work some years before as having resulted from his thinking it good at vacant times to take him to his "old delectable studies;" in the edition of 1573, he speaks of its being then eight years since, leaving his own peculiar gains, he had consecrated himself to the search of our famous antiquities; in the edition of 1598, his expression is, that it was "full thirty-six years" since he had done

so; and in the dedication of his 'Annals' to Archbishop Whitgift, dated 24th November 1600, he says, "It is now nigh forty years . . . since I first addressed all my cares and cogitations to the study of histories and search of antiquities."

The accounts that have been given of Stow's publications are for the most part very defective, confused, and contradictory. Passing over for the present his 'Survey of London,' about which there is no difficulty, we will first exhibit the statements we have met with as to his other works, that have the air of having been drawn up with the greatest care:—

I. Strype, in an elaborate 'Life of Stow,' extending to 27 double-columned folio pages, prefixed to his edition of the 'Survey of London,' tells us that the first book Stow put forth of the history of England was his 'Summary of the Chronicles of England,' from the coming in of Brute unto his own time; that he set about this in 1562, on the suggestion of Lord Robert Dudley (afterwards the famous Earl of Leicester); that when the work was published (it is not said in what year), it was dedicated, "with the continuation and increase thereof from time to time," to that nobleman; that not long after, namely, in 1573, it was enlarged and reprinted, and again dedicated to Leicester, in an address in which Stow speaks of his lordship's "generous acceptance of many works presented unto him by others as well as himself," and states that "he fell upon the study and pains of examining and collecting of this English history five years before he set forth this Summary;" that before this larger Summary came forth, he had published several lesser Summaries; that "after twenty-five years" (it is not said from what time), his fortune growing low, he addressed a petition to the lord mayor and aldermen, in which, as Strype quotes the words from the original, though without giving us the date of the paper, he represented that for the space of twenty-five years past (besides his 'Chronicle,' dedicated to the Earl of Leicester), he had set forth various Summaries dedicated to the lord mayor, aldermen, and commoners of the city, and that he minded shortly, if God so permitted, to set forth a far larger Summary or Chronicle of the city and citizens thereof than had yet been published; that some years after he addressed another petition to the mayor and aldermen, in which, after telling them that he was of the age of threescore years and four, he goes on, as before, to speak of the Chronicles (not Chronicle) and divers Summaries he had set forth, "for the space of almost thirty years last past;" that after his Summary, he published, in the year 1600 (now after near forty years study of history) his 'Flores Historiarum,' that is, his 'Annals of this land,' from the time of the ancient Britons to his own, "which," however, "were nothing else but his Summary greatly enlarged;" that "this book was set forth again in the year 1605, by Stow himself, with enlargements, in the black letter, in a thick quarto;" that he intended to publish, or leave to posterity, a far larger volume, but died before he could accomplish that design; "and where that laborious work of his is," adds Strype, "I know not; only we are told that he left the same in his study, orderly written, ready for the press; but that it came to nothing. We all know that another edition of the Annals was set forth in folio by Edmond Howes, some years after the author's death. Perhaps those historical collections are preserved in the curious repository of Sir Simonds Dewes, as some say the rest of Stow's books and papers are, many of which are now repositied in the incomparable library of manuscripts erected by the Earl of Oxford and Mortimer." Such is the substance of between four and five long wordy columns which Strype devotes to the matter. "So that," he concludes, "Stow's histories, which he collected and wrote, were three, viz., his Chronicle, his Summary of Chronicles, and his Annals. The two latter he printed; but that Chronicle which he called his largest work was never printed."

II. The account given by the writer of the article on Stow in the 'Biographia Britannica,' is, that his 'Summary of the Chronicles of England' first appeared in 1565; that it was reprinted with additions and improvements in 1570, 1575, and 1590, and, with a continuation by Edmond Howes, in 1607, 1610, 1611, and 1618; that an abridgement of this 'Summary' appeared in 1566, and was reprinted with continuations in 1567, 1573, 1579, 1584, 1587, 1598, and 1604; that there was an edition of the 'Summary,' under the title of 'Annales,' published in 4to in 1592; but that his 'Annals,' properly so called, first appeared in 1600, under the title of 'Flores Historiarum, or Annals of England;' and finally, that "from his papers Edmond Howes published afterwards that folio volume which goes under the name of Stow's Chronicle," first in 1615, and again in 1631, but that "even this doth not contain all that 'far longer work' which Mr. Stow mentions, and intended to have published, leaving it in his study orderly written, ready for the press." The manuscript, it is added, "is not in the British Museum, with others of our author's manuscripts," which, as already stated, were among those of the Earl of Oxford, now forming what is called the Harleian Collection.

III. Watt, in his 'Bibliotheca Britannica,' makes Stow to be the author of no fewer than four different printed works on English history, namely—1, his 'Summary of English Chronicles,' of which there were editions, in 8vo, in 1565, 1570, 1575, 1579, 1590, and with continuations by Howes, in 1607, 1610, 1611, and 1618; 2, his 'Summary of Chronicles abridged,' printed in 8vo, in 1566, 1567, and 1579; 3, his 'Chronicles of England,' published, in 4to, in 1580, 1584, 1587,

1592, and, under the title of 'Flores Historiarum, or Annals of this Kingdom,' in 1600 and 1604, each time with a continuation; 4, his 'Annals, or a General Chronicle of England,' 12mo, 1573; 4to, 1592; 16mo, 1598; 4to, 1602, 1605, and, continued by Howes, folio, 1614-15; and again 1631. This account appears to be a mere jumble of blunders, made up from the 'Biographia Britannica,' and probably the entries in some booksellers' catalogues.

It does not appear that there are really more than two historical works of Stow's which can properly be called different, namely, his 'Summary' and his 'Annals.'

1. The earliest edition of the 'Summary' was unquestionably published in 1561, of which there is a copy supposed to be unique, in the valuable library collected by the Right Hon. T. Grenville, and presented by him to the British Museum. He seems to have reprinted editions of this work very frequently, probably, as Mr. Thoms suggests ('Life and Writings of John Stow,' prefixed to his edition of the 'Survey of London'), "one for every year," and severally dedicated to the lord-mayor and aldermen, by name, for the time being. Several of these later editions, published during Stow's life, are in the British Museum. The first edition of the 'Summary' that we have met with published after Stow's death is entitled 'The Abridgment of the English Chronicle, first collected by M. John Stow, and after him augmented with very memorable antiquities, and continued with matters forreine and domesticall, unto the end of the yeare 1610, by E. H., gentleman; imprinted at London for the Company of Stationers, 1611.' This volume is a 12mo, in black letter, like its predecessors; but the type is larger, and it does not seem to contain, with the exception of the Continuation, much more than what Stow had already printed, although Howes, the editor, tells us that, besides the time the present edition had cost him, he had laboured five years on the preceding edition of the work, which appears to have been published in 1607. The present volume has two dedications, one to Sir Henry Rowe, who was lord mayor in 1607, the other to Sir William Craven, who was elected to that office in 1610. Stow's 'Summary' seems to have been in constant demand for half a century after its first publication; it was the popular manual of our national history; hence the book was laid hold of by the Stationers' Company, who probably brought out new impressions of it every three or four years, continued to the date of publication like their almanacs and other similar handbooks.

2. Of the 'Annals,' the first edition was published in 1580. A copy now before us, in 4to and black letter, wants the title-page, but appears to have been printed in 1592, to which year the history is brought down. At the end, on p. 1295, the author, addressing the "good reader," says, "I desire thee to take these my labours in good part, like as I have painfully to my great cost and charges, and not for hire, out of many old hidden histories, and true records of antiquity, brought the same to light, and freely, for thy great commodity, bestowed them upon thee: so shalt thou encourage me to publish a larger volume and history of this island, princes of the same, and accidents of their times, which I have gathered, and is ready to the press, when God shall permit me." Stow's 'Annals,' although of course mentioning the same facts, with many others, as his 'Summary,' is altogether a different work from that: even this edition of 1592 must contain at least ten times as much matter as the most extended edition of the 'Summary.' Another edition, also in 4to and black letter, a copy of which is in the British Museum, is entitled 'The Annales of England; faithfully collected out of the most authentical authors, records, and other monuments of antiquity; lately collected, since increased, and continued from the first habitation untill this present year 1605; by John Snow, Citizen of London. Imprinted at London for George Bishop and Thomas Adams. Cum privilegio regie majestatis.' This edition has the dedication to Whitgift, dated 1600, already mentioned, and also a 'Preface or Address to the Reader,' which contains the greater part of the Dedication prefixed to the various editions of the 'Summary,' and inscribed to the lord mayor for the time being. In his dedication to Whitgift the author states that his laborious collections have now at length grown into a large volume, "which," he says, "I was willing to have committed to the press, had not the printer, for some private respects, been more desirous to publish Annals at this present;" and he afterwards expresses his hope of the archbishop's favourable acceptance of the present work, as but part of that which he "intended in a more large volume." In his Preface also he describes this edition of his 'Annals' as an abstract of a far larger work which he has gathered, and meant to have published; and at the end of the 'Chronicle,' on p. 1438, after soliciting as usual the reader's favourable acceptance of his labours, he adds, "So shalt thou encourage me, if God permit me life, to publish or to leave to posterity a far larger volume, long since by me laboured, at the request and commandment of the Rev. Father Matthew Parker, Archbishop of Canterbury; but he then deceasing, my book was prevented by printing and reprinting (without warrant or well-liking) of Rayner Wolfe's Collection, and other late comers, by the name of Raphael Hollingshead his Chronicles." We doubt if, with the exception of the continuation, there be almost anything in this edition of the 'Annals' which is not in the preceding edition of 1592. Nor does there appear to be much added to the portion of which Stow is the author in either of the editions published after his death by Howes

in folio, the first in 1615, the second in 1631. Of the latter, still in black letter, the full title is 'Annales, or a General Chronicle of England; begun by John Stow, and augmented with matters forraigne and domestique, antient and moderne, unto the end of this present year 1631, by Edmund Howes.' In his dedication to the king however Howes intimates that he had been no less than thirty years employed upon the work, and that he had undertaken and performed the task in consequence of his "oath and promise made to the late most reverend prelate Dr. Whitgift, Lord Archbishop of Canterbury." We do not find that he professes to have made use of any manuscript materials left by Stow.

Stow's other work, his 'Survey of London,' was first published in a quarto volume in 1598; and again, in the same form, with considerable additions, in 1603. After the author's death, a third edition, also in 4to, was published in 1618, by A. M. (Anthony Monday), who, according to Strype, "made several additions (as he pretended) which, or much of which (as he hinted in his Epistle), he had formerly from Stow himself, who, while he was alive, delivered him some of his best collections, and used importunate persuasions with him to correct what he found amiss, and to proceed in perfecting a work so worthy." A fourth edition, in folio, came out in 1633, professing on the title-page to be "now completely finished by the study and labour of A. M., H. D. (Humphrey Dyson), and others." Strype gives C. J. as one of the contributors, meaning probably the C. I. whose signature is appended to the prefatory address to the reader. The next edition was that published by Strype, in 1720, in 2 vols. fol., each twice the size of the folio of 1633. Strype's additions indeed made the 'Survey' for the greater part a new work.

Stow, in various passages of his 'Annals,' claims the continuation of Holinshed's 'Chronicle' from 1576 to 1586 as his own handiwork. He appears to have at least supplied a great part of the materials for that portion of the work; but he is merely mentioned as one of several contributors in the Epistle to the Reader prefixed to the edition of 1587 by A. F. (Abraham Fleming), who besides takes to himself the credit of having digested the whole. In his 'Annals,' under the year 1400, Stow states that the edition of Chaucer published (by Speght) in 1569 was founded upon divers written copies corrected by him. Dr. David Powel, in his 'History of Cambria,' published in 1584, acknowledges that he derived important assistance from Stow, who supplied him with a considerable number of manuscript historians, of which he had made use. Stow had possessed himself of a large collection of curious and valuable manuscripts, some originals, some transcribed by his own hand; among the latter, the six volumes of Leland's 'Collectanea' (since printed by Hearne), which he sold to Camden for a life annuity of eight pounds a year.

The hard fate of Stow in his old age is well known. The laborious and acute investigator of antiquity, and faithful and graphic depicter of the manners and customs of his own time, was left by his countrymen, when he had reached his eightieth year, literally to beg his bread. James I. granted letters patent authorising Stow to collect the voluntary contributions of the people throughout the greater part of the kingdom, and the same privilege was renewed to him the following year. The letters recite that, "Whereas our loving subject John Stowe (a very aged and worthy member of our city of London), this five and forty years hath to his great charge, and with neglect of his ordinary means of maintenance (for the general good, as well of posterity as of the present age), compiled and published diverse necessary books and chronicles; and therefore we, in recompense of these his painful labours, and for the encouragement to the like, have in our royal inclination been pleased to grant our Letters patent under our great seal of England, dated the 8th day of March 1603 [1604 according to our present mode of reckoning], thereby authorising him, the said John Stowe, and his deputies, to collect amongst our loving subjects, their voluntary contributions and kind gratuities;" and the document concludes by recommending "his cause, . . . having already in our own person, and of our special grace, begun the largesse for the example of others." This document, referred to by Strype, was first printed by Mr. Bolton Corney, in his 'Curiosities of Literature, Illustrated,' p. 65, and is reprinted by Mr. Thoms, 'Life of Stow,' p. xi.

Stow died of the stone colic, on the 5th of April 1605, and was buried in the parish church of St. Andrew Undershaft, where his monument, exhibiting his effigy, erected by his widow, is still to be seen. Strype says that he left four daughters, but whether any sons he could not learn.

\* STOWE, HARRIET ELIZABETH BEECHER, is one of twelve children (several others of whom have gained distinction in literature) born to the Rev. Dr. Lyman Beecher, himself a man of note as a writer and Presbyterian preacher in the United States. When Mrs. Stowe was born, her father was settled at Litchfield in Connecticut, in charge of a Presbyterian congregation; thence he removed to Boston, where he occupied the chief Presbyterian pulpit till 1832, when he was called upon to assume the office of principal in a new seminary for the training of Presbyterian ministers which had been founded near Cincinnati. A man of great energy, of strong opinions on theological and social topics, and full of practical zeal as a reformer of social abuses, Dr. Beecher seems to have imparted these characteristics to his children, and more especially to his daughters. One of these, Catherine Esther Beecher, an elder sister of Harriet, acquired celebrity by her exertions

in the cause of female education in America. She opened a school in 1822 at Hartford; and the fame of the school was increased by the publication by Miss Beecher of various text-books for its use, and for use in other institutions of the kind. For a time Harriet assisted her sister in this school; but in 1832 she accompanied the rest of the family to Cincinnati. Here she married one of her father's colleagues, the Rev. Professor Calvin E. Stowe, then already of some distinction as a theological writer, and better known since that time as the author of various religious works which have been widely read on this side of the Atlantic as well as in America. From the time of her marriage, Mrs. Stowe was in the habit of occasionally writing short tales and sketches with a religious or philanthropic purpose; which tales and sketches—published in magazines and newspapers, or otherwise—were destined to be resuscitated afterwards when their authoress became famous. Among them was a collection published together at New York in 1844 under the title of 'The Mayflower, or Sketches of Scenes and Characters among the Descendants of the Pilgrims;' and among the most popular of the scattered ones were tracts bearing such titles as 'Four Ways of Spending the Sabbath,' 'Let Every Man mind his Own Business,' &c. Meanwhile Mrs. Stowe's father and her husband were taking a deep and active interest in the question of American slavery. They distinctly gave in their adhesion to the Abolitionist Convention; and they made the question a subject both of statistical study and of public discussion. The students at Lane Seminary took up the same cause heartily. The consequence was such a vehement public opposition to Dr. Beecher and Professor Stowe by the pro-slavery party at Cincinnati that at last they both resigned their offices. In 1850 Professor Stowe was appointed to the chair of Biblical Literature in the theological college of Andover, Massachusetts. It was here, in that same year, that Mrs. Stowe, who had shared in the studies and exertions of her husband and father in the great question of the republic, wrote her world-renowned tale of 'Uncle Tom's Cabin.' It was published in parts in the 'Washington National Era,' and no sooner was it completed than it was republished entire, and commenced its extraordinary career. In the course of less than a year more than 200,000 copies were sold in the United States; and this was but the prelude to its still more astounding successes in Britain and other countries. Numberless reprints were published in Britain in 1852; the work was sold in scores in every petty village; it was exported in bales and cargoes to the colonies; it was translated into all languages. Literally the book went the round of the planet, and affected, to an extent infinitely beyond what any other book could pretend to, the imagination of the human race. Of course the book roused contradiction and opposition in America, and it was by way of answering such hostile criticism, and of proving the accuracy of her representations, that in 1853 she published her 'Key to Uncle Tom's Cabin,' presenting the original facts and documents upon which the story is founded. In April 1853, Mrs. Stowe, accompanied by her husband, her brother the Rev. Charles Beecher, and several other friends, paid her first visit to Britain. She was received everywhere with enthusiasm; and, after travelling through England, Scotland, and parts of the Continent, she returned to America in September. Her impressions in the course of her journey were given to the world in her 'Sunny Memories of Foreign Lands,' published in 2 vols. in 1854. To this work has succeeded 'Dred, a Tale of the Great Dismal Swamp,' published, also in 2 vols., in 1856. Neither work has come up in reputation to its great predecessor; but both have been circulated in thousands, together with reprints of those earlier writings of Mrs. Stowe to which we have alluded above. Among them, besides the ones mentioned, are, 'The Coral Ring,' 'Temperance Tales,' 'Make to Yourselves Friends,' &c. Since the composition of 'Dred,' Mrs. Stowe has made a second visit to Europe, from which she has but recently (May 1857) returned to America.

STOWELL, WILLIAM SCOTT, BARON, was the elder brother of Lord Chancellor Eldon, and the eldest son of Mr. William Scott, coalfitter, of Newcastle, by his second wife, Jane, daughter of Mr. Henry Atkinson, who was of the same profession. [ELDON, EARL OF] He was born on the 17th of October, 1745 (O.S.) at Heworth, a village on the Tyne, about three miles below Newcastle, and in the county of Durham, to which his mother had been sent a few days before, in the apprehension excited by the advance of the Scotch rebel army after the battle of Prestonpans. Egress in any common way being impracticable, they had been obliged, it is related, to hoist her in a sort of basket over the town wall, which then ran along the quay, separating Mr. Scott's house in Love Lane from the river, where a boat was in readiness to receive her. At Heworth she was safely delivered of twins; William, and a daughter, who was named Barbara and died in infancy.

William was educated with his two younger brothers, Henry and John, at the Royal Grammar-school of Newcastle, under the Reverend Hugh Moises. Moises is said to have been principally instrumental in getting both William and John sent to college. William entered the University of Oxford in February 1761, standing for and obtaining a scholarship at Corpus Christi College, for which the circumstance of his having been born in the county of Durham rendered him eligible. Having taken his Bachelor's degree on the 20th of November 1764, he was on the 13th of the following month elected a Probationary Fellow of University College; and it is remarkable that for his eligibility on this occasion likewise he was again in-

debted to the accident of his being a native of Durham. He was now also elected by the same society a College tutor in the room of the already celebrated linguist William (afterwards Sir William) Jones, who had recently left Oxford for the metropolis. In 1767 he took his master's degree; and in May 1772, he proceeded B.C.L., having by this time determined upon following the profession of an advocate at Doctors' Commons. He had already, with a view to the study of the law, entered himself at the Middle Temple, in June 1762. He was detained at the University however a few years longer than he otherwise would have been by being elected in 1774 by the members of convocation, after a contest, to the office of Camden Reader of Ancient History. The lectures which he delivered in this capacity attracted crowded audiences, and brought him into high and wide reputation. It is said that they still exist in manuscript.

At last, in 1776, he retired from the office of College tutor; but he still continued to reside at the University till after he had taken his degree of D.C.L., which he did in 1779. On this occasion, in the University phrase, he went out grand compounder, which means that he paid the higher fees exacted from graduates worth 300*l.* a year. He had, no doubt, saved money from his income as Fellow, and his constantly increasing receipts during the twelve years that he held the office of College tutor; but it is to be remembered that he had also inherited a considerable property from his father, who died in 1776. It was probably the independence to which he was thus raised that determined him to resign his employment as a college tutor; but it appears that old Mr. Scott's wealth was not quite so great as it has been stated to be by Mr. Twiss in the first and second editions of his 'Life of Lord Eldon.' He left somewhat less than 20,000*l.*

He now entered at Doctors' Commons, and passed another year partly in Oxford, partly in London, the rule being that no one shall practise as an advocate till the expiration of that space of time after his admission, which accordingly is called his year of silence. Dr. Scott was called to the bar in February 1780. He was admitted into the Faculty of Advocates at Doctors' Commons, according to Mr. Surtees in one place in November 1779, in another place not till the spring of 1780 ('Sketch,' pp. 26 and 61). So early however as in December 1778, he had been elected a member of the famous Literary Club, having been mainly indebted for that distinction to the favour of Dr. Johnson, to whom he had been introduced in University College by their common friend Chambers, afterwards Sir Robert, and now a judge in India. Scott soon became a favourite with Johnson, whom he had accompanied from Newcastle to Edinburgh, when the latter set out on his tour to the Hebrides, in the autumn of 1773. With the patronage of Johnson, and his own 'clubable' qualities, Scott rapidly made his way to distinction in the most intellectual society of the English capital.

His talents and learning, and the reputation he had brought from the university, brought him a large practice in his profession from his first entrance upon it. And his success as an advocate in no long time led to promotion. In 1783 he was appointed to the office of Registrar of the Court of Faculties. In 1788 the Bishop of London appointed him Judge of the Consistory Court; and the Archbishop of Canterbury, his Vicar-General, or Official Principal. In the same year he was made Advocate-General, and knighted, and was also nominated a Privy Councillor. In 1790 he was nominated by the archbishop Master of the Faculties. Finally, in 1798, he was made Judge of the High Court of Admiralty. Meanwhile, after having in 1780 been disappointed in his expectation of being sent into parliament as representative of the University of Oxford, and having been unseated on a scrutiny in 1784, when he had been returned for Downton, he had been a second time returned for that nomination borough, in 1790, through the influence of ministers with the patron, the Earl of Radnor. He was again returned for Downton to the next parliament, which met in 1796. At last in March 1801, on a vacancy occurring by the retirement of Francis Page, Esq., he obtained the object of his early ambition by being elected member for his university; and that seat he retained as long as he continued a commoner.

He had had reason to expect that he would have been raised to the peerage in 1805; but some unexplained court intrigue interfered, and he was not ennobled till the 21st of July 1821, when he was created Baron Stowell, of Stowell park. He retained his place on the bench till Christmas 1828. For the last two years of his life he was reduced to a state of mental imbecility; and he died at his seat of Early Court, Berks, after an illness of a few days, on the afternoon of Thursday, the 28th of January 1836, in his ninety-first year. He had been twice married: first, in April 1781, to Anna Maria, eldest daughter and co-heiress of John Bagnall, of Early Court, in the county of Berks, Esq., who died in September 1809; secondly, on the 10th of April 1813, to Louisa Katherine, Marchioness Dowager of Sligo (widow of the first Marquis and daughter of Earl Howe), his acquaintance with whom had originated, singularly enough, in the circumstance of his having presided in the preceding December at the Admiralty Sessions at the Old Bailey, on the trial of her son, Lord Sligo, for inveigling some seamen from one of the king's ships to serve on board his yacht (for which he was sentenced to pay a fine of 5000*l.*, and to be imprisoned four months in Newgate). This last proved a very unsatisfactory connection; but the lady died in August 1817. By his first wife Lord Stowell, besides a daughter who became the

wife, first, of Thomas Townshend, Esq., secondly, of the late Viscount Sidmouth, had a son, William, who died at the age of forty-two, about two months before the death of his father.

Lord Stowell is the highest English authority in his own department of the law, including both ecclesiastical law and the law of nations, if not the highest of all authorities upon the particular questions which he had occasion to consider and decide; for, having produced no complete treatise upon either of the branches of jurisprudence which he administered, he must be distinguished from the great text-writers, between whom and him no comparison is properly admissible. His judgments in the Consistory Court have been reported very ably and carefully by Drs. Haggard and Phillimore; those delivered by him in the Court of Admiralty, in an equally superior manner, and, in part, with the advantages of his own revision, by Drs. Robinson, Edwards, Dodson, and Haggard. Their characteristics are the most complete mastery of all the learning of his subject, great comprehensiveness of view, a penetrating sagacity in the disentanglement of the essential points and governing principle of a case from the confusion and sometimes apparent contradiction of details and accessory circumstances, a remarkable faculty of luminous and striking illustration, and all this combined and set off with a diction generally of much precision, elegance, and expressiveness, though occasionally somewhat diffuse and rhetorical. Some of Lord Stowell's judgments may be called almost revelations of the law, being expositions of large and intricate questions which had never before been thoroughly investigated, but which he has completely cleared up and set at rest.

As a politician this distinguished lawyer was, like his brother, Lord Eldon, an uncompromising Conservative, shrinking from all change as only the beginning of universal ruin. Except however by giving his steady vote in support of his party and his principles, he very rarely took part in the proceedings of either House of Parliament. During the first six years that he sat in the House of Commons, he only spoke once; of some two or three displays which he afterwards made, a speech of three hours' length, which he delivered on the 7th of April 1802, on moving for leave to bring in a bill for amending the statute of the 21st of Henry VIII., respecting the non-residence of the clergy, was the most memorable. He was also instrumental however in carrying through the House several other measures having a reference to the established church, of which he was the supporter on all occasions, considering himself indeed as a sort of representative of the clergy, both in his quality of member for the University of Oxford, and from his office as an ecclesiastical judge.

(Memoir by Mr. Townsend in *Law Magazine*, No. xxxiii., reprinted, with some alterations and additions, in the *Annual Biography and Obituary* for 1837; article on Lords Stowell and Eldon in *Law Review*, vol. i.; Lord Brougham, *Historical Sketches of Statesmen*, second series; *Sketch of the Lives of Lords Stowell and Eldon*, by William Edward Surtees, D.C.L., 8vo, 1846; Anecdotes of Lord Stowell, in *Gentleman's Magazine* for October, 1846.)

STRABO (Στράβων) was born at Amasia, in Cappadocia, before the Christian era, but the time of his birth is unknown. His mother was the granddaughter of Lagetas, who was one of the two sons of Dorylaos, a skilful commander who had been employed by Mithridates Euergetes. (Strab., p. 477, 478, ed. Casaub.) Moaphernes, who had been employed by Mithridates Eupator, was an uncle of Strabo's father (p. 499), or (according to the true reading of Strabo's text) the uncle of his mother by the father's side. We are not informed who his father was. It has been observed that his name, Strabo, is the cognomen of Pompeius Strabo, the father of Pompey the Great, whence it has been conjectured that on his father's side there was some connection with the family of Pompey; but what this connection may have been, is purely a matter of conjecture. Strabo, the son, received a good education. He studied at Nysa, under Aristodemus; at Amisus, in Pontus, under Tyrannio; and at Seleucia of Cilicia, under Xenarchus, who was a Peripatetic. He also visited Alexandria in Egypt, where he had the instruction of Boethus of Sidon, also a Peripatetic; and Tarsus, then a great school of learning, where he studied under Athenodorus, who was a Stoic. It thus appears that even during the course of his education Strabo must have been a considerable traveller, and his own work shows that he must subsequently have visited many places. Syria, Palestine, and Egypt, as far as the cataracts of Syene, were within the range of his travels. In Egypt he became acquainted with Ælius Gallus, who commanded a Roman expedition into Arabia, in the time of Augustus, and he visited in his company the vocal statue of Memnon at Thebes (p. 816). He also travelled in Crete, Northern Greece, and probably some parts of the Peloponnesus: he tells us that he saw Cleonæ from the Acrocorinthus; but his remarks about Mycenæ seem to show that he did not visit that part of the Peloponnesus at least (p. 377). He was personally acquainted with Italy, and he tells us that Elba, Corsica, and Sardinia are visible from the heights of Populonium (p. 223), from which it is a probable conclusion that he had seen those places from the Italian coast. It is also probable that he spent some time at Rome, where he would find materials for his geographical work.

There are various passages in his 'Geography' which indicate about what time they were written. In his sixth book (p. 238) he speaks of Germanicus and Drusus as still living; and in the thirteenth (p. 627) he speaks of Tiberius as the reigning emperor, and as having

repaired the mischief done to Sardis by the great earthquake, A.D. 17. (Tacit., 'Ann.' ii. 47). There are numerous other passages in this work in which he speaks of contemporary historical events, but perhaps none which can with certainty be referred to a later date than the great earthquake. In a passage of the fourth book (p. 206) he says that it was then the thirty-third year since the Norici had been reduced to obedience by Tiberius and Drusus, which took place about B.C. 15; according to which Strabo was writing his fourth book in the year A.D. 18.

Strabo's 'Geography' is mentioned by few ancient writers: he is cited by Marcianus of Heraclea, Athenæus, and Harpocration (Λευκάς, Λέξαυος); but Pliny, who might frequently have cited him in the geographical part of his work, never mentions his name; nor does it occur in Pausanias. He is mentioned by Josephus and by Plutarch, not as a geographer, but as an historical writer.

Very different opinions have been given of Strabo's geographical work. That he was deficient in mathematical knowledge is evident, and his accuracy in many cases is at least doubtful. To form a proper judgment of him, we must ascertain what he proposed his work to be, which may be collected from various passages. His work was to be practical, that is, adapted to the use of persons of a certain amount of education, and particularly personages engaged in administration. He says that a "man who reads his work ought not to be so ignorant as never to have seen a sphere or the circles marked on it;" and he goes on to say, that a man who is ignorant of these and other like matters, which he has enumerated, and which belong to the elementary parts of knowledge, cannot understand his work. "His work," he says, "is, in a word, for universal use, political and profitable to all, just as history is" (p. 12, 13); and "as he had written an historical work (ἱστορικῶς ἱστορικῶς), useful, as he supposed, both for ethical and political philosophy, he determined to add to it a geographical work, which was of a like kind, and addressed to the same class of men, and chiefly to those in power; and, as in the former work, only what related to distinguished men and to distinguished lives was recorded, and things trivial and mean were omitted; so in his geographical work he should dwell only on things which were of note and of importance, and things in which there was something useful for example, and worth recording, and agreeable." From this it appears that Strabo neither designed a mathematical treatise, nor an enumeration of astronomical positions, nor a treatise on the physical character of countries. His design was to write something which should give an educated man a general notion of the earth's surface, its political divisions, the chief peculiarities of each, and so much of its history as would enliven and explain his geographical description.

Accordingly Strabo produced a work which contains a great mass of useful information, but is not strictly a geographical work, and though systematic according to his notion of system, it does not deserve the name of a system of geography. Though he resided a long time at Alexandria, he derived little advantage from the labours of the geographers and astronomers of that school for the correction of positions and fixing the bearings of places with respect to one another, or for determining the general form of the regions which he describes. His taste indeed was for other studies than those which belong to the geographer.

The first two books of Strabo contain his general geography. In the first book he treats of the advantages of the study of geography, and discusses the geographical knowledge of Homer, which he rates highly. He then mentions the old geographers, as Hecataeus, Democritus, Eudoxus of Cnidus, and Ephorus of Cume; and the more recent geographers, Eratosthenes, Hipparchus, Polybius, and Posidonius. He passes a critical judgment on the first two books of Eratosthenes, which leads him to various discussions, and to observations on the changes which the earth's surface has undergone. In the second book he extends his criticism to the third book of Eratosthenes, and to the three books of Hipparchus. He also discusses the merits of Posidonius and Polybius. Strabo has thus preserved many passages of the Greek geographical writers; but the author's judgment is often prejudiced and inaccurate. He severely criticises Hipparchus, and points out many of his errors, particularly as to the latitude of places. The latter part of the second book treats of the preliminary knowledge which the geographer requires. Strabo was acquainted with the fact of the spherical figure of the earth; and he determines the boundaries of the habitable part of it. The world is divided by the equinoctial circle into the northern and the southern hemispheres. The habitable portion is bounded on the north by a parallel of latitude which passes through Ierne (Ireland), and on the south by the parallel which passes through the Cinnamon country. The parts to the north of the first parallel are not habitable on account of cold, and those to the south of the second parallel are uninhabited owing to excessive heat. He follows Eratosthenes in his measurements, and compares them with those of Hipparchus and Polybius. The habitable world (οἰκουμένη) is surrounded by water, and the Caspian Sea is a gulf of the Northern Ocean, a mistake which he might have corrected by the aid of Herodotus. The length of the habitable world is about double its breadth.

The third book contains the description of the Spanish Peninsula and the Balearic Islands; his principal authorities are Artemidorus, Posidonius, and Polybius. The fourth treats of Gallia, Britain, the

Alps, and the tribes which inhabited the Alps, and the valleys belonging to that mountain-system: in general he follows the description of Caesar, and he also used Artemidorus and Polybius, and probably the work of Aristotle on Political Constitutions, for his account of Massilia (Marseille): his description of Britain is exceedingly meagre; in treating of Thule he gives some account of Pytheas, but rejects his authority. The fifth and six books contain the description of Italy, Sicily, and the adjoining islands: he had probably seen a large part of these countries himself; yet he makes great use of Polybius, Posidonius, Ephorus, Eratosthenes, and many other writers: in treating of Corsica and Sardinia, he quotes the 'Chorographus,' without saying who is intended by the term: it has been suggested that the word has reference not to any particular individual, but to the results of the commission under the direction of Agrippa which made a survey of the empire: it has also been conjectured that Agrippa himself is meant by the Chorographus. In the seventh book Strabo treats of the countries on the Danube, and the parts included between the Danube, the Adriatic, and the Black Sea: the parts which treat of Macedonia and Thrace are lost, and in their place we have a scanty epitome. Strabo's authorities for this part of his work seem to have been very defective. The eighth, ninth, and tenth books contain his description of Greece and the Islands, in which he makes great use of Homer: Ephorus, Polybius, Posidonius, Hipparchus, Artemidorus, and Timosthenes, are also his authorities, in addition to many other writers. With the eleventh book Strabo begins his description of Asia, as to the extent and dimensions of which his notions are very inaccurate. He divides it into two main portions, determined by the range of Taurus. The western portion comprises the countries between the Tanais, Palus Mæotis, the Black and the Caspian Seas; the countries east of the Caspian, bordering on India; and Media, Armenia, and Cappadocia, to the Halys: these are described in the eleventh book. In the twelfth and following books he treats of Asia west of the Halys and the adjoining islands. His authorities for the eleventh book are, among others, Artemidorus; the historians of the Mithridatic wars; Metrodorus of Scepsis; and Patrocles, the admiral of Seleucus and Antiochus, for the account of the Oxus and Jaxartes. The twelfth book contains the description of Cappadocia, Pontus, Paphlagonia, Bithynia, Galatia, Lycaonia, Isauria, Pisidia, Mysia, and Phrygia, a great part of which is founded on his own personal knowledge. The thirteenth and fourteenth books conclude the description of Asia west of the Halys; and comprehend also the islands of Lesbos, Samos, Chios, Rhodes, and Cyprus. His description of the Troad, in the thirteenth book, is mainly founded on Homer; but he also uses Eudoxus, Charon, Scylax, and Ephorus. A great number of other writers were also used for the description of the several countries and places included in these two books. In the fifteenth book he passes to the description of the other portion of Asia, which is determined by the Taurus; and he first treats of the southern parts of the continent. In his description of India he chiefly follows Eratosthenes and the historians of Alexander, particularly Patrocles and Aristobulus. His notion of the form of India was entirely false, and he knew nothing of the great southern peninsula; but he speaks at some length of the customs and institutions of the people. After India he describes the Persian empire, comprehending under the general name of Ariana (Iran) the country bounded on the east by the Indus, and on the west by a line drawn from the Caspian Gates to the mouth of the Persian Gulf. Nearchus and Onesicritus are his authorities for the description of the coast: for other parts he uses Aristobulus, Eratosthenes, and Polyclitus. The sixteenth book contains the remainder of Asia: his authorities are generally the same as for the southern and eastern parts of Asia, with the addition of his own observations in Syria. The seventeenth book contains the description of Libya (Africa), and concludes with a brief sketch of the division of the Roman empire into provinces: Eratosthenes is his principal authority, but he also uses Agatharchides and Herodotus.

The text of Strabo is often corrupt, and there are many defective passages. There is extant an epitome, or Chrestomathia, of the whole work, which is referred to the 10th century A.D., which is sometimes useful in correcting the text. There are also extant various other extracts from the geography of Strabo. The historical work (ἱστορικῶς ἱστορικῶς) of Strabo, which he mentions in a passage already quoted, is lost: it was a continuation of Polybius, and extended at least to the death of Julius Caesar.

Strabo first appeared in a Latin version in 1472. The first edition of the Greek text was printed by Aldus, at Venice, folio, in 1516. The edition of Isaac Casaubon, Geneva, folio, 1587, contains the translation of Xylander: this edition was reprinted after Casaubon's death, at Paris, folio, 1620, with his last corrections. Siebenkees undertook a new critical edition, for which purpose he collated several manuscripts: he only lived to complete the first volume, which contains the first six books: this edition was finished by Tzschucke, and was published at Leipzig, 6 vols. 8vo, 1796-1811. The best text of Strabo at the date of its publication was that by Koray, Paris, 4 vols. 8vo, 1815-19, which has an index, but no translation; but a much superior edition is that by G. Kramer, 3 vols. 8vo, Berlin, 1847-52. The text of Strabo edited by A. Meineke in 3 vols. 12mo, is included in Teubner's cheap series known as the 'Leipzig Classics'; also, Greek and Latin, in Didot's Paris Classics, under the care of C. Müller and F. Dübner, 3 c

but of this we believe only the first volume is yet published. The 'Chrestomathia' is printed in Hudson's 'Minor Geographers,' and in the editions of Almeloveen, and of Falconer. An English translation by Mr. H. C. Hamilton, forms three volumes of Bohn's 'Classical Library.' There is a French translation of Strabo in 5 vols. 8vo (1805-1819), by La Porte du Theil, Koray, and Gosselin; the sixteenth and seventeenth books are by Letronne. Strabo was translated into Italian by Ambrosoli, Milan, 4 vols. 8vo and 4to. The valuable German translation of Groskurd, in 3 vols. 8vo (1831-34), is founded on a corrected text, and is accompanied with critical notes and explanations.

A full account of the editions, translations, and various works in illustration of Strabo is contained in Hoffmann's 'Lexicon Bibliographicum.'

STRADA, FAMIANO, born at Rome in 1572, entered the order of the Jesuits, and became professor of rhetoric in the Gregorian college at Rome, where he spent the greater part of his life, and where he died in 1649. He wrote 'Prolusiones,' or Latin essays, upon rhetoric and literature, which were admired at the time. In these essays the author comments upon several of the Roman classical writers, and he introduces his own imitations of their style. He speaks very unfavourably of Tacitus, whom he accuses of malignity, impiety, and want of veracity, though he praises his style. But the work for which Strada is remembered, is entitled 'De Bello Belgico ab Excessu Caroli V. ad Annum 1590,' being a history of the revolt and war of the Netherlands against Spain, which he wrote in Latin about the same time as his contemporary Bentivoglio wrote the history of the same war in Italian. Strada brought his narrative down to the year 1590, and the work was continued by two other Jesuits (fathers Dondini and Galluzzi), who wrote the sequel as far as the year 1609: their compositions however are very inferior to Strada's in style. It appears that Strada undertook his work at the desire of the Farnese family, one of whose members, Alessandro Farnese, duke of Parma, became illustrious in the wars of Flanders, as commander of the Spanish armies. The history of Strada is not without merit, though it can hardly be expected to be quite impartial. His rival historian, Cardinal Bentivoglio, was also biased in favour of Catholic Spain against the Protestant Netherlands, yet he wrote with considerable freedom, and the work of the cardinal is generally preferred to that of the Jesuit, but this preference may be partly attributed to the circumstance that Strada's work is written in a dead language.

STRADA, or STRADA'NUS, JOHN, or STRADANO, GIOVANNI, as he is called by Italian writers, was born in the year 1536, of an illustrious family, at Bruges, where he studied the art of painting. He went while very young to Italy, and soon acquired so much proficiency and reputation as to obtain employment at Florence in the palace of the duke, Cosmo I., and in those of several of the nobility. From Florence he went to Rome, where he devoted himself with the greatest ardour to the study of the antique and the works of Raffaele and Michel Angelo. By this means he so much improved his taste, knowledge of composition, and correctness of design, that he was ranked among the most eminent artists of his time; and before he left Rome he was employed in the pope's palace, in conjunction with Daniel da Volterra and Francesco Salviati. At Naples and other cities of Italy to which he was invited, he executed many considerable works in fresco and in oil; but he fixed his residence in Florence, in which city there are still some fine performances of his; the most celebrated is 'The Crucifixion,' which is a grand composition, with numerous figures larger than life, and near the cross are the Virgin, St. John, and Mary Magdalen.

Though he chiefly painted subjects from sacred history, he was fond of painting animals, hunting parties, and sometimes battles, all of which he executed in a noble style, and with great spirit. It is not possible to reconcile the statements of authors respecting the birth and death of Strada: Sandrart and others say that he was born in 1536, and died in 1604, aged sixty-eight; and these, or the dates given by Baldinucci, who says he was born in 1536, and died in 1605, are probably correct. De Piles and Resta say he was born in 1527, and died in 1604, aged seventy-seven. The authors of the 'Abrégé de la Vie des Peintres' say that he died at the age of eighty-two; yet they fix his birth in 1536, and his death in 1605, which would make him only sixty-nine years of age.

STRADELLA, ALESSANDRO, a composer much celebrated in musical history, was born at Naples about the middle of the 17th century. His works, most of which are to be found in the British Museum and in the library of Christchurch, Oxford, are chiefly of a miscellaneous kind, consisting of airs, duets, cantatas, madrigals, &c. One oratorio and one opera comprise the whole of his dramatic compositions that Dr. Burney's diligent search enabled him to discover. The former—'San Giovanni Battista'—is highly extolled by the musical historian, who has in his fourth volume given a duet from it, as a specimen of the whole; but in the 'Fitzwilliam Music' is a quintet from the same of a far superior order. It seems to be agreed that the study of his works contributed largely in forming the taste of many great composers—of our own Purcell, of Clari, Steffani, A. Scarlatti, and Pergolesi, and this alone is sufficient to bestow on him a lasting reputation.

The personal history of Stradella is full of interest when fully narrated, but we have only space for a brief sketch of it here. He

was not handsome, but remarkable for the symmetry of his form, for his wit and polished manners, and these, added to his exquisite style of singing, made his company desirable in the highest circles. At Venice he was engaged by a nobleman to instruct a young lady of high birth, named Hortensia, who, notwithstanding her family rank, submitted to live with the noble Venetian in criminal intimacy. After a time the fascinating qualities and accomplishments of her teacher raised a new flame in her bosom. The passion was mutual, the lovers were married and fled to Rome, whither they were pursued by two assassins, engaged by the Venetian to punish the inconstancy of his mistress and avenge the injury his pride had sustained. These found the couple in the church of San Giovanni Laterano, and they determined to carry their design into execution as the fugitives retired, in a dark evening, at the conclusion of the sacred service. But while waiting the favourable moment, they heard the musician sing, and were so overcome by the charms of his voice and strains, that, confessing to him what had been their object, they declared their determination to abandon it. The intended victims immediately retired to Turin. There they were pursued by two other hired murderers, and though taken under the protection of the Duchess of Savoy, and lodged in her palace, Stradella received three stabs in his breast, and the assassins found a sanctuary in the hotel of the French ambassador, who refused to surrender them. The wounds, though most dangerous, did not prove mortal; and as a year elapsed after the recovery of the sufferer, and no fresh attempt on his life was made, he considered himself secure for the future. But the resentful Venetian only awaited a more certain opportunity for gratifying his unquenchable revenge. Stradella accepted an engagement at Genoa, to compose an opera, whither he went with his wife. Their enemy, informed of this movement, followed them by the agents of his unrelenting revenge, who, rushing into their chamber, stabbed both of them to the heart. This event Walther, in his 'Lexicon,' fixes in the year 1670; but Dr. Burney shows that it must have occurred some years later.

STRAFFORD, THOMAS WENTWORTH, EARL OF, was born in Chancery-lane, London, on the 18th of April 1593. He was the eldest son of Sir William Wentworth, of Wentworth Woodhouse, in the county of York, where his family are said to have been settled since the time of the Conquest. His family was one of the most opulent as well as ancient of the class known in England under the name of gentry, and had frequently intermarried with the higher aristocracy. The estate which Wentworth inherited from his father was worth 6000*l.* a year, a very large sum at that time, probably equal to more than three times the amount in the present day. (Strafford's 'Letters and Despatches,' vol. ii., pp. 105-6, folio, London, 1739, and Dr. Knowler's Dedication prefixed to them.) He received part of his education at St. John's College, Cambridge. In 1611 he married the Lady Margaret Clifford, the eldest daughter of Francis, earl of Cumberland. The accuracy of this date, as that of his first marriage, given by his friend Sir George Radcliffe, appears to be established by a letter dated the 11th of January 1611, from Sir Peter Frecheville to his father Sir William Wentworth; although the compilers of his Life in the 'Biographia Britannica' have chosen, in direct opposition to the statement of Radcliffe, the old and intimate friend of Wentworth, to place his marriage after his return from the Continent, towards the end of 1612 (by the old mode of reckoning, according to which the legal year began on the 25th of March, but by the new about the beginning of 1613), instead of in 1611, before his going abroad. The same letter also shows that he was from his early years of studious and regular habits. He appears to have taken almost as much pains as Cicero recommends for the education of an orator. Sir George Radcliffe informs us that the excellence possessed by him in speaking and writing he attained "first by reading well-penned authors in French, English, and Latin, and observing their expressions; secondly, by hearing of eloquent men, which he did diligently in their sermons and public speeches; thirdly, by a very great care and industry which he used when he was young in penning his epistles and missives of what subject soever; but above all, he had a natural quickness of wit and fancy, with great clearness of judgment, and much practice, without which his other helps of reading and hearing would not have brought him to that great perfection to which he attained. I learned one rule of him," adds Sir George, "which I think worthy to be remembered: when he met with a well-penned oration or tract upon any subject or question, he framed a speech upon the same argument, inventing and disposing what seemed fit to be said upon that subject before he read the book; then reading the book, compare his own with the author, and note his own defects, and the author's art and fullness; whereby he observed all that was in the author more strictly, and might better judge of his own wants to supply them." (Strafford's 'Let. and Desp.,' vol. ii., p. 435.)

In some of Strafford's earlier letters, particularly those to Sir George Calvert, principal secretary of state in the time of James I., there is, though no marks of profound scholarship, a somewhat pedantic display of trite Latin quotations. From these however, though we may judge so far of the extent of Strafford's scholarship, it would be incorrect to estimate his abilities, for they are mostly confined to his early letters, and, among them, to his letters to courtiers. Upon his early habits still further light is thrown by some advice which he gives to his nephew Sir William Savile, in a letter dated "Dublin Castle,

29th September, 1633." Advising him to "distrust himself and fortify his youth by the counsel of his more aged friends before he undertakes anything of consequence;" he adds, "it was the course that I governed myself by after my father's death, with great advantage to myself and affairs, and yet my breeding abroad had shown me more of the world than yours hath done; and I had natural reason like other men, only I confess I did in all things distrust myself, wherein you shall do, as I said, extremely well if you do so too." ('Let. and Desp.,' vol. i., p. 169.)

The letter from which the above quotation is made contains so much good advice, so well and so weightily expressed, that it may bear a comparison with Bureleigh's celebrated 'Advice to his Son': the resemblance in some passages is striking. With respect to the greater part of this advice, particularly what regards economy and regularity in the management of his private affairs, temperance in drinking, and abstinence from gaming, it was the rule by which Wentworth shaped his own conduct, and to which, according to Radcliffe, he strictly adhered. The part of the advice to which he himself least adhered was that recommending calmness and courtesy of demeanour; for even his most intimate friend Sir George Radcliffe admits that "he was naturally exceedingly choleric," and the actions of his life show that in that particular he was never able thoroughly to subdue nature.

In the same year in which he was married, Wentworth went into France, having previously been knighted. He was accompanied by the Rev. Charles Greenwood, fellow of University College, Oxford, as his 'governor,' or travelling tutor, for whom he entertained the greatest respect and regard to the end of his life. In February 1612, he returned to England. He was returned and sat for the county of York in the parliament which began April 5th, 1614. Radcliffe's account as to this date, though rejected by the writers in the 'Biographia Britannica,' and Mr. MacDiarmid, is confirmed by Browne Willis's 'Notitia Parliamentaria,' vol. iii., p. 169: "Co. Ebor. Jo. Savile, kt., Thomas Wentworth, kt. and bart., anno 12 Jac. I., began April 5, 1614, and continued till June 7, and was then dissolved." During this short parliament, which continued only two months, Wentworth does not appear to have spoken. Mr. Forster, his latest biographer, says that he has examined the Journals, and finds no trace of Wentworth's speaking on either side in the great struggle that was then going on. ('Life of Strafford,' in the 'Cabinet Cyclopædia;' 'Lives of Eminent British Statesmen,' vol. ii., p. 197.)

In 1615 Wentworth was appointed to the office of *custos rotulorum* for the west riding of the county of York, in the room of Sir John Savile; an office of which Savile attempted to deprive him about two years after, through the influence of the favourite, the Duke of Buckingham, but without success, though he succeeded afterwards. The result was a feud between Wentworth and the Saviles, the father and son, Sir John Savile the younger, afterwards Lord Savile. In 1621 Wentworth was again returned to parliament for the county of York; and this time he brought in Sir George Calvert, one of the secretaries of state, along with him. In Michaelmas term he removed his family from Wentworth Woodhouse to London. He took up his abode in Austin Friars, where in 1622 he had a "great fever." When he began to recover, he removed, about July, to Bow, where shortly after his wife the Lady Margaret died. On the 24th of February 1623, he married the Lady Arabella Hollis, a younger daughter of the Earl of Clare, a lady, observes Radcliffe, "exceeding comely and beautiful, and yet much more lovely in the endowments of her mind."

Hitherto, though Wentworth had not taken a very prominent part in the proceedings of parliament, still he was considered to have acted with the party that opposed the court, as appears from the fact of his being, on the eve of the calling together of a new parliament, among the number of those whom Buckingham attempted to disable from serving, by having them pricked sheriffs of their respective counties. In November 1625 Wentworth was made sheriff of Yorkshire. A passage from one of his letters at this time shows that he was never inclined to go the lengths that some others did in resistance to the royal prerogative. ('Let. and Desp.,' vol. i., p. 33.)

In May 1627 he was committed a prisoner to the Marshalsea by the lords of the council for refusing the royal loan; and about six weeks after, his imprisonment was exchanged for confinement at the town of Dartford in Kent, from which place he was not to go above two miles. About Christmas he was released, and shortly after the third parliament of Charles began, in which Wentworth served as knight for Yorkshire. Wentworth had now resolved to make the court party more aware of the extent of his talents than they yet appeared to be. On the discussion of the general question of grievances, he spoke with an ability and spirit which proved to them that he might turn out such an enemy, that he was worth having as a friend. It has been usual to speak of Wentworth as an apostate; but he never appears to have been at heart on the popular, or rather the parliamentary side. His whole conduct both before and after he became the king's minister shows that he considered the general movement in modern Europe to be not towards democracy, but towards the establishment of absolute monarchy. The several springs of Wentworth's conduct are now fully laid bare in a manner that they could hardly be to his contemporaries, and in a manner that few men's have ever been to after-ages, by the publication of the two large folio volumes of his

'Letters and Despatches,' one of the most valuable collections of papers, both in a political and historical point of view, ever made public. In that collection there are two letters (Strafford, 'Let. and Desp.,' vol. i., pp. 34, 35), to Sir Richard Weston, chancellor of the exchequer, containing very unequivocal overtures, the non-acceptance of which at the time would seem to have produced the indignant outbreak of patriotic eloquence above alluded to.

In June 1628, the parliament ended. In July Sir Thomas Wentworth, having been reconciled to Buckingham, was created Baron Wentworth. The death of Buckingham soon after removed the only obstacle to higher honours. In Michaelmas term he was made Viscount Wentworth, Lord President of the North, and a privy councillor.

The establishment of the Council of the North originated in the frequent northern rebellions which followed Henry VIII.'s suppression of the lesser monasteries, and extended over the counties of York, Northumberland, Cumberland, Westmoreland, and Durham. The commission, though apparently only one of oyer and terminer, contained a clause authorising the commissioners to hear all causes real and personal, when either of the parties was poor, and decide according to sound discretion. This clause was declared by all the judges to be illegal. James issued a new commission, by which the commissioners were not ordered to inquire "per sacramentum bonorum et legalium hominum," or to be controlled by forms of laws but were merely referred to certain secret instructions which were sent down to the council. Against this however the judges had the courage to protest, and to issue prohibitions on demand to the president and council; and the instructions were ordered to be enrolled, that the people might have some chance of knowing them.

Dr. Knowler, the editor of the 'Strafford Papers,' in the adulatory dedication of them to his patron, the grandson of the Earl of Strafford, gravely observes that "Sir Thomas Wentworth, who was a true friend to episcopal government in the church, and to a limited monarchy in the state, could have no reason, when the Petition of Right was granted, to refuse to bear his share of toil and pains in the service of the public, or to withstand the offer of those honours his majesty was graciously pleased to make him, especially when it gave him an opportunity of setting an example of a wise and just and steady administration."

Wentworth's acceptance of the office of president of this council was a flagrant violation of the fundamental principle of the Petition of Right. His career in the office too did not belie the promise of its acceptance. One of his first acts was to declare that he would lay any man by the heels who ventured to sue out a prohibition in the courts at Westminster. (Rushworth, vol. ii. p. 159.) And one of the judges (Vernon), who had the courage to resist these encroachments on the ancient laws of the land, Wentworth tried hard to have removed from his office. (Strafford, 'Let. and Desp.,' vol. i. pp. 129, 130.) Indeed, like his friend and coadjutor Laud, Wentworth never let slip an opportunity of expressing his bitter dislike of the interference of the judges and common lawyers with his scheme of governing, not by the laws of England, but according to "sound discretion."

In January 1631, Wentworth was made lord deputy of Ireland. The principle on which he set about governing there was in substance the same as that of his government in the presidency of York. "These lawyers," he writes to the lord marshal, "would monopolise to themselves all judicature, as if no honour or justice could be rightly administered but under one of their benches' gowns." (Strafford, 'Let. and Desp.,' vol. i., p. 223.) And he adds, a line or two after, "Therefore if your lordship's judgment approve of my reasons, I beseech you assist me therein, or rather the king's service, and I shall be answerable with my head." It is remarkable how frequently he alludes to this last as the test of the soundness of the policy of his measures. They were in the end so tested, and being found wanting, he was taken at his word; he was called upon to pay, and paid the forfeit. One of the principal means by which Wentworth sought to squeeze money out of the people of Ireland was by holding a parliament.

Wentworth's political economy was not very sound, yet he saw far enough to discover that to enrich the king, the way was, to begin by enriching the people. "For this is a ground," he says, "I take with me, that to serve your majesty completely well in Ireland we must not only endeavour to enrich them, but make sure still to hold them dependent upon the crown, and not able to subsist without us." (Strafford's 'Let. and Desp.,' vol. i. p. 93.) But the plan he proposed does not seem certainly very well adapted for enriching the people. "Which will be effected," he proceeds, "by wholly laying aside the manufacture of wools into cloth or stuff there, and by furnishing them from this kingdom; and then making your majesty sole merchant of all salts on that side; for thus shall they not only have their clothing, the improvement of all their native commodities (which are principally preserved by salt), and their victual itself from hence (strong ties and enforcements upon their allegiance and obedience to your majesty); but a means found, I trust, much to advance your majesty's revenue upon salt, and to improve your customs. The wools there grown, and the cloths there worn, thus paying double duties to your crown in both kingdoms; and the salt outward here, both inward and outward there." He thus sums up the advantages of the measures proposed:—"Holding

them from the manufacture of wool (which, unless otherwise directed, I shall by all means discourage), and then enforcing them to fetch their clothing from thence, and to take their salt from the king (being that which preserves and gives value to all their native staple commodities), how can they depart from us without nakedness and beggary? Which in itself is so weighty a consideration, as a small profit should not bear it down." ('Let. and Desp.,' vol. i. p. 193.)

In one particular he did benefit Ireland. At his own risk he imported and sowed a quantity of superior flax-seed. The first crop having succeeded, he next year laid out 1000*l.* on the undertaking, set up a number of looms, procuring workmen from France and Flanders, and sent a ship to Spain freighted with linen at his own risk. Thus began the linen manufacture of Ireland, which in some measure verified Wentworth's prediction that it would greatly benefit that country. (Strafford, 'Let. and Desp.,' vol. i. p. 473.)

Wentworth appears to have been of very infirm health, which, taken with the general course of his education and his position in society, will in part account for the acerbity and irritability of temper, and the impatience of any opposition to his will, which throughout his career involved him in so many personal quarrels. The number of powerful personal enemies which Wentworth thus arrayed against himself appears to us to be a proof of the want of real political talent of a high order. A really wise politician, such as Oliver Cromwell for example, does not raise up such a host of powerful personal enemies. Laud gives a good hint about this in one of his letters. "And yet, my lord," he says, "if you could find a way to do all these great services and decline these storms, I think it would be excellent well thought on." (Strafford, 'Let. and Desp.,' vol. i. p. 497.)

In 1639 Charles raised Wentworth to the dignity of an earl, which he had in vain solicited formerly. He was created Earl of Strafford and Baron of Raby, and invested with the title of lord-lieutenant, or lieutenant-general of Ireland—a title which had not been borne since the time of Essex.

In 1640 the Earl of Northumberland being attacked by severe illness, the king appointed Strafford in his place, to the command of the army against the Scots. He does not appear to have performed anything here to make good either his own high pretensions or the character for valour given him by some writers. Of his impeachment at the opening of the Long Parliament, Clarendon gives the following account:—"It was about three of the clock in the afternoon, when the Earl of Strafford (being infirm and not well disposed in health, and so not having stirred out of his house that morning), hearing that both houses still sate, thought fit to go thither. It was believed by some (upon what ground was never clear enough) that he made that haste there to accuse the Lord Say, and some others, of having induced the Scots to invade the kingdom; but he was scarce entered into the house of peers, when the message from the House of Commons was called in, and when Mr. Pym at the bar, and in the name of all the Commons of England, impeached Thomas, earl of Strafford (with the addition of all his other titles), of high treason."

In the article Pym we have shortly adverted to the trial of the Earl of Strafford for high treason. To the remarks made there we may add that, though it was not to be supposed or expected that the Statute of Treasons of Edward III. (25 Edward III., st. 5, c. 2), being made to protect the king, not the subject, would provide specially for the punishment of such attempts as those of Strafford; it does nevertheless appear that Strafford was punishable for having become the instrument for administering the government of the Council of the North, carried on in direct violation of the Petition of Right, which during the time of Strafford's being president of that council was the law of the land. However the Commons changed their course and introduced a bill of attainder, which was passed on the 21st of April, in the Commons, and soon after in the Lords. The king with tears in his eyes and other demonstrations of weakness characteristic of him signed a commission for giving the royal assent to the bill, and then made some feeble and unavailing efforts to save the life of his obnoxious minister. "The resort to the bill of attainder," observes Mr. Forster ('Life of Strafford,' p. 404), "arose from no failure of the impeachment, as has been frequently alleged, but because in the course of that impeachment circumstances arose which suggested to the great leader of the popular cause the greater safety of fixing this case upon wider grounds. Without stretching to the slightest extent the boundaries of any statute, they thought it better at once to bring Strafford's treason to the condemnation of the sources of all law."

Strafford was beheaded on Tower Hill on the 12th of May 1641. In his walk from the Tower to the place of execution his step and manner are described by Rushworth as being those of "a general marching at the head of an army, to breathe victory, rather than those of a condemned man, to undergo the sentence of death." Within a few weeks after his death, the parliament mitigated the penalties of their sentence to his children. In the succeeding reign, the attainder was reversed, and his son was restored to the earldom.

STRANGE, SIR ROBERT, a descendant of the family of Strange of Balcaisky, in the county of Fife, was born at Pomona, one of the Orkney Isles, on the 14th of July 1721. After successively adopting and abandoning the study of the law and the pursuit of a sea-faring life, he was apprenticed to an engraver, Mr. Cooper of Edinburgh, who had a considerable establishment and a school for apprentices.

He had studied for a considerable time, when he joined the forces of the Pretender, and was appointed a lieutenant in the Life Guards, a step he was induced to take with a view of obtaining the hand of Miss Isabella Lumisden, who consented to marry him "on condition that he should fight for the prince," and who did marry him in 1747. After the battle of Culloden he sought refuge in the Highlands, where he suffered the severest privations. Subsequently he ventured to Edinburgh, where he subsisted upon the produce of a sale of his drawings of the chiefs of the rebellion, which he privately disposed of at a guinea each. He had also made a half-length portrait of the Pretender, from which he subsequently made an engraving—the first he executed on his own account. After his marriage he went abroad, and at Rouen obtained an honorary prize for design, when he proceeded to Paris, where he studied engraving under the celebrated Le Bas, from whom he learned the use of the dry point, of which he made such successful use in his own plates; he also worked for a time with Descamps. In 1751 Strange settled in London, and soon established a high reputation as an historical engraver, of which class he is considered to be the first in the English school.

In 1760 he again went abroad, and executed plates after pictures by many of the greatest of the old masters, and was made a member of the academies of Rome, Florence, Bologna, Parma, and Paris. On his return to England, he was received with every mark of distinction, and in January 1787 was knighted, though he complains incessantly of suffering persecution on account of his supposed Jacobite principles. He died on the 5th of July 1792. He left a widow, three sons, and one daughter, amply provided for by the fruits of his industry and ability. His gains were, it is only right to notice, considerably increased by dealing in pictures, in which his shrewdness as well as his knowledge appear to have stood him in good stead. Strange is the only Englishman whose portrait is introduced in the painting in the Vatican of 'The Progress of Engraving.' Force, vigour, clearness, and precision are the prevailing characteristics of his style, nor is he less noted for the careful distinction which he makes in his plates between the texture of the various materials represented. He was the author of an unpublished treatise entitled 'The History of the Progress of Engraving,' to which he added impressions of his principal plates and a portrait of himself. He also commenced an Autobiography, which is printed in Mr. Dennistoun's very amusing work referred to below. The following is a list of Strange's most important works:—'St. Cecilia,' after Raffaele; the 'Virgin and Infant Christ,' with Mary Magdalen, St. Jerome, and two Angels, after Correggio; 'Mary Magdalen,' 'The Death of Cleopatra,' 'Fortune flying over a Globe,' 'Venus attended by the Graces,' and 'Joseph and Potiphar's Wife,' after Guido; 'Christ appearing to the Virgin after his Resurrection,' 'Abraham expelling Hagar,' 'Esther and Ahasuerus,' and the 'Death of Dido,' after Guercino; 'Venus and Adonis,' 'Venus reclining,' and 'Danæ,' after Titian; 'Romulus and Remus,' and 'Cæsar repudiating Pompeia,' after Pietro da Cortona; 'Sappho consecrating her Lyre,' after Carlo Dolci; the 'Martyrdom of St. Agnes,' after Domenichino; 'Belisarius,' after Salvatore Rosa; 'The Virgin with St. Catherine and Angels contemplating the Infant Jesus,' after Carlo Maratti; 'The Choice of Hercules,' after Nicolas Poussin; and the 'Return from Market,' after Philip Wouvermans. Amongst his portrait engravings may be particularly mentioned the Children of Charles I., and Queen Henrietta Maria, with the Prince of Wales, and Duke of York, after Vandyke.

(*Memoirs of Sir Robert Strange, Knight, Engraver; and of his Brother-in-law, Andrew Lumisden, Private Secretary to the Stuart Princes.* By James Dennistoun of Dennistoun. 2 vols. 8vo, 1855.)

STRANGFORD, PERCY CLINTON SYDNEY SMYTHE, SIXTH VISCOUNT, was born in 1780, and graduated in 1800 at Trinity College, Dublin, obtaining the gold medal and other honorary distinctions. He entered the diplomatic service early. Before he was of age he had gained a high reputation by his contributions to the 'Poetic Register.' In 1801 he succeeded to his father's Irish peerage, and became secretary of legation at Lisbon. Here his love of language and poetry led him to master the Portuguese language, and to translate the poems of Camoens, to which he prefixed the life of that poet. This translation is highly praised by both Lord Byron and Thomas Moore, and attained considerable popularity, several editions having been called for. He became afterwards British envoy at Lisbon, and accompanied the court and royal family of Portugal to Brazil. In 1817 he became ambassador at Stockholm, from whence he was transferred in 1820 to the Sublime Porte, and to St. Petersburg in 1825. In 1828 he was sent on a special mission to the Brazils. He was created a D.C.L. of Oxford in 1834, at the installation of the Duke of Wellington, with whom he had been associated as co-penitentiary at the Congress of Verona. He was made in 1825 a Knight Grand Cross of the Hanoverian Guelphic Order, and raised to the peerage of England as Lord Penhurst. Lord Strangford was an ardent lover and patron of literature and the fine arts, an active member and vice-president of the Society of Antiquaries, and a frequent contributor, under the initials of P. C. S. S., to the 'Gentleman's Magazine' and 'Notes and Queries.' He was collecting materials for the biography of his ancestor Endymion Porter, to whom Milton has addressed a sonnet, when he was carried off by a short illness May 29, 1855.

\* STRATFORD DE REDCLIFFE, STRATFORD CANNING, FIRST VISCOUNT, is the fourth son of Stratford Canning, Esq., merchant of London, and first cousin to the late Right Hon. George Canning, and of the first Lord Garvagh, and is descended from a younger branch of the ancient family of Canning of Foxcote, in the county of Warwick. He was born in London January 6th, 1788, and received his early education on the foundation at Eton, where he rose to the captaincy of the school. He was admitted a scholar of King's College, Cambridge, in 1806, but quitted the university in the following year, without having taken a degree, on being appointed a précis writer in the Foreign Office under his cousin; and in the same year he accompanied Mr. Merry as secretary on his embassy to Denmark and Sweden. In 1808 he was despatched as secretary to Mr. (afterwards Sir Robert) Adair's special mission to the Dardanelles, for the purpose of negotiating terms of peace between this country and the Porte, which had been forcibly interrupted in 1807; an object which was eventually accomplished by the treaty signed January 5, 1809. These negotiations were secretly opposed by both France and Russia; but the Sultan Mahommed remained firm to the interests of Britain. In the following April Mr. Canning was made secretary of legation at the Porte, and on the recall of Mr. Adair in 1810 was accredited minister plenipotentiary at that court. This important post he retained till 1812, when he returned to England and took the degree of M.A. by royal letters at King's College, Cambridge. In 1814 he was appointed envoy to Switzerland, and assisted in the formation of the Treaty of Alliance between the nineteen cantons, which eventually became the basis of their federal compact. In 1820 having been sworn a member of his majesty's Privy Council, he was accredited as envoy extraordinary and minister plenipotentiary to the United States, and remained at Washington for three years; during which time he had an opportunity of obtaining correct knowledge of the details of the various questions which had been left for future adjustment between the two governments by the treaty of Ghent. At the end of 1824, Mr. Stratford Canning was sent to St. Petersburg on a special mission, having reference to the Greek troubles, and another also to the Emperor of Austria. After accomplishing the duties of these missions he proceeded to Constantinople, having been appointed ambassador extraordinary and plenipotentiary to that court on the 10th of October 1825. Here he lost no occasion of negotiating with the sultan in favour of the Greek nation, whose heroic exertions and horrible sufferings had engaged alike the admiration and sympathy of men of all nations and of all parties; but his appeals were unfortunately without avail. The obdurate sultan could pardon, but would not treat with men whom he looked upon as his slaves. Under these circumstances, the three powers—England, France, and Russia—determined upon concerting more effectually for terminating a condition of things which had become a scandal to all Europe. In 1827 Mr. Canning returned to England for a time, and in the July of that year was signed the treaty of London, by which the three powers agreed to tender to the Sublime Porte their mediating offices towards putting an end to the internal war and establishing the relations which ought to exist between Turkey and the people of Greece, and in event of such mediation being rejected, to interfere by force in the matter. The reply of the Porte was a refusal, and was immediately followed by active measures of coercion. The battle of Navarino, on the policy of which so much discussion and debate has taken place, was fought in September 1827, and the allied powers resolved to take the Greek nation under their protection, and consulted on the propriety and means of establishing it as an independent state. Mr. Canning, on the part of the British government, took an active share in the inquiries and deliberations necessary towards this result. In 1829 he had conferred upon him the distinction of a Civil Knight Grand Cross of the Bath for these and former diplomatic services. He had been already elected for the borough of Old Sarum, and shortly afterwards was chosen to represent the since disfranchised constituency of Stockbridge, Hants. In October 1831 he was again despatched on a special mission to the Ottoman Porte, for the purpose of treating upon and defining the future boundaries of the kingdom of Greece, which were eventually settled according to his recommendations in 1829. The result was another treaty signed at London, on May 7th 1832, between the same three powers, and ratified by Bavaria on the 27th of the same month, upon the basis of which Prince Otho of Bavaria accepted and ascended the throne of Greece. In the same year Sir Stratford Canning was deputed upon a special mission to the courts of Madrid and Lisbon, the latter of which however he did not visit. In December 1834 he was again elected to parliament, this time for King's Lynn, Norfolk, which he continued to represent down to the month of January 1842. In 1836 and again in 1841 the ministry of Lord Melbourne offered to him, though politically opposed to them, the governorship-general of Canada, the acceptance of which however he declined. Towards the close of the year 1841 he was appointed a third time as ambassador at Constantinople, in succession to the late Lord Ponsonby: this post he has held under each successive ministry down to the present time (June 1857). In April 1852 he was elevated to the peerage as Viscount Stratford de Redcliffe, a title which he chose to mark his paternal descent from William Canninge, the "pious founder of the Church of St. Marye Redclyffe," at Bristol.

The policy of Lord Stratford in Turkey has been manly and con-

sistent. Considering the integrity of the Ottoman power to be essential to the permanent relations of Europe; having learned also to respect that power, in regard of the strenuous efforts towards reform and regeneration which it has been recently making, with more or less success, he has given a firm support to the independent policy of the Porte, against the attacks and machinations of its avowed enemy, Russia. Shrewd to detect the crooked schemes of that government, he has met them when discovered with a bold and resolute front. In the dispute between the Porte and the Court of Russia, Lord Stratford de Redcliffe gave to the Porte the full extent of the moral support at his command, without in any way compromising his government beyond the point to which his instructions warranted him. When, in May 1854, the Foreign Secretary of the Porte consulted him, in common with the representatives of France and Austria, in reference to the ultimatum of Prince Menzikoff, the reply was one leaving the Ottoman government free to adopt and declare its own line of policy; but that line of policy being once adopted, and announced to the British ambassador, the latter did not hesitate to express his approval of it, and to promise the friendly offices of his government. Independently of the more important political questions bearing upon European relations, to which Lord Stratford has never been blind, and of the part which he has taken in transactions connected therewith, too numerous for us to mention, there have been very many occasions on which he has been the means of promoting the ends of humanity, religious freedom, and intellectual progress. Owing to his successful representations, the infliction of torture was prohibited in the Turkish dominions; to him is due the abolition of the penalty of death, formerly inflicted upon renegades—that is, Christians who, having embraced the Mohammedan belief, reverted to Christianity; also the appointment of the mixed courts for the trial of civil and criminal causes in which Europeans are concerned, and the reception therein of the testimony of Christians upon an equal footing with that of Mohammedans; he likewise procured, in 1845, a firman for the establishment of the first Protestant chapel in the British Consulate at Jerusalem; and in 1855 another firman, establishing the religious and political freedom of all descriptions of Protestants throughout the Turkish empire—for which he has received memorials of thanks from the representatives of various bodies of Protestants. On the other hand, complaints have been made of Lord Stratford's haughtiness, which has, it is affirmed, occasionally been productive of most important results, and has given occasion to grave censure in Parliament, and angry comments by the press. To scientific discovery Lord Stratford has always lent his valuable aid. In 1845, when Mr. Layard could not find a government, or scientific body, or public, to second his aspirations for the discovery of ancient Nineveh, Lord Stratford authorised and enabled him, at his own risk and expense, to proceed upon his researches. In 1847, those interesting relics, the Budrum marbles—being, as supposed, the remains of the mausoleum erected at Halicarnassus, by Artemisia, queen of Caria, to her husband, Mausolus—were obtained by Lord Stratford, by firman from the Porte, and presented by him to the British Museum.

Lord Stratford de Redcliffe married—1st, in 1816, Harriet, the daughter of Thomas Raikes, Esq., Governor of the Bank of England, who died in 1817; and, 2ndly, in 1825, Elizabeth Charlotte, daughter of James Alexander, Esq., of Somerhill, near Tunbridge, and niece of the Earl of Caledon.

STRATICO, SIMONE, COUNT, was born at Zara, in Dalmatia, in 1730, of a family originally from Candia, studied at Padua, where he took his doctor's degree, and was made professor of medicine in that university when only twenty-five years of age. In 1761 he accompanied to England the ambassador sent by the Venetian senate to congratulate George III. on his accession; and on his return to Padua he succeeded the Marquis Poleni in the chair of mathematics and navigation. He wrote several works on hydraulics and hydrostatics, and upon naval architecture and navigation. In 1801 he was appointed by the government of the Italian republic to the chair of navigation in the university of Pavia, and under Napoleon's kingdom of Italy he was made inspector-general of roads, rivers, and canals, and senator of the kingdom and knight of the iron crown. After the Restoration the Emperor of Austria gave him the cross of the order of St. Leopold. Count Stratico died at Milan in 1824, at the age of ninety-four. His principal works are—1, 'Raccolta di Proposizioni d'Idrostatica ed Idraulica,' Padova, 1773; 2, 'Vocabolario di Marina,' 3 vols. 4to, Milan, 1813-14, a work which was wanted in the Italian language: Stratico collected the nautical expressions used by the Venetians, Pisans, and Genoese in the time of their maritime greatness, and added the modern expressions adopted from the French and English; 3, 'Bibliografia di Marina,' 1823; 4, 'M. Vitruvii Pollionis Architectura cum Exercitationibus J. Poleni et Commentariis Variorum,' Udine, 1825. This is an excellent edition of Vitruvius, with important illustrations and comments by Poleni and Stratico, and was published after the latter's death. Stratico was one of the most distinguished men of science in Italy. His cabinet of models for shipbuilding, and his collection of books relative to the art of navigation, were bequeathed by him to the Lombardo-Venetian kingdom, and they have been placed in the library of the Institute of Milan. (Maffei, *Letteratura Italiana*; Biographical Notice of Stratico, in the 'Antologia' of Florence, vol. xvi.)

STRATON, the son of Arcesilaus, and a native of Lampsacus, a Peripatetic, who about B.C. 286 undertook the charge of the Peripatetic school after Theophrastus. He was the master of Ptolemy Philadelphus, and was well paid for his services.

Respecting his doctrine only scattered hints can be gathered, as all his works have perished. He differed from his master Aristotle on certain points. He maintained that there was a principle of motion destitute of intelligence inherent in all matter; which principle causes all composition and decomposition of bodies; that the world, in consequence, was not formed by an extramundane deity, nor by any intramundane animating pervading intelligence; but it was formed by the innate force of matter, which momentarily creates and dissolves. He was called Physicus, from his making physical matters his chief study. A list of his works is given by Diogenes Laertius ('Straton'), and a copy of the philosopher's testament. Eight persons of the name of Straton are enumerated by Diogenes.

(Diog. Laert., 'Straton'; Cicero, *De Natura Deorum*, i. 18; Brucker, *Instit. Hist. Phil.*)

\*STRAUSS, DAVID FRIEDRICH, was born at Ludwigsburg, in Württemberg, on January 27, 1803, educated in the school of his native town, then in the theological seminary at Blaubeuren, and lastly in the Theological Institute at Tübingen. In 1830 he was appointed curate, and in 1831 professor's assistant in the Seminary at Maulbronn, after which he proceeded to Berlin for six months to study the Hegelian philosophy, and to hear Schleiermacher. In 1832 he became under-teacher in the Theological Institute at Tübingen, and delivered lectures on philosophy in the University. In 1835, he having been hitherto unknown in the literary world, 'Das Leben Jesu, kritisch bearbeitet' ('The Life of Jesus critically treated'), startled the world, as it contained an attempt to prove, with much misdirected acuteness and subtlety, that the whole of the Evangelical history was a series of myths founded to a considerable extent on the Old Testament prophecies of the Messiah, concocted in the first and second centuries of the Christian era, and by degrees adopted by the Christian community. This work, which produced a crowd of adversaries, occasioned his dismissal from his situation at Tübingen, and he accepted that of teacher in the Lyceum at Ludwigsburg, which however he resigned in 1836, in order to become a private tutor at Stuttgart. While here he prepared a reply to his opponents in his 'Streitschriften,' published in 1847; and in his 'Zwei friedlichen Blätter' (two friendly addresses), he sought to place his case in the most favourable point of view. A still greater commotion was created when he was appointed, by the Council of Education of Zürich, in February 1839, Professor of Divinity and of Church History in the University. The numerous public meetings which were held giving voice to the popular dissatisfaction with this appointment, not only compelled the dismissal of Strauss from his office (to whom however, as a compensation, a pension of a thousand francs was awarded), but caused the overthrow of the administration. Restored again to his literary activity, Strauss produced, in 1839, an Essay 'Über Schleiermacher und Daub,' as a preparation for his next most important work, 'Die christliche Glaubenslehre, in ihrer geschichtlichen Entwicklung und in ihrem Kampfe mit der modernen Wissenschaft' ('The Doctrine of Christian Faith, in its Historical Development and in its Contest with Modern Science'), published in two volumes in 1840-41; in which the exegetic, the dogma-historical, the critical, and the dogmatic elements are treated of in an original manner. After a considerable interval Strauss produced 'Der Romantiker auf dem Throne der Cäsaren, oder Julian der Abtrünnige' ('The ancient Roman on the Throne of the Cæsars, or Julian the Apostate'), which appeared in 1847, and which, from its personal allusions to a living sovereign, created a great sensation. In 1848 he was set up as a candidate by his native town to represent it in the German parliament, but the clerical party, who had no confidence in him, had sufficient influence in the district to ensure his rejection; but he published speeches made by him on this occasion, in the same year, under the title of 'Sechs theologisch-politische Volksreden.' Ludwigsburg however sent him as its representative to the Württemberg Diet, where he very greatly disappointed his excited supporters by the conservative tendency of his political opinions and votes. This dissatisfaction led to an address conveying their displeasure, and he retired in December 1848. He again returned to his literary pursuits, and in 1849 published 'Schubarts Leben in seiner Briefen,' a life of Schubart, a poet, and a countryman of his own, chiefly from Schubart's correspondence, but which contains several essays by Strauss himself. 'Christian Märklin, ein Lebens- und Charakterbild aus der Gegenwart,' published in 1851, is likewise a biographical work, in which he has introduced many circumstances relating to himself.

\*STRICKLAND, MISS AGNES, was born in the early part of the 19th century, at Reydon Hall, near Southwold, in Suffolk. Her father was Thomas Strickland, Esq., a descendant of the Stricklands of Sizergh Hall, in Westmoreland. He had a family of eight children (two sons and six daughters), of whom Agnes Strickland is the third daughter. She became a writer at an early age, and has continued her literary labours with great assiduity. After a few trials anonymously in periodicals, a small volume of 'Patriotic Songs,' by Agnes and Susanna Strickland, was published, which was followed by 'Worcester Field, or the Cavalier, a poem in Four Cantos, with Histo-

rical Notes, by Agnes Strickland,' 12mo, without date. It is written in the lyrical measures of Scott's 'Lay of the Last Minstrel.' This poem was followed by 'Demetrius, a Tale of Modern Greece, in Three Cantos, with other Poems,' 12mo, 1833. 'Demetrius' is written in the ten-syllable measure, rhymed, in the style of Lord Byron's 'Corsair,' &c. Her next productions are in prose:—'The Pilgrims of Walsingham, or Tales of the Middle Ages,' 3 vols. 12mo, 1835; 'Tales and Stories from History,' 2 vols. 18mo, 1836; 'The Rival Crusoes,' 12mo; 'Alda, the British Captive,' 18mo, 1841; 'Historical Tales of Illustrious British Children,' 12mo, 1847. In 1842 appeared 'Letters of Mary, Queen of Scots, now first published from the Originals, collected from various Sources, private as well as public; with an Historical Introduction and Notes, by Agnes Strickland,' 2 vols. 8vo. A third volume was published, but the whole were afterwards incorporated, re-arranged, and published in 2 vols. in 1844. In 1850 she published 'Historic Scenes and Poetic Fancies,' 8vo, a volume which contains her earliest literary productions, together with several which had never before appeared, written, as she states, "after the romance of youthful fancy had been chastened and sobered down by the experience and the realities of life." Among the early poems in this volume is one on 'The Escape of Mary Beatrice and her Babe' (wife and son of James II.), of which she observes, that "the touching incident on which this poem was founded first suggested the idea that Lives of the Queens of England would be found replete with scenes of more powerful interest than any work of fiction that could be offered to the world."

In 1851 appeared 'Lives of the Queens of England, from the Norman Conquest, now first published from Official Records and other Authentic Documents, private as well as public, by Agnes Strickland; a new edition, revised and greatly augmented, embellished with Portraits of every Queen,' 8 vols. 8vo. The first volume was published in 1840, and the following volumes, to the number of twelve, were published in succession. New editions of each volume were required, and the popularity of the work appears to be still undiminished, since, at the sale of the copyrights of the late Mr. Colburn, the publisher of the work, May 26, 1857, the copyright of 'The Lives of the Queens of England' was sold for 6000*l*. Though the name of Elizabeth Strickland does not appear on the title-page, she has been associated throughout with Agnes in the production of this work, and also in that of the 'Lives of the Queens of Scotland and English Princesses connected with the Regal Succession of Great Britain,' 6 vols. 8vo, Edinburgh, 1850, &c. Though these works do not satisfy the sterner requirements of the historical student, either in accuracy of statement or impartiality in the exhibition of character, they are useful to the general reader, as well for the copious extracts which they contain as in pointing out sources of neglected information and in directing him to trustworthy authorities previously not commonly known.

\*CATHERINE PARR STRICKLAND, having married Lieutenant Trail, of the 21st Royal North British Fusiliers, embarked with him for Canada, where they still reside. After having been there some time Mrs. Trail published in the 'Library of Entertaining Knowledge' a volume entitled 'The Backwoods of America, being Letters from the Wife of an Emigrant Officer, illustrative of the Domestic Economy of British America.' She has since published the 'Canadian Crusoes, a Tale of the Rice-Lake Plains,' 18mo, London, 1852.

\*SUSANNA STRICKLAND, soon after her marriage with John Wedderburn Dunbar Moodie, of the Royal North British Fusiliers, published 'Enthusiasm, and other Poems, by Susanna Strickland (now Mrs. Moodie),' 12mo, 1831. Mr. and Mrs. Moodie soon afterwards followed Mr. and Mrs. Trail to Canada, and Mr. Moodie is now sheriff of the county of Hastings, Canada West. Mrs. Moodie has published 'Roughing it in the Bush, or Life in Canada,' 2 vols. 8vo, London, 1852, and 'Life in the Clearings versus the Bush,' 12mo, London, 1853. She is also the authoress of 'Mark Hurdlestone' and 'Flora Lindsay,' two novels published in America and reprinted in England.

\*JANE MARGARET STRICKLAND, another sister, has published 'Rome, Regal and Republican: a Family History of Rome,' 2 vols. 8vo, 1854.

\*MAJOR STRICKLAND, the elder of the two brothers of this family, emigrated to Canada in 1825, and has published 'Twenty-Seven Years in Canada West, or the Experience of an Early Settler,' by Major Strickland, C.M., 2 vols. 8vo, London, 1853. Major Strickland paid a visit to England in 1851, at which period his mother was living, as well as all the family of eight children. The younger brother is commander of the Scotia, East Indian; and another sister is married to the Rev. Richard Gwyllim, incumbent of the parish of Ulverstone in Lancashire, and rural dean of Furness.

STRICKLAND, HUGH EDWIN, was the grandson of Sir George Strickland on his father's side, and of the celebrated Dr. Edmund Cartwright on his mother's side. He was born at Righton, in the East Riding of Yorkshire, on the 2nd of March 1811. After receiving a careful private education he was placed as a pupil with Dr. Arnold, then living at Laleham, previous to his appointment as head-master at Rugby. After leaving Laleham Mr. Strickland was entered at Oriel College, Oxford. Here the taste which he had acquired in the country for natural history became systematically directed towards geology under the teaching of Dr. Buckland. On leaving Oxford he went to reside with his father at Tewkesbury, and here he studied with great

diligence the geology of the Cotswold Hills, and of the great valley of the Severn. Although distinguished as a naturalist, one of his earliest literary productions discovered a taste similar to that of his maternal grandfather. This contribution consisted of the description of a new wind-gauge in the 'Mechanic's Magazine, for 1825.' His papers on the geology of his native district were mostly published in the Proceedings and Transactions of the Geological Society, of which he was an early and active member. The following are the titles of some of these papers, 'Description of a Series of coloured Sections of the Cuttings on the Birmingham and Gloucester Railway.' 'On the Occurrence of the Bristol bone bed in the Lower Lias near Tewkesbury.' 'On certain Impressions on the Surface of the Lias bone bed in Gloucestershire.' 'Notes of a Section of Leckhampton Hill.' 'On the Elevatory Forces which raised the Malvern Hills.' 'Memoir of the Geology of the Vale of Evesham.' In conjunction with Sir Roderick Murchison he also worked at the geology of the district in which he lived. Thus in the fifth volume of the 'Geological Transactions' a conjoint paper appeared 'On the New Red Sandstone System in Gloucestershire, Worcestershire, and Warwickshire.' They also published a separate work, entitled 'Outline of the Geology of the neighbourhood of Cheltenham.'

In 1835, in company with Mr. Hamilton, he made a journey to Asia Minor. During his travels he made notes, generally on natural history, but more especially on the geology of the districts through which he passed. In the 'Geological Transactions' he published the following papers, 'On the Geology of the Thracian Bosphorus.' 'On the Geology of the neighbourhood of Smyrna.' 'On the Geology of the Island of Zante.' 'On Currents of Sea-Water running into the Land in Cephalonia.' 'A general Sketch of the Geology of the Western Part of Asia Minor.'

On the failure of the health of Dr. Buckland, Mr. Strickland was appointed reader in geology in the University of Oxford. This post he held at the time of his death in 1853. As a zoologist Mr. Strickland was best known as an ornithologist. He was thoroughly acquainted with the birds inhabiting Great Britain, and gradually extended his knowledge of the forms of these animals. His papers on the classification and description of birds are very numerous. Amongst these the following were published in the 'Proceedings of the Zoological Society': 'Descriptions of New Species of Birds from West Africa.' 'Notes on certain Species of Birds from Malacca.' Many other papers on birds were published by him in the 'Annals and Magazine of Natural History,' in Jardine's 'Contributions to Ornithology' and in other works.

Whilst at Oxford his attention had often been directed to the head and foot of the Dodo, the only existing remains of a bird that had ceased to exist within a comparatively recent period. These remains had occupied the attention of naturalists, and many conjectures had been made as to the exact nature of this bird. Mr. Strickland expended a large amount of time and labour in getting together all the facts that existed with regard to the history and disappearance of this bird [DODO in NATURAL HIST. DIV.] and published a volume on the subject, entitled 'The Dodo and its Kindred, or the History and Affinities of the Dodo, Solitaire, and other extinct Birds,' London, 4to, 1848. This work contained copies from drawings of this bird, and a discussion on its zoological affinities, and the conclusion of the author that it belonged to the family of *Columbidae* or *Doves*. In the soundness of this conclusion most naturalists now agree. During his life Mr. Strickland was engaged in preparing a large work on the synonymy of the family of birds, one volume of which has been published since his death.

Mr. Strickland, during his geological studies, had his attention necessarily drawn to the family of *Molusca*, and numerous papers on the recent and extinct forms of the *Molusca* attest his knowledge of this department of natural history. With his great knowledge of the detailed facts of the natural history sciences it is not matter of surprise that he took a deep interest in classification. He proposed at one of the meetings of the British Association for the Advancement of Science the appointment of a committee for the purpose of reforming the nomenclature of natural history. He was the author of the report issued by this committee, and which has been extremely useful in establishing clear rules for the nomenclature of zoology.

He was one of the original founders and a member of the council of the Ray Society. He was mainly instrumental in inducing this society to undertake the publication of Professor Agassiz's 'Bibliographia Zoologica et Geologica.' This work he undertook to edit and see through the press, and had completed the third volume at the time of his decease. The original list of works in this book was increased by Mr. Strickland at least one third. His own publications, the list of which was published in the fourth volume and after his death, amounted to eighty-six. He was cut off in the midst of his labours and usefulness. He had been attending the meeting of the British Association for the Advancement of Science held in the year 1853 at Hull. He wished to inspect the cuttings of the Gainsborough and Retford Railway, and whilst thus engaged, note-book in hand, at the Clarborough Tunnel, on that line, he was run over by a passenger train, and killed on the spot, September 14, 1853. He was married in 1845 to the second daughter of Sir William Jardine, Bart., but left no children.

STROZZI, an historical family of Florence, of the period of the

republic, which produced many distinguished men both in learning and politics. The Strozzi are mentioned in the beginning of the 14th century by the chronicler Dino Compagni as belonging to the Guelph and Neri party, of which they became one of the leading families. After the revolt of the lower orders, in 1378, was suppressed, Tommaso Strozzi joined Salvestro de' Medici, Benedetto Alberti, and Giorgio Scali in supporting the popular government against the burgher aristocracy, at the head of which were the Albizzi and some of the Strozzi themselves, who, on suspicion of a conspiracy against the existing government, were seized in 1379, and summarily put to death. A fresh insurrection in 1381 upset Tommaso Strozzi and Giorgio Scali: Strozzi escaped, but Scali was beheaded. Tommaso Strozzi retired to Mantua, whither a branch of the Strozzi was thus transplanted.

In the following century the most conspicuous of the family was PALLA STROZZI, who filled several high offices: he was at the siege and surrender of Pisa in 1406. He was afterwards employed on several missions; he was sent, together with Cosmo de' Medici, to the congress of Ferrara in 1432, when peace was concluded between the Duke of Milan on one side, and Florence and Venice on the other, through the mediation of Duke Nicholas of Este. Shortly after this a civil strife broke out between the rival families of the Medici and the Albizzi, and Palla Strozzi joined the party of the latter. The Medici, from the time of Giovanni, father of Cosmo, had taken the popular side, especially in the business of the catasto or census, by which taxation upon property was fixed in proportion to the value of each citizen's property. This measure had been strenuously opposed by the grandi, or older wealthy families, who, having had hitherto the government in their hands, had never paid their proper share of the public burdens, which fell chiefly on the inferior citizens. The Albizzi, who were at the head of this burgher aristocracy, became jealous of the popularity of the Medici. In 1434 they contrived by means of money to have the Gonfaloniere, and the majority of the signori or executive, elected from among their friends. Cosmo de' Medici was then first thrown into prison, and subsequently banished. [MEDICI, vol. iv., col. 175.] After a twelvemonth a reaction took place in favour of the Medici: an executive was chosen from among their friends. Rinaldo degli Albizzi now proposed to his friends to resort to arms to prevent the new executive from taking their seats of office, and to oblige the signoria that was going out to appoint a balia which would appoint an executive favourable to them. Palla Strozzi, too honest or too weak for a partisan, opposed the proposal of Rinaldo as too violent and illegal, and advised to wait and watch the acts of the new executive. This was the ruin of the Albizzi; for the new governors began by imprisoning the late Gonfaloniere, and he summoned the Albizzi to appear at the town palace. Upon this Rinaldo summoned his friends to arms, but many of them declined to obey his call; and Palla Strozzi, after several messages, came out with two armed followers; at which Rinaldo broke out in bitter words of reproach, and Strozzi, after a brief retort turned his horse's head, and went home. Rinaldo remained in uncertainty: he parleyed with his enemies, whilst the signoria had time to send for troops from the country, which occupied all the strong posts in the city. The usual parliament was then assembled, and a balia was appointed, which condemned the Albizzi, Strozzi, and many others to exile in 1435. Palla Strozzi went to Padua, where he spent the remainder of his life in studious retirement. "On arriving at Padua he devoted himself entirely to study, and found in it a harbour from past storms. He took into his house John Argyropoulos and another learned Greek, and allowed them a good salary to read to him Greek works. Argyropoulos read to him Aristotle on natural philosophy, and the other read to him other works. Palla Strozzi was himself well acquainted with Greek, and he translated into Latin the works of John Chrysostomus." (Tito Vespasiano Strozzi, in Méhus's 'Life of Ambrosius Traversari.') He died at Padua in 1462, at ninety years of age.

Before his exile Palla Strozzi had exerted himself to encourage learning in his native city of Florence. Together with Coluccio Salutati and Niccolò Nicoli, he engaged Manuel Chrysoloras to come from Greece to Italy about 1396; and Strozzi defrayed in great part his expenses, and caused him to be retained at Florence as professor of Greek. Books however were still wanted; and Strozzi sent to Greece for them, and obtained many volumes at his own expense. Among other books he got the 'Politics' of Aristotle, the 'Cosmography' of Ptolemy, with the maps, the 'Lives' of Plutarch, and the works of Plato. About the year 1428 Palla Strozzi was chosen, with Giannotti Mannetti, to reform the university of Florence, and they established new chairs, and gave a fresh vigour to that institution. It was by Palla Strozzi's advice that Fililefo was engaged as professor, with the stipend of 300 crowns, and the new professor soon after had nearly 400 pupils. Strozzi was about to form a public library at Santa Trinita, in the centre of Florence; he had purchased many books, and had engaged amanuenses to transcribe others for the purpose, when the unfortunate civil factions of 1434-35, and his own exile, prevented the execution of his plan. But yet Palla Strozzi, with Salutati, Mannetti, and others, must be considered as having greatly contributed to the revival of classical studies in Italy, before the brilliant era of the Medici, to whom the whole merit has been commonly attributed. Timoteo Maffei of Verona, Paolo Cortese, Ercole Strozzi, and others, wrote eulogies of Palla Strozzi.

A collateral branch of the Strozzi lived at Ferrara in the 15th century. Its progenitor was Nanni or Giovanni Strozzi, a Florentine, who removed to Ferrara, and became a distinguished captain in the service of the Marquis Nicholas of Este, was ennobled, and acquired considerable wealth. Nanni left four sons, all of whom applied to literature; but the most distinguished of them was TITO VESPASIANO STROZZI, who studied under Guarino da Verona, and became a distinguished scholar and Latin poet. Some of his 'Carmina' were published by Aldus Manutius, and they contain his own biography; others are still inedited. Tito Vespasiano filled several judicial and administrative offices at Ferrara. He was appointed by the duke president of the Council of the Elders, and was sent ambassador to Rome in 1484. As an administrator however, it appears from some contemporary chroniclers that he was very unpopular. ('Diario Ferrarese,' in Muratori, 'Rer. Ital. Script.,' xxiv.) He died about 1508, and his tomb is in the church of Santa Maria del Vado at Ferrara.

ERCOLE STROZZI, son of Tito Vespasiano, rivalled and perhaps surpassed his father as a poet. He wrote both Latin and Italian: some of his Latin verses are published together with those of his father. He began a poem in praise of Duke Borso of Este, which he left unfinished. He was a friend of Bembo, Giovio, and other illustrious contemporaries, and Ariosto ('Furioso,' c. 42) has placed him among the excellent poets of his age. The mode of his death was tragical. He had just married Barbara Torella, of a noble family of Ferrara, when, on the 6th of June 1508, he was murdered one evening as he was returning home, and his body was found on the road with twenty-two stabs, and wrapped up in his mantle. Giovio says that a personage of high rank, whom he does not name, was through jealousy the author of the murder. The Duke Alfonso of Ferrara was suspected. Some of the Latin elegies of Ercole Strozzi resemble those of Ovid in ease and pathos, and in one of them he seems to foretell his own death. He was buried in the same church as his father. His widow, who was also a poet, wrote a sonnet on his death, which is in the 'Raccolta dei Poeti Ferraresi.'

Of the main stock of the Strozzi family which remained at Florence, the most celebrated was FILIPPO STROZZI, who figured at the period of the fall of the republic. Filippo acted an ambiguous part; he was ambitious, and had great influence through his connections and his great wealth, being possessed of large funds in various banking-houses in several countries of Europe. He was at times the friend and at others the rival of the Medici. He married Clarice, daughter of Piero de' Medici and niece of Leo X., a haughty ambitious woman, who ill brooked to see two illegitimate scions of the family—Alessandro and Cardinal Ippolito—placed by Pope Clement VII. to rule over Florence. Filippo and his wife were the instigators of the popular movement of May 1527, in which the republic was restored and the two young Medici were reduced to a private condition. Filippo Strozzi was a supporter of the new Gonfaloniere Capponi and of the moderate party, in opposition to the violent men who wished to proscribe all the friends of the Medici, and drive matters to extremities. In 1529, by the treaty of Barcelona, between Charles V. and Pope Clement, it was agreed to make Alessandro, the spurious and even dubious son of Lorenzo, duke of Urbino, son of Piero, duke of the Florentine state, and Charles V. agreed to give him in marriage his natural daughter Margaret. An army of mixed Imperial and Papal troops was sent against Florence, which was obliged to surrender, after an obstinate resistance, in which several members of the Strozzi family distinguished themselves, in August 1530, and Lorenzo Strozzi, brother of Filippo, was one of the commissioners who signed the capitulation on the part of the Florentines. Filippo, who was then at Rome, took part in the various conferences held there by the friends of the Medici in the presence of Pope Clement, concerning the sovereignty to be given to Alessandro. Filippo Strozzi returned to Florence and appeared to be on good terms with the new duke, to whom he even lent money to build a citadel to overawe the city. But Strozzi and his family were too wealthy and too ambitious to be long subservient to a young upstart whose character was despicable. The sons of Filippo were fiery and restive; and his daughter Luisa, who had married Luigi Capponi, having been publicly insulted by one of the duke's courtiers, the latter was assailed one evening and roughly handled by some unknown men. Her brothers, being suspected, were arrested, but afterwards liberated by an order from Pope Clement. The unfortunate Luisa died soon after of poison. Filippo and his sons left Florence for Rome, where Paul III., Clement's successor, felt not the same interest as his predecessor for the Duke of Florence. Cardinal Ippolito de' Medici, an illegitimate son of Giuliano, duke of Nemours, being piqued at having been set aside for his cousin Alessandro, encouraged the Florentine malcontents, who assembled at Rome under his auspices, and among whom Filippo Strozzi and his sons were conspicuous. Cardinal Ippolito however died suddenly, not without suspicion of poison. In the year 1535, when Charles V. landed at Naples on his return from the Tunis expedition, Filippo Strozzi and other Florentine emigrants appeared before him and complained of the tyrannical and dissolute conduct of Duke Alessandro, who repaired to Naples with his counsellor Guicciardini, in order to answer their charges. Filippo Strozzi offered large sums of money to the courtiers of Charles, to obtain the removal of Duke Alessandro. At last the emperor decided that the duke should remain, but should give a complete amnesty to

the political emigrants, who however resolutely refused the boon, and dispersed themselves among various towns of Italy. Filippo Strozzi repaired to Venice.

In 1537 Duke Alessandro was murdered by his relative Lorenzino de' Medici, who was a descendant of Lorenzo, the brother of Cosmo the elder; upon which the partisans of the Medici contrived to have young Cosmo, another descendant of the same branch, elected prince of Florence, with the approbation of Charles V. The Florentine emigrants were now reduced to despair, and being excited by the agents of France and of Pope Paul III., they resolved to try once more the chance of arms. Filippo Strozzi repaired to Bologna, with his son Piero, a young man of rash courage, who had served in the French armies, and with Baccio Valori, Anton Francesco degli Albizzi, Prior Salviati, and others; thence they made an irruption into the Florentine territory with about 4000 French and Italian mercenaries. The attempt was badly conducted, and a party of the invaders who had taken possession of the castle of Montemurlo, situated between Prato and Pistoja, allowed themselves to be surprised by the soldiers of Cosmo joined by Spanish troops in the emperor's service, and were totally routed. Piero Strozzi was lucky enough to escape, but Filippo and the other leaders were taken and carried to Florence, where most of them were immediately beheaded. Filippo Strozzi was imprisoned in the very fortress which his money had helped to raise. He was there kept as a prisoner of the emperor, under the care of his lieutenant Don Juan de Luna. Charles V., although he hated Filippo Strozzi and all his family as enemies and partisans of France, still hesitated concerning his doom, as Pope Paul and other great personages interceded for him; Duke Cosmo however was eager for his death. The emperor told the pope that he would spare him if he could show that he was innocent of the murder of Duke Alessandro. Filippo Strozzi was at Venice when the murder was committed at Florence, and it appears certain that he had no previous understanding with Lorenzino: he was astonished and for a time incredulous when the latter told him what he had done; but when he was convinced of the truth, he praised Lorenzino for his deed, and extolled him as another Brutus. However, Filippo Strozzi was examined, and put to the torture in presence of Cosmo's chancellor and of Don Juan de Luna; but although he suffered cruelly, being of a weak and sensitive frame, he denied all participation in the murder, and Don Juan de Luna at last ordered the torture to cease. Duke Cosmo however seized upon Giuliano Gondi, an intimate friend of Filippo, who, being under the torture, said that he had heard from Filippo that he was privy to the murder. The depositions were sent to the emperor, who ordered Don Juan de Luna to deliver his prisoner into the hands of Cosmo. Filippo, being informed of this, preferred killing himself to being put to death by the executioner. He wrote a declaration of his motives, inscribed 'Deo Liberatori,' in which he said that after having been already cruelly tortured, and in order to avoid being induced, through the violence of renewed torments, to accuse some of his innocent relations and friends, as had lately been the case with the unfortunate Giuliano Gondi, he had determined to put an end to his existence, and that he recommended his soul to God, begging of his mercy to give him at least a place with Cato of Utica and other virtuous men who had died in a like manner. He then requested his sons to fulfil his testament, and to repay Don Juan de Luna, the Spanish commander of the fortress, for the many accommodations he had granted him, and to bury his body in Santa Maria Novella by the side of his wife, if it should be permitted; otherwise it might lie wherever they would put it. And lastly, addressing the emperor, he entreated him to inform himself better concerning the condition of poor Florence, and to provide better than he had hitherto done for its weal, unless he intended to ruin the city altogether. He signed this remarkable paper, which was found in his bosom after his death, "Philippus Strozzi jamjam moriturus," and added as an epigraph the line from Virgil—

"Exoriare aliquis nostris ex ossibus ultor."

He then seized a sword which had been left, perhaps by a friendly hand, in his prison, and cut his throat. His end excited a feeling of compassion, mixed with horror, all over Italy. Whatever judgment we may form of the character of Filippo Strozzi, in which ambition and weakness were predominant ingredients, we cannot help compassionating him in his death. The mode of his trial was barbarous and illegal: if he had been tried and executed, like his companions, as a rebel or disturber of the public peace caught with arms in his hands, the sentence would have been plausible; but he was kept in prison for a twelvemonth, and then tried for a deed of which he was innocent. Strozzi was generous and accomplished, was well acquainted with classical literature, and he translated Polybius's treatise 'On the mode of forming Encampments,' and also some apophthegms of Plutarch. Many have mistaken him for a real patriot, which he was not; and Charles V. had well judged him, as well as the other leaders of the Florentine emigrants, when he said to Antonio Doria, who was pleading their cause at Naples in the time of Duke Alessandro, "You little understand these men, Antonio; they do not wish the liberty of their country, but their own greatness; for if we were to remove the duke they would become themselves lords of Florence, in spite of the other citizens, who really love the liberty of their city, but who could not

resist the influence and wealth and power of these ambitious leaders." (Varchi; Segni; Adriani; the 'Life of Filippo,' by his brother Lorenzo Strozzi; and Botta, 'Storia d'Italia.') A curious manuscript was discovered not many years since in the possession of the Cavalier G. F. Ugucioni of Florence, which is an inedited history of Gian Girolamo de Rossi, a friend of Filippo Strozzi, which contains several particulars concerning his untimely end. ('Antologia di Firenze,' No. 127, July 1831.) The author says that Cardinal Cibo and Cosmo's mother were the great instigators of Filippo's death, because they thought that his great wealth was dangerous in his hands, but would be less so when divided among his children. Filippo had still at his death 50,000 scudi, or crowns, of income, chiefly in the banks of France, which his enemies could not touch, after the emperor had confiscated the funds which he possessed in Spain, Germany, and Italy.

PIERO STROZZI, son of Filippo, after escaping from Tuscany, returned to France, where he was patronised by Henri II. and his consort Catherine de' Medici, and rose to high rank in the French army. In 1553 he was sent, with the title of 'Lieutenant of the King in Italy,' to Siena, which republic was then at war with Cosmo, duke of Florence, and where there was already a French auxiliary force, joined by a number of Florentine emigrants. His brother Leone Strozzi went also with a French naval force to the coast of Piombino, but was killed while attacking a small fortress near the shore. Piero Strozzi mismanaged the defence of Siena; his great object being to attack Florence, he neglected the main matter, which was to defend Siena; he made useless incursions into the Florentine territory. Being defeated, after a desperate fight near Marciano, by the Marquis of Marignano, he retired to Montalcino; and the city of Siena, after sustaining the horrors of famine, was obliged to surrender to Duke Cosmo, in April 1555. Piero Strozzi, who in the meantime had been made marshal of France by Henry II., retired to Rome. Soon after, Pope Paul IV. having quarrelled with King Philip II. of Spain, the latter sent the Duke of Alba from Naples to attack Rome in 1556, and Piero Strozzi was entrusted by the pope with the defence of the city. Strozzi stood out bravely against the Spaniards, till the arrival of the Duke of Guise with a French army obliged the Duke of Alba to withdraw to Naples. After this Strozzi returned to France, and repaired to the French camp in Picardy to fight against the Spaniards and English. In 1558 he and the Duke of Guise took Calais from the English, but shortly after Piero Strozzi was killed by a musket-shot at the taking of Thionville. His son Philippe attained high rank in the French service, and was killed in 1587, in the Azores Islands, whither he had been sent with an expedition by Henri III., or rather by Queen Catherine de' Medici, to favour the claims of Don Antonio, claimant of the crown of Portugal against Philip II. of Spain.

GIAMBATTISTA STROZZI, son of Lorenzo and nephew to Piero, was born at Florence in 1551, and was celebrated during a long life for his learning, his upright character, and his encouragement of useful knowledge. His house was a kind of school, to which young men fond of study resorted, and he gave them lessons gratuitously, and held disputations with them on various subjects of science. Those who were assiduous but poor he supplied with books, board, and other necessities, and by so doing he greatly reduced his property. He was very intimate with the Grand-Duke Ferdinand I. and his son Cosmo II. When Urban VIII. was elected pope in 1623, he invited Giambattista Strozzi to Rome, gave him apartments in the Vatican, and delighted in his conversation; and when Strozzi departed to return to Florence, the pope sent him a letter, in which, among other expressions of esteem, he said that he wished that every town of Italy possessed a man like him. After his return to Florence he became blind, but continued to receive in his house and converse with studious men who resorted to him from all parts. He died in 1634, at eighty-three years of age. He was an elegant writer both in prose and in verse; some of his poems and dissertations have been published, but most of his works remain in manuscript. He began a poem entitled 'L'America,' concerning the discoveries of his countryman Amerigo Vespucci, but left it unfinished. Professor Rosini has inserted many interesting particulars of the life of Giambattista Strozzi in his historical novel 'La Monaca di Monza.'

There are several other individuals of the name of Strozzi belonging to various branches of the family, who became known in different parts of Italy for their learning. Francesco di Soldo Strozzi, a Florentine, but residing at Venice, translated into Italian Xenophon's 'History of Greece,' Venice, 1550, and also Thucydides, which last he dedicated to Duke Cosmo, Venice, 1545, reprinted in 1563, but of which a much better edition was published at Verona in 1735. Oberto Strozzi of Mantua, a descendant of Tommaso above mentioned, was a patron of literature. He lived in the 16th century, and was a friend of Berni, Mauro della Casa, and other learned men. He founded a poetical academy at Rome, called 'Dei Vignajuoli,' about 1534, which assembled in his own house, and whose meetings are recorded in high terms by Marco Sabino in his dedication to Strozzi of the poetical 'In-tituzioni' of Mario Equicola in 1541.

Giulio Strozzi, born at Venice about the latter part of the 16th century, wrote poems—among others an epic entitled 'Venezia Edificata.' He afterwards went to Rome, when he and Cardinal Deti founded an academy called Degli Ordinati, in opposition to that of the Umoristi. Strozzi was made papal protonotary, and died at

Rome. Ciriaco or Chirico Strozzi, a Florentine, lived in the 16th century; he was professor of philosophy and of Greek at Bologna, and afterwards at Pisa, where he died in 1565. He composed a supplement to the 'Politics' of Aristotle, to supply the loss of the ninth and tenth books. Pietro Strozzi, also a Florentine, lived in the 17th century, and wrote a theological and controversial work, 'De Dogmatibus Chaldaeorum,' with the view of converting the Nestorians of Mesopotamia to the Church of Rome. (Tiraboschi; Pignotti; Fontanini.)

The palace Strozzi at Florence, built by the architects Da Majano and Pollajolo, in the time of the republic, is a remarkable specimen of the massive and stern style of Tuscan architecture of the middle ages. After the lapse of nearly four centuries it appears as perfect as if it were a recent structure. The colossal entablature which crowns the building is much admired.

STRUENSEE AND BRANDT, have acquired celebrity from their extraordinary rise to rank and power, and still more so from their common fate. Their names are inseparably blended in history, and the life of the one can hardly be told apart from that of the other.

JOHN FREDERICK COUNT STRUENSEE was born at Halle in Saxony, on the 5th of August 1737. His father, a divine of some eminence, respected alike for his good qualities and for the orthodoxy of his principles, was professor of theology at the university of Halle, and his mother was the only daughter of John Samuel Karl, physician in ordinary to the king of Denmark. Both his parents took great pains in educating young Struensee, who, after the ordinary course of studies at the school attached to the orphan-house of Dr. Franke, entered the university in 1754, and applied himself to physica. The extraordinary talents which he possessed, and the facility with which he acquired everything bearing upon the science he had chosen, were strongly counterbalanced by licentious habits and a loose way of thinking on matters of religion. Being however under the control of his father, he obtained, with some distinction, his degree of doctor in medicine in 1757. In the same year his father was made pastor primarius at the principal church of Altona, where young Struensee himself obtained the appointment of public physician. Singular success attended him in the practice of his profession, and shortly after his arrival a few literary productions procured him the reputation of an author. He remained in this situation after his father's removal to Rendsburg in 1760, where he had been appointed superintendent-general of Sleswig and Holstein. It is to Struensee's stay in Altona that we must ascribe his knowledge of politics, little as it was, which he so ably employed afterwards in the days of his greatest prosperity. Here also he laid the foundation of that pernicious system of licentiousness which was at once the stimulus of his ambition and the cause of his ruin.

It does not appear when he left Altona; but in 1768 we find him appointed to attend the King of Denmark, Christian VII., in his tour through Germany, France, and England. Struensee soon insinuated himself into the good graces of the king, with whose profligacy the loose principles and easy manners of his new physician were in perfect accordance; and such was the ascendancy he gained over his royal master, that, shortly after his introduction to him, he ventured to promise Brandt, whose acquaintance he made at Paris, to use his influence in order to procure his recall from banishment. About the same time he met Count Rantzau, who afterwards played so conspicuous a part in the revolution which involved his ruin. At Paris a frequent intercourse with D'Alembert and Voltaire confirmed him in his infidelity, while the profligacy of the higher ranks gave exemption from the fear of scandal. We must not omit that it was during this journey of Christian VII. that the degree of D.C.L. was conferred on the king by the University of Oxford, and that of M.D. on Struensee. Soon after their return to Copenhagen the king himself presented Struensee to the Queen Caroline Matilda, the posthumous daughter of Frederic, Prince of Wales, and sister of George III., and promoted him to the rank of privy councillor. It appears however that the queen did not receive this new favourite of her husband with any marks of attention. It was only through the address with which Struensee reconciled her with the king, from whom she had been alienated in consequence of his excesses, that he became as acceptable to her as to her husband. He received every day from both of them new marks of consideration and esteem, and in 1775, having inoculated the crown prince (Frederic VI., born in 1768), he was entrusted with his physical education. In his capacity of lecturer to the king, Struensee found ample opportunities of realising his ambitious plans. In order to supplant Count Bernstorff, or rather, to deprive him of his seat in the council of state, he recommended Count Rantzau-Aschbach. Soon afterwards he obtained the recall of his friend Enewold von Brandt, who was raised to the dignity of 'maitre des plaisirs' and director of the plays, instead of the old favourite Count von Holk. Brandt's polished manners, his easy address, and his lively conversation, were qualities well calculated to promote his favour with the court, where it was of the greatest importance to Struensee that none but his friends should have any influence. It was chiefly through Brandt that he finally succeeded in dismissing Count Bernstorff from the service; many other men of quality were obliged to leave their situations, and the queen-dowager Juliana Maria soon found herself without power, neglected by her

friends, and slighted by her enemies. The triumph of Queen Caroline was complete; the king behaved to her with deference, and Struensee was now constituted first minister with almost unlimited power. Thus matters stood at the end of 1776, when of the two parties striving for the power which the king had almost resigned, that of the young queen under the guidance of Struensee obtained a decisive victory. In order to be in perfect security, Struensee assigned to Brandt the special office of amusing the king and preventing him from having any conference with his ministers.

It was about this time that the king, urged by Struensee, dissolved the council of state, and instituted in its place a commission of conference ('Commission conferenz') which consisted of the presidents of the several branches of public administration. This measure brought all the power into the hands of the prime minister, by whom the members of this new council had been appointed. It changed at the same time the whole Danish constitution by depriving the nobility of their hereditary influence in the affairs of the government, created a universal feeling of disapprobation, and brought much popular odium on Struensee. So limited were the powers of this new chamber that it could assemble only at certain times, and might be dismissed by the minister; in fact, its members had neither rank, power, nor influence. The imprudence with which this measure was carried into effect could not but prejudice the queen's cause. Among the many enemies which it created, few were so exasperated as Count Rantzau, who, with his seat in the council of state, lost all his power and authority. In order to revenge himself he joined the queen dowager at Friedensburg. This sudden change in the administration had however the desired effect. Struensee's authority became paramount, and no one ventured to oppose him. The ministers were removed one after the other. All affairs were carried on under the immediate direction of Struensee, and all papers passed through his hands before their ratification by the king. He soon found however that notwithstanding his qualifications for managing the foreign affairs of the kingdom, he had no present means of restoring the exchequer and regulating the home department, both of which had long been declining under the administration of persons utterly devoid of prudence and unacquainted with the resources of the country. His brother C. A. Struensee, member of the college of finance, assisted him in his intended improvements; but the taxes which he imposed produced great destitution among the lower classes, a circumstance which, joined to the despotism exercised over them by a foreigner, increased the number of malcontents and the dissatisfaction of the people. All this time the king was surrounded by libertines, by whom the court was plunged into a profligacy which offended the nation. Meanwhile the attachment of the queen to Struensee exceeded, in appearance at least, the bounds of moderation. In July 1771 she was delivered of a princess, and her fears of the infamous reports which were likely to spread from the court of the queen dowager at Friedensburg tended only to place her after this event still more in Struensee's power. This power he shamefully abused. He was raised to the dignity of a count, together with his friend Brandt, and there is reason to believe that much of the enormous wealth of which he died possessed was wrong from the queen's weakness. But though the queen's fears made her silent, it was not so with the press. Its comments on Struensee's proceedings could not be silenced, except by revoking the freedom which he had granted only two years before with the hope of obtaining popularity. This proceeding, as well as the many slights he offered to his former friends, raised the indignation of the people to the highest pitch, and even those who were most attached to him treated him with reserve and coldness. At this crisis too his mental powers began to fail; the daring which had founded his administration, and the quickness in planning and boldness in executing which sustained it, gave place to a weak and vacillating fear of his daily increasing difficulties. An unimportant mutiny of 300 sailors who had not received their pay had already shaken Struensee's firmness, and was followed by a revolt of the life-guards, whom he had dismissed without any cause.

On this occasion Struensee acted in a manner unworthy of a man in power; he acceded to all the demands of the revolted soldiers, and sought to conciliate them by various means. This disclosure of his weakness of character, to which succeeded measures evidently calculated to secure his personal safety, led the English ambassador to warn the queen of the approaching downfall of the favourite. The regard he felt for her made him even go farther, and request that she would remove Struensee from the court, in order to prevent the catastrophe which he foresaw. But all his entreaties were in vain. The queen trusted too much to Struensee's prudence, who now made some changes in the department of police, with the view of securing himself against any danger. But the purport of those measures was too manifest. The people naturally enough concluded that Struensee was conscious of having slighted the nation, and they began to see that the prime minister was only a fortunate adventurer, whose career was drawing to a close. The partisans of Juliana Maria and her son Prince Frederic regarded this as an opportunity for a coup d'état too favourable to be neglected. They planned a conspiracy with so much secrecy that nothing whatever transpired which could have put Struensee on his guard. Early in the morning of the 17th January 1772, Queen Matilda, Struensee and his brother, Brandt, and

all their friends and adherents, were arrested. The evening before a ball had been given in the royal palace. Struensee, conscious of his own unpopularity, had, according to his custom, surrounded the palace with guards on whose fidelity he thought he could rely. General Eichstädt, who had been gained over by the opposite party, changed the soldiers, substituting his own dragoons in their place. That evening the young queen danced much, and closed the ball with the treacherous Prince Frederic, about one o'clock. At three in the morning, Colonel Köller, an old enemy of Struensee, sent his officers into the palace, telling them that he had orders from the king to arrest the queen. At the same time the conspirators—the Queen Dowager, Prince Frederic, Rantzau, Köller, Guldberg, and Eichstädt—went into the wretched king's bedchamber, and forced him to sign the order for the seizure of Struensee and his partisans. The unfortunate queen was carried to Kronenburg, where she was confined until the end of May 1772, when she was set at liberty through the resolute influence of the English government, and was removed to Zelle, where, after three years of exile, and at the early age of twenty-four, she died of a broken heart. With her last breath she solemnly asserted her innocence, and however imprudently she may have acted, there is little, if any doubt, that she was free from the crime imputed to her by her enemies, the queen dowager and her partisans, who appear to have been devoid of the least particle of truth, mercy, or generosity.

A special commission was formed, in order to try Struensee. The charge, consisting of nine heads, was given to the fiscal-general on the 22nd April 1772. He was, of course—the entire power being now in the hands of his bitterest enemies, and the king being in fact a prisoner in their hands—found guilty. By the sentence, which was pronounced on the 25th of April 1772, Struensee was to be deprived of all his dignities and beheaded. His right hand was to be cut off, his body quartered and broken on the wheel, and his head and hand were to be stuck up on a pole. This sentence the king was forced to go through the mockery of confirming; and on the 28th of April Struensee was decapitated, after witnessing the death of his friend Brandt. During Struensee's imprisonment, Dr. Münter succeeded in converting him from scepticism to Christianity: the narrative of his conversion was published, first at Copenhagen, in 1788, and translated into English by the Rev. Mr. Wendeborn, and republished in 1826 by Thomas Rennell. Struensee was undoubtedly a man of great abilities, capable of great application to business, rapid and decisive in his resolutions, as well as enlarged and patriotic in his views; but he neither possessed the profound policy, the active vigilance, nor the superior judgment requisite for maintaining him in his sudden elevation. Towards the close of his ministry he acted without foresight or address, as if, with the difficulties which augmented around him, he lost his presence of mind and strength of understanding. Voluptuousness was the source of his misfortunes; ambition only contributed to hasten and complete them. His ignorance of the language of the country which he for some time ruled made him commit many mistakes which otherwise he would have avoided. Nevertheless the charges brought against him are heavy, especially that of peculation; he had on various occasions used the public money for the purposes of himself and his friends, and on one occasion he took 60,000 dollars to remunerate himself for his services, and gave an equal sum to Brandt. His friend Brandt was formerly chamberlain to Christian VII.; but having calumniated Count Holck, the then favourite of the king, he was banished from court. Struensee, as above stated, recalled him in 1770, and from that period his life was but a copy of that of the prime-minister.

(Jens Kragh Høst, *Der geheime Cabinetsminister Graf Struensee und dessen Ministerium*, which is the best book on the subject; *An Authentic Elucidation of the History of Counts Struensee and Brandt*, 1788, a book containing many unfounded and incorrect assertions; Falken Skjold, *Mémoires*, Paris, 1826; *A Narrative of the Conversion and Death of Count Struensee*, by Dr. Münter, London, 1826, containing also Struensee's famous confession; and Mahon, *England*, vol. v.)

STRUENSEE, CARL AUGUST VON, brother of the foregoing, was born at Halle on the 18th of August 1735, and entered the school of the orphan-house and the university of that town. The wish of his father was that he should study theology; but although he was matriculated in the theological faculty, young Struensee chiefly applied his mind to mathematics and philosophy. In 1756 he was appointed a lecturer at the university of Halle; his lectures on mathematics and Hebrew were well attended, and procured for him some reputation. As early as 1757 he obtained a professorship at the military academy of Liegnitz. The scantiness of pupils which the war had occasioned, gave him leisure to study the application of mathematics to the science of war, and in 1760 he published his 'Rudiments of Artillery' (3rd edition, Leipzig, 1788). This work procured him the favour of Frederic II., who sent him a great number of young officers whom he was to form for the service. In 1771 appeared his 'Rudiments of Military Architecture,' the third volume of which appeared in 1774; they were republished at Leipzig in 1786. This was the first good book on the subject published in Germany. Meanwhile his brother, who had lately made his appearance at the court of Copenhagen, invited him to that city in 1769. Here he was raised to the dignity of counsellor of justice, and such was his application in the performance

of his duties and the judgment with which he avoided all party strife, that after the downfall of his brother he was set at liberty after a short imprisonment, and permitted to return to his country. Frederic II. received him with kindness, and offered to him the yet vacant place at the academy of Liegnitz; but he refused the offer, and retired to his country-seat of Alzenau, in the neighbourhood of Haynau in Silesia, where he pursued his political and mathematical studies. Here he translated Pinto's 'Essays on Political Economy' (1776), to which he added, in 1777, a second volume containing essays of his own. These were augmented and republished in 3 vols., Leipzig, 1800. It was here also that he wrote 'A Short Description of the Commerce of the principal European States,' a work which was completed by Sinapius, and contains very important notices on the trade of the Prusso-Polonic states. Upon this he was raised to the rank of counsellor of finances, and appointed at Berlin director of the maritime trade. In this capacity he distinguished himself by his extraordinary zeal and his politic measures, and soon effected a rise in the trade, which had much suffered under former administrations. For these services he was made a noble, and received the name of Karlsbach in 1789; two years afterwards he was appointed minister of state and president of the board of excise, in which situation he died October 17, 1804.

STRUTT, JOSEPH, an artist and antiquary of considerable merit, was born at Springfield, in Essex, October 27, 1742. His father was the owner of a mill at Springfield. At the age of fourteen the son was apprenticed to the unfortunate William Wynne Ryland, the engraver, and afterwards became a student of the Royal Academy, where he tried his talent at painting in oil. In 1771 he became a student in the reading-room of the British Museum, the manuscript stores of which gave a new bias to his pursuits, and where he conceived, and obtained the best embellishments for, most of the literary labours which he afterwards executed.

In 1773 he published his first work, 'The Regal and Ecclesiastical Antiquities of England, containing the representations of the English monarchs from Edward the Confessor to Henry VIII.,' a thin volume in quarto; a new edition of which he published, with a Supplement, in 1793. In 1774 he published the first volume 4to, of what he called 'Horda-Angel-Cynnan, or a complete view of the Manners, Customs, Arms, Habits, &c. of the Inhabitants of England, from the arrival of the Saxons;' the second volume of which appeared in 1775, and the third in 1776. In 1777 and 1778 he published his 'Chronicle of England,' in 2 vols. 4to. He had intended to bring this work down to his own time in six volumes, but not meeting with the encouragement he looked for, he stopped at the Norman Conquest. His next work was 'A Biographical Dictionary, containing an Account of all the Engravers from the earliest period to the present time, illustrated by engravings,' 2 vols. 4to, London 1785 and 1786; a work creditable to his judgment and industry.

In 1790 an asthmatic complaint rendered a country residence necessary, when he retired to Bacon's farm in Hertfordshire, where he employed a part of his time in engraving a series of plates in illustration of 'The Pilgrim's Progress.' Here he remained for four or five years. In 1795 he returned to London, and began collecting materials for his 'Complete View of the Dress and Habits of the People of England from the establishment of the Saxons in Britain,' the first volume of which he published in 1796, and the second in 1799. In 1801 he published the last work he lived to complete, on 'The Sports and Pastimes of the People of England,' 4to; reprinted in 1810, 4to, and again in 8vo, edited by William Hone, in 1830.

Mr. Strutt died, in narrow circumstances, in Charles Street, Hatton Garden, October 16th, 1802. He left some manuscripts in the possession of his son, from which 'Antient Times,' a drama in 4 vols., 12mo; and 'The Test of Guilt, or Traits of Antient Superstition, a dramatic tale, with the Bumpkin's Disaster,' &c., 4to, have since been published, as well as 'Queen Hoo Hall,' a romance, illustrative of ancient manners, left unfinished by Strutt, and for which Sir Walter Scott, at the request of the publisher, Mr. Murray, wrote a conclusion in 1808; to this Sir Walter in his general preface to the Waverley Novels makes a special reference, not only as "a step in his advance towards romantic composition," but as leading him to recur to the Highland story he had already commenced, and in fact to recast and complete Waverley.

Nichols, in his 'Literary Anecdotes,' whose account we have principally followed, enumerates (vol. v., pp. 685, 686,) a considerable number of single plates which Mr. Strutt engraved and published, as well as a few paintings in oil and drawings.

STRUVE, GEORG ADAM, was born at Magdeburg, on the 26th of September 1619. His father, the proprietor of Wandesleben, was judge in the supreme court of the duchy of Magdeburg. The family of Struve came originally from Brunswick, in which the grandfather of the subject of this sketch possessed an equestrian fief. Some of the ancestors of the mother of G. A. Struve had occupied high judicial offices, and others had pursued, with success, the career of university honours.

Struve's father was too much occupied by his judicial duties to superintend the minute details of his son's education; but his mother laboured anxiously to instil devotional feelings into his infant mind. He received instruction in the first elements of Latin, and other branches of knowledge, at the Lyceum of Magdeburg, until he attained his eleventh year. In 1630 he was sent to the Gymnasium of Schleu-

singen, where he remained till 1636. His principal tutor was Reyher, a man of great reputation as a teacher, who, besides grounding him thoroughly in Greek and Latin, imparted to him some notions in philosophy and belles-lettres.

His family had suffered much during these six years from the destruction of Magdeburg by Tilly's army, and the devastation of the district in which their property lay. They led an unsettled life for several years, sometimes in one town sometimes in another, till the storm of war having drifted into other provinces, they ventured again to take up their abode at Magdeburg. Not long after their return, Georg Adam arrived at the house of his parents a few days sooner than he was expected. Six years had so completely changed his appearance, that he was received as a stranger both by his parents and sisters, who did not recognise him until he declared himself.

In June 1636, Struve entered the University of Jena. The taste which he had acquired for literature and science, under his school-master, prompted him, although the law was his professional study, to devote a good deal of time to the philosophical classes. He attended the lectures of Philip Herst upon ethics; of Daniel Stahl upon logic and metaphysics; of Johann Zeisold upon physics; and of Johann Michael Dehler upon oratory and history. These were branches of knowledge which the jurists of his day were only in a few rare instances beginning to cultivate, but he found, in after life, advantage from this preliminary intellectual discipline. Even at this early age, if we may credit the narrative of his son, he had become aware of the important lights which a study of history was calculated to throw upon the doctrines of law, and the advantage a lawyer might derive from cultivating a logical precision in the statement of his arguments and an elegant diction. So strong was his sense of the latter requisite, that, in addition to the public lectures on rhetoric, he attended private classes for practical exercise in oratory. Seeing also how much depended in law upon precision of language, he extended his inquiries into the field of philology.

All these pursuits however were carried on in subordination to his legal studies. He attended the lectures of Peter Dieterich, Erasmus Ungebauer, and Ortholph Fomman. The last-mentioned was a relation of Struve's mother, and the young man had been confided to his superintendence, a trust which he conscientiously discharged by a watchful direction of his private studies. Struve had no relish for the wild merriment which then, even more than in modern times, was characteristic of the German student. He seems to have been of a quiet and even timid disposition, for a fright that he got from some soldiers, when a marauding party plundered Jena, soon after his arrival at the university, impaired his health sensibly for several years. His irreproachable conduct prepossessed the professors in his favour; and the distinguished appearance he made in a disputation which he maintained, in the philosophical faculty, on his thesis 'De Victoria et Clade,' in 1638, raised great expectations of his future eminence. He quitted Jena on the 11th of September 1639, and his public certificate from the heads of the University was more than usually flattering.

He remained upwards of a year in his father's house for the purpose of re-establishing his health, which had not yet recovered from the effects of the shock above alluded to. In the year 1641 he entered himself at the University of Helmstädt, where he remained till April 1645. Hermann Conring was then in the vigour of life: Struve attended during the summer of 1641 his lectures on the history of ancient Germany, to which the 'Germania' of Tacitus served as a text-book. In the winter of the same year he heard Rudolph Diephold's lectures upon 'genealogia historica,' as a supplement or continuation of Conring's, whose lectures upon politics he attended at the same time. In 1642 he was a member of a class to which Conring expounded the 'Politics' of Aristotle. Heinrich Habne, at that time the most esteemed civilian in Germany, had ceased to lecture, but Struve was fortunate enough to be selected as his amanuensis on some occasions, and heard the 'Pandects' explained by his colleague Wesenbeck. His relation with Conrad Horn was more intimate, for his father had placed him under the immediate control of that professor, who exercised him, along with his other pupils, unremittingly in private disputations.

In January 1642, Struve maintained a public disputation in the juridical faculty, on a thesis 'De Damnis, illis præcique quæ ex dolo, culpâ, aut casu proveniunt, harumque correctionibus et præstationibus.' And in July 1643, he maintained one in the philosophical faculty, on a thesis 'De Ducibus et Comitibus Imperii Germanici.' In February 1645, he again supported a juridical thesis 'De Vindicta Privata;' and having been admitted to the preliminary examinations, received his licence as candidate for the degree of Doctor of Laws.

Two months thereafter, before he had completed his twenty-sixth year, he was appointed by Augustus, duke and archbishop of Magdeburg, assessor to the magistrates of Halle, an office which he retained not quite a year and a half. In the month of February 1646 he received as a matter of course the title of Doctor; and in the December following he was called to fill the chair of law in the University of Jena, left vacant by the death of Fibigius. He was admitted an assessor to the magistracy in January 1647; and in June 1648 an assessor to the high court of the circle of Saxony. He continued in the discharge of his judicial and academical duties till 1667. His opinions were in great request both in controversies relating to public

and those relating to private rights. The town of Brunswick being at that time involved in a dispute regarding its privileges with the duke, requested Struve to undertake the management of their legal business; and he, having obtained the consent of the patrons of the university, was appointed, on the 26th of March 1661, counsel in ordinary to the good town of Brunswick for three years, with an annual salary of 300 dollars, becoming bound to advise its magistrates in writing whenever called upon, and, if necessary, to visit the town four times in the year. The duke and town having settled their dispute by a compromise, this connection was dissolved in December 1663. At first Struve lectured upon the 'Institutes,' a duty devolving upon the youngest professor. As his seniors died off, he was called in succession to lecture upon the 'Pandects,' the 'Code,' and ultimately upon feudal law. Entertaining from his own experience a high opinion of the benefit to be derived from disputations, he encouraged his pupils to engage in them frequently among themselves under his guidance; and in course of time the idea suggested itself to him of making the young men maintain in succession disputations on all the leading doctrines of the branch of law he might be lecturing upon at the time. From a series of theses impugned and defended in this manner arose his 'Syntagma Juris Feudalis,' first published in 1653, and his 'Syntagma Juris Civilis,' first published in 1658.

He received unexpectedly, in the year 1667, the appointment of privy councillor to the dukes of Weimar, and transferred himself with his family to the seat of government in the month of December. His discharge of the duties of this office gave so much satisfaction, that when the line of Saxe-Altenburg became extinct in 1672, and doubts were entertained whether the line of Gotha or Weimar had the nearest claim to the succession, he was selected as the ablest person to advocate the cause of his master. In the conduct of this delicate business, he had the merit or good fortune to give entire satisfaction, both to the party for whose interest he acted, and that to which he was opposed. When the territories of the house of Weimar were divided between the brothers, he remained in the service of the Duke of Weimar. Notwithstanding the load of public business which devolved upon him during this period of his life, he contrived to find some time for the literature of his profession. He published in 1669 answers to objections which had been urged against some of the doctrines maintained in his 'Syntagma Juris Civilis,' a work which had however been completed before he left Jena. He compiled his remarks on the 'Immo' of Gothofredus, which his son Burkhard Gotthelf published at Frankfurt after his death. In 1668 he published 'Jus Sacrum Justinianum.'

The Ordinarius of the Judicial College of Jena died in 1674; and notwithstanding the active competition of the most distinguished German jurists for so honourable and lucrative an employment, Struve was selected by the patrons of the university as the best qualified for the office, along with which the professorship of canon law was then uniformly held. On the 28th of July, he made with his family a sort of triumphal entry into Jena; for the citizens and the members of the university met him in procession at some distance from the town. The important offices to which he had been appointed he continued to fill till his death, although the active discharge of their duties was interrupted for a time by the affairs of the regency of Jena.

On the death of Duke Bernard, to whose share the duchy of Jena had fallen at the partition of the Weimar territories, his son Johann Wilhelm, a minor, succeeded. His uncle Johann Ernest of Weimar was guardian, but it was deemed expedient that a permanent council of regency should sit at Jena. Struve was appointed president of this body about the end of August 1680. In virtue of this appointment, the whole burden and responsibility of the general executive government of the territory, the discharge of the consistorial business, and the management of the finances, fell upon his shoulders. He was obliged to relinquish to another the discharge of his professional duties, reserving however his appellate jurisdiction as ordinarius. So many cares naturally distracted his attention from his own private concerns, which were considerably dilapidated in consequence of his elevation. His pre-eminent position too exposed him to much malevolence; but he laboured indefatigably, and gave satisfaction both to the Duke of Weimar, and to the Duke of Eisenach, who at his death succeeded him in the regency. The young Duke of Jena died towards the close of 1690, not long after a partition was agreed to by the lines of Weimar and Eisenach, and the council of regency being dissolved in consequence, Struve was restored to his academical functions.

His life at Jena, both before and after this interruption, though a busy was a uniform one. As privy councillor he attended every consultation to which he was summoned by the dukes his masters. As Ordinarius he presided both in the ordinary and appellate tribunals of Jena. He prepared opinions in reply to the cases addressed by numerous applicants either to the Judicial College of Jena or to himself individually. In addition to these occupations, he faithfully expounded to his pupils the doctrines of the canonical law as then received in the courts of the Protestant states of Germany. After the dissolution of the regency, he did not again enter the academical chair, but continued nevertheless, with unabated diligence, to urge on the literary undertakings to which his professional duties had prompted him, and which, even whilst acting as vice-regent, he had not neglected. He prepared a new edition, with notes explanatory of the points in

which the Lutheran deviated from the Roman Catholic system of canon law, of Valerius Andrea's treatise on that branch of jurisprudence, which he used as a text book; but it was not published till 1680, when other cares prevented him from continuing his lectures. The chief ambition of his later life was to bring the canonical law of Protestant Germany into a better and more systematic form. With that view he projected various works; but on account of their extent, and the interruption he experienced, only fragments of them were completed. A projected 'Jurisprudentia Canonica,' after the model of his own 'Jurisprudentia Romano-Germanica,' remained a mere project. Of a complete 'Commentary on the Five Books of the Decretals,' only that which relates to the fifth book, 'De Delictis,' was published, at Jena in 1691; it appears that his son Georg Gottlieb acted as editor. It was his intention to treat the doctrine of marriage in a much fuller manner in his annotations on the fourth book: valuable materials were collected for the purpose; and he had resolved to make his son Burkhard Gotthelf digest them under his own superintendence and direction, but the young man preferred accepting the invitation of his brother at Darmstadt, as is noticed in the succeeding article. The materials for a projected treatise 'De Causis et Beneficiis Ecclesiasticis' were in like manner left unarranged at his death. The materials and plans of the great structure he contemplated alone survived him. He found time, amid all his labours, to compile a system of the common law of the Empire in the German language, a work which was undertaken at the request of Duke Ernest of Gotha, and published in 1689. It was the first German treatise of the kind, and gave a severe shock to the prejudices of most of his contemporaries. The autumn before his death he undertook to prepare an edition of the 'Criminalia' of Carpovius for a Leipzig bookseller, but death prevented him.

His son remarks that his energy and love of life seemed materially to abate after the shock he received by the death of the young duke. He continued however without intermission the arduous duties of his office, and was seized in court with the illness which carried him off in less than twenty-four hours. It was a maxim which he was fond of repeating, that "the Ordinarius of Jena ought to die standing."

Georg Adam Struve was twice married. His first wife was the daughter of Christopher Philip Richter, whom he succeeded as Ordinarius. They were married on the 6th of November 1648, and lived together fourteen years, during which time she brought him eight children, all of whom died before him except two, Friedrich August, who inherited the property of his maternal grandfather, and died two years after his father, and Johann Wilhelm, a practising lawyer of considerable eminence, long resident in Darmstadt, of whom mention is made in the following article. Conscious that his professional duties incapacitated him from paying the necessary attention to the education of his children, Struve, soon after the death of his first wife, began to look about for a second. His choice fell upon Susanna Berlich, daughter of a distinguished lawyer resident in Dresden. They were married on the last day of October 1663; and she survived him six years. She brought him seventeen children, of whom four sons and one daughter survived him. Three of the sons, Georg Gottlieb, Burkhard Gotthelf, and Friedrich Gottlieb, embraced the legal profession, but only the second attained to any eminence. Ernst Gotthold was a practising physician in Brunswick. Two of Struve's daughters married lawyers; so that he descended from one line of jurists, and was progenitor of another.

His published works are—'Syntagma Juris Feudalis,' Jena, 1653; *ibid.*, 1659; Frankfurt, 1703-4. To the later editions are appended 'Observationes feudales juxta syntagmatis juris feudalis ordinem digestæ,' 'Decas Consiliorum et Responsorum Feudalium,' and 'Centuria Decisionum, quarum res feudales, quarum allodialis.' 'Syntagma Jurisprudentiæ Civilis,' Jena, 1665 (frequently reprinted); 'Jurisprudentia Romano-Germanica Forensis,' Jena, 1670; 'Jus Sacrum Justinianum, sive Progymnasmatum ad Titulos priores Libri i. Codicis,' Jena, 4to, 1668; 'Evolutiones Controversiarum in Syntagmata Juris Civilis comprehensarum,' Jena, 1669; 'Triga Dissertationum: de Vindicta privata et retorsione juris iniqui; de ædificiis privatis; et de annonæ,' Jena, 1670; 'Dissertationes Criminales XVI. in academia Salana publicæ disquisitioni præpositæ,' Jena, 1671; 'Decisiones Sabbathina, Canonice et Practicæ; Selectiones de Conventionibus et Contractis,' Jena, 4to, 1677; 'Notæ et Observationes Theoreticæ, Canonice et Practicæ ad Antonii Matthæi Tractatum de Successionibus,' Jena, 4to, 1678; 'Valerii Andreae Desselii Eretomata Juris Canonici, cum animadversionibus,' Jena, 8vo, 1680 and 1691; 'Dissertatio Juridica de Invocatione Nominis Divini,' Jena, 4to, 1682; 'Jurisprudentz, oder Verfassung der Landüblichen Rechte,' Mersburg, 8vo, 1689; 'Commentarius ad Librum V. Decretalium de Delictis, Cura Georgii Gottliebii Struvii,' Jena, 4to, 1691.

The writings of Georg Adam Struve indicate a mind which, as far as it could see, saw distinctly and correctly. He belonged, notwithstanding his studies in philosophy and history, rather to the race of jurists which preceded him, than to the more accomplished race which succeeded him. His historical erudition is very deficient in critical discrimination; and he labours painfully to torture the doctrines of law into the formulæ of scholastic logic. It was as a practical lawyer that he distinguished himself; a character for which perhaps even the limited range of his mental vision peculiarly qualified

him; but towards the formation of which his robust yet tranquil constitution both of mind and body, his clearness of apprehension, self-possession, and moral courage, but above all his high and pure sense of moral rectitude, were invaluable ingredients. His influence in the development of German jurisprudence was exercised as presiding judge in an important appellate tribunal; as a consulting lawyer whose opinions were highly valued throughout all Germany; and as a judicious former of the minds of youth. He worked more through the jurists he trained, than by his own works. Georg Adam Struve was one of those robust, quiet, powerful natures which are of more importance in society than nine-tenths of the more glaring personages who engross the admiration of the multitude.

(*Pii Manes Struviani, sive de Vita et Scriptis Georgii Adami Struvii, Illustris quondam Jureconsulti quibus justa persolvit moestissimus filius Burkard Gotthelf Struve, Jena, apud Johannem Bielkium, 1705.*)

STRUVE, BURKHARD GOTTHELF, third son by the second marriage of Georg Adam Struve, was born at Weimar on the 26th of May 1671, and was carried to Jena, when his father transferred his residence to that university, on receiving the appointment of Ordinarius of the Judicial College there, in 1674. Great pains were taken with his education by his parents; and in after life Struve often acknowledged his obligations to Johann Friedrich Durre, who had the charge of his elementary education. An incident mentioned in the Memoir of his father, which he published in 1705, almost leaves the impression that the old gentleman treated him in boyhood like a favourite plaything. The last time Georg Adam Struve presided at the creation of a number of doctors of law, in 1680, he commanded Burkhard, then a boy of nine years only, to make his remarks, and put questions with the rest of the assembly. Not long after this event the boy was sent to the gymnasium at Zeitz, and confided to the care of Christopher Cellarius, rector of the institution. Young Burkhard made himself so useful to his preceptor, both in his private study and in the public library, that he gained his confidence sufficiently to be employed as an assistant upon the corrected and enlarged edition of Faber's 'Lexicon,' which he had undertaken to publish.

Burkhard Gotthelf Struve, having attained his seventeenth year, returned to Jena for the purpose of commencing his university studies, in 1788. His father, who was then engrossed with the labours which fell to his share as president of the regency of the duchy of Jena, had relinquished for a time the active discharge of the professorial office. At the urgent request of his son however he consented to give private instruction, on Wednesdays and Saturdays, to him and eleven of his young associates, in the system of Romano-Germanic law recognised by the tribunals of Germany, and the plan of tuition pursued was to examine the pupils upon the elementary treatise on this branch of law compiled by their instructor, and to exercise them in arguing upon controverted doctrines. Burkhard attended at the same time the prelections of Johann Hartung and Peter Müller in Roman law. He seems however to have been a more assiduous frequenter of the literary classes of Jacob Müller, Andreas Schmidt, and especially of Georg Schubart, then rector of the university, under whose presidency he held, in 1689, a public disputation upon some theses appended to his dissertation 'De Ludis Equestribus.' Not long after he disputed in the juridical faculty on the legal doctrines 'De Auro Fluviali;' and on both occasions he is said to have impressed his auditory with admiration of his precocious talents. While thus engaged, he did not neglect pursuits more consonant to the tastes of his age, country, and academical associates. He learned dancing, and was for a time a frequent attendant in the fencing-school. Tiring however of these pursuits, he devoted himself with ardour, in his leisure hours, to the study of the French language. In the Memoir of his father, already alluded to, he mentions that about this time he was employed by his father in a collation of his Latin treatise 'Jurisprudentia Romano-Germanica Forensis,' with his work on the same subject in German, to show that the one was not a mere translation of the other, but a different work. The statement which Burkhard drew up on this occasion was meant to be inserted in the pleadings of the publisher of the German work, against whom the publisher of the other had brought an action; but it was published, at a later period, by the bookseller, as a preface to a new edition, without the compiler's knowledge or consent. An exercise of this kind, and the repetitions under his father, were well calculated to impress the leading doctrines of the law upon his memory.

Towards the close of the same year in which he maintained his first public disputations, Burkhard Gotthelf Struve repaired to the University of Helmstädt, for the purpose of studying history under Heinrich Meibom, and civil law under Georg Engelbrecht. After a year's residence at Helmstädt he went to Frankfurt-on-the-Oder, in order to profit by the instructions of Samuel Stryk and Peter Schulz. During his abode at Frankfurt he engaged in a controversy which led him to appear for the first time in print. An obscure jurist of the name of Schnegras had published, in 1689, a treatise 'De Concursu Creditorum,' in which he attacked some doctrines laid down by the elder Struve, in his 'Institutes of Forensic Law,' regarding the classification of creditors and the right of property in dowry. Burkhard asserted the correctness of his father's views in a pamphlet, which he called 'Struvius non Errans,' and which, to judge by the warmth with which he speaks of the controversy at a much riper age, must have been rather bitter.

Schnegras replied in the same strain, but his young antagonist was induced by the advice of older and cooler friends to allow the matter to rest.

In 1691 Stryk having accepted of a chair in the University of Wittenberg, Struve returned to Jena, and was soon after sent to Halle by his father, with a view to his attending the sittings of the supreme court there, in order that he might make himself master of the forms of process. The dry details of legal practice were repulsive to a mind early accustomed to the self-indulgent habits of the abstract student, and to the applause attendant upon skill in mere literary controversy. Instead of frequenting the court, he directed himself almost exclusively to the theory and antiquities of public and feudal law. In such a frame of mind he lent a willing ear to the inducements held out by an elder brother to make a tour to Belgium, and afterwards join him at Darmstadt, where he was established as a practising lawyer. He in consequence visited in succession Gotha, the Hague, Amsterdam, Rotterdam, and Leyden, and was everywhere, on account of his father's reputation, kindly received. He afterwards confessed that his thoughts during this journey were rather distracted by the gaiety and splendour of the towns he visited, than earnestly bent upon extending his knowledge; nor was this very unpardonable in one who had only completed his twentieth year. He did however derive some benefit from the conversation of distinguished scholars in Utrecht and Leyden.

At the request of his brother he repaired to Frankfurt to take charge of some business for the transaction of which he required a confidential agent in that town. It was the time of the fair, and the novelty and bustle of the scene left a lasting impression upon Struve's mind. The affairs which required his presence there being arranged, he returned to the Hague, and the first distraction of travelling having worn off, settled to study. The favourite pursuits of the Dutch literati extended his field of inquiry. On the one hand, the Hague being then a centre of an active diplomacy, his investigations regarding public law were enabled to assume a more practical and real character. The literary pursuits too of his new associates had more of the tone of society than those which prevailed in the German universities. On the other hand, the museums of Holland, and especially the collections of coins and other antiquities, attracted him to inquiries for which his investigations into the antiquities of feudal law had in some measure prepared him. During his residence at the Hague he was indefatigable in his visits to all the museums and libraries, and in his study of the periodical literature, which opened in a manner a new world to him. He made for himself a considerable collection of coins and antiquities. While thus engaged, and projecting a tour through Spain and Great Britain, he was seized with a violent illness, which interrupted his pursuits.

On his recovery he rejoined his brother, and was employed by him at various times to conduct actions for him in the courts of Darmstadt, Stuttgart, and Cassel. He was induced about this time by the fair promises of a Livonian nobleman to undertake a journey in his company to Sweden for the purpose of obtaining a more intimate acquaintance with the antiquities of Scandinavia. Struve with this view proceeded to Hamburg, where he was to be joined by his companion. The count not making his appearance however, he returned to his brother, and in the same year (1692) visited Wetzlar, for the purpose of obtaining, by attending the sittings of the imperial court, a more accurate knowledge of the practice of public law. While thus engaged, he was attacked by a more severe illness than the preceding; and some of the symptoms induced a suspicion that it was occasioned by poison. No sooner was he convalescent than he received intelligence of the death of his father, and was obliged to leave Wetzlar in order to look after his share in the inheritance. During the period which elapsed between his quitting the University and his return to Jena, his mind, though stimulated to greater activity and familiarised with objects of greater reality and importance than had previously engaged his attention, had been dissipated and distracted with their multiplicity. To the end of his life he occasionally expressed regret that he had not, in compliance with the request of his father, remained at Jena, to digest under his direction his collections for a commentary on the law of marriage, an occupation which must have contributed to give him more precision and more command over his thoughts.

On his return to Jena, Struve found one of his brothers eagerly engaged in pursuit of the philosopher's stone. He was of a facile disposition, as is apparent from an anecdote he relates in the Life of his father, of his incurring a rebuke by undertaking to solicit privately for a person whose conduct was under judicial investigation. This easiness of temper at first led him to join in his brother's experiments, but the frenzy seized him in turn, and he was soon as zealous an adept as the other. As might have been anticipated, the search after the secret of making wealth ended in beggaring both. The brother was only saved from a jail by Struve selling the collection of curiosities he had made in Holland, and even a part of his wardrobe. To the intoxication of his golden dreams succeeded a state of miserable depression which lasted for two years. He secluded himself from society, and absorbed himself in the study of the Scriptures and the theological writings of Tauler and Arndt.

When he recovered his elasticity of mind, he found himself unable to encounter the expense of following out the academical career to which his father had destined him. Some time elapsed before any

prospect of employment opened to him. In 1695 he published at Frankfurt-on-the-Main some notes on the legal doubts of Gothofredus (known among jurists as the *Immo* of Gothofredus), from a manuscript of his father. In 1696 he published a letter to his old teacher Cellarius, 'De Bibliothecarum harumque Præfectis.' At last, in 1697, he was appointed by the patrons of the University of Jena curator of the library. Upon receiving this appointment he opened private classes, giving instruction, according as his pupils desired, in physics, the elements of the Greek language, Roman antiquities, or history. The number of young men who attended him excited the envy of the established teachers, and drew down upon him the active enmity of Schubart. It was found necessary to provide himself with a legitimation as teacher; and for this end he, in the year 1702, took the degree of Doctor of Law and Philosophy at Halle, the usual fees being remitted at the solicitation of Stryk and Cellarius.

As soon as he obtained his degree he took measures for having himself enrolled as Doctor Legens at Jena, and his subsequent career was one of uninterrupted success. On the death of Schubart he was appointed to the chair of history, and he commenced the discharge of its duties in 1704 by publishing a programme 'De Vitiis Historicorum,' and delivering a public oration 'De Meritis Germanorum in Historiam.' His fame as a public teacher attracted many of the young nobility from all parts of Germany, and among others Prince Ernest Augustus, afterwards duke of Weimar. Having received in 1712 an invitation to the University of Kiel, he was induced to decline it by the patrons of Jena conferring upon him the office of historiographer to the university, the rank of counsellor, and the appointment of extraordinary professor of law. He was promised the succession to the ordinary professorship of feudal law, which he actually obtained a few years later. In 1717 he was appointed a privy councillor by the reigning prince of Baireuth, and in 1730 he received the same compliment from the Saxon court. He repeatedly filled the office of dean in the Philosophical faculty, and was thrice chosen rector of the university. He died May 24, 1738, having nearly completed his sixty-seventh year.

Struve was thrice married. He was united to his first wife, Anna Elizabetha Bertram, daughter of an assessor in the court attached to the salt-works of Halle, in 1702, who died in 1706, leaving him two daughters. He married in 1707 his second wife, Regina Elizabetha Ständler, daughter of the town-clerk of Naumburg on the Sala; the year of her death is uncertain; she left no surviving children. In 1724 he married Sophia Maria, widow of Ernest Friedrich Kittoner, a clergyman in Quedlinburg, who brought him no children.

The published works of Burkhard Gotthelf Struve are very numerous. A complete list of them is given in the 'Acta Eruditorum' of Leipzig, published in 1740. The following are the most important, either on account of their subjects and inherent interest, or of the indications they give of the progress and direction of the author's studies:—'*Struvius non Errans*,' 4to, Franc. ad Viad., 1691; '*Bibliotheca Numismatum Antiquorum*,' 12mo, Jenæ, 1693; '*Pia Mortis Desideria in Obitu Susannæ Berlichiae, matris pietissimæ*,' 8vo, Jenæ, 1699; '*Didaci Saavedra Abriss eines Christlichen Politischen Prinzen*,' 12mo, Jenæ, 1700; '*Antiquitatem Romanarum Syntagma, sive de Ritibus sacris Systema absolutius, adjecta Bibliotheca, Figuris aeneis, et Indicibus necessariis*,' Jenæ, 1700; et auctior, 4to, 1729; '*Acta Literaria ex MStis edita et collecta*' (17 fasciculi collated, with the date 1713 on the title-page); '*Bibliotheca Juris Selecta*,' Jenæ, 1703 (frequently republished, ultimately with additions by Buder); '*Introductio ad Notitiam Rei Literariæ, et Usum Bibliothecarum*,' Jenæ, 1704 (contains the 'Dissertatio de Doctis Impostoribus,' published separately by the author in the preceding year); '*Bibliotheca Philosophica in suas classes distributa*,' 8vo, Jenæ, 1704 (frequently republished latterly with additions by Kahl); '*Selecta Bibliotheca Historica*,' 8vo, Jenæ, 1705 (republished with additions by Buder); '*Pii Manes Struviani, seu de Vitis et Scriptis Georgii Adami Struvii*,' 8vo, Jenæ, 1705; '*Syntagma Juris Publici Imperii Romano-Germanici*,' 4to, Jenæ, 1710 (republished in 1711; and again much enlarged, with the title '*Corpus Juris Publici I. R. G.*,' in 1738); '*Syntagma Historiæ Germanicæ, à primâ gentis origine ad annum usque 1716*,' 4to, Jenæ, 1716 (subsequently published in an enlarged form, with the title '*Corpus Historiæ Germanicæ, à primâ gentis origine ad annum usque 1730, ex genuinis historiarum documentis, cœvorum scriptorum monumentis, diplomatibus, et ex actis publicis, illustratum cum variis observationibus et figuris aeneis, adjecto indice locupletissimo, et opusculis ad historiam Germanicam facientibus; præmissa est Chrest. Gottl. Buderii Bibliotheca Scriptorum Rerum Germanicarum, easdem universum illustrantium*,' fol., Jenæ, 1730 (a German translation of this work has been published); '*Historia Juris Romano-Justinianei, Græci, Germanici, Canonici, Feudalis, Criminalis, et Publici*,' 4to, Jenæ, 1718; '*Einleitung zur Deutschen Reichs Historie*,' 8vo, Jenæ, 1724; '*Corpus Juris Publici Academicum*,' 8vo, Jenæ, 1726 (thrice republished); '*Compendium Juris Feudalis*,' 8vo, Jenæ, 1727 and 1737; '*Kurtzer Entwurf zur Einleitung zur Wissenschaft der Staaten von Deutschland*,' 8vo, Jenæ, 1733 (the title of this work contains the term '*scientia statistica*,' the invention of which has been attributed to Achenwall); '*Corpus Juris Gentium, sive Jurisprudentia Heroica ex Juris Naturæ et Gentium Argumentis petita, et innumeris exemplis ex actis publicis editis et ineditis, historiarumque monumentis, omnis ævi illustratum*' (this work occupied thirty years of its author's life,

was left complete, but unpublished, at his death, and appeared at Jena in 1743, edited by J. Aug. Helfeld).

Much of the reputation of Burkhard Gotthelf Struve during his lifetime seems to have proceeded from his personal amiability, and from his usefulness as a general index. His style is heavy, and his thoughts scarcely ever original or striking. His services to the literature of history and jurisprudence are great, but they are mainly the services of an able librarian and index-maker. To him perhaps rather than to Achenwall belongs the merit of having given a more systematic form to the statistical branch of education as taught in the universities of Germany—an important department of information, but too apt to spread out into trivial diffuseness.

(*Nova Acta Eruditorum*, anno 1740 publicata, Lipsiæ, 1740; *4d Nova Acta Eruditorum quæ Lipsiæ publicantur Supplementa*, Tomus iv., Lipsiæ, 1742; *Pii Manes Struviani, sive de Vita et Scriptis G. A. Struvii*, Jenæ, 1705; *Bibliothèque Germanique*, tomes viii. et xliii., Amsterdam, 1724 and 1738; Martini Lipenii, *Bibliotheca Reali Juridica*, Lipsiæ, 1757.)

STRYPE, REV. JOHN, is said to have been of German descent, but he was born in London, 12th November 1643. After having been six years at St Paul's school, he was admitted, in 1661, of Jesus College, Cambridge; but he soon after removed to Catherine Hall, where he took his Bachelor's degree in 1665, and his Master's in 1669. In the latter year he was presented to the perpetual curacy of Theydon-Boys in Essex; which however he resigned a few months after, upon being appointed minister of Low Leyton in the same county. Here he continued to reside till within a few years of his death, when he came to live with Mr. Harris, an apothecary at Hackney, who had married his granddaughter. He had been lecturer of Hackney till he resigned that appointment about the year 1724; and he also held along with his Essex living the sinecure of Tarring in Sussex, to which he was presented by Archbishop Tenison. He died 13th December 1737, in the house of Mr. Harris, at the great age of ninety-four.

The history of Strype's long life, in so far at least as it is of any public interest, consists merely of the list of his successive publications. Although his works amount to thirteen large folio volumes, besides octavos and pamphlets, it was not till he had reached his forty-sixth year that he gave any employment to the press, and then he began with a single sermon; nor did he print anything more till five years after. Then, in 1694, appeared, in a folio volume, the first fruit of his researches in ecclesiastical antiquities, his 'Memorials of the most renowned Father in God Thomas Cranmer, sometime Lord Archbishop of Canterbury.' This was followed, in 1698, by an octavo volume entitled 'The Life of the Learned Sir Thomas Smith, principal Secretary of State to Edward VI. and Elizabeth; wherein are discovered many singular matters relating to the State of Learning, the Reformation of Religion, and the Transactions of the Kingdom during his time;' that in 1701 by another octavo volume entitled 'Historical Collections relating to the Life and Acts of Bishop Aylmer' (or Aelmer, who filled the see of London from 1577 to 1594); and that by his 'Life of Sir John Cheke,' 8vo, London, 1705. He published another single sermon in 1708; and the next year he brought out the first volume in folio of his 'Annals of the Reformation and Establishment of Religion,' comprehending the first twelve years of the reign of Elizabeth. Before proceeding further with this work, he produced three more biographical folios as companions to his Life of Cranmer: his 'History of the Life and Acts of Archbishop Grindal,' in 1710; his 'Life and Acts of Archbishop Parker,' in 1711; and his 'Life and Acts of Archbishop Whitgift,' in 1718. Then, digressing to another field of antiquarian investigation, he came forth, in 1720, with his new edition of Stow's 'Survey of London,' in two bulky folios, of which we may safely say that nearly three-fourths consist of his own additions. [Srow.] The next year, 1721, was published what may be regarded as his most important work, his 'Ecclesiastical Memorials, relating chiefly to Religion and the Reformation of it, and the Emergencies of the Church of England, under King Henry VIII., King Edward VI., and Queen Mary I.' in three volumes, folio. Of this work a new edition, though limited, we believe, to a very small number of copies, was brought out at London in 1816, in seven volumes, 8vo. But Strype's labours were not yet closed: another single sermon, in 1724, ushered in a second edition of the first volume of his 'Annals' in 1725; a second folio volume of that work the same year, bringing down the history of the Church of England to A.D. 1580; a third in 1728, embracing the period from 1581 to 1588; and a fourth, in 1731, consisting however only of a collection of papers, which the author's advanced years and infirmities prevented him from reducing into a narrative, in illustration of the remainder of the reign of Elizabeth.

Strype probably spent the first fifty years of his life in collecting the materials of the voluminous works which he gave to the world in the succeeding forty. His books all consist for the greater part of masses of original papers, even so much of them as has the form of being his own composition scarcely ever evincing any real digestion of the facts which he sets before his readers. He claims the merit of great fidelity and accuracy, and probably he may be trusted in general for the correctness of his transcriptions, all of which he professes to have made with his own hand; but, being really what may be called a dull, almost a stupid man, though possessed of a consider-

able amount of knowledge, he is both apt to miss the essence of events and transactions in his prolix detail of the circumstances, and even occasionally, with all his tediousness, to leave his narrative imperfect by the omission of some particulars which would not have escaped a sharper intellect. We believe every reader or consulter of Strype will have found himself annoyed occasionally by this absence, amid a multitude of superfluities, of the one thing needful. His books however are all curious and valuable for the quantity of information they contain never before published, and some of which is not to be elsewhere found; and they must on that account be considered as forming, along with Burnet's 'History,' and even in some respects in a higher degree than that, the foundations of the history of the reformed Anglican Church, but like that work they require some critical discernment and judgment to use to advantage.

**STUART FAMILY.** The origin of this family is briefly stated under ROBERT II. of Scotland. In his descendants the crown of Scotland continued down to James VI. of Scotland, who became James I. of England. From him the sovereigns of England remained in the Stuarts to the flight of James II. The Acts of Settlement, passed in the reign of William III., secured the succession of the House of Hanover to the throne of England, and the descendants of James II. were subsequently excluded from the throne of Scotland also. [GEORGE I.] The chief historical interest that attaches to the House of Stuart after the abdication of James II., is limited to the two invasions of Great Britain by his son and grandson, who are often respectively called the elder and younger Pretender.

**STUART, JAMES FRANCIS EDWARD.** On the 16th of September 1701, James II. died; and his son James, Prince of Wales, was immediately acknowledged by Louis XIV. as king of Great Britain, contrary to his promise to King William. The King of France was induced, as Tindal affirms, to take this step, chiefly by the persuasion of Madame de Maintenon, whom Mary of Este had engaged in her favour; and the influence of the Dauphin was added to that of Madame de Maintenon. The King of Spain, the Pope, and the Duke of Savoy also acknowledged the Pretender, as the Prince of Wales was afterwards called; as king of England.

In 1708 extraordinary preparations were made by Louis XIV. at Dunkirk, but the object of them was kept so secret, that no one in England suspected the intentions of the French. Louis, indignant at the recent attempt of the allied powers upon Toulon, and believing that the discontent of the Scotch with the Union rendered them ready for revolt, was preparing to invade England. The Pretender's claims were the ostensible reason for this attempt: and Louis, in a visit to him at St. Germain's, presented him with a sword mounted with diamonds, begging him never to forget that it was a French sword. The prince repaired to Dunkirk, intending to pass over to the Frith of Forth; but he was taken ill of the measles, and the English fleet had time to get ready. "In the meantime," says Cunningham, "the Pretender wrote to the French king for his directions what to do in this unhappy case. The French king, who was no more concerned about the Pretender's life and affairs than to serve his own turn, answered, that he must not desist from the undertaking nor delay his embarkation; and ordered some men thither to see him on ship-board, though he was hardly recovered of his distemper." So eager was Louis for the enterprise, that though the Pretender requested only a few days for the recovery of his health, Louis was peremptory, and the fleet put to sea. But this expedition was wholly unsuccessful, partly, as some thought, from the aversion of the Pretender to land in Scotland, partly from storms, which dispersed the French ships, partly from the vigilance of the English admiral, Sir George Byng, but chiefly from the dissensions of Fourbin and Gare, who had the command of the French fleet. It returned, with the Pretender on board, to Dunkirk, and the disappointed prince obtained permission of Louis to engage in the campaign in Flanders. In commemoration of this expedition a medal was struck in England; and the price of 100,000 crowns was set upon the Pretender's head by the English parliament. On the 11th of July 1708, the Pretender is stated by French writers to have been in the battle of Oudenarde, which was gained by Marlborough; but according to the accounts of Dutch historians, he contented himself with observing the engagement from the steeple of a neighbouring village church, and consulted his safety by a timely retreat.

In 1713 the Pretender published a protest which he forwarded to the ministers of the different states at Utrecht, declaring that he could not "by his silence seem to consent to what was transacting to the prejudice of him and of the lawful heirs of his kingdom;" and that, finding the confederate powers had no regard to his rights, he solemnly protested against all that might be agreed on to his prejudice. No notice was publicly taken of this protest; but the Pretender's friends in England were indefatigable in strengthening his favour with the queen. The jealousy which Anne cherished of the House of Hanover, and her resentment when it was proposed that the Electress Sophia should reside in England, strengthened for a time the influence of Lord Bolingbroke. But the Pretender's stronghold was in the affections of the queen. It has even been surmised that she was cognisant of the expedition against Scotland in 1708. Upon the death of Queen Anne, James, who had been residing at Bar-le-Duc, posted to Versailles, where he met with an ungenerous reception from Louis XIV., who had found it most consonant with his interests to acknowledge King

George I., and who intimated to the Pretender, through the Marquis de Torcy, that he must quit France. In August 1714, James sent to the principal nobility of Great Britain a declaration in which he asserted his claim to the throne, and stated his surprise that upon the death of the queen a foreign prince should have been proclaimed king. This manifesto was sent by many of those who received it to the secretary of state; and the ambassador of the Duke of Lorraine, in whose territory James was then living, was forbidden the court. A proclamation was made, in which the price of 100,000*l.* was set on the head of the Pretender, who, as his partisans expressed it, had "no place left for him to flee unto." Circumstances however had been operating in favour of the Pretender. Many persons had an hereditary attachment to the House of Stuart; some were influenced by hopes and promises of honours; and more, by the outcry that the church was in danger under the Whig government, which was the "main artifice" of the plot, as George I., in his speech to parliament, after the rebellion had commenced, expressed himself. In 1715 the court of St. James's received information that an open rebellion had broken out in Scotland, headed by the Earl of Mar, who had been secretary of state for Scotland when Anne died, and had been one of the first to swear allegiance to her successor. The Marquises of Huntley and Tullibardine, the Earls of Southesk and Marischal, with many other noblemen and landed proprietors, joined in the rebellion, and the Pretender's standard was set up by the Earl of Mar at Brae-Mar, on the 6th of September 1715.

Active measures were taken by the English government. Several suspected persons were imprisoned in the castle of Edinburgh; and General Whetham was ordered to form a camp near Stirling. Several vessels at the same time sailed from Havre-de-Grace for Scotland, and notwithstanding the efforts of the British navy, one of them reached Arbroath, and supplied the Highlanders with arms and ammunition, which were carried to Brae-Mar. Assurances were also given that the Pretender would shortly arrive. But the news that Louis XIV., who had secretly encouraged the rebellion, was dead, struck a panic among the Jacobites, and for a time suspended their operations. They decided however to proceed in their course, and to urge the Pretender by letter to appear amongst them. The Earl of Mar assumed the title of lieutenant-general of the Pretender's forces, and a manifesto, setting forth the national grievances, was published. A scheme was also formed to surprise the castle of Edinburgh, but was defeated.

About the 9th of September the Duke of Argyll, commander-in-chief of the English forces in Scotland, marched northward; whilst several Scottish peers, the Earl of Sutherland, the Duke of Roxburgh, and others, showed their loyalty to King George by raising their clans. A conspiracy was about the same time discovered in England. Colonel Paul, who had a company in the first regiment of foot-guards, was detected in enlisting men for the Pretender's service. In Somersetshire an insurrection was projected, but checked by the government; treasonable designs however were so widely spread in the western counties of England, that at Bath the Jacobites talked openly of the Scotch rebellion as merely a diversion to draw the troops off to the north. General Wade was at last ordered to march to Bath, where he discovered and seized many chests of fire-arms and some pieces of cannon. The University of Oxford was also tainted with Jacobitism, and 'King James's' health is reported to have been drunk there every day. General Pepper being despatched to Oxford, entered the city early one morning and apprehended sixteen or eighteen persons, whom he conveyed to Abingdon. Cornwall was also disaffected, and a correspondence was now carried on among the conspirators throughout Great Britain. As their communications could not with safety be entrusted to the post, Jacobite gentlemen rode to different parts of the kingdom under the pretence of travelling for pleasure, but in fact to convey letters and intelligence.

The next step which the insurgents took in the north was to proclaim James king at Newcastle-upon-Tyne, and to make an attempt on the town of Newcastle, but finding the gates closed, they retired to Hexham, where they were joined by some Scottish horse. Their numbers were now increased by recruits, who joined them at different towns, and the influence of the Earl of Derwentwater, a Jacobite nobleman, gave them additional strength. But the town of Newcastle stood firm, and the rebels, hearing that they were to be attacked at Hexham, withdrew from that place, having first proclaimed the Pretender. On the 12th of October the standard of James VIII. of Scotland was set up at Moffat in Annandale, by the Earl of Kenmure; and on the 19th the Scots, under Lord Kenmure, being joined by the English rebels, marched to Kelso.

In the meantime the Earl of Mar proceeded to Dunkeld, where the Marquis of Tullibardine, and the Earl of Breadalbane, joined his troops with 2000 men. They possessed themselves of Perth, and upon this important town being gained, their force was much augmented. The rebel army now assumed a formidable appearance; being the clansmen of rich nobles and chiefs, the soldiers were well armed, and amounted to 12,000, cavalry and infantry. The rebels possessed themselves of Burntisland, and afterwards of all towns on the coast between their head-quarters and the mouth of the Frith of Forth. The Earl of Mar next attempted to cross the Frith, and to make a descent upon the Lothians, in order to gain over the south of Scotland. Fifteen hundred men succeeded in landing at North Berwick, Aberlady, and

other places. Their next attempt was to march to Edinburgh, where they expected to be joined by the people; but the Duke of Argyle sending a detachment to prevent their entrance into the capital, the rebels changed their course, and marched into Leith. They then retreated to Seaton House, an old castle about seven miles from Edinburgh, whence the Earl of Rothes, with a company of dragoons and volunteers, finding it impossible to dislodge them without artillery, was obliged to retire.

On the 27th of October the Highlanders at Seaton House marched southwards to Kelso, where they were joined by the English and Scottish horse from Nithsdale and Northumberland. Mr. James Murray had arrived in Edinburgh, authorised to make liberal promises of assistance from France, and to declare that he came in the capacity of secretary to the Pretender. It was now expected that all communication would soon be cut off between the Duke of Argyle and London; and the Earl of Mar was strongly advised to attack Argyle before the arrival of a reinforcement of dragoons from Ireland, which were expected.

It was now that the 6000 men guaranteed by the Dutch to be sent over to England were demanded by the British ministry, and granted by the States. Orders were issued to all the governors of seaports to examine all British subjects who might attempt to pass from the Continent into England; for it was thought that the Pretender, with the Duke of Ormond and Viscount Bolingbroke, intended to come into the country. On the 25th of October General Carpenter set out from Newcastle for Kelso, where the Jacobite army lay. The Jacobite commanders proposed to pass the Tweed and attack Carpenter's troops, which were tired with marching; but ultimately the Pretender's forces marched to Jedburgh, and thence towards Dumfries, which they thought of investing. The Duke of Argyle was at Stirling with so small a force, that unless he was soon joined by the Dutch or Irish troops, he could not save Dumfries. Everything seemed to favour the enterprise of the Pretender, but divisions in the Jacobite council of war frustrated their plans. The Earl of Wintoun, one of the insurgent leaders, opposed the siege of Dumfries, and the English officers urged a march into their own country. Confidence was thus lost, and the men daily deserted. After some loss of time the rebels marched to Brampton in Cumberland, where the Pretender was proclaimed. They then proceeded to Penrith, and thence on the 5th of November to Appleby; next to Kendal and Kirby Lonsdale, and on the 7th to Lancaster, which they entered without opposition. They left Lancaster on the 9th day of the month, for Preston, where they were joined by a number of gentlemen and others of the Roman Catholic persuasion, a circumstance which did not satisfy the Scottish chieftains and Highlanders, who had been led to expect that their forces would be augmented by the high church party.

General Carpenter was now pursuing the Jacobites, but with his dragoons only, in order to save time. He had communicated with General Wiles, at Chester; and both generals advanced in concert, to unite their strength and attack the rebels at Preston. General Wiles reached Preston first, and found the town strongly barricaded. On the 12th of November Wiles attacked the barricade below the church, which was gained; but the other barricades, which were flanked with Highlanders, were not carried, and the king's troops were obliged to retire that evening. On the following morning General Carpenter and his troops arrived, and the town was completely invested. The Highlanders were indeed eager to make a sally, but they were not allowed to move. A capitulation was determined on, and Colonel Oxburgh went out with a trumpet to propose terms to General Wiles. All however that he could gain was a promise that, if the rebels would lay down their arms, he would not allow the soldiers to cut them to pieces, and he would give them an hour to consider of it. No terms were finally made for the Jacobites. General Carpenter entered the town on one side, and General Wiles on the other; and they met the rebel troops in the middle of the town. The noblemen and chieftains were put first under guard, and then their followers. The number of the English and Scottish prisoners of all classes amounted to 1489. On the same day that Preston surrendered, the battle of Dumblane was fought between the Duke of Argyle and the Earl of Mar. The left wing of the rebels, though they fought bravely, was routed; and the Duke of Argyle, after pursuing them to the river Allan, returned to the field, where both armies stood looking at each other; towards evening the duke drew off to Dumblane, and the enemy to Ardoch. On the same day news arrived that the pass of Inverness was gained. This important advantage was the result of treachery. Lord Lovat had delivered it to the king's troops.

The principal persons among the rebels were sent to London. On reaching Highgate they were pinioned with cords, and not allowed to hold the reins of their horses, which were led by a foot-soldier. The prisoners were conducted from Highgate to London, amid crowds of spectators, the drums playing a triumphal march. They were distributed in different prisons; the noblemen were lodged in the Tower.

On the 22nd of December the Pretender landed at Peterhead in Scotland, with a train of six gentlemen, among whom was the Marquis of Tynmouth, son of the Duke of Berwick. From Peterhead James proceeded to Newburgh, a seat of the Earl Marischal's; and passing through Aberdeen in disguise to Fetterope, he was met there by the Earl of Mar, who had left Perth with a troop of horse. James now assumed

the state of royalty: he formed a court, and made several peers and created knights. He was also proclaimed with great ceremony before the house where he was lodging.

In January 1716 the Pretender made a progress through the country, entering Dundee publicly, with the Earl of Mar on his right hand and the Earl Marischal on his left. The people thronged into the marketplace to kiss his hand. On the 7th of January he arrived at Scone, and on the 9th of January he made his public entry into Perth, and reviewed some of the troops. He expressed great pleasure at the sight of the Highland dress, which was new to him. In the evening he returned to Scone, where he formed a council and issued six proclamations. On the 16th of the month James harangued his council, having previously received addresses from the episcopal clergy of Aberdeen. His council however, being convinced after the arrival of the Dutch troops that the army of the Pretender could no longer resist that of Argyle, had resolved to abandon the enterprise and disperse the forces. But wishing to keep their design secret, they acted as if they meant to attack the English army. They began to raise batteries, plant guns, and even destroyed Auchterarder, Blackford, Denning, Muthell, and other places, to prevent their affording quarter and provision to the enemy. The Duke of Argyle, having received supplies, marched through Auchterarder to Tullibardine, whilst the Pretender and his followers retreated to Dundee. Suspicious now arose that the Pretender, together with the members of his council, intended to escape, and to leave the army to their fate; and the report gained ground when the Jacobite army was ordered to march to Montrose, near which several French ships lay at anchor. The rebel troops, possessed with this idea, refused to move. The Earl of Mar however succeeded in pacifying them by the assurance that James was going to place himself at their head, and by declaring that it was intended to make a stand at Aberdeen; and to add to the deception, the horses and body-guard of the Pretender were drawn out before the door of the house where he lodged. James, in the meantime, slipping out by a back entrance, walked to the Earl of Mar's lodgings, and proceeded to the sea-shore, where a boat conveyed him and Lord Mar on board a French ship which was then in Montrose road. The boat returned, and fetched seventeen persons of rank, who were acquainted with the Pretender's design. The Pretender reached Gravelines in a few days. The vessel returned in twelve days; and in spite of the utmost vigilance on the part of Argyle, a very considerable portion of the noblemen and others who were engaged in this unfortunate affair escaped to France.

In France at this time there was little comfort for the Pretender and his friends. It was the interest of the Duke of Orleans, regent during the minority of Louis XV., to maintain a good understanding with the house of Hanover. Lord Stair, the English ambassador, was urgent in his remonstrances to prevent the Pretender's return to France. On his return from Scotland, James deemed it necessary to dismiss Lord Bolingbroke, who had acted as his secretary, on suspicion of treachery, and the place was filled by the Duke of Ormond.

The earls of Wintoun, Kenmore, and Derwentwater, of Carnwath and of Nithsdale, with lords Widdrington and Nairn, were tried at London. The prisoners of inferior rank were tried chiefly at Lancaster, where many were executed: one thousand of them, upon their petition, were transported to the Plantations in North America.

The Countess of Nithsdale and Lady Nairn, waiting their opportunity behind a window-curtain, threw themselves on their knees before the king, as he passed through the apartments of St. James's Palace, to beg for their husbands' lives. The king heard their appeal, but was not moved. Lady Derwentwater, with the duchesses of Richmond and Bolton, were introduced by the dukes of Richmond and St. Albans into the royal bed-chamber, where Lady Derwentwater humbly besought mercy for her husband. On the 7th of March the earls of Derwentwater and Kenmore were beheaded on Tower Hill; lords Widdrington, Carnwath, and Nairn were reprieved. The Earl of Nithsdale escaped in woman's attire brought to him by his wife. The Earl of Wintoun was condemned to death, but escaped from the Tower.

There were still however proofs of disaffection. On the 29th of May the Jacobites wore oaken boughs; and on the 10th of June, the Pretender's birthday, they displayed white roses. At Oxford the spirit of disaffection was shown more plainly than in any other place. Alarmed by these and other manifestations, in 1716, King George succeeded in forming an alliance with France and the States, the chief object of which was to crush the Jacobite cause. By this treaty it was stipulated that the Pretender was to leave France, and to go beyond the Alps; nor was he to be permitted ever to set foot in France again on any pretext whatever. A renewal of that promise which had been made at the treaty of Utrecht was given; and all protection was withdrawn from James on the part of the French government. The Pretender removed into Italy.

In 1718 the Pretender became the instrument of Cardinal Alberoni's ambitious intrigues. Upon war breaking out between France and Spain, James left Urbino, where he had resided since his expulsion from France, and went to Rome. He was there advised by Pope Clement XI. to go into Spain, where a squadron had been for some time fitting out against England. James was received with regal honours at Madrid; and the Duke of Ormond, one of his adherents,

was appointed captain-general of the expedition which was to invade England, and was authorised to proclaim the Pretender's name at certain places. But a storm dispersed and entirely disabled the Spanish fleet off Cape Finisterre; and a descent which the Spaniards made at Kintail in Scotland (June 1719), although aided by the Highlanders, was defeated by General Wightman. During the year 1718-19 a marriage was agreed on between the Pretender and Maria Clementina Sobieski, granddaughter of John Sobieski, king of Poland. This princess had a million sterling for her dowry. The court of Vienna however objected to the marriage; and on her way through Tyrol to Italy the princess was seized, and placed in confinement in Innspruck. Not being released, even upon the personal application of her father, she escaped from Innspruck in man's clothes, went to Bologna, and was there married by proxy to the Pretender, who was still in Spain. Two sons, Charles-Edward and Henry, were the offspring of this union. The Earl and Countess of Inverness were entrusted with the charge of the eldest, styled Prince Charles. They were Protestants, a circumstance which gave great offence to their mother, and to Cardinal Alberoni, by whose counsels she was governed. After six years of married infelicity, or, as Maria Clementina terms it in her letters, "of injuries and insults," she withdrew, in 1725, to the convent of Cecilia, whence no entreaties of her husband could draw her, nor could he for many months obtain even an explanation of her conduct. From various letters, which are given in the 'Lockhart Papers,' it seems that, as usual, both parties considered themselves in the right. The Pretender would not part with Lord Inverness; his wife was resolved not to return to him whilst that nobleman and his wife, of whom she is said to have been jealous, remained at court. The followers of James were scandalised at this breach; at length the Earl of Inverness was dismissed, and a reconciliation was effected. The Earl of Inverness was a Colonel Hay, upon whom the Pretender bestowed the title in 1725, at the same time making him his secretary. He was always called Colonel Hay, except at the Pretender's court, and by the persons corresponding with it. Maria Clementina died in 1735.

In 1722 the Pretender published at Lucca his famous declaration, addressed to his loving subjects of Great Britain, and to all foreign princes and states, to serve as a foundation for a lasting peace in Europe, and signed 'James Rex.' This document, which, amongst other articles, contained a proposal to George I. to resign his crown, was pronounced by the House of Lords to be a false, insolent, and traitorous libel, and was burnt at the Royal Exchange.

The death of George I. produced no improvement in the fortunes of James Stuart, though there were continual cabals in his favour in Great Britain, and a treaty (called the treaty of Vienna) had been formed between the emperor of Germany and the king of Spain in 1725, with a view of restoring the Pretender. James, during the latter years of his life, resided entirely at Rome, where he led a quiet life, although the hope of ascending the throne of England seems never wholly to have left him. Frugal in his household, he saved, out of the pension allowed him by the pope and his share of the Sobieski estate, a sum of money sufficient to defray the expenses of a subsequent invasion of England. The events of the year 1745 belong to the history of his eldest son, rather than to the annals of the Pretender's life. He was the last of the Stuarts that received kindly honours. James Stuart died at Rome in 1765.

CHARLES EDWARD STUART, born on the 31st of December 1721, bore the title of Prince of Wales among the Jacobites. He served in Spain under Don Carlos, who paid him great respect and attention. He is represented, a few years after this time, to have been a youth of graceful person, generous, affable, and engaging manners, "to have the spirit of a Sobieski without the timidity of a Stuart;" and, though reared in the effeminate south, to have been capable of encountering difficulties and hardships. In the year 1743 Cardinal Tencin, the prime minister of France, who had received the purple at the recommendation of the Pretender, combined with the Jacobites in England and Ireland to project a fresh invasion of Great Britain. He persuaded the Pretender to surrender his claims to Charles Edward, and, upon his consenting, the prince set out for France, giving out that he intended to make a campaign in Piedmont, but proceeding in the disguise of a courier to Paris, where he arrived on the 20th of January 1744. The young man was, as Tindal expresses it, "made a loan of to France," whose aim was to cover her own selfish designs with the plea of countenancing the Stuart family. Marshal Saxe was appointed to command the expedition; and he, having been in England, and knowing that the towns were rarely fortified, had an idea that the country could be quickly subdued.

The young prince set out for the coast of Picardy, where an army of 15,000 men was assembled, and transports were provided at Boulogne, Dunkirk, and Calais for carrying the troops to England. The army was to land on the coast of Kent, where many Jacobites were expected to rise; and at the same time a squadron sailed from Brest to convoy the transports. But the squadron fled before the British fleet under the command of Sir John Norris, and almost shared the fate of the Invincible Armada. A violent storm destroyed most of the transports, and a great part of the troops were drowned (1744). The prince returned to Paris, and waited a more favourable opportunity. But he was not daunted by obstacles, and the period at which

the rebellion of 1745 was undertaken was favourable to its success. The king of England was in Hanover, and Scotland was almost destitute of troops. The Highlanders, disaffected, and thirsting for revenge, were ripe for revolt. Towards the end of May 1745, Charles Edward left Paris for Nantes. William, Marquis of Tullibardine, who had been attainted in 1715, Sir John Macdonald, Colonel Strickland, Mr. George Kelly, a clergyman of the Church of England, and Sir Thomas Sheridan, formerly tutor to the young Pretender, with several other gentlemen, accompanied him. On the 5th of July he sailed in *La Doutelle*, a French vessel, which he had joined from Nantes in a fishing-boat, designing to sail round Ireland, and to land upon the western coast of Scotland. Another ship, the *Elizabeth*, was ordered to accompany him as a convoy, and on board this vessel the prince had placed 400,000*l.* sterling, with arms for several thousand men. These two ships fell in with a British cruiser to the west of the Lizard Point. A fierce action ensued, and the *Elizabeth* was so much damaged as to be obliged to put back into Brest. The prince pursued his course to Scotland, saying that he would either die or be crowned. On the 28th of the month he landed at Boradale, a farm belonging to Macdonald of Clanranald, on the shore of the bay of Lochnanuagh. He thence proceeded to the house of Kinlochmoidart, where he was met by several Highland chieftains; and whence the clans were summoned to rise. Many persons here advised the prince to return to France, and wait another opportunity; but he was resolute in remaining. About ten days afterwards the prince set up his standard at Glenfinnan.

At this time Sir John Cope was commander-in-chief in Scotland. At first the news of the rebellion was treated with ridicule, and the government were dilatory in their measures. On the 6th of August a reward of 30,000*l.* was offered, by proclamation of the lords justices in the Gazette, to any person who should secure the eldest son of the Pretender; and on the 31st, George II. returned to London from Hanover. The prince, having heard of the price put upon his person, issued a counter proclamation, offering 30,000*l.* for apprehending the Elector of Hanover. On the 27th of August he advanced in hopes of meeting Sir John Cope; but on reaching Garvamore, he found that General Cope had faced about, and taken the route by Ruthven to Inverness. No sooner did the English troops turn their backs upon the Jacobite army, than a common soldier deserted, and carried the news to the other side. The Highlanders instantly put themselves into motion; and on arriving at Garvamore, it was determined that they should march to the south, and enter the low country, thus endeavouring to get possession of Edinburgh before General Cope should arrive there. On the 30th of August they reached Blair Athol, and the Duke of Athol, who was on King George's side, retired at their approach. On the 3rd of September they entered Perth, where the Pretender's declarations were read. At Perth great numbers flocked to the Pretender's standard. Among the most considerable were the Duke of Perth, Lord Strathallan, and Lord George Murray, who was the younger brother of the Marquis of Tullibardine, whose right of primogeniture had been forfeited by his attachment to the exiled Stuarts: his second brother, Lord James, now duke of Athol, having succeeded to his estates and honours. Lord George Murray was a brave, humane, and honourable man; and he possessed a sound judgment in military matters. Having accepted the act of grace which passed after the rebellion of 1715, Lord George was not possessed of that entire confidence on the part of Charles Edward which he proved himself eventually to have fully merited.

The reception which the prince met with in the Lowlands was not so cordial as he expected. On the 11th of September he marched from Perth to Dunblane; and on the 13th passed the Forth at the ford of the Frew, a few miles above Stirling. Colonel Gardiner's dragoons, which were posted near Stirling, withdrew at his approach. On the 15th instant the rebels arrived within nine miles of Edinburgh, and Gardiner's and Hamilton's dragoons were posted within two miles of it. The city had been hastily fortified; a thousand men had been armed for its defence, in addition to the city guard; and trained bands of mixed Whigs and Jacobites were constantly on duty. Everything was so prepared that the town might have held out for some days before troops which had not a single cannon. "But," says an anonymous writer, "to the lasting dishonour of Scotland, the capital was given up to a handful of half-starved savages without stroke of sword."

On the 15th of September, being Sunday, public worship was suspended, and the volunteers were under arms all day. On Monday, until noon, the defence was carried on very vigorously; but about two o'clock a petition was set on foot, praying the magistrates and town-council to call a meeting of the chief inhabitants to deliberate concerning the propriety of delivering the town up to Charles Edward. About this time, the dragoons first, and afterwards the officers of the crown, left the city, the dragoons taking the route of Musselburgh and Haddington. The result of the public meeting, which was principally composed of Jacobites, was a determination to surrender the town, and place the arms of the volunteers in the castle. A deputation was despatched to Gray's Hill, about two miles from Edinburgh, where Charles Edward then was. Whilst the terms of capitulation were still under discussion, intelligence came that General Cope had arrived at Dunbar, and would speedily march to the relief of the town. A second deputation was sent, to gain time, and those who composed it

returned to the city early in the morning of Tuesday the 17th in a coach. The coach entered at the West Port, and drove down the street towards the Canongate. On the gate being opened, a body of 900 Highlanders, under the command of Lochiel and Sullivan, rushed in. The lord provost and town council, who were waiting the return of the deputation in the street, on hearing of this event retired to their homes. At noon Charles, in a Highland dress, attended by the Duke of Perth and Lord Elcho, came by Duddingston into the King's Park, and entered through St. Anne's Yard into Holyrood Palace. There was a great crowd assembled to receive him, and the young prince was one whose personal appearance might seem to justify the enthusiasm which he inspired. "The figure and presence of Charles," observes Mr. Home, who witnessed his entrance to Holyrood, "were not ill suited to his lofty pretensions. He was in the prime of youth, tall and handsome, and of a fair complexion." As he entered the palace there was an expression of languor and melancholy in his countenance: the Jacobites compared him to Robert Bruce; the Whigs declared that he looked like a gentleman and a man of fashion, but not like a conqueror. After dismounting, the prince walked towards the apartments of the Duke of Hamilton: when he was near the door a gentleman moved out of the crowd, drew his sword, and walked up stairs before the prince. This was James Hepburn of Keith, who had been engaged when very young in the rebellion of 1715; a gentleman who is said to have been a model of manliness, simplicity, and honour; but whose hatred of the Union, rather than love of the Stuart race, induced him to sacrifice himself to a notion of national independence.

In the meantime Sir John Cope had marched from Dunbar to Haddington, and thence to Prestonpans and Seaton. A council of war had been held by Charles Edward at Duddingston, where he had proposed to engage General Cope's army. This was agreed on; but when the prince declared his resolution to lead the troops to battle himself the chiefs remonstrated, and with some difficulty induced him to give up the design. On the next morning (September 21) the Highlanders advanced to Tranent, and to the west of the town continued their march until they saw the king's soldiers encamped near Preston. A loud shout was raised by the English and returned by the Highland troops. A morass, which was pronounced to be impassable, divided the armies. The afternoon was spent in movements. At night both armies lay down to repose, the Highlanders with the resolution of attacking the king's troops early in the morning. During the night a country gentleman, who knew the ground well, proposed to Lord George Murray to show him a part of the morass whence the rebels might attack their enemies without observation. Lord George referred him to Prince Charles, who was sleeping on the ground with a sheaf of peas-straw under his head. Charles was pleased with the proposal, and before break of day his troops began to move. They marched through a sort of valley, or hollow, concealed by the darkness first, and afterwards by a mist. Charles took his place between the first and second line. At length, the morass being passed, the two armies were separated only by a corn-field. The Highlanders, ill armed and without cannon, followed up the advantage which they had gained with wonderful success. A panic seized the king's troops. The Highlanders threw down their muskets, drew their swords, and pursued the enemy. "In a very few minutes," says Home, "after the first cannon was fired, the whole army, both horse and foot, were put to flight. Not one of the soldiers attempted to reload their muskets, and not one bayonet was stained with blood." All the king's infantry were killed, or taken prisoners, except about 170, who escaped by great speed or other good fortune. This was called the battle of Prestonpans.

The second line of the Highland troops, commanded by Prince Charles, had kept so near the first as to appear to General Cope all one body. The prince was only fifty paces behind the vanguard—a proof of courage which his enemies could not deny; but it was a departure from his agreement with the chiefs, who had made conditions that he should not expose himself to imminent danger. General Cope's conduct was severely censured; but when inquired into by a board of general officers he was not censured, and the conduct of the soldiery was made to bear the blame. "His great error," observes Sir Walter Scott, "was in drawing up his forces in front of a high park wall, which barred their escape from their light-heeled enemies. Collecting his dragoons, Cope, with the earls of Loudon and Home, marched to Berwick, where Lord Mark Ker received him with this sarcasm, "that he believed he was the first general in Europe that had brought the first tidings of his own defeat."

Great apprehension was now entertained in England lest the prince should immediately march southwards. But Charles and his council did not deem it prudent to appear in England with so small an army, and they resolved to wait some time longer at Edinburgh. The castle of Edinburgh remained still in the possession of the king's troops, commanded by General Guest. At first the garrison was supplied with necessaries from the town, but on the 29th of September orders were given to allow no person to pass into the castle. A letter was that evening sent down by General Guest to the provost of Edinburgh, declaring that unless a free communication was opened with the garrison and the town, the general would commence a cannonade upon the city. The prince, on hearing of this threat, ordered the communication

to be re-opened. But the Highlanders having, on the 1st of October, fired at some people who were carrying provisions to the castle, the garrison on the next day began to fire on the houses that covered the prince's Highland guard. Upon this a contest commenced between Prince Charles and General Guest, during which several houses were set on fire, and several persons on both sides killed. The cannonade lasted till the evening of the 5th of October, when Prince Charles at last published a proclamation permitting a communication between the town and the castle. Very few of the inhabitants of Edinburgh joined the Pretender during these destructive reprisals. There was in fact a disinclination among the common people to flock to his standard. Lord Kilmarnock and Arthur Elphinstone, afterwards Lord Balmerino, at this time joined the prince; and Lord Ogilvie, eldest son of Lord Airly, arrived in Edinburgh with a regiment of 600 men. These additions, and reinforcements sent by a few other noblemen and gentlemen, chiefly in the neighbourhood of the Highlands, together with supplies of arms and ammunition from France, strengthened the prince's cause.

It was now discussed by the prince's council in what manner their advantage could best be prosecuted. The prince, who was totally unacquainted with the country which he had invaded, could not bear opposition, nor listen to advice. Feuds and intrigues divided his little court; and too great confidence in his own opinion made him positive and resolute, when he ought to have been cautious. Having received all the reinforcements that he expected, he one day suddenly apprised his council that he was resolved to march to Newcastle, and to oppose the progress of Marshal Wade, who had advanced to that town. It was in vain that several of his friends opposed his determination. Three times it was brought before the council, and on the last discussion the prince settled the point by these words: "I see, gentlemen, that you are determined to stay in Scotland, and defend your country; but I am also resolved to try my fate in England, even if I should go alone."

On the 31st of October, Charles marched out of Edinburgh, leaving Lord Strathallan to command in Scotland. At Dalkeith House he was joined by the clan Macpherson and some other Highlanders, amounting in all to about 1000 men: this made his whole force about 6500. With one division of his army the prince marched to Kelso, then taking the Jedburgh road, he crossed the Esk, and on the 8th of November reached Brampton in Cumberland. On the next day the other division of the army arrived, and proceeded to invest Carlisle, which surrendered to the Duke of Perth on the 15th of November. It was now determined to march directly to London. Before Charles had set foot on English ground, three armies, each of them superior in number to his own, were prepared to oppose his progress: one, under General Wade, at Newcastle; a second, in Lancashire, commanded first by General Ligonier, and afterwards by the Duke of Cumberland; and a third, consisting of old regiments, was stationed in the villages near London, and was, in case of need, to have been commanded either by the king or the Earl of Stair. The rebel troops nevertheless, leaving a garrison in Carlisle, marched forward in two divisions: the first, commanded by Lord George Murray, arrived at Penrith on the 21st of November; the second, or main body, headed by Charles, chiefly composed of Highland regiments, and having the cannon, followed, and advanced from Penrith, by Shap, Kendal, Lancaster, and Garstang, to Preston. On the 29th they reached Manchester, by way of Wigan, and were joined by 200 or 300 of the common people. These men, the only Englishmen who joined the standard of the Pretender, were called the Manchester Regiment, and were commanded by Colonel Townley, a Roman Catholic. Preston and Manchester were the only places where ringing of bells or acclamations were heard. From Manchester the rebel army marched to Macclesfield: from Macclesfield the two divisions went by different roads; the one by Congleton, the other to Leek, and from Leek by Ashbourn to Derby, where on the 4th of December (1745) both divisions arrived. During the march from Carlisle to Derby, the prince learned that John Drummond, the Duke of Perth's brother, had arrived at Montrose with his own regiment, the Royal Scots, Fitzjames's regiment of horse, and the picquets of six Irish regiments in the service of France.

The Duke of Cumberland's forces lay at Lichfield, Coventry, and Stafford. It seemed at first to be the intention of the rebels to avoid the duke, and to advance to London; but after halting a day or two in Derby, they altered their intention, chiefly upon the representation of Lord George Murray, and retreated, with the design of meeting Lord Drummond's army, which was coming from the north. The retreat was resolved upon by the advice of Lord George Murray, and much to the dissatisfaction of Prince Charles. The Duke of Cumberland now began the pursuit of the rebels, who were only two days' march before him. Lord George Murray, who commanded the rear-guard, defeated the duke's dragoons at Clifton near Penrith in a skirmish, in which the Highlanders fought with their usual courage, and Lord George, bareheaded (having lost his bonnet and wig), was foremost in the encounter. On the 20th of December the Scottish army left Carlisle, and crossed the Esk into Scotland. On this occasion the prince saved one of his men from being drowned by catching him by the hair. The Highland troops marched unmolested by Moffat and Dumfries to Glasgow, where they were by no means welcome. At Glasgow they remained seven or eight days, and the troops then

began their march to Stirling, in two divisions. When the troops came near Stirling, the prince took up his abode in a house called Bannockburn. Lord George Murray's division occupied Falkirk. The town of Stirling soon surrendered, and Charles's army, now, by the junction of the forces of Lord Strathallan and Drummond, amounting to 9000 men, attacked the castle of Stirling. On the 16th of the month General Hawley left Edinburgh, which he had entered during Charles's absence, and marched to Falkirk; so that his army was now only seven miles distant from that of the Pretender. Lord George Murray marched at the head of the Macdonalds of Keppoch with his drawn sword in his hand. The Macdonalds began the fight, and repulsed the king's dragoons. The rout of the royalists seemed complete. With difficulty General Hawley kept a few of his regiments together, and retreated to Linlithgow, leaving seven pieces of cannon and a quantity of provision, ammunition, &c., upon the field. A strong body of Highlanders, commanded by Lord George Murray, immediately took possession of Falkirk.

The friends of the House of Hanover were greatly dejected on hearing of the defeat; whilst the generals of the rebel party deemed it incomplete, and blamed each other. Charles remained at his quarters that night, and on the following day returned to Bannockburn. Meantime the siege of Stirling Castle proceeded slowly, owing to the superior fire of the castle. On the 30th of January the Duke of Cumberland arrived at Edinburgh, whither General Hawley had retired; and on the following day the duke marched against the enemy. Lord George Murray with the clan regiments was now at Falkirk, and Prince Charles was still in the house of Bannockburn. The rebels at first resolved to make a stand, and to give the duke battle; but on the following morning they suddenly raised the siege of Stirling Castle, and retreated. Two explosions were the first signal of this event which reached the duke's ears; these were the powder-magazines blown up by the Highland troops, who retreated in disorder over the river Forth.

The Highlanders marched through Dunblane to Crieff, where the two divisions of their army separated: one, under Prince Charles, marched north by the highland road; the other, commanded by Lord George, proceeded through Montrose and Aberdeen, by the coast road, to Inverness. In the vicinity of that town both divisions approached each other. Charles, suffering his men to straggle about, lodged at Moy, the seat of Mackintosh, about ten miles from Inverness. Here he was saved from a surprise by the presence of mind of a woman. Lord Loudon, who was at Inverness, hearing that the prince had only five or six hundred men with him, set out one evening as soon as it was dark, with a design to seize him. Lady Mackintosh, the wife of Charles's host, is supposed to have been apprised of this attempt by letters from her mother. Without saying a word to Charles, she ordered five or six of the people, well armed, to watch on the road from Inverness, under the direction of a country smith. When Lord Loudon's troop drew near, the smith and his party gave them a shot or two, calling upon the Macdonalds and Camerons to join them. Lord Loudon's men, deceived by these shouts, retreated precipitately to Inverness, and many of them were trampled down in the confusion of their flight. Charles, on the following day, hearing of this skirmish, which was called the Rout of Moy, marched to Inverness. Upon Lord Loudon retreating, he laid siege first to Fort George, and next to Fort Augustus, both of which places he captured. During the months of February and March a desultory war was carried on, until, at the end of March, news was brought that the Duke of Cumberland was marching towards Inverness with all his forces. On the 14th of April, Charles retreated from Inverness to Nairn, where he again made a stand. That night the Highlanders slept amid the furze and trees of Culloden wood, about three miles from Nairn. The prince's army was now much dispersed, and many of his best officers were absent. The Master of Lovat, son of Lord Lovat, was, as well as others, recruiting his forces. Lochiel however joined the army of Charles with his regiment; and, on the 15th, the army, reinforced by Keppoch and his regiment, was drawn out in order of battle upon Drummoissie Muir, about a mile and a half to the south-east of Culloden House. About two o'clock the men were ordered to their quarters, and Charles, calling together the generals, announced his intention of making an attack upon the duke's army, then at Nairn. When he explained his design, the Duke of Perth and John Drummond dissented; and Lochiel remarked, that on the next day the prince's army would be stronger by fifteen hundred men. But the matter was decided when Lord George Murray seconded Charles's proposal, and urged the advantage of a night attack. Many men had gone to Inverness to get food; and the ranks were thinned: but Charles, bent upon a night attack, ordered the men to march at eight o'clock. At the appointed hour the Highland army advanced in a column, with an interval in the middle, according to a plan of Lord George Murray's, who marched in the front at the head of the Athol brigade. Charles and the Duke of Perth were in the centre of the line of march. The night was very dark, and was far spent before the Highlanders reached Kilravock wood, where the officers, finding by their repeating-watches that it was two o'clock in the morning, consulted what was to be done; as Nairn was still more than three miles off, and it would be daylight before they could reach it. The matter was decided by Mr. Hepburn, who, on hearing a drum in the enemy's camp, observed, that

if they should retreat they would be pursued; and that they would then be in a worse condition than they now were. The Duke of Cumberland had gained intelligence of the attempt, and by five o'clock in the morning his army was on its march. The Highlanders, weary and dispirited, retraced their steps to Culloden, where many of them lay down to sleep. About eight o'clock the duke's forces were seen marching towards them; and about twelve, they were within two miles and a half of the rebels. About one o'clock a heavy cannonade was begun by the king's troops, and continued till two. The Highland regiments suffered severely, and a very inefficient fire was returned from their cannon. Colonel Belford, of the artillery, seeing a body of horse with Charles, who was stationed on a small eminence behind the right of the second line, pointed two pieces of cannon at them; one of Charles's servants, who stood behind him with a led horse, was killed, and the face of the prince was bespattered with dust. The Highlanders now became impatient to attack. A messenger was sent to Lochiel, representing the necessity for doing something. Whilst Lochiel was speaking to Lord George Murray, the Mackintosh regiment broke out from the line, and drove back the king's troops, sword in hand, but they were mostly brought to the ground by a terrible fire. A few desperate men pressed on, and perished by the bayonet. The Macdonalds and other Highland regiments now retired: it is said that the former were affronted by being deprived of the right, the post of honour, which their clan had possessed from time immemorial. It was in vain that the Duke of Perth called upon them to behave themselves, and make a right of the left, declaring that if they did, "he would henceforth call his name Macdonald." The Highlanders were dispirited, and their condition became desperate.

At this crisis the Duke of Cumberland advanced with the infantry, and the Highlanders fled; some retired to Badenoch, and others to the hills. Many who had fasted all day ran twenty miles without tasting food. The Fraser and Drummond's regiments retired to Inverness. The dragoons pursued and slaughtered the fugitives. When Charles saw, for the first time, his Highlanders repulsed and flying, he advanced to rally them; but Sir Thomas Sheridan dissuaded him from the fruitless attempt. The entreaty would not have availed, according to the testimony of the prince's standard-bearer, if General Sullivan had not led the prince's horse by the bridle from the field. Whilst some Highland troops still kept their ground, Lord Elcho, it is said, rode up to the prince, and exhorted him to make one final attempt to rally, or, at least, to die like one worthy of a crown. The reply was hesitating. Lord Elcho, with execrations, turned from him, for whom he had sacrificed everything, and swore never to see his face again; an oath which he kept.

The rebels are said to have lost about a thousand men; and among these were the bravest and the most devoted to the cause. The prince, after dismissing the troops which followed him, went to Gorthleck, where Lord Lovat was, and whence he sent a farewell message to the remnant of his army, thanking them for their services, but desiring them to attend to their own preservation. He next proceeded to Invergarie, near Fort Augustus, where he took leave of all his followers except Sullivan, O'Neil, and Burke, a servant who knew the country. Charles had now resolved to escape to France. For a time he kept about the islands of North and South Uist, sometimes in fishermen's huts, sometimes subsisting upon the bounty of the islanders, but generally in a state of the utmost privation. Hunted from place to place by the king's troops, his adventures are scarcely equalled by the fictions of any romance. General Campbell searched the islands of Barra and South Uist in vain; and Long Island, in which he also took shelter, was surrounded by frigates and sloops of war. In this perilous condition Charles remained until the end of June, when he was delivered from his danger. Flora Macdonald, the daughter of Macdonald of Melton, in the isle of South Uist, was the generous and courageous woman who risked her life to save that of the prince. She had heard of his misfortunes and dangers, and expressed a wish to assist him. Charles was introduced to Flora, who undertook to convey him to Skye as her maid, dressed in female attire. As no one was allowed to go without a passport, she procured one for herself and her supposed maid, Betty Burke. On the evening before they were to sail, she and Lady Clanronald met the prince at a place near Ormaclade, on the sea-shore. Whilst they were at supper here, news came that a party of officers and soldiers were searching Ormaclade in quest of Charles. Shortly afterwards, on seeing four armed cutters at a little distance, the ladies and the prince hid themselves among the rocks. About eight in the evening they sailed; and although threatened by a party of the Macleod's militia, who saw them from the shore, they pursued their way to Kilbride in Skye. Here Flora intended to lodge the prince at Mugstot, the seat of Sir Alexander Macdonald, but several of the king's soldiers being in the house, he was sheltered at the house of Macdonald of Kingsburgh, Sir Alexander's factor. On the following day Charles changed his attire, and crossed over to Rasay, where he lodged for some time in a cowhouse; but growing impatient in this retreat, he returned to Skye, where he was assisted by the Mackinnons, and by their aid sailed to Loch Nevis, a lake in the mainland, where he was put ashore on the 5th of July. Here a number of the king's troops were stationed, and Charles was now enclosed between a line of posts formed by the officers who had notice of his situation. To escape this danger, he was forced, with

a friend, to creep up the channel of a brook which was between two of these posts. He was accompanied by Macdonald of Glenaladale, with whom, after surmounting numerous difficulties, he reached the hill of Corado, between Kintail and Glenmoriston. Here he found some of his faithful followers living in a cave: wretched and altered as he was, his brave adherents knew him, and fell upon their knees. "He had," says Home, "a coat of coarse dark-coloured cloth, and a wretched yellow wig, with a bonnet on his head. His brogues were tied with thongs, so worn that they would hardly keep on his feet. His shirt was saffron, and he had not another." He remained in this cave five weeks and three days; and not even the reward of 30,000*l.* which was offered for his person, would have tempted these poor men, who sheltered the wretched descendant of the Stuarts. He continued his wanderings for many weeks; sometimes becoming so exhausted from fatigue and want of food that he could not walk without help: at length, after many narrow escapes, he was able to cross Locharkaig, and reach the fir-wood near Achnacarry. Here he heard from his faithful chieftains, Lochiel and Cluny, that they were at Badenoch, where he might with some risk join them. About the 29th of August Charles met his two friends, and was conducted by them to Letternilick, a remote place in the great mountain Benalder, where he remained until a vessel arrived at Lochnanuagh to convey him to France. On the 19th of September he reached Boradale, travelling only by night, and sailed for France on the 20th; he arrived at Morlaix in Brittany on the 29th of September 1746. During the wanderings of the prince the secret of his concealment had been entrusted to hundreds of persons of every age and sex. Flora Macdonald was for some time confined in the Tower, but, being liberated, she found a home for a short time in the house of Lady Primrose, a Jacobite lady. No organised scheme for establishing Charles Edward upon the throne of England was ever afterwards formed.

Charles was received in France with professions of affection from Louis XV.; and, until his departure from France became necessary to insure peace with England, he was well treated by the French king. In 1748, after the peace of Aix-la-Chapelle, the king of France could not allow him any longer to remain in his dominions. Charles long resisted the attempts made to induce him to leave France; and notwithstanding a letter from his father, recommending him to comply with the wishes of Louis, he remained at Paris. At length Charles, in stepping out of a coach from the Opera, was seized, and sent to Vincennes; and he was afterwards conducted with a guard out of the kingdom. After some delay he repaired to Rome. Charles Edward married a princess of the house of Stolberg in Germany, who survived him, and married Alfieri. [ALFIERI.] The union was not happy, and the latter period of the prince's life was disgraced by habits of intoxication. He had no issue by his wife; but he left a natural daughter, whom he created Duchess of Albany, and to whom he bequeathed a considerable property. For many years Charles seems to have cherished hopes of recovering the crown of Great Britain; but at length, when his claims ceased to be sustained by any foreign power, and when the courts of Europe no longer gave him the title of Prince of Wales, he took the title of Count of Albany, and sank into a habit of life strangely contrasted with his former activity. He died on the 31st of January 1788. Notwithstanding his failings, Charles Edward possessed much energy and fortitude. His brother, Henry Benedict, who was created by the old Pretender Duke of York, and afterwards made Cardinal York, was the last representative of the royal house of Stuart. Henry Benedict died at Rome in 1807.

It is scarcely necessary to refer to a claim set up within the last few years by two brothers, John Sobieski and Charles Edward, whose name appears to be Hay-Allan, but who called themselves Stuart, who, in 'Tales of the Century, or Sketches of the Romance of History between the years 1746 and 1846,' and elsewhere, attempted to persuade the world that they were the descendants of a son of Charles Edward Stuart by his wife the Princess Louisa, who was surreptitiously handed over to an agent of the Hanoverian government, and by him conveyed to Scotland and brought up under the name of Hay as his own son. Their story was investigated, and clearly shown to be a fiction, in the 'Quarterly Review,' vol. lxxxi.

STUART, ARABELLA, or ARBELLA, often styled, both by her contemporaries and by subsequent writers, the Lady Arabella, was the only child of Charles Stuart, duke of Lennox, younger brother of Henry, lord Darnley, the father of James I. James and she therefore were full cousins. Her mother was Elizabeth, daughter of Sir William Cavendish, father of the first Earl of Devonshire. The birth of the Lady Arabella has been variously placed from 1574 to 1577, but the most probable year is 1575. The Lady Arabella stood in the same degree of relationship to Elizabeth that James himself did through his mother; both were great-grandchildren of Henry VIII.'s eldest sister Margaret; James through his mother, Queen Mary, and her father James V. of Scotland, son of that princess by her first husband; Arabella, by her father, Charles Stuart, and his mother, Margaret Douglas, the daughter of the English princess by her second husband, Archibald Douglas, earl of Angus. She was born in England; and during the reign of Elizabeth that circumstance was openly stated by Parsons, the Jesuit (in his 'Conference about the next Succession to the Crown,' published under the name of Dolman, in 1594), as giving her claim to the throne an advantage over that of the

Scottish king. At all events she was undoubtedly, before the birth of his son Henry, in February 1594, the next in order of succession to James; and if he had died without issue, she would have been Elizabeth's heir, upon the same principle that he was so accounted.

The position in which she was thus placed by her illustrious descent, and near connection with the thrones both of England and Scotland, forms the key to the sad history of the Lady Arabella. While she was yet very young, it is said that her cousin, King James, wished to have her married to her relation, Lord Esme Stuart, whom he looked upon as his heir in case he should die childless, and whom he had created Duke of Lennox; but the scheme, which must have been projected before 1583, the year in which Esme, duke of Lennox, died, was defeated by the opposition of Elizabeth. When she grew up, other matrimonial speculations were entertained with regard to her, some by herself, some by others; for a full account of which the reader is referred to the 'Biog. Brit.,' and to Mr. Disraeli's paper on 'The Loves of the Lady Arabella,' in his 'Curiosities of Literature' (pp. 357-363, edit. of 1838). She first became an object of general public attention by the manner in which her name was brought forward in 1603, immediately after the accession of James, in the affair of the alleged plot called 'The Main,' for which Sir Walter Raleigh was tried: one of the charges against Raleigh was, that he designed to raise the Lady Arabella to the throne, under the protection of Spain. There is not the least probability however that any such design was ever entertained; it is at any rate admitted on all hands that the Lady Arabella knew nothing of it. (Howell's 'State Trials,' ii. 1-60; Jardine's 'Criminal Trials,' i. 389-520; Lingard's 'History of England,' ix. 8-18; Tytler's 'Life of Raleigh,' pp. 257-301.) But her situation was a sufficiently difficult and dangerous one, without this unfounded suspicion or imputation; the more especially as she appears to have been entirely dependent even for subsistence upon the bounty of the crown. James's wish evidently was, that she should remain unmarried; but in February 1609, a discovery was made of a love affair in which she was engaged with a companion of her childhood Mr. William Seymour, second son of Lord Beauchamp, the eldest son of the Earl of Hertford; and although both parties were called before the council, and there sharply reprimanded and warned to take heed of what they were about, their affection disregarding all consequences, they managed to get secretly married very soon after. The marriage was discovered in the summer of the following year, 1610; on which Seymour was immediately committed to the Tower, and the lady placed under custody in the house of Sir Thomas Parry at Lambeth, from which it was some months after ordered that she should be transferred to Durham, there to remain under charge of the bishop. This marriage probably excited James's alarm and fury the more, inasmuch as the Seymours inherited a claim to the crown which many persons thought better than his own, in virtue of their descent from Mary, the youngest sister of Henry VIII., upon whose representatives that king had settled the succession, in case of failure of his own issue, by a will which an act of parliament had certainly authorised him to make. [HENRY VIII.] The Lady Arabella had scarcely set out on her forced journey to the north, in April 1611, when she was taken ill, or professed to be taken ill, at Highgate; and here in consequence she remained for six days, whence she was removed first to Barnet, and then, at the end of eleven days, to the house of a Mr. Conyers, at East Barnet, where she was kept, till contriving to elude the vigilance of her keepers, she set out, disguised in male apparel, and, attended by a Mr. Markham, about three o'clock in the afternoon of Monday the 3rd of June, took horse at a little inn about a mile and a half distant, and about six o'clock reached Blackwall, where, going into a boat that was in readiness, she was rowed down the river, and next morning was taken on board a French vessel that waited for her and her husband at Lee. Seymour meanwhile had also contrived to effect his escape from the Tower; but as he did not make his appearance so soon as had been agreed upon, the vessel set sail without him, and he was obliged to make a bargain with a coaster from Newcastle to take him across to Flanders, which he reached in safety. His wife was not so fortunate; a small ship of war was immediately despatched from the Downs to intercept her, and she was captured in Calais Roads. She and Seymour never again met. She was thrown into the Tower, where sickness, sorrow, and ill-treatment, after some time deprived the poor victim of her senses, and she died insane in her prison, on the 27th of September 1615. Many of her letters that have been preserved, and which have been printed by Mr. Disraeli, Ballard ('Memoirs of British Ladies'), and others, show that the Lady Arabella united no ordinary talent and literary accomplishment to her high spirit and passionate strength of character; and she also appears to have possessed a considerable share of personal beauty. Seymour was not only permitted to return to England the year after the death of his wife, but was the same year created a baronet; and, his father having died previously, he became Earl of Hertford on the decease of his grandfather, in 1621, and in 1640 was made Marquis of Hertford, under which title he makes a considerable figure in the history of the civil war, in which he fought on the side of the crown, although he had allied himself to the parliamentary general the Earl of Essex by marrying his sister. He just lived to witness the Restoration, and to be restored by Charles II. to the dukedom of Somerset, which had been forfeited,

as it had been acquired, by his great-grandfather the Protector; he died 24th October 1660. It is worthy of being noted, that to one of his daughters by his second wife, he gave the name of her whom he had first loved and had not forgotten.

STUART, GILBERT, LL.D., was the son of Mr. George Stuart, who was related to the learned grammarian Ruddiman, and filled the office of professor of Humanity, or Latin, in the University of Edinburgh, with much reputation, till his death in 1793. Gilbert was born at Edinburgh, according to the common account, in 1746; but in 1742, according to Kerr's *'Memoirs of Smellie'* (i. 499, and ii. 2). He was educated for the profession of the law; but a passion for general literature early took possession of him, and drew him off from his legal studies, so that he never was called to the bar. He first made himself known by his *'Historical Disquisition concerning the Antiquity of the British Constitution,'* which he published in 1767, and which was held to have so much merit, that the University of Edinburgh immediately bestowed upon the youthful author the degree of LL.D. In the following year appeared his *'View of Society in Europe, in its Progress from Rudeness to Refinement; or, Inquiries concerning the History of Laws, Government, and Manners.'* This work, which reached a second edition in 1778, displayed great reading, as well as ingenuity of speculation. Soon after it first appeared, the professorship of public law in the University of Edinburgh became vacant, and Stuart applied to the crown for the appointment, but unsuccessfully, in consequence, as he conceived, of the interference of the Principal, Dr. Robertson. This notion, and the event out of which it arose, had a great influence on the future course of Stuart's life and literary labours. If Robertson really did use his influence to prevent his appointment to the academical chair, it is believed that his reason was, the character for dissipation and intemperance which Stuart had already established for himself, notwithstanding his occasional hard reading and violent paroxysms of study. From this time he evinced, in addition to his unfortunate habits of life, a temper the most malignant, and revengeful, which went far to destroy all the value of his undoubted learning and talents. On his failure in the matter of the professorship, he left Edinburgh for London, but without leaving behind him his personal resentments, which seem to have comprehended the general body of the literary men of his native city. In London, where he resided from 1768 to 1773, he is understood to have been chiefly employed in writing for the *'Monthly Review.'* But he also found time to produce, in 1772, a satirical attack upon the newly published Latin Grammar of Dr. Adam, the rector of the High School of Edinburgh, under the title of *'Animadversions on Mr. Adam's Grammar, by Jo. Rich. Bushby;'* and he is also understood to have been the writer of other papers in ridicule both of Adam and of his book, which appeared about the same time in the *'Weekly Magazine,'* recently begun at Edinburgh by Walter Ruddiman, the nephew of the grammarian. Stuart (and his father, who is believed to have assisted him) had two special reasons for these aggressions: the new grammar was designed to supplant that of their relation Ruddiman, and Adam was besides a great ally of Principal Robertson. In 1772, also, Stuart edited (anonymously) the posthumous work of Francis Stoughton Sullivan, LL.D., entitled *'Lectures on the Feudal and English Laws.'*

In 1773 he returned to Edinburgh; and then he and Mr. William Smellie, the printer (a man of talent and considerable literary acquirement), set up together a new monthly periodical, entitled *'The Edinburgh Magazine and Review.'* The first number of this publication, which is not to be confounded with the original *'Edinburgh Review'* established in 1754, in which Dr. Robertson, Adam Smith, &c. were writers, appeared in October 1773, the 47th and last in August 1776. The general spirit of the articles, especially of those written by Stuart, was of such unsparring severity, instigated too, as was conceived, in many cases by his personal resentments, that, notwithstanding the attraction of no common ability, a public feeling was at last aroused against the work, which compelled its conductors to give it up. A list of Stuart's reviews and other communications is given in Kerr's *'Life of Smellie,'* i. 403-405. Of the former the most remarkable was an article on the first volume of Henry's *'History of Great Britain,'* the first of a series of ferocious attacks on that work by Stuart, of which a full account may be found in Mr. Disraeli's *'Calamities of Authors.'* They were continued in the *'Political Herald'* and the *'English Review,'* two periodical works in which Stuart engaged when he returned to London some years after this, and the proprietor of which was his countryman Mr. John Murray, the father of the present eminent publisher of the same name. But meanwhile he produced several additional works in his own name while he still remained at Edinburgh; his *'Observations concerning the Public Law and Constitutional History of Scotland,'* 8vo, Edinburgh, 1779 (an attack upon the introductory book of Dr. Robertson's *'History'*); his *'History of the Establishment of the Reformation of Religion in Scotland,'* 4to, London, 1780; and his *'History of Scotland from the Establishment of the Reformation to the Death of Queen Mary,'* 2 vols., 8vo, London, 1782, another attack upon Robertson, founded on his alleged unfair treatment of the Scottish queen, whom Stuart zealously defends from all the charges brought against her. These works all drew considerable attention in their day, but they are now little read; the amount of learning and thought which they contain has not proved sufficient

to buoy up the large portion of them composed of inconclusive unsatisfactory speculation, and the sophistry of mere passion and party spirit. They are all written however with much force and vivacity of style. Stuart returned once more to London in 1782; and he appears to have been principally employed in conducting the two publications belonging to Mr. Murray, already mentioned, for the next four years. But jaundice and dropsy, brought on and fed by persevering dissipation, had by the end of this space completely undermined his constitution. He returned to Scotland in the spring or summer of 1786, and died in his father's house at Musselburgh, on the 13th of August in that year.

(Kerr's *Memoirs of Smellie; Disraeli's Calamities of Authors; Chalmers's Life of Ruddiman.*)

STUART, GILBERT CHARLES, sometimes called American Stuart, was born at Narraganset, Rhode Island, U.S., of Scotch parents, in 1755. Evincing early considerable skill in taking pencil likenesses, he was entrusted to the care of a travelling artist named Alexander, whom he accompanied on a tour through the southern states, and afterwards to Scotland. Alexander died shortly after their arrival in Edinburgh, but young Stuart found friends there, and is said, in some of the notices of him published in this country, to have graduated at Glasgow University. This however may be doubted, as, according to his American biographers, he had returned to America and was established at Newport as a portrait-painter in 1773. The revolution however interfered so seriously with his pursuits that in 1775 he proceeded to London, and there he seems for a time to have led a very irregular life, depending for a subsistence as much on his musical skill as on his pencil; and for awhile he officiated as organist at a church in Foster-lane, City. About 1777 however he was introduced to his countryman Benjamin West, who received him into his studio as a pupil and assistant, and under him he made rapid progress. In 1781 he commenced practice in London on his own account, and found numerous and liberal patrons; his broad effective style gaining very general favour, and Reynolds and other leading English artists assisting him with the most friendly liberality. Among his more eminent sitters during his residence in London were, George III., the Prince of Wales (afterwards George IV.), John Kemble, Sir Joshua Reynolds, Benjamin West, Woollett the engraver, Alderman Boydell, and other distinguished artists and patrons of art. But he had always been of intemperate habits, and though he curbed them for awhile, as he became prosperous he slackened the reins, and eventually he was obliged to leave London. He removed first to Dublin, where his convivial habits found ample encouragement; and then to Paris. In the French metropolis his American parentage attracted many leading politicians to his studio: while here he painted a portrait of Louis XVI.

In 1793 he returned to New York, and his European reputation having preceded him, he became at once the leading portrait-painter of that city. But, ambitious of painting Washington, he in the following year removed to Philadelphia, and there painted what is acknowledged to be the standard portrait of the greatest of Americans. On the removal of the seat of government to Washington, Stuart removed there; but in 1806 or 1807 he settled in Boston, where he continued to reside till his death, which occurred in July 1828. He left a widow and daughters, for whose benefit about 300 of his paintings were collected and exhibited at the Boston Athenæum. Stuart painted a large proportion of the most eminent of his countrymen, including Washington, Jefferson, and four other American presidents. His last work was a portrait of John Quincy Adams. His original portrait of Washington is in the Boston Athenæum. Our National Gallery possesses three portraits by him—Benjamin West, and the engravers William Woollett and John Hall. Stuart is the greatest portrait-painter America has yet produced, and in male portraits he ranks along with the best English portrait-painters. His style is free, manly, and unaffected; his likenesses were regarded as faithful by those familiar with his sitters; and the expression of his heads is intellectual and characteristic.

STUART, JAMES, frequently distinguished by the name of Athenian Stuart, was born in Creed-lane, Ludgate-street, London, in 1713, of parents in a very humble rank of life, and by the death of his father he was left at a very early age the eldest of a family reduced by that event almost to indigence. Beyond this no particulars are known relative to the intervening period before he could at all have contributed to the support of the family by his pencil. In the absence of evidence to the contrary, it may safely be assumed that his education must have been a very slender one; and that in all probability he had received very little instruction, if any, in drawing, when the talent he showed for it recommended him to Goupy, who kept a shop in the Strand, and who employed him to design and paint ladies' fans—a branch of art at that time greatly in vogue, and more encouraged than any higher kind of painting. Such was the school in which the future investigator of Athens and its monuments was trained. Fortunately, Goupy himself was an artist of some ability, both as an engraver and painter in body colours, and, being acquainted with the works of the best masters, his instructions were no doubt advantageous to Stuart. He continued with Goupy till about 1742, when he set out for Italy, for the purpose of improving himself. Little more is known of him during his residence in Italy than that, after staying at Rome nearly seven years, industriously occupied in

painting, he embraced the offer made to him by his friend Revett and Gavin Hamilton of joining them in an excursion to Greece; though Hamilton, who was probably the originator of the scheme, afterwards declined accompanying them.

Revett (Nicholas, second son of John Revett, of Brandeston Hall, Suffolk) may be supposed to have been better qualified by education for an undertaking which required some knowledge of antiquity, whereas Stuart may be thought to have been very ill prepared. He had however, during his long residence at Rome, applied himself so diligently to the study both of the classical tongues and of archaeology, at the College della Propaganda, as to be able to give proof of his proficiency in a Latin dissertation, '*De Obelisco Cæsaris Augusti Campo Martis nuperimmo effosso*,' dedicated to Viscount Malton, and printed in 1750, at the pope's expense. Whether either himself or his companion had paid particular attention to architecture is doubtful, or rather the probability is that they were acquainted with it merely as a collateral branch of art. At all events it is not a little remarkable that it should have been reserved for two painters to show the world what Grecian architecture was, and thereby lead to a complete revolution in architectural taste. Having previously issued a prospectus of their undertaking, and raised funds for their tour by subscriptions received from England, the travellers quitted Rome in March 1750; and after passing some time at Venice, made an excursion to Pola in the following July, where they employed themselves three months in making drawings of the amphitheatre, &c., which however formed no part of their original work, and remained unpublished till 1816, when they first appeared in a fourth or supplementary volume, edited by Mr. Joseph Woods. In March 1751 they reached Athens, where they remained till about the end of 1753; and while there Stuart met with Mr. Dawkins, a lover of ancient art, the companion and patron of Wood (author of '*Ruins of Palmyra*'), and who afterwards proved a most liberal patron to Stuart also on his return to England, affording him both encouragement and assistance in preparing his materials for publication. Dawkins himself however did not live to see the '*Antiquities of Athens*' in a published form, for he died about two years before the work was brought out.

Stuart and his companion returned to England in the beginning of 1755; but it was not until several years afterwards (1762) that the first volume of the '*Antiquities*' was published. Stuart appears to have had by far the greater share in the labour, and the literary part is ascribed entirely to him. The work was well received by the learned, and by artists, notwithstanding that, owing to the delay in bringing it out, the subject had been forestalled by Leroi's '*Ruines*,' &c. [LEROI.] The greater care bestowed upon the English work gave it however a permanent architectural value, while the rival one has fallen into disrepute as untrustworthy, and, though by a professional architect, as being more pictorial than antiquarian. Perhaps it was rather an advantage to Stuart, that in examining Grecian architecture he was unbiassed by any previous professional prejudices, and had nothing to unlearn. Still it was not every one who was satisfied with the first portion of the '*Antiquities*;' for Winckelmann has spoken of it very disparagingly in a letter to Fuessli, where he hints that it had disappointed many persons both in England and elsewhere. Its success however admits of no dispute. There was considerable encouragement afforded just then to such studies; and it was about the same time that Adam published his work on Diocletian's Palace [ADAM], while Wood's '*Ruins of Palmyra*' and '*Ruins of Baalbec*' had appeared a few years previously, and the '*Ionian Antiquities*' somewhat later.

The patronage and encouragement which Stuart received did not cause him to prosecute the continuation of his work very diligently, for the second volume was not entirely completed, and the third only in progress, at the time of his death. Neither was he very eager to avail himself to the extent he might have done of the opportunities afforded him as a practising architect. His patrons, the Marquis of Rockingham, Lord Anson, &c., had aided him so effectually (the latter bestowing on him the appointment of Greenwich Hospital), that he was now in easy circumstances, and willingly relaxed from that continued exertion which prudence no longer imposed upon him as a duty. His employment as an architect was consequently by no means equal to what his celebrity would have obtained for him. His principal work is the chapel of Greenwich Hospital, as rebuilt by him, after being destroyed by fire; but although beautiful as regards the details, and the individual decorations borrowed from Grecian architecture, it is, if considered as a whole, very far from Grecian in character. For Lord Anson he built a mansion in St. James's-square, and also several ornamental structures, in imitation of antique models, in the grounds of that nobleman's seat at Shuckburgh. He also erected Mrs. Montagu's house, Portman-square, and some other private mansions, but none of any particular note for their architecture.

Stuart was twice married. When he had reached the mature age of sixty-seven, he took for his second wife a very young woman, by whom he had five children: among them a son, who entered the navy, and died in 1800. Another boy, who is said to have exhibited an extraordinary talent for drawing, was carried off by the small-pox not very long before his father's death, which occurred on the 2nd of February 1788. Another son, born (April 13, 1788) two months after his father's death, entered the navy and attained the rank of lieutenant,

and is still living (1857). The second volume of the '*Antiquities*' was edited by Newton in 1790, and the third by Beverley in 1794.

Between Stuart and his colleague Revett some differences appear to have taken place relative to the management of their joint publication, which were arranged by Stuart purchasing Revett's share in it and such materials as he had provided towards the completion. Having got rid of that engagement, Revett undertook a second antiquarian expedition at the expense of the Dilettanti Society, for the purpose of exploring the remains of ancient architecture in Ionia. The result of this tour, which occupied him about two years in company with Dr. Chandler, was the '*Ionian Antiquities*,' the first volume of which was published in 1769. Like Stuart, he afterwards practised as an architect, was employed by Lord le Despencer at West Wycombe, and erected the church at Ayot, St. Lawrence, Herts, but was so far from realising an independence that he died in very straitened circumstances in 1804, at the age of eighty-two.

STUBBS, HENRY, was a remarkable example of temporary celebrity followed by nearly complete neglect and oblivion, the consequence of great natural talents and acquired knowledge not being matched with a sufficiency of judgment, and of there chancing to be little or nothing in a considerable mass of literary produce which has not been superseded by later works or by the progress of discovery. He was the son of a clergyman, and was born at Partney, near Spilsby in Lincolnshire, 28th February 1631. He spent his early boyhood in Ireland, whither his father had transferred himself and his family on adopting the doctrines of the Baptists; but after his death the breaking out of the rebellion in 1641 drove the widow and her son back to England, upon which young Stubbs was put to Westminster school, then presided over by Busby, with whom he became a great favourite. In 1649 he was elected a student of Christchurch, Oxford; where, although he made himself many enemies by his conceit and arrogance, he is said to have prosecuted his classical studies with such success, that while still an undergraduate he used to discourse in the public schools in very fluent Greek. He had before going to the university attracted the notice of Sir Harry Vane, from whom he received much substantial kindness; and this connection naturally attached him to the parliamentary cause—for which however he used to declare in after-life that he never had any real affection. But for a considerable time he exerted himself with much seeming zeal on that side in various ways. After he had taken his degree of B.A. he went to Scotland in 1653, and served a couple of years in the army there; and then, having, on returning to Oxford, and taking his master's degree, been made under-librarian of the Bodleian, he got himself turned out after about two years, both from that office and his studentship, by a succession of violent pamphlets which he published against the existing condition of both church and state, under the titles of '*A Vindication of Sir Harry Vane*;' '*An Essay on the Good Old Cause*;' and '*Light Shining out of Darkness*,' with an Apology for the Quakers. Upon this catastrophe he betook himself to Stratford-on-Avon, and there practised as a physician till the Restoration, when he presented himself to receive confirmation at the hands of his diocesan, and in 1661 was sent out to Jamaica with the title of his majesty's physician for that island; but, finding the climate not to agree with him, he soon returned and re-established himself at Stratford, from which, after some time, he removed to Warwick, where he continued to reside till he met with his death, by being drowned in attempting to make his way across a river between Bath and Bristol, on the 12th of July 1676. Stubbs, who seems to have had no principle, began to write against his old political friends and his former political opinions as soon as the king returned; but his only writings after the Restoration that are now remembered are his attacks upon the Royal Society, the principal of which is his answer to Sprat and Glanville, entitled '*Legends no History, or a Specimen of some Animadversions upon the History of the Royal Society*;' together with the Plus Ultra of Mr. Glanville reduced to a Non Plus, 4to, 1670. But here too he wasted his powers in a cause with which posterity has not sympathised. Anthony Wood, who was his contemporary at Oxford, has drawn his character graphically enough. He was, Wood says, "the most noted Latinist and Grecian of his age; was a singular mathematician, and thoroughly read in all political matters, councils, ecclesiastical and profane histories: had a voluble tongue, and seldom hesitated either in public disputes or common discourse; had a voice big and magisterial, and a mind equal to it; was of an high generous nature, scorned money and riches, and the adorers of them; was accounted a very good physician, and excellent in the things belonging to that profession, as botany, anatomy, and chemistry." Stubbs, with all his vast memory for words and facts, was plainly destitute of the faculty of distinguishing, in any complexity, right from wrong, or truth from falsehood. Wood admits that he altogether wanted even common discretion.

STUBBS, GEORGE, an eminent animal painter and anatomist, was born at Liverpool in 1724, and settled in London. He excelled especially in the portraits of horses. Fuseli observes, with considerable truth, though as his wont, whether for praise or censure, in too broad and unqualified a vein, "That his skill in comparative anatomy never suggested to him the propriety of style in forms, if it were not eminently proved by his Phaëton with the Horses of the Sun, would be evident from all his other figures, which, when human, are seldom

more than the attendants on some animal; while the style of the animals themselves depended entirely on the individual before him: his tiger, for grandeur, has never been equalled; his lions are, to those of Rubens, what jackals are to lions; but none ever did greater justice to that artificial animal, the race-courser."

Stubbs completed in 1766 his work 'On the Anatomy of the Horse,' in eighteen tables from nature; and before his death three numbers of another work (which was to have consisted of six), under the title of 'A Comparative Anatomical Exposition of the Structure of the Human Body with that of a Tiger and a common Fowl,' in thirty tables.

There are two pictures by this artist in the Grosvenor Gallery, the property of the Marquis of Westminster: one of them represents Portraits of Brood-Mares in a Landscape; the other, the Grosvenor Hunt. The scene is near Eton Hall, in which portraits of the late Earl Grosvenor, of his brother, and others are introduced. These pictures, which are very clever, are considered the best works of this artist.

STUERBOUT, DIERICK, commonly called DIRK VAN HAARLEM, was born at Haarlem, in the early part of the 15th century. He is perhaps the oldest of the Dutch painters, and one of the best of the early masters. The two large works by him in the royal collection at the Hague are wonderful works for their time, and, independent of their age, are two of the most interesting pictures in the European collections. They were at one time attributed to Memling, whose works they somewhat resemble; their history however is now well known, as they and their master are mentioned in some manuscript Annals and Antiquities of Louvain discovered by M. de Bast. The pictures were preserved at Louvain until 1827. These pictures are called, in the catalogue of the gallery of the King of Holland, the first and second pictures of the Emperor Otho and the Empress Mary. Their subject is from a story of the old chronicles of Louvain, called the Golden Legend; the event took place in 985. The Emperor Otho III., on his return from a journey to Rome, condemned at Modena one of his courtiers, an Italian count, to death, in consequence of an accusation from the empress (which was false), that he had attempted her honour. The count was beheaded, but immediately afterwards his widow, with his head on one arm and a red-hot iron which she holds with impunity in her other hand (an infallible proof of her husband's innocence), on her knees supplicates the emperor for justice. The emperor, being convinced by the fire ordeal of the count's innocence, orders the empress to be burnt at the stake. From this tradition Stuerbout painted two pictures for the Town-hall of Louvain in 1468, on wood, each 117 inches French, by 66; the figures are about the size of life. In the first picture the emperor is listening to the false accusation of the empress, and the count is being led out in his shirt to execution; the actual beheading is represented in the distance. In the second picture the widow is kneeling before the emperor with the head of her husband and the red-hot iron in her hand, and in the distance of this piece the empress is being burnt at the stake; in both pictures are various attendants. The execution is in the style of the Van Eyck school, and is extremely elaborate, especially in the second piece, which is superior to the first.

These pictures were fixed on the wainscoting of the Justice-hall at Louvain, and by each was a panel containing an explanation of the subjects in the Flemish language, and in gold Gothic letters. They were very dirty, and fast approaching decay, when in 1827 they were purchased for a small sum by the late King of Holland, who presented them to the present king, then Prince of Orange. They were removed to and restored at Brussels, and were in the collection of the Prince of Orange there, until 1841, when they were placed in their present locality at the Hague.

In the above-mentioned manuscript, 'Annales et Antiquités de Louvain,' it is stated that Dierick Stuerbout painted these two pictures for the Council-hall in 1468, and that he was paid for them 230 crowns. In the same manuscript it is stated that Stuerbout was on the 20th of May of the same year commissioned to paint a picture 26 feet long by 12 high, and another of the Last Judgment 6 feet high and 4 wide, both for the sum of 500 crowns. Van Mander mentions a picture by Dirk Van Haarlem which he saw at Leyden; in the centre was the head of Christ, and on two side-wings the heads of St. Peter and St. Paul. It was inscribed as follows in gold letters in Latin—"One thousand four hundred and sixty-two years after the birth of Christ, Dirk, who was born at Haarlem, made me at Louvain. Eternal peace abide with him." From this inscription it is evident that the Dirk of Louvain mentioned by Guicciardini in his 'Description de tous les Pays-Bas,' Antwerp, 1568, is the same as Dirk Van Haarlem, though that writer mentions them as two painters. Vasari mentions Diric da Lovanio. Stuerbout must have resided some time at Louvain. He was also from his style probably a pupil of John Van Eyck, or some of his scholars. These two great pictures prove that Stuerbout was a much better painter than many of the most celebrated of his followers; his figures are decidedly better, though too long in their proportions, his forms fuller and better modelled, and his heads are executed with less rigidity and sharpness of feature. M. Nieuwenhuys and others give 1410 and 1470 as the respective dates of Stuerbout's birth and death, but how the information is acquired is not stated; Van Mander, whose book was published in 1604, was not acquainted with either. They appear to have

originated with Otley, who makes some conjectures on the matter in his 'Early History of Engraving.'

STUKELEY, THE REV. WILLIAM, M.D., was descended from an ancient Lincolnshire family, and was born at Holbeach in that county, on the 7th November 1687. From the grammar-school of his native town he went to Bennet College, Cambridge, in 1703. At this time natural science as connected with the profession for which he was intended, seems to have been his favourite pursuit; and the chief assistant of his studies was Stephen Hales, afterwards celebrated for his physical investigations and discoveries, who was a member of the same college. Hales and he, we are told, were wont to ramble over Gogmagog Hills and the bogs of Cherry Hunt Moor, gathering simples; Stukeley, who was a ready draughtsman, having added a map of the country to Ray's Latin Catalogue of the Plants growing around Cambridge, which they used to take with them as their guide. The two friends also applied themselves together to anatomy and chemistry, and performed many curious dissections and experiments. ('Account of Hales,' drawn up from materials furnished by Peter Collinson, F.R.S., in 'Annual Register' for 1765.)

Having taken his degree of M.B. in 1709, Stukeley afterwards repaired to London, where he attended St. Thomas's Hospital as a pupil of Dr. Mead; and then he settled as a medical practitioner at Boston, in his native county. In 1717 he removed to London; in 1719 he took his degree of M.D.; in 1720 he was admitted a Fellow of the College of Physicians; but although he appears to have continued to rise in his profession, he left the metropolis in 1726, and, returning once more to Lincolnshire, fixed himself at Grantham. Here he soon acquired great reputation. His health however had been for some years giving way, and in 1729, on the persuasion, it is said of Archbishop Wake, he relinquished medicine and took orders. The same year he was presented by Lord Chancellor King to the living of All Saints, in Stamford; and some time after, having become chaplain to the Duke of Ancaster, he received from his Grace, in 1739, the living of Somerby, near Grantham, which he seems to have held along with his Stamford preferment. But in 1747 he was presented to the rectory of St. George the Martyr, in Queen Square, London, by the Duke of Montague, with whom he had become acquainted some years before, when they were brought together as founders of the Egyptian Society; and this brought him once more up to the metropolis, which, or Kentish Town, in the immediate neighbourhood, continued to be his residence for the rest of his life. He died in the rectory-house, on the 3rd of March 1765, from a stroke of palsy with which he had been attacked a few days before.

The taste for antiquarian research showed itself in Stukeley at an early age, and occupied much of his leisure even when his chief attention was given to other studies. It is only as a writer on British antiquities that he is now remembered. His only medical publication is a tract entitled 'A Dissertation on the Spleen,' which appeared in 1723, and is said to have been well received. But even before this he had published his first antiquarian work, 'An Account of a Roman Temple (the celebrated Arthur's Oven) and other Antiquities near Graham's Dike in Scotland,' 4to, London, 1720. This was followed by his 'Itinerarium Curiosum, or an Account of the Antiquities and Remarkable Curiosities in Nature or Art observed in Travels through Great Britain,' illustrated with copper-plates, fol., 1724. A second volume, or 'Centuria,' as it is designated, was added to this work from the papers and drawings he left at his death ready for the press; and was given to the world, along with a reprint of the former volume, in 1776. It is of all Stukeley's works the one that is now most sought after. His next publications were his two works on the great druidical or supposed druidical remains in the West of England—the first, entitled 'Stonehenge and Abury, two Temples restored to the British Druids,' fol., 1740; the second, 'Abury, a Temple of the British Druids,' fol., 1743. A new edition of these two works was published at London, in 2 vols, fol., in 1838. In 1743 also appeared his 'Paleographia Britannica,' 4to. He produced nothing more except some communications to the 'Archæologia' and the 'Philosophical Transactions,' till in 1757, he printed, in a separate tract, his account, with extracts, of the work of Richard of Cirencester, 'De Situ Britannia,' sent to him as having been recently discovered at Copenhagen, by J. C. Bertram [RICHARD OF CIRENCETER]; but a more extended account of this work is given in the second or posthumous Centuria of his 'Itinerarium Curiosum,' already noticed. In 1759 appeared, in a quarto volume, one of his most remarkable works, entitled 'Some Account of the Medallist History of Marcus Aurelius Valerius Carausius, Emperor of Britain.' "I have used his materials," says Gibbon, in one of his notes, referring to this work, "and rejected most of his fanciful conjectures." No antiquarian ever had so lively, not to say licentious a fancy as Stukeley; the idea of the obscure remote past inflamed him like a passion; most even of his descriptions are rather visions than sober relations of what would be perceived by an ordinary eye; and never before or since were such broad or continuous webs of speculation woven out of little more than moonshine. He possessed however a great deal of real ingenuity as well as learning; and all his works contain many things that are both curious and valuable, some of them much that would by this time have been irrecoverably lost but for his record of it, although few, if any of either his theories or his histories are to be received throughout with implicit faith. His only

theological work, we believe, was a collection of Sermons, published in 1760, under the title of 'Palaeographia Sacra,' principally occupied with the natural history and botany of the ancient world. As a man, Stukeley appears to have been distinguished by a very placid and amiable disposition.

STURGEON, WILLIAM, distinguished as an electrician, was born at Whittington, in the county of Lancaster, in 1783. His parents were in humble circumstances, and he was at first apprenticed to a shoemaker; he subsequently entered the militia, and afterwards the Royal Artillery as a private soldier. It was whilst thus engaged that his taste for scientific pursuits commenced, and he employed his leisure hours in making experiments more especially in electricity. He appreciated the discoveries of Oersted, Faraday, Arago, and Ampère, in the newly-created sciences of magneto-electricity and electro-magnetism, and was soon enabled to suggest a modification of Ampère's rotatory cylinders. In 1824 he began to publish the result of his researches, and in that year four papers by him on electricity were printed in the 'Philosophical Magazine.' In 1825 he presented a paper to the Society of Arts which was published in their 'Transactions,' describing a complete set of electro-magnetic apparatus of a novel kind. This apparatus was remarkable for attaining a larger amount of power in a smaller bulk than had been hitherto attained by any other arrangement. For this invention he obtained the large silver medal of the Society of Arts and a purse of thirty guineas.

Soon after the invention of the electro-magnetic machine, Mr. Sturgeon drew attention to the powerful effects to be obtained from the use of soft iron in the construction of the electro-magnetic apparatus. The soft iron horse-shoe magnet has entered more or less into the construction of all electro-magnetic machines since that time. Mr. Sturgeon subsequently directed his attention to the construction of plates for the various kinds of galvanic batteries. In his 'Experimental researches in Electro-magnetism, Galvanism,' &c., he first drew attention to the superiority of amalgamated plates of rolled zinc over the unprepared cast zinc before generally used. His method of dipping the zinc plates in acid, and afterwards in mercury, is employed to this day in the majority of galvanic machines. He subsequently suggested many modifications in the forms of machines which are now in daily use, and his name is inseparably connected with the mechanical application of the principles that had been worked out by Oersted, Faraday, and Ampère since the beginning of the present century. Mr. Sturgeon for some years occupied the chair of Experimental Philosophy in the Hon. East India Company's Military Academy at Addiscombe. During the latter part of his life he filled the office of Lecturer on Science at the Royal Victoria Gallery of Practical Science at Manchester. He died at Manchester in the month of December 1850.

STURM, CHRISTOPH CHRISTIAN, was born on the 25th of January 1750, at Augsburg. He studied theology at Jena and Halle, and was subsequently appointed preacher at Magdeburg. In 1778 he obtained the offices of pastor at the church of St. Peter, and of Scholarchus, at Hamburg. His sincere piety, his zeal as a religious instructor of the people, and his learning gained for him the love and esteem of his flock. His leading principle was that a preacher should render his knowledge of true religion and morality fruitful in his own actions before attempting to effect the same in others by his instructions; and his whole life, which is marked by scarcely any incidents, was only characterised by the honest endeavour to carry his principle into practice. He died on the 26th of August 1786.

Sturm wrote many religious works, which are more of a practical than of a scientific character. The following are the most important: 'Der Christ in der Einsamkeit,' Halle, 1763; 'Der Christ am Sonntage,' 1764, &c.; 'Unterhaltungen mit Gott in den Morgenstunden auf jeden Tag des Jahres,' 1768, 2 vols. 8vo, and often reprinted; 'Betrachtungen über die Werke Gottes im Reiche der Natur und der Vorsehung auf alle Tage des Jahres,' 1785. This work has been translated into most of the European languages, and also into English by Clarke, under the title of 'Reflections on the Works of God,' &c. The numerous editions of this translation show that the work has been very popular in England. He likewise published a considerable number of sermons, and among them a collection of sermons for children: 'Predigten für Kinder von reiferem Alter,' Leipzig, 2 vols. 8vo, 1774. Sturm also occupies a considerable rank among the writers of sacred poetry, which he published in four collections: 'Gebete und Lieder für Kinder,' 1776; 'Gesangbuch für das reifere Alter,' 1777; 'Lieder für das Herz,' 1787; and 'Gesangbuch für Gartenfreunde,' all of which breathe the purest piety. Many of his sacred songs have been incorporated into the hymn-books which are used in the Protestant churches of Germany.

STURM, JOHN, was born on the 1st of October 1507, at Schleiden in the Eifel, between Treves and Cologne. In 1524 he went to Louvain, where he devoted himself to ancient literature, but after a few years' study he entered into partnership with Rutger Rescius, an eminent Greek scholar, who was forming a printing establishment at Louvain for the printing of Greek authors. The only works that are known to have issued from their press are an edition of Homer, and one of Xenophon's 'Memorabilia Socratica,' which appeared in 1529, 4to. In this year Sturm went to Paris, probably with the intention of forming connections for the sale of his publications. But the very

favourable reception which he met with at Paris, and the new world which here opened to him, determined him not to return to Louvain. He began to occupy himself with teaching, and soon obtained permission to set up a school. Sturm had adopted the Lutheran creed before he left Germany, but took care not to avow it in public. At Paris however it appears to have become known to some persons, and the severe regulations in France against Protestantism at last induced him to go to Strasburg, in which city a gymnasium was just established. The office of rector of the school was offered to Sturm, who entered upon it in 1538. Owing to his exertions and the generous support of the city of Strasburg, this gymnasium soon became one of the most flourishing in all Germany, until, in the year 1566, it was raised to the rank of a university, under the management of Sturm. While he was devoting himself with the utmost zeal to his duties as a teacher and rector, he was no less active in promoting the interests of Protestantism. He was sent on various missions concerning religious matters, and was extremely liberal and kind towards all who suffered for their religious opinions. But he showed nothing of a sectarian spirit, and some of his friends, who were staunch Lutherans, began to suspect him of leaning towards the doctrines of Calvin. They openly attacked him in their sermons, the consequence of which was that he gave up attending them. His silence and perseverance excited their anger and hatred. Various charges were at last brought against him, among which it was alleged that he had not been at church or partaken of the Lord's Supper for twenty years. His enemies at length succeeded, in 1583, in persuading the magistrate of Strasburg, on the pretext of his old age, to deprive him of his office, which was given to Melchior Junius, one of his former pupils. Notwithstanding the honourable appearance of his dismissal, and although he was left in the enjoyment of his former salary, he keenly felt the wrong which was done to him. His strength rapidly declined, and a few years before his death, which took place on the 3rd of March 1589, he lost his sight.

Sturm was one of the most amiable, benevolent, and learned men of the age. He went so far in his liberal support of persecuted Protestants, that he became involved in great pecuniary difficulties; but he was far from being a vehement sectarian. He appreciated the merits of every man, whatever might be his religious opinions, and he was no less esteemed by Roman Catholic prelates, than by the moderate party among the Protestants. As a teacher he was eminently successful. On account of his great knowledge of rhetoric, and his elegant Latin style, he was called the German Cicero. His works, all of which are written in Latin, are very numerous. The following are the most important:—'*De Literarum Ludi recte aperiendis*,' Strasburg, 4to, 1538; '*In Partitiones Ciceronis Oratorias Dialogi Quatuor*,' Strasburg, 8vo, 1539; '*M. Tullii Ciceronis Opera Omnia, editio post Naugerianam et Victorianam emendata à Jo. Sturmio*,' Strasburg, 9 vols. 8vo, 1540, often reprinted with corrections and emendations; '*Prolegomena, hoc est, Præfationes in optimos quosque utriusque Linguae Scriptores*,' Zürich, 8vo, 1565; '*De Universa Ratione Elocutionis Rhetoricæ, Libri Quatuor*,' Strasburg, 8vo, 1576 (this work, which in reality only consists of three books, is a very elaborate and systematic commentary on the rhetorician Hermogenes); '*Anti-Pappi Quatuor*,' Neustadt, 4to, 1580, &c. (this work contains his theological controversies with Pappus, Osiander, and others). His treatises on education have been reprinted in several collections of works on this subject.

STURM, JOHN CHRISTOPHER, a German mathematician and natural philosopher, was born at Hippelstein, in Bavaria, November 3, 1635. His father, who was master of the wardrobe to the elector of Bavaria, having been ruined by the wars, the youth was indebted for the benefits of a good education to the benevolence of Daniel Wulfer, a clergyman of Nuremberg, who placed him at the school in that city, where, during eight years, he was engaged in the study of the ancient languages and such of the sciences as were then taught. Having made considerable progress, young Sturm was sent by his benefactor to the University of Jena, where he took his degrees; and in 1660 he went to study at Leyden. He remained there only one year, and then he returned to Jena, where he qualified himself for the church. He was appointed to the ministry for one of the parishes in the territory of Ettingen, where he continued to perform the duty till 1669, when, through the interest of his friends, he was appointed professor of mathematics in the University of Altdorf, in Franconia. This post he held during thirty-four years, and it is said that he was the first who introduced, in the gymnasia and the common schools of Germany, the practice of giving instructions in the elements of useful science to the children of the working classes.

Sturm had been educated in the philosophy of Aristotle, but in his visit to Holland he became acquainted with that of Descartes; and, after a vain effort to reconcile the principles of the ancient with those of the modern physics, he formed for himself a species of philosophy by selecting whatever, in either, appeared most consonant to nature and reason. This philosophy he endeavoured to introduce into the schools of his country; and though he did not wholly succeed, he contributed much to the general diffusion of a knowledge of the physical sciences in the north of Europe.

He died December 26, 1703, leaving a son, Leonard Christopher Sturm, who became an architect.

The principal works of Sturm are, 'Collegium Experimentale sive Curiosum, in quo primarius hujus seculi Inventa et Experimenta Physico-mathematica An. 1672,' Nürnberg, 2 vols. 4to, 1676; 'Cometarium Hevelii et Petiti Hypotheses,' Altdorf, 4to, 1677; 'Mathesis Enucleata,' 1 vol. 8vo; 'Mathesis Juvenilis,' 2 vols. 8vo, of which the second contains a tract entitled 'Scientia Cosmica, sive Astronomica Spherica, et Theorica Tabulis comprehensa,' Nürnberg, 1684; 'Physicæ Conciliatricis Conamina,' Nürnberg, 1685, being a collection of the principal dissertations before published on the different systems of philosophy. Sturm also published a translation into Latin of the 'Hydraulic Architecture' of Bockler; a German translation of Archimedes; and a collection of letters to Dr. Henry More of Cambridge, on the weight and elasticity of the air. In 1684 he published a second part of the collection of discoveries made up to that time; and editions of both parts, together with the letters to Dr. More, were published in 1701 and 1715; these contain many curious experiments.

STURM, JACQUES CHARLES FRANÇOIS, the discoverer of the celebrated theorem which bears his name, was born at Geneva in September 1803, of a family which had quitted Strasbourg in the middle of the last century. After completing his school education and his classical studies at the college with remarkable success, he became in his fifteenth year a student of the university of his native city, where he made rapid progress in the study of mathematics and philosophy. The sudden death of his father, leaving his mother and four children, of whom Charles was the eldest, without any adequate maintenance, compelled him, before the close of his seventeenth year, to resort to private tuition for the support of himself and his family, and three years afterwards he was recommended as tutor to the son of Madame de Stäel. At the close of the year 1823 he accompanied his pupil to Paris; and though he shortly afterwards returned to Geneva, he found no sufficient occupation there, and he finally resolved, in company with his intimate friend and school-fellow, M. Colladon—the present distinguished professor of physics at Geneva—to seek his fortune in the French metropolis. Sturm had already become favourably known to mathematicians by several articles in the 'Annales des Mathématiques' of M. Gergonne, published at Nîmes, on different branches of analysis and geometry, and the strong recommendations which he and his companion bore with them from Lhuillier, and the kind offices of M. Gerono, an eminent teacher of mathematics at Paris, made them known to Ampère, Fourier, Arago, and other eminent members of the Institute of Sciences, who recommended them to pupils as a means of support. Sturm afterwards obtained employment upon the 'Bulletin Universel,' under Baron de Férussac, and was in fact a subordinate in the office of that journal when he published his theorem. The joint labours of Sturm and his friend were shortly after rewarded by a distinction of no ordinary importance, when the Academy of Sciences of the Institute awarded to them, on June 11th, 1827, the great prize of mathematics proposed for the best essay on the compression of liquids. Their memoir was inserted in the 'Mémoires par divers Savants' ('Savants Étrangers'), vol. v., published, agreeably to the very inconvenient usage of the Academy, eleven years afterwards, in 1838.

The determination of the number of real roots of a numerical equation which are included between given limits, is a problem which had occupied the attention of the greatest analysts of the past age—of Waring, of Lagrange, and more especially of Fourier, who of all other analysts had made the nearest approaches to its practical, though he had failed in its theoretical, solution. The attention of Sturm had been for some time directed to this class of researches, which he pursued with remarkable continuity and diligence, encouraged, as he himself assures us, by the instructions and advice of this eminent master. The result was the discovery of the theorem which will be for ever associated with his name, and which conquered the difficulty that had embarrassed all his predecessors, and thus permanently extended the dominion of analysis.

The memoir which contained this important theorem was presented to the Academy on the 23rd of May 1829, supplementary papers being read at the two following meetings; and rapidly conducted its author to fortune and public honours. His connection with the 'Bulletin Universel' enabled him to give an immediate account of his method to the world ('Bull. Univ. des Sciences Math. Phys. et Chim.', vol. xi. p. 419, art. 271, 272, 273). The paper itself was not published till the year 1835, in the 'Mémoires des Savants Étrangers,' vol. vi., where it appears without a date.

In the course of a few years he was chosen a member of the principal scientific societies of Europe: he was elected a member of the Academy as the successor of Ampère in 1836: in the same year he was made Professor of Mathematics, upon the special recommendation of Arago, at the Collège Rollin, répétiteur at the École Polytechnique in 1838, and in 1840 he was appointed to succeed Poisson in the chair of Mechanics in the same school. In 1840 also, he was elected a foreign member of the Royal Society of London, and received the Copley Medal, "for his valuable mathematical labours in the solution of a problem which has baffled some of the greatest mathematicians that the world has produced." The first announcement of the theorem in the English language was not made until 1835, when Professor J. R. Young, of Belfast, inserted the substance of Sturm's memoir in his

BIOG. DIV. VOL. V.

work entitled 'The General Theory and Solution of Algebraical Equations,' published in that year. The first intimation of it had reached him in the month of May, when his own work was in great part printed, and disregarding a disparaging comment of Lacroix, he thought the discovery of sufficient importance to justify the destruction of many pages of his manuscript prepared for the printer, and the suspension of the work until the volume of the 'Savants Étrangers' should be published. This he received in July, and his own work was published in August. To the appreciation and zeal of this analyst, whose recognition and promulgation of the value of Sturm's labours were thus both immediate and simultaneous, British mathematicians, as well as M. Sturm himself, were greatly indebted. In the preface to his 'Mathematical Dissertations' (one of which is devoted to the theorem) dated November 25, 1840—only five days before the presentation of the Copley medal—he adverts to Sturm's discovery as at that time exciting considerable interest among analysts, as well in this country as on the continent; and he then expresses his own estimation of it in the following terms: "I believe that I have already contributed somewhat to extend the knowledge of this important theorem among British analysts; and although it has been since disparaged and undervalued in certain quarters, I have always entertained the conviction that it must eventually supersede every other method at present known for effecting the complete analysis of a numerical equation." In Professor Young's subsequent introductory volume on 'The Analysis and Solution of Cubic and Biquadratic Equations,' published at the beginning of 1842, he invited the attention of the young analyst to Sturm's method; and the second edition of his former work on equations, entitled 'The Theory and Solution of Algebraical Equations of the Higher Orders,'—which appeared early in the following year, is chiefly devoted to the analysis and developments of that method and the previous theories of Budan and Fourier.

In France it was not without some difficulty that the substantial rewards of his scientific achievements were obtained; he was a foreigner, and naturally placed at a disadvantage in a contest with native competitors. It is right to notice this both for the honour of France and as a proof of the very high reputation which Sturm had attained. The subsequent memoirs of Sturm, whether first presented to the academy or not, were chiefly printed in the journal of M. Liouville. Two of these memoirs, relating to the discussion of differential and partial differential equations, such as present themselves so commonly in the solution of the more important problems of mathematical physics, possessed a merit so extraordinary that M. Liouville—a most competent judge—declared, at a time when he was himself a competitor with Sturm for a place in the Academy, "that impartial posterity would place them by the side of the finest memoirs of Lagrange."

The first of these two memoirs was presented in 1833 to the concours for the great prize of mathematics, to be awarded by the Academy in 1834 for the most important discovery in that science made known within the preceding three years. The academy conferred the prize on Sturm—not for the memoir which he had submitted to the judgment of the commission, but for that which contained his celebrated theorem and which had been presented in 1829. Other memoirs relate to optics, mechanics, pure analysis, and analytical geometry, and embrace the most difficult questions which have been treated in those several branches of science. One of the latest of these was a communication to the academy on the theory of vision, and is remarkable both for the geometrical and analytical elegance with which many questions subsidiary to the theory are treated in it. It confirms generally,—with one important exception relating to the asserted muscularity of the crystalline lens and the changes attributed to its action,—the views of the late Dr. Thomas Young [YOUNG, THOMAS] in his well-known memoir on this subject: Dr. Young himself, it must be remembered, once relinquished his belief in the muscularity of the lens, though he finally resumed it.

Sturm visited England in 1841, and gave the mathematicians with whom he conversed a high impression, as well of the extent of his knowledge as of his inventive power.

The health of M. Sturm, which had previously been remarkably vigorous, began to decline in 1851, probably in consequence of his laborious public employments and the unremitting severity of his studies. He died on the 18th of December 1855, to the deep regret of a large circle of friends and pupils, to whom he appears to have been singularly endeared by the modesty, truthfulness, and simplicity of his character.

STURZ, HELFRICH PETER, born Feb. 16th, 1740, at Darmstadt, was, although in a subordinate class of literature, a first-rate writer, and almost the first who distinguished himself by an elegant and graceful prose style in German, and by his playful humour. After filling the post of private secretary, first to Baron von Widmann at Munich, and next to the chancellor Von Eyben at Glückstadt, he went, in 1762, to Copenhagen, where he resided some time in a similar capacity with the minister Bernstorff, who obtained for him appointments of very considerable value. In 1768 he was made Danish 'Legationsrath,' and visited France and England in the suite of Christian VII. From this journey originated his 'Briefe eines Reisenden,' which contain many interesting details, and various anecdotes relative to the eminent literary characters and others to whom

3 F

he had been introduced. At this period, while enjoying the present, he could look forward to still brighter prospects for the future; but the scene suddenly changed. Implicated in Struensee's fall, he was arrested in January 1772, just as he was on the eve of being married, and although released within about four months, so great was the shock he experienced, that he never completely recovered from it, for it continued more or less to affect both his mind and his body during the rest of his life. His circumstances too were greatly changed by that event; and although he obtained an appointment which afforded him a sufficiency, it was in a small town in the duchy of Oldenburg, where he was completely removed from that polished and intellectual society which he had enjoyed in the capital. He had pined in this sort of banishment several years, when letters reached him from Copenhagen announcing the most flattering prospects, but such was the effect the unexpected intelligence had upon him, that he survived it only two or three days, being suddenly carried off by fever on the 12th of November 1779. Besides the work above mentioned, and his 'Reminiscences of Bernstorff,' he wrote a number of literary papers on miscellaneous subjects, which he had begun to collect and publish just before his death.

SUA'REZ, FRANCIS, eldest son of Gaspar Suarez of Toledo, and of Antonia Vasquez of Utiel, was born at Granada, where his father practised as an advocate, on the 5th of January 1548. After receiving a good elementary education, he was sent to Salamanca to study law in 1562. The members of the Society of Jesuits, founded about twenty years before, were at this time labouring to extend the ramifications of their order with the full force of the enthusiasm which gave it birth. John Ramirez, as Suarez asserted in after-life, induced no less than five hundred students of Salamanca to devote themselves to a religious life by the fervour of his preaching on Quadragesima Sunday in 1564. Suarez himself was among the number. He experienced considerable difficulty before he could induce the superiors of the order to admit him to probation; and even after John Suarez, the provincial-general, had resolved to receive him, on account of his possessing qualifications which appeared capable of being turned to account, remonstrances were offered against this determination by more than one member of the Society. During the period of his novitiate Suarez eminently distinguished himself by that obedience and humility, which it was one of the great objects of the founders of the order to impress upon their disciples. Before the probationary two years were completed, he was made to begin his philosophical studies. In these he made little progress, and earnestly begged of his superiors to allow him to desist from studies for which he was convinced he had no capacity. A more favourable opinion of his talents continued notwithstanding to gain ground among the order, and Martin Gutierrez, then in high estimation among his brethren, was wont to say, pointing to Suarez, "God intends, through the instrumentality of that brother, to magnify the church, and do honour to the Society." Deferring in this, as in everything, to the directions of his superiors, Suarez toiled through the usual course of philosophical study, but apparently with indifferent success; for when advanced to the theological classes, in which he took more pleasure, he found his progress obstructed by his deficiency in the preparatory branches of instruction, and he now laboured to make up his deficiencies. With this view he compiled for himself a system of metaphysics, the same which, published at a later period, with a very few finishing touches, elicited much applause. Having completed this task, he devoted the whole of his private hours to self-tuition in the science of casuistry. Having taken his vows at the usual time, Suarez was immediately employed in the educational department. He taught philosophy for a short time at Segovia, and next theology, for several years, at Valladolid. In 1580 he was called to Rome, and lectured on theology there, in the College of the Society, with great applause for eight years. The climate of Rome affecting his health, he obtained leave to return to his native country in 1588, where he was appointed professor of theology in the University of Alcalá, a situation which he held till 1596. On quitting Alcalá he lectured for a year at Salamanca. The University of Coimbra in Portugal had, in the meantime, by repeated solicitations obtained of Philip II. that Suarez should be appointed its principal professor of divinity. On his way thither Suarez received the degree of Doctor in theology from the University of Evora. He arrived at Coimbra in 1597, and spent there the remaining twenty years of his life. His lucid arrangement, extraordinary memory, and fervid eloquence, rendered his lectures eminently popular. But the manner in which his contemporaries speak of him is calculated to leave an impression that his striking personal character had quite as great an influence in raising him to fame as his intellectual powers. He shunned applause; he was indefatigable in his endeavours to render himself serviceable to others; he was guarded in his language, even when expressing himself under strong excitement; he was abstinent, both in regard to meat and drink; and the same enthusiasm which impelled him "to take the order by storm," continued to show itself unabated to the last, in his eager discharge of devotional offices.

Of all his works, that which attracted most attention in this country was, as might have been expected, the controversial treatise called forth by the defence of the oath of fidelity published by James I., 'Defensio Fidei Catholicæ et Apostolicæ adversus Anglicanæ Sectæ

Errores, cum Responsione ad Apologiam pro Juramento Fidelitatis et Prefationem Monitoriam Serenissimi Jacobi, Angliæ Regis.' It appeared at Coimbra in 1613. It is the work of an enthusiastic recluse, who, deeply convinced of the truth of his principles, and accustomed to teach them as abstractions to youth, not to attempt to practise them amid the hindrances of real life, pursues them out to all their consequences with a bold and severe logic. The language is decorous, but the conclusions are stated without reserve or softening, and at the conclusion of each chapter an exhortation is addressed to King James, begging him to acknowledge their truth, and submit to them in practice. The king replied by having the book condemned to be burnt in London. By order of the Parliament of Paris, it suffered the same fate in that capital in 1614. It was not such a work as political leaders in the court of Rome would have ventured to put forth; but it was such a one as they rejoiced to see put forth by their abstract thinkers, for whom they could apologise to sovereigns as well-meaning men, but ignorant of the world, and therefore not worth minding, at the same time that they reckoned, and not without cause, upon the effects to be produced by the single-minded expression of a sincere enthusiast. With Suarez however it was perfect earnestness and conscientious conviction. When informed of the treatment experienced by his book, he expressed the enthusiastic wish that his body had enjoyed the privilege of bearing testimony to his faith by suffering the same fate; and he was in truth the stuff of which martyrs are made. His systematic works were after his death collected and published under the auspices of the Society in twenty-four volumes. The most important are:—four volumes on the chief end of man, in which he treats of the will, good and evil, virtue and vice, and sins; a volume on laws, and God viewed in his capacity of legislator; four volumes on grace, viz. on justification and the necessity of grace, on actual grace and the means of grace, on habitual grace and its effects, on the true meaning of efficacious means of grace, &c.; two volumes of metaphysics, and one of commentaries on different works of Aristotle. The chief merits of the writings of Suarez are order and precision. His system is a modification of Molinism, with a view to obviate some of the objections urged against it by the strict adherents to the views of St. Augustine. The controversy between the Jesuits and the sectaries of that father, like that between the Arminians and Calvinists in the Reformed Church, is parallel to the controversy between necessitarians and those who maintain the freedom of human action. The qualities of mind elicited in theological controversy are acuteness and logical neatness. These are to be found in Suarez, nor is there anything in his writings to warrant the opinion that he possessed higher intellectual attributes. He was something more than a mere logician and verbal critic; but his greatness consisted in his elevation of sentiment, impassioned temperament, and energetic will. Suarez died at Lisbon, whither he had gone to make arrangements for the publication of his volumes on Grace, on the 25th of September 1615.

(*Life*, prefixed to the edition of Suarez's *Works*, published at Venice in 1740; *Bibliotheca Nova Scriptorum Hispanorum*, v. 'Franciscus Suarez')

SUBLEYRAS, PIERRE, a distinguished French painter, was born at Uzeu in 1699. His father, who was also a painter, was his first instructor, but at the age of fifteen he took his son to Toulouse and placed him with Antoine Rivalz, a painter of reputation in that part of France. In 1724 he went to Paris, and two years afterwards obtained the grand prize for painting given by the French Academy for a picture of the Brazen Serpent. He was accordingly sent in 1728 to Rome, with a pension from the then government, and he continued there the remainder of his life, and acquired a great reputation. In 1739 he married a Roman lady, Maria Felice Tibaldi, a distinguished miniature painter, and they were both a short time afterwards elected members of the academy of St. Luke. Subleyras was patronised by the popes Clement XII. and Benedict XIV., by several cardinals, and many of the Roman nobility. He painted Benedict's portrait, and was commanded by that pope to execute one of the altarpieces for St. Peter's, to be worked in mosaic. The picture representing St. Basil celebrating mass before the Emperor Valens, who is seized with a fainting fit, was finished in 1745, and after being exposed in St. Peter's for three weeks, was removed to the mosaic offices, and completed in mosaic before the death of Subleyras. He died at Rome of pulmonary consumption May 28, 1749, aged fifty.

There are several fine pictures by Subleyras in Rome and in some other cities of Italy, and a few in France; there are eight in the Louvre. His execution was delicate, but he composed well, and was an agreeable colourist. He etched a few plates; among them three of the pictures which are in the Louvre—the Brazen Serpent, Mary Magdalen at the feet of Christ, and St. Bruno restoring an infant to life. There is also a Holy Family by him.

SUCHET, LOUIS GABRIEL, Duke of Albuféra and Marshal of France, was a native of Lyon, where his father was a silk manufacturer. The year of his birth is stated by some authorities to have been 1770, by others 1772. On the breaking out of the French Revolution, he entered as a volunteer in the cavalry of the national guard of Lyon; shortly afterwards, he became captain of a volunteer company raised in the department of l'Ardèche, which he commanded during four months, when he was raised to the grade of "chef de bataillon" in

the troops of the above-named department. In this capacity, it is stated, he was compelled to be the active witness of many atrocities, committed in the name of the law by the deputy of the convention, Maignet. He was present at the siege of Toulon in 1793; from thence he was transferred to the army of Italy, and was attached to the brigade under the command of General Laharpe. In this campaign he specially distinguished himself at the combat of Loano (23rd of November 1795), where he captured three Austrian standards. He afterwards served with distinction in the same campaign under the Generals Augereau and Masséna, and received several wounds. He was selected by Masséna to present to Bonaparte the standards which had been captured during the year 1797 by the brigade in which was his battalion. It was on the field of battle at Neumark (2nd of April 1797) that he was raised to the rank of "chef de brigade." He afterwards joined the army in Switzerland, where he was instrumental to the conclusion of a treaty with the cantons of Berne and Fribourg. This treaty did not prevent the war being soon after rekindled in Switzerland, and in it Suchet displayed considerable skill; it was there that he first gave proof of his talents as a tactician, which afterwards raised him so high in the estimation of Bonaparte. The important part he acted in this campaign was recognised by his chief, who deputed him to Paris to present to the Directory twenty-three standards taken from the enemy.

When the expedition to Egypt was determined upon, it was originally intended that Suchet should be included among the military commanders selected to act under Bonaparte; the disordered state however of discipline which prevailed in the army of Italy, and the representations of General Brune, who commanded it, caused him to be retained there with the rank of Major-General of Brigade. In his new command he made many strenuous endeavours to renew the ancient discipline and to ameliorate the condition of the soldier; these endeavours were construed by the suspicious government at Paris into an attempt to introduce into the army an aristocratic rule. His recall was decided upon, in opposition to the strong remonstrances made on the subject by General Joubert, who was among the most popular and successful of the republican generals of that period. On his arrival at Paris, he succeeded in clearing himself of the charges which had been brought against him, and he was transferred to a command in the army of the Danube. He there rendered himself conspicuous by the able manner in which he seconded the skilful manoeuvres of General Masséna in the Grisons. The successes which attended the French arms in Switzerland were counterbalanced by the disasters of General Schérer in Italy; these disasters necessitated the appointment of a more daring and vigorous commander, and Joubert was again intrusted with the chief command. On this occasion Suchet was recalled from the army of the Danube, and placed at the head of Joubert's staff. The campaign which ensued added greatly to his military reputation; the careful avoidance of error in his movements and manoeuvres, the skilful disposition of his troops, whether acting independently or in conjunction with the main army, as they procured him important successes, soon attracted the notice of Bonaparte when he joined the Italian army, and he was appointed by him second in command to Masséna. In this capacity he particularly distinguished himself in the actions at San Bartolomeo and the bridge of Cezio (7th and 8th of May 1800). With a body of 8000 men, advantageously posted, he checked the advance of General Mélas, who had five times his numbers, and for a long time harassed his army, whose retreat he had cut off; he thus afforded a powerful co-operation to the main army of the French, which, under the command of Bonaparte, was at that time crossing the Great St. Bernard. General Suchet, after these operations, rejoined Masséna on the plains of Alessandria, and was present at the battle of Marengo. When, in consequence of this decisive battle, the city of Genoa again fell into the hands of the French, the government of it was given to Suchet. At the conclusion of the armistice of six months, which had been concluded between the French and Austrians, the command of the centre of the army of Italy was confided to him. In this command he was enabled to extricate General Dupont, so unfortunately known by his subsequent disasters at Baylen, in Spain, from a position of considerable danger, and, in conjunction with him, obtained a signal success over the Austrians, under General Bellegarde, at Pozzolo, in which action 4000 prisoners were made.

During the peace which was concluded in 1801 at Luneville between the Empire and France, General Suchet was employed in inspecting the troops stationed on the south and west frontiers; he was afterwards actively engaged in the superintendence of military works, and finally promoted to the governorship of the castle of Lacken, near Brussels, having been previously named member of the Legion of Honour.

On the opening of the campaign of 1805, Suchet was attached to the division of the army under the command of Marshal Lannes. At the memorable battle of Austerlitz, he commanded the left wing of that division, and greatly distinguished himself by a manoeuvre as daring as it was skilful. The following year, a few days previous to the battle of Jena (14th of October, 1806), he obtained at the head of his division, some important advantages over Prince Frederick Louis of Prussia, who commanded the advanced guard of the main army of the Prussians, at Graffenthal; in this engagement he captured thirty pieces

of artillery; among the killed was the young and gallant Prince of Prussia. To this movement of Suchet Napoleon was indebted for the opportunity of attacking, without opposition, the rear of the main army of the Prussians. The following year he materially contributed to the success obtained by Savary, duke of Rovigo, over the Russian General Essen, who, with 20,000 men, attacked the French on the banks of the river Narre (16th of February 1807), and was repelled with considerable loss.

The reputation which Suchet had acquired in these engagements as a brave soldier and a skilful tactician, induced Napoleon to entrust him with a separate command. An opportunity of doing so was afforded him by the war which broke out in Spain in 1808, and he gave him the command of the fifth division of the army, having previously raised him to the highest grade of the Legion of Honour, with a pension of 20,000 francs, and the title of Count of the Empire. After assisting for a short time at the siege of Saragossa, he was appointed to the command of general-in-chief of the French army in the province of Aragon. This brings us to the most illustrious period of his military life. When General Suchet was placed at the head of the forces in Aragon, he found the army so destitute of discipline that it almost amounted to disorganisation. In applying the measures to restore this discipline, he evinced considerable discernment, prudence, and energy; no longer thwarted in his efforts by the factious opposition of mere theoretical statesmen, as he had been in the time of the Directory, he speedily effected this important purpose. "Suchet was no ordinary man; and with equal vigour and prudence he commenced a system of discipline in his corps, and of order in his government, that afterwards carried him, with scarcely a check, from one success to another, until he obtained the rank of marshal for himself, and the honour for his corps of being the only one in Spain that never suffered any signal reverse." (Napier, 'History of the Peninsular War,' vol. ii. p. 97.) In 1810 General Suchet received orders from Madrid to lay siege to the strong fortress of Lerida, the approaches to which were covered by the Spanish General O'Donnell and a strong body of Catalan troops. The defeat of this general was followed, after a gallant and obstinate resistance, by the surrender of the fortress which he had protected (14th of May 1810), in which were found five hundred pieces of artillery. The fall of Lerida was followed by that of Mequinana (8th of June 1810), and Tortosa (2nd of January 1811). These successes were followed by one still more important, the taking of the city of Tarragona (28th of June 1811), which was defended by a garrison of 13,000 men; the city fell into the hands of the French after a siege of two months, or rather, as Suchet himself expressed it, after a succession of three sieges and five assaults; they found in it, according to the French accounts, five thousand cannon and abundant munitions. The sanguinary nature of this siege may be judged from the fact that upwards of 9000 Spaniards of the garrison are said to have perished. The occupation of Mont-Serrat, a place of such strength that it was deemed impregnable, followed soon after the fall of Tarragona. These brilliant services were justly appreciated by Napoleon, who rewarded them by raising Suchet to the dignity of a Marshal of the Empire. In the latter end of the year 1811 Suchet directed the operations of his army against Murviedro, the ancient Saguntum, the fortifications of which had latterly been reconstructed at considerable expense; the defeat of General Blake and 30,000 men under its walls, was followed, after about a month's siege, by the fall of this important fortress. A reinforcement of fresh troops having arrived from Navarre, Suchet next proceeded to invest the city of Valencia, which surrendered to him by capitulation on the 10th of January 1812. The fall of this city and of some fortresses in its neighbourhood, was followed by the occupation of the entire province of which it was the capital. Albuféra, which had been the scene of his last successes, became the title of the dukedom to which he was raised by Napoleon, who added to his title an extensive and valuable domain. But he obtained a higher title to the respect and admiration of posterity by the general expressed feeling of the Spaniards under his rule, that he mitigated the horrors of war by his humanity, and dealt equal justice to the conquerors and to the conquered. Marshal Suchet pursued the same system of government in the province of Valencia that had answered so well in that of Aragon; he placed it in the hands of a commission composed of enlightened and respectable men. He called together an assembly of persons of every class of society, and who represented various interests, to vote the expenses of the war and equitably to divide its burdens; and to them he rendered a faithful and detailed account of the manner in which these taxes were employed. He manifested the same spirit of confidence and justice towards the soldiers under his command, and found it productive of the most beneficial results.

The success which attended the British arms under Lord Wellington, and the decisive victory which he obtained at Vittoria, compelled a large portion of the French army to retreat beyond the Pyrenees, and, in consequence, Suchet found himself under the necessity of abandoning the eastern provinces of Spain, and to fall back upon Catalonia, where he maintained himself for some time. Obligated at length to evacuate this province, and to retreat towards the frontiers of France, he effected this retreat in the attitude of a conqueror, and secured his army from the reverses usually incident upon such an operation. On reaching Narbonne, he signified, on 14th April 1814, his adhesion to

the decrees of the senate directed against Napoleon. Employed to receive Ferdinand VII. who had been released from Valençay, and to present him to the Spanish army, he was publicly thanked by the king for the manner in which he had carried on the war against his subjects. The gratitude of the Spanish nation towards the administration of this marshal was further evinced by the general testimony which was borne to his justice and humanity, when, in 1823, the French again occupied the scene of his exploits.

The speedy adhesion of Suchet to the Bourbons was rewarded by his being created a member of the new peerage, and his appointment to the command of the tenth military division, of which the headquarters was Strasbourg. On the return of Napoleon I. from Elba, though he maintained his fidelity to the Bourbons so long as Louis XVIII. remained in France, he renewed his allegiance to his former chief, and accepted the command of the army of the Alps, with which he obtained several important successes over the Piedmontese and the Austrians. His army was composed of only 10,000 men, and on the approach of the main body of the Austrians, nearly 100,000 strong, he was compelled to fall back upon Lyon, for which city, by his judicious management, he obtained an honourable capitulation; one of the conditions in it being that all the valuable munitions of war contained in that city should be respected by the enemy.

On the second restoration of the Bourbons he remained for some time in disgrace, and was deprived of his civil though not of his military honours. He was however restored to his position in the peerage by a royal ordinance dated the 5th of March 1819, and he appears to have almost entirely recovered the favour of the king. On the French expedition to Spain in 1823, it was generally expected that Marshal Suchet would have been selected to accompany the Duke of Angoulême as his principal adviser, but he was already suffering severely from the disease to which he shortly afterwards fell a victim. He died at Marseille on the 7th of January 1826, leaving behind him a young widow and several children. During the latter years of his life he was occupied in composing a memoir of his campaign in Spain, which has since been published. (*Mémoires de Suchet*, 2 vols., Paris, 1826.)

The reputation of Suchet stands deservedly high amongst the generals of Napoleon I. His military career was unstained by any of the excesses which have disgraced so many of his most distinguished colleagues in command. Brought up in the school of Masséna, he rivalled his military skill without imitating his vices. It is true that his entrance by storm into Tarragona was marked by the rapine and inhumanity of his soldiers; but the inability of a chief perfectly to restrain the frenzied violence of his soldiers on such terrible occasions is a melancholy fact which the history of all ages has established. We have already dwelt upon his qualities as a military and a civil ruler. The high opinion entertained of Suchet by Napoleon I. has been recorded by O'Meara and Las Cases. On the question being asked him by the former, who, in his opinion, was the first of his generals? he replied, "I think that Suchet is probably the first. Masséna was; but you may say that he is dead" (1817)—alluding to the complaint under which that marshal was fast sinking.

SUCKLING, SIR JOHN, an English poet, was born at Whitton in Middlesex, 1608-9. His father was one of the principal secretaries of state and comptroller of the household to James I., and was by descent of a Norfolk family. The son is said to have shown in his boyhood great readiness in the acquisition of languages. We are not clearly informed as to the place and manner of his education. Aubrey thinks that he was at school at Westminster, but this fact does not seem certain. In 1623 he matriculated at Trinity College, Cambridge, and in 1628, about a year after his father's death, travelled abroad. In 1631 he joined the army of Gustavus Adolphus, king of Sweden, and probably remained on the Continent till 1632. On his return to England he led the life of a courtier, and was distinguished among his contemporaries not less by the brilliancy of his wit than by the splendid appearance which he maintained by the most lavish expenditure. Among his companions were Lord Falkland, Carew, Shirley, and Davenant; from the last of whom Aubrey derived most of his anecdotes of Suckling, whom he has thus described (*Lives of Eminent Men*, 'Bodleian Letters,' vol. ii., part ii., 545):—"He was famous at court for his ready sparkling wit, which was envied, and Sir William (Davenant) says he was the bull that was bayted; he was incomparably ready at repartee, and his wit most sparkling when most set on and provoked." While pursuing a course of fashionable pleasures, among which gambling seems to have most attracted him, he became engaged in a quarrel with a brother of Sir Kenelm Digby, and received from him a severe beating, which he does not appear in any way to have resented. After this dishonour his associates looked coldly on him, and the consequent loss of reputation seems to have been accompanied by the decline of his fortunes. About this time we find the first notice of him as an author: in 1637 was published his 'Session of the Poets'; in 1638, his 'Aglaura'; and in 1639 his 'Brennoraht,' under the title of 'The Discontented Colonel,' a satire on the rebels. When the disturbances broke out in Scotland, Suckling equipped a troop of 100 horse in the king's service, and so magnificently, that they cost him, it is said, 12,000*l*. This extravagance was much ridiculed; and the misconduct and defeat of his men in 1639, in the battle between the Scotch and the royal army, gave occasion for a ballad, more coarse

than humorous, said to have been written by Sir John Mennis, a wit of those times, and which is printed in a poetical miscellany entitled '*Musarum Deliciae, or the Muses' Recreation*, containing several pieces of poetique wit,' 2nd edit., 1656. (Percy, '*Ancient Ballads*,' ii. 322.) In 1640, on the meeting of the long parliament, Suckling was returned member for Bramber, and took an active share in the party strife that followed. A letter of his is extant, addressed to Henry Jermyn, afterwards earl of St. Albans, in which he discusses at some length the critical situation of the king. In 1641 he joined in a plot to rescue Strafford from the Tower, and was in consequence summoned before parliament and accused of being an accomplice in a design to bring over the French; upon this he fled to France, and died soon afterwards in that country.

His death is said to have been caused by a fever; or, according to another story, related by Pope, and inscribed on his portrait at Knowle in Kent, by a wound in the heel from a rusty nail, a penknife, or a razor, placed purposely in his boot by his valet, who, after robbing him, wished to ensure safety in flight by disabling his master from pursuit. According to Aubrey, he poisoned himself at Paris, and Mr. Suckling, in the work referred to below, says that family tradition confirms the report. In a pamphlet entitled '*A Letter sent by Sir John Suckling from France, deploring his sad Estate and Flight*,' dated Paris, June 16, 1641, but which was published in London, 1641, he is said to have stayed some time at Rouen after his arrival in France, and to be then living with his wife at the Hague; but no reliance can be placed upon such a production. His death must have been before 1643, as in that year was printed, at London, '*A Copy of Two Remonstrances brought over the River Stix in Caron's Ferryboat, by the Ghost of Sir John Suckling*.' His works are—1. '*Fragmenta Aurea*,' 8vo, London, printed by Humphrey Moseley, 1646, with a portrait of the author, containing poems, letters, and an Account of Religion by Reason; in some of his poems he is said to have been assisted by Sir John Mennis. (Wood's '*Athen. Oxon.*,' Bliss, iii., 926.) 2. '*The Goblins*,' London, 1646. 3. '*Fragmenta Aurea*,' 1648, no portrait. 4. '*An Account of Religion by Reason*,' London, 1658. 5. '*Aglaura, the Goblins, and Brennoraht*,' London, 1658. 6. '*Letters to several Persons of Honour*,' London, 1659. 7. '*The Sad One*,' a tragedy, London, 1659. 8. '*His Last Remains*,' London, 1659. 9. His Works—Poems, Plays, Letters, Tonson, 8vo, London, 1709, with portrait; have been several times reprinted. A work entitled *Selections from his Works*, with a Life prefixed by the Rev. Alfred Suckling, London, 1836, has furnished most of the few facts contained in this scanty biography. The reader may also consult his Life, by Chalmers, the pamphlets about him already quoted, and a folio sheet printed in 1641, entitled '*The Sucklington Faction*.'

In person Suckling was about the middle size, though but slightly made, with a graceful carriage. In the edition of his works by his namesake is an engraving from a portrait by Vandyke, and two more by that master are there mentioned. His poems relate almost entirely to the passion of love: the fortunes of a lover and the feelings arising from his successes and reverses are described with the accuracy of one personally experienced in such adventures. These compositions, written in the transition period between an age of thought and learning, and an age of careless dissipation, present in singular combination the characteristics of the passing and the coming generation. In the more or less pedantic love of classical allusion, and in the strained intricacy of wit, the style of Suckling somewhat resembles that of his contemporaries; while in the licentiousness of his subjects, the gaiety and ease of expression, and the strange mixture of grossness and refinement of feeling, he still more reminds us of the court-poets of the reign of Charles II. His ballad of '*The Wedding*' has been justly celebrated for the truth and naïveté of description, and the happy boldness in the use of homely imagery. The songs, '*When, dearest, I but think of thee*,' and '*Tell me, ye juster Deities*,' are among the best of his pieces. His letters are written in remarkably pure English, but in a style too studied and elaborate for such compositions.

\*SUE, EUGÈNE, the popular romancist, was born at Paris Dec. 10, 1804. His ancestors, who came from Lacombe, near Cannes, in the south of France, settled in the French capital at the beginning of the 18th century, and having adopted the medical profession, produced three generations of respectable physicians, two of whom became celebrated, and enjoyed a very extensive practice. Joseph Sue, his grandfather, and Jean-Joseph Sue, his father, are both mentioned with honourable distinction in the national biographies of France. The latter, who had been principal physician to the Hôpital de la Maison du Roi, and anatomical lecturer to the École Royale des Beaux Arts, during the reign of Louis XVI., was one of the household physicians of Napoleon I.; and the future author of the '*Wandering Jew*' was held at the font by the Empress Josephine and her son Eugène Beauharnais, from whom he derives his Christian name.

Dr. Sue, having but two children—a son and a daughter—was desirous of bringing up his son to his own profession, and Eugène in consequence studied medicine at the hospitals as well as at the schools of Paris; and, thanks to his father's position and influence, was enabled at the age of twenty to enter a company of the Royal Body Guards as aide-major. He was soon after transferred to the staff of the French army preparing to enter Spain under the Duke of Angoulême. In

this campaign he was present at the siege of Cadiz and at the Trocadero in 1823. In 1825 he quitted the land for the sea service, visited America, Asia, and the coast of the Mediterranean, during which excursions he obtained that knowledge of ocean scenes and sailor life which he has since described with indisputable power in his earlier tales. He was present in 1828 at the battle of Navarino, on board of the line-of-battle ship *le Breslau*. In 1829 his father died at the age of sixty-nine, leaving to his son an unincumbered estate of 40,000 francs (1600*l.*) a year, besides a splendid museum of anatomy, valued at several thousands more, bequeathed to the nation. Eugène Sue, at this time in his twenty-sixth year, renounced the profession by which his family had acquired so much distinction, and to which he owed his fortune. His taste inclining to art, he became a painter, and in that vocation entered the studio of Gudin. About the same period he felt an ambition to signalise himself in literature, and this was gratified by the insertion of some slight articles in the journal recently established by Emile de Girardin—'*le Voleur*.' Encouraged by this success, he began to write tales descriptive of sea adventures, publishing in quick succession '*Plick et Plock*,' '*Atar-Gull*,' and '*la Salamandre*.' The two former were rejected by the trade, he therefore published them at his own risk. In 1832 he had already become popular both with publishers and their subscribers. But it would be quite a mistake to suppose that he was an advocate of the July revolution—no man at that time could repudiate it more; wherever he went he was loud in denouncing it. His father's name and his private fortune gave him access to the best company; he selected the highest for his cultivation, and lived among the old families of the Faubourg Saint-Germain.

Sue was one of the first to try his skill in framing those historical romances which the genius of Sir Walter Scott had rendered so universally popular. A new market had been opened for the purchase of his, and similar fictions—the newspaper feuilletons. Thus his '*Latréaumont*,' his '*Jean Cavalier*,' his '*Commandeur*' were published and devoured, from day to day by the public. His name had become a magnetic charm in the estimation of those speculators, who had once rejected his manuscript. It was presumed that so popular a name was a guarantee for success in literary enterprises; and acting on this presumption, he was engaged at very high terms, having a reputation for concocting vivid scenes of naval adventure, to write a '*History of the French Navy*.' But the speculator in this instance was disappointed: the public bought the first volume on account of the name, and refused to buy all the other volumes on account of the work. From 1832 to 1840, Eugène Sue had confined himself to that class of fictions, in which he had attempted to emulate, if not to rival, Fenimore Cooper in sea adventures, and Sir Walter Scott in historical delineations. But at this period the novels of Balzac in France, and those of Charles Dickens in England, had created a taste for the novel of real life, or as the French call it, *le Roman de Mœurs*. He therefore resolved to adopt the new style, and to this change we owe '*Arthur*,' the '*Hotel Lambert*,' and '*Mathilde*,' published in 1841 and 1842. Making allowance for those licences in morality, which are too frequently found in the current French fictions as well as dramas, there is a skill in the combination of the plot, and a power of description in the incidents, in '*Mathilde*,' which his earlier tales did not prepare the reader for. The highest critical authorities have admitted that it exhibits more than one of the qualities of a superior novel. It was in this work that Eugène Sue first started that idea of the moral Howard, going about succouring the poor, redressing wrongs, and chastising the wicked, which he developed afterwards in the '*Mysteries of Paris*' and the '*Wandering Jew*.' These two novels originally appeared in the '*Journal des Debats*' and the '*Constitutionnel*,' occupying by their great length nearly three years in the course of publication. Including the interval between the conclusion of the former and the first appearance of the latter, the whole of the four years from 1842 to 1846 was taken up with these baleful writings, and the ferment and agitation of the public fancy was excited to the highest degree, without respite or relaxation. The original terms proposed and accepted for each of these fictions, was 100,000 francs (4000*l.*); but it is understood that they were purposely extended and developed, on account of their unexampled success, and much larger sums allowed for them to the author. They were afterwards republished in volumes, going through many editions, and being translated into most living languages. '*Martin, l'Enfant Trouvé*,' appeared in 1846 in the columns of the '*Constitutionnel*,' and '*Les Sept Péchés Capitaux*' in the same paper in 1847-48. Perhaps the most serious censure passed on his writings was that passed on this last by the author himself when he said in bravado, "that he would show the fair side of all these sins;" for the work, which consists of seven separate tales, is nothing else but an apology for each and all of them. The first of these tales—'*Pride*'—is perhaps the master-piece of Eugène Sue; the second tale—'*Envy*'—contains one very dramatic scene; but his '*Avarice*,' his '*Sloth*,' &c., are unworthy of his reputation.

The '*Mystères du Peuple*,' published in 1852, is the last fiction of any note produced by the pen of this voluminous writer. It is intended as an exposure of all the misery and injustice to which the common people of every country have been reduced in all the ages of the world. After the Revolution of Feb. 1848, Sue, who had abandoned his early conservative principles for extreme democratic and socialistic ones, was

elected a representative of the *Assemblée Nationale*; but since the election of Napoleon III. he has taken no part in politics.

SUETONIUS (CAIUS SUETONIUS TRANQUILLUS). The few particulars which are known of the life of Suetonius are derived chiefly from his own writings and from the epistles of his friend the younger Pliny.

The time of his birth is not known, but as he states that he was a young man (*adolescens*) twenty years after the death of Nero, the time may be fixed approximately. He also says that his father was Suetonius Lenis, a tribune of the thirteenth legion, and of equestrian family ('*Oth.*' 10); and that he was in the battle of *Bebricum*, in which Otho was defeated by Vitellius. It has been remarked that the name *Lenis* signifies the same as *Tranquillus*; but it is said, that instead of '*Lenis*,' some manuscripts have '*Lætus*.' There are extant several letters from Pliny the Younger to Suetonius, the son, from one of which (i. 18) it appears that Suetonius was then practising at the bar. In another letter (v. 11) Pliny urges him to publish some works which he had written. At the request of Pliny, Trajan granted Suetonius the *Jus trium liberorum*, by which he obtained all the privileges of those who actually had children, and was freed from the disabilities imposed by the *Lex Julia et Papia Poppæa* on those who were married and had no children. He was *Magister Epistolarum* to Hadrian, but lost his office at the same time that *Septimius Clarus* who was *Prefectus Prætorii*, and many others, were dismissed by Hadrian on the ground, which is very obscurely stated, that they had, without the emperor's permission, conducted themselves towards his wife, *Sabina*, with more familiarity than was consistent with the respect due to the Imperial family. (*Ael. Spart.*, '*Hadrian*,' ii.)

Nothing more is known of Suetonius. His friend Pliny calls him a most upright and learned man, whose character rose in his estimation the better he became acquainted with him. Suetonius was a voluminous writer; a list of his works is given by *Suidas* (v. *Τράγκυλλος*) as follows: one book on sports or pastimes among the Greeks; two books on Roman games and shows; one book on the Roman year; one book on the notes or marks used in writing; one book on the '*Res publica*' of Cicero; a treatise on proper names, and the forms of garments, shoes, and other articles of dress; a treatise on words of bad omen; two books on Rome and its institutions and manners; a work in eight books on the Cæsars from *Julius Cæsar* to *Domitian*, which is still extant; and a *Stemma* or Genealogy of illustrious Romans. He also wrote a work on kings, in three books; a work entitled '*De Institutione Officiorum*,' a work on the *Prætors*, the eighth book of which is quoted by *Priscian*; and a work '*De Variis Rebus*.'

The only complete work of Suetonius, which is extant, is the '*Lives of the Twelve Cæsars*,' now printed in twelve books or parts, but sometimes distributed into eight books, as appears from *Suidas*, and from several manuscripts. This work comprehends, as already observed, the Cæsars from *C. Julius Cæsar*, the Dictator, to *Domitian*, both included. It has been conjectured that the first part of the *Life of C. J. Cæsar* is wanting; because it begins rather abruptly with the events of his sixteenth year; but the conjecture has nothing else to support it. The biographies of Suetonius are peculiar in their construction. He does not strictly follow the chronological order of events. There is no attempt at rhetorical ornament or effect: the style is characterised by correctness, brevity, precision, perspicuity, and simplicity; there are no idle words. There is an air of impartiality about the whole work, from which a reader derives greater confidence in the truth of the narrative, than from the laboured pictures of *Tacitus*. *Vopiscus* calls him a faultless and most impartial writer, and a lover of brevity. The vices of the Cæsars are stated circumstantially and drily, as facts well ascertained. These biographies abound in facts. Indeed their chief merit consists in being a most copious source of materials. Accordingly the style has been appropriately called by *La Harpe* anecdotal. That Suetonius was a learned Roman, as his friend Pliny states, is apparent from his work. He seems to have had a competent knowledge of the antiquities and the constitutions of his country. Like *Tacitus*, he frequently mentions the legislative enactments (*Senatus Consulta*) which were passed under the Cæsars, but neither is he nor any other Roman historian always a safe guide in such matters. The work of Suetonius does not affect to be historical, yet it comprehends a brief notice of all the public events which happened in the life of each Cæsar. It is a valuable work for the early Imperial times, and if used judiciously with the other authorities, it might form the basis of something like a satisfactory history of this period. He consulted official documents, and availed himself of sources of information which are now entirely lost.

The editions of the '*Lives of the Cæsars*' are very numerous. About fifteen editions were printed before 1500. The oldest edition that bears a date is that of Rome, 1470, fol., by *G. A. Campani*. One of the best editions is that of *Isaac Casaubon*, fol., Paris, 1610. There is a small useful edition, with a selection of notes, by *J. Schild*, 8vo, *Lugd. Bat.*, 1647, &c. Among the other editions of Suetonius are those of *J. G. Grævius*, *Oudendorp*, and *Ernesti*. A list of the editions is given in *Schweigger's* '*Handbuch der Classischen Bibliographie*,' Leipzig, 1834; see also *Bähr's* '*Geschichte der Römischen Literatur*,' 1845. The '*History of the Twelve Cæsars*' was translated

into English by Philemon Holland, fol., London, 1606; and there are four or five other English translations. There are French, Dutch, German, Danish, Italian, and Spanish translations. There is also extant a small treatise 'On Distinguished Grammarians' by Suetonius; and another 'On Distinguished Rhetoricians,' consisting at present of only six chapters. Neither of these works is included in the catalogue of Suidas, unless they belonged to the work 'On the Stemma of Illustrious Romans,' which however, if we may judge from its title, would be a different kind of work. It has been conjectured that they formed part of a work 'De Viris Illustribus' (not the work extant under that title, which belongs to Aurelius Victor), on the model of which, Jerome says, in an epistle to Desiderius, that he himself wrote a treatise. There are also extant the following Lives by Suetonius: the Lives of Terence, Juvenal, Persius, Horace, Lucan, and the elder Pliny; the last is only a few lines. These Lives are conjectured to have been part of a larger work 'On Poets.' But the Life of the elder Pliny would not properly belong to such a treatise.

SUEUR, EUSTACHE LE, one of the most celebrated of the French painters, was born in 1617. His father was an obscure sculptor of Mont Didier. After he had learnt from his father the first rudiments of design, he was placed in the school of Simon Vouet at Paris, then very famous, where he was the fellow-scholar of Le Brun and Mignard. Le Sueur soon surpassed his master, and forsook his manner, and by assiduously studying the antique, and some of Raffaele's pictures and the prints after him by Marcantonio, he adopted a style, which for its simplicity and severity contrasted greatly with that of Vouet and the French school of the time, and at length placed the name of Le Sueur above that of any of his rivals. He has been termed by his admirers the French Raffaele; but he was far behind that great master in every respect.

The celebrated series of St. Bruno, of twenty-two large pictures, painted on wood, in the cloister of the Carthusians at Paris, was executed by Le Sueur before his thirtieth year; he completed it in three years, and was assisted only by his brother-in-law and scholar Goussé, or Goulai, in the figures, and by Patel in the landscapes. In 1766 these pictures were transferred to canvas, and are now in the Louvre. The character and the composition of several of them are very pleasing, but in chiaroscuro they are very indifferent, and the colouring is monotonous: they have been engraved by Chauveau and Le Clerc. In his thirty-second year, in 1649, he painted his celebrated picture of St. Paul preaching at Ephesus, and the Gentiles burning their proscribed Books, for the guild of the goldsmiths, to be presented to the cathedral of Notre Dame; it is a grand composition of many figures, the heads and the draperies are much in the style of Raffaele; it has been engraved by Stephen Picart and R. U. Massard. Paul Healing the Sick, engraved by Bauzo and the elder Massard, and the Martyrdoms of St. Laurence and of St. Protas, both engraved by Gerard Audran, are also compositions, conspicuous for their simplicity and severity. Le Sueur painted many other celebrated pictures, as, Christ scourged; Christ with Martha and Mary; and the Presentation in the Temple; the histories of St. Martin and St. Benedict: and others—all of which have been engraved by the best French artists. His most extensive works however, by some considered his best, and which occupied him the last nine years of his life, were the mythological paintings of the Hôtel du Châtelet, executed for the President Lambert de Thorigny; they were removed to the Louvre in 1795. The palace was decorated by Le Sueur and Le Brun conjointly; three apartments were painted by Le Sueur, the 'Salon de l'Amour,' the 'Cabinet des Muses,' and 'l'Appartement des Bains.' In these paintings Le Sueur has still adhered to his great model, and has imitated the style of the celebrated series of the story of Cupid and Psyche, painted by Raffaele, in the Farnesina at Rome. In the first apartment, he painted several beautiful compositions from the life of Cupid; in the second, the Muses, and a grand composition of many figures, of Phæton entreating Apollo to allow him to drive the chariot of the Sun; in the third, Diana, surprised by Actæon, Diana detecting the pregnancy of Calisto, and the triumphs of Neptune and of Amphitrite. These works have been universally preferred to those of Le Brun; they have been engraved by Bernard Picart and others, in nineteen plates, and were published in Paris, in 1640, in folio, under the title 'Les Peintures de Charles Le Brun et d'Eustache Le Sueur qui sont dans l'Hôtel du Chastelet, cy devant la Maison du Président Lambert, dessinées par Bernard Picart, et gravées tant par lui que par différents Graveurs.'

In 1655 Le Sueur's labours were terminated by his death, in the thirty-eighth year of his age; a constant excitement and an excessive application proved too much for a constitution naturally weak. Though he is reported to have been of a gentle and an amiable disposition, he had many enemies, but the report of his having been poisoned is without foundation. That Le Sueur's great talents engendered an active jealousy among his rivals, is generally allowed, especially upon the part of Le Brun, who is said to have openly expressed his satisfaction at the death of Le Sueur, saying, that he had been relieved of a great thorn from his foot. It cannot be doubted, that if Le Sueur had lived, the rising influence of Le Brun would have been seriously checked, and the French school of painting might have taken ultimately a totally different course from that which it pursued from the time of Louis XIV. until the last quarter of a

century. Le Sueur never left Paris. He married very young, and being very badly paid for his works, he never had the means of travelling, or improving his taste by visiting Italy and studying the great works of its famous schools. The defects of his style are, a deficiency in a thorough mastery of the naked figure, a feeble chiaroscuro, and a heavy and monotonous tone of colouring; some of his figures also want life, and appear to want purpose; in composition however, in character, and in the casting of draperies, he has seldom been surpassed; qualities foremost among the properties requisite to constitute a great painter.

When the Royal Academy of the Fine Arts was established in Paris, in 1648, Le Sueur was appointed one of the twelve ancients or professors; he had been previously elected a member of the Academy of St. Luke at Rome. His style had little influence upon the arts in Paris; his only scholars were his three brothers, Pierre, Philippe, and Antoine Le Sueur, Le Fevre, and Nicolas Colombel. His own portrait, painted by himself, has been engraved by C. N. Cochin. In Landon's 'Ouvres de Le Sueur' there are 110 prints from his works.

(Felibien, *Entretiens sur les Ouvrages des plus excellents Peintres, &c.*: D'Argenville, *Abregé de la Vie des plus fameux Peintres*; Réveil and Duchesne, *Musée de Peinture et de Sculpture*.)

SUHM, PETER FREDERIK, one of the most learned and industrious writers that Denmark has produced, was the son of Admiral Suhm, and was born at Copenhagen on the 18th of October 1728. Such was his extraordinary application to study, that he is said to have read not only the chief classic authors but other works to the amount of fifteen hundred volumes, in his father's library at Plessen, when he was not more than sixteen—a report no doubt greatly exaggerated. In 1746 he entered the university of Copenhagen, and, in compliance with his father's wishes, studied jurisprudence; but though he received, two years afterwards, an appointment in the supreme court of justice at Copenhagen, and though the most brilliant career both at the bar and in public affairs opened itself to him, he soon renounced it, devoting himself entirely to his literary pursuits, more especially to the study of northern history and antiquities. In order to acquire authentic information and materials relative to these subjects, he not only visited Norway in 1751, but remained there till 1765, when he returned to Copenhagen, where he continued to reside until his death.

Shortly after his return he began to publish the fruits of his laborious researches in a succession of historical works, all relating to northern and Gothic annals, mythology, and archaeology, and no less remarkable for the vast erudition displayed in them than for the prodigious literary industry of which they are a monument. One of the most valuable of them is that entitled 'Odin, or the Mythology of Northern Paganism,' 1771. His 'Critical History of Denmark,' 4 vols. 4to, 1774-81, and his 'History of Denmark,' 7 vols., 1782, &c., likewise afford a mass of information relative to the more obscure periods and antiquities of that and the other countries of Scandinavia. His industry with his own pen was equalled only by the munificence with which he patronised similar undertakings. He caused, for instance, the last two volumes of the 'Scriptores Rerum Danicarum' to be printed at his own expense; and bore the cost of publishing the Icelandic 'Landnamabok,' &c., and the edition of the 'Annales Abulfedæ,' by Adler, 5 vols., 1789-94.

In addition to his various and vast labours as an historian, Suhm distinguished himself also in several other branches of literature, including poetry. His 'Idyls,' indeed, although not without merit, have little interest at the present day; but his prose 'Tales,' founded upon northern legends and traditions, are deservedly popular. These and his other miscellaneous productions form the collection of his 'Samlade Skrifter,' in 16 vols., 1788-99.

Suhm not only formed at great expense a most valuable collection of books, amounting to upwards of 100,000 volumes, but freely opened it to the public, librarians and attendants being kept by him for that purpose; and he continued to augment it—appropriating to that purpose the yearly sum of 5000 dollars—until he consented that it should be incorporated with the royal library in 1796, on conditions which sufficiently attest that noble-minded disinterestedness which, after literary enthusiasm, formed the leading trait of his character. His death, which was occasioned by gout, took place September 7th, 1798.

SUICER (SCHWEITZER), JOHN GASPAR, or CASPAR, was born at Zürich in 1620, and after studying at Montauban, returned to Switzerland, and became the pastor of a country commune in 1643. In 1660 he became professor of Hebrew and Greek in the University of Zürich, and devoted himself especially to the study of the Greek fathers. He resigned his chair in 1683, and died on the 29th of December 1684.

His chief work, the reputation of which is still great, was his 'Thesaurus Ecclesiasticus, e Patribus Græcis, ordine alphabetico, exhibens quæcunque Phrases, Ritus, Dogmata, Haeresees, et hujusmodi alia huc spectant,' 2 vols. fol., Amst., 1682; best edition, 2 vols. fol., Amst., 1728, with a supplement by his son. He is said to have been engaged upon this work for twenty years.

Suicer wrote three other works, on the Nicene Creed and other points of Oriental Church history, besides a Greek Syntax and a Greek and Latin Lexicon.

SUICER, JOHN HENRY, son of the above, was born at Zürich on the 6th of April 1644, and received a learned education from his father, to whose profession he also devoted himself. After travelling over part of Switzerland and Germany with a pupil, he was recalled to Zürich, and received an appointment to the gymnasium of that town. In 1683 he succeeded his father in his professorship, and in 1700 he was appointed to the chair of theology in the University of Heidelberg, but fell ill shortly after his arrival in that town, and died there on the 23rd of September 1705.

Besides the Notes to his father's 'Thesaurus,' he wrote—1, 'Compendium Physicæ Aristotelico-Cartesianæ,' Amst., 1685; 12mo, Bâle, 1691; 2, 'A Commentary on the Epistle of Paul to the Colossians,' 4to, Zürich, 1699, to which are added, in the same volume, three discourses, 'De Fortunis Græciæ Antiquæ,' 'De Græciæ Christiana,' and 'De internis Ecclesiæ reformatæ Terroribus;' 3, 'Specimen Commentarii in Epistolam ad Ephesios,' in the 'Miscellanea Duisbergensia.'

J. H. Suicer is sometimes confounded with an ancestor of the same name, who wrote 'Chronologia Helvetica, res gestas Helvetiorum ad nostra usque tempora complectens,' 4to, Hanau, 1607; reprinted in 1735 in the 'Thesaurus Helveticus' of Fueslin. He places the foundation of Zürich in A.M. 1980, but he is a trustworthy historian of modern times. He also wrote a history of Switzerland down to the year 1532, which is preserved in manuscript in various libraries.

(Life of J. H. Suicer, by J. R. Wolff, Zürich, 1745.)

SUIDAS (Σουίδας), a Greek lexicographer. Strabo (p. 329, Casaub.) speaks of a Suidas who wrote an historical work on Thessaly, which is also cited by the scholiast on Apollonius Rhodius, and by Stephanus of Byzantium; but it seems very unlikely that this Suidas was the author of the Lexicon which goes under the name of Suidas. Eustathius, in his 'Commentary on Homer,' occasionally quotes Suidas the lexicographer; and as Eustathius lived about the end of the 12th century and the beginning of the 13th, we may conclude that the lexicographer Suidas was at least prior to this time. There appears to be no certain indication in the Lexicon of Suidas which will show who he was or what was his country. There are indeed passages in the work from which it appears that he lived during or after the reign of Alexius Comnenus, for he quotes Michael Psellus (v. Ἰγνάτιος; v. Δέρτρον; v. Ἡγύροπος); and if these passages were inserted by Suidas he must have lived not earlier than the close of the 11th century. (But see Gaisford's edition.) In the article 'Adam,' he gives a chronological epitome, which he closes with the death of the Emperor John Zimisces, who died in 974; and in another place (v. Κωνσταντινούπολις) he speaks of Basil II., and his brother Constantine, who succeeded John Zimisces. There are other passages in Suidas, from which some inference as to his age might be derived, but it is often difficult to know when the lexicographer is quoting others or speaking himself. Whatever may be the age of the compiler of the Lexicon, the work has the appearance of having received additions from a variety of hands.

The work of Suidas is a Dictionary arranged alphabetically, but with some deviations from the strict alphabetical order. It contains both proper names, as names of persons and places, and words which belong to a dictionary of a language in the modern acceptance of that term. Among his names of persons there are names both from profane history and from sacred history, such as Abimelech and Adam. The work is exceedingly imperfect in all the classes of names, and appears to have been formed on no plan. Some of the articles are long and tolerably complete; others are very short and contain no information. Thus, for instance, 'Adam' is a long article; but of 'Aaron' we are told nothing more than that it is a proper name. The work is compiled from numerous writers, some of whom are mentioned in a list prefixed to the Lexicon, comprising twelve names, among which are Eudemus and Cassius Longinus. It may however be doubted if this list was made by the compiler of the Lexicon. A much more copious catalogue is contained in the edition of Küster. Among the old scholiasts, none was used by the compiler more freely than the scholiast on Aristophanes; but the work of Suidas contains some passages which are not in the extant scholia on Aristophanes. The work is not only deficient in plan, but is often defective and inaccurate in the execution. Numerous corrupt and base words have been introduced from bad authorities or bad manuscripts; sometimes under one name of a person we find events belonging to the lives of various persons of the same name, placed without any discrimination (v. Σεβήρος); and under one name there are frequently events and extracts from writers which belong to other names (v. Μαξιμίανος; v. Ἀνδρέας; v. Πάρος). The Lexicon contains a great number of extracts from Greek writers, and frequently without mention of their names; but these extracts have often no reference to the title of the article, and add nothing towards explaining or illustrating it. This is partly owing to many marginal additions having been introduced into the text by ignorant transcribers.

With all these defects, the Lexicon of Suidas is a very useful work, and is of great assistance for the literary history of antiquity. It is also useful for illustrating the meanings of many words. It also contains numerous passages of ancient writers that are lost. As to the biographical notices, it has been conjectured that they have all been taken from one work, which is further conjectured to be the 'Onoma-

tologon' of Hesychius. The 'Onomatologon' was a list or catalogue of men distinguished for knowledge, and it is stated in the Lexicon (v. Ὀνόμαχος) that it is an epitome of the work of Hesychius of Miletus, who lived in the time of the Emperor Anastasius; but we may allow this assertion to have its full weight, without admitting that it is the only source from which Suidas derived even his literary notices. (See the notes of Küster and Naek.)

There is an unpublished epitome of Suidas by Thomas of Crete: Robert Grosseteste, bishop of Lincoln, who died in 1253, is said to have made a Latin translation of Suidas (Fabricius, 'Bibl. Med. et Inf. Lat.');

but see the note in Fabricius ('Biblioth. Græca,' vi. 402, ed. Harles). The first edition of Suidas was by Demetrius Chalcondylas; it was printed at Milan, fol., 1499, without a translation. This edition is defective in some places. The second was the Aldine edition of Venice, fol., 1514, also without a translation: this edition differs in some passages from that of Chalcondylas, whence it seems probable that it was printed from a different manuscript. The edition of Aldus was reprinted by Froben, at Basel, fol., 1544, also without a translation, but with the correction of some typographical errors. H. Wolf made the first Latin translation of Suidas, which was published at Basel, fol., 1564, without the Greek text; and the revised translation was printed again at Basel, 1584. The first edition of the Greek text with a Latin translation was by Æmiliius Portus, 2 vols. fol., Geneva, 1619; the Latin version was new. In 1705 the edition of Küster appeared at Cambridge, in 3 vols. fol., with the improved version of Portus and numerous notes. The foundation of this edition is the text of Portus, which was corrected with the help of manuscripts. The preface of Küster contains a dissertation on Suidas, and on the previous editions, and more particularly on that of Portus. A far superior edition of Suidas is that by Gaisford, 3 vols. fol., Oxford, 1834; the first two volumes contain the text, and the third the indexes. Gaisford states in his preface that Küster used pretty nearly the same manuscripts as himself, but that he has been very careless in noting the readings, and that his edition, though useful in other respects, is consequently of very little critical value. Gaisford has noted all the various readings of the best manuscripts, and also the readings of the Milan edition. He has also generally noted the emendations of Portus, many of which Küster adopted without any remark; indeed Küster is accused, and justly, of taking the notes also of other scholars without any acknowledgment. Gaisford has carefully indicated the sources from which Suidas derived his information; and he has reprinted most of Küster's notes. The third volume of Gaisford contains the 'Index Küsterianus Rerum et Nominum Propriorum quæ extra seriem suam in Suidæ Lexico occurrunt,' and two new indexes. One of these two new indexes contains all the words in Suidas arranged in alphabetical order, which is useful, because the Lexicon does not always follow the usual alphabetical order; and it also contains other words which do not appear in the alphabetical order of the Lexicon. The other of these two indexes is an index of the writers who are cited by Suidas. This edition is a splendid and valuable work. G. Bernhardt published an edition of Suidas founded on that of Gaisford, with a Latin version, Halle, 1834, of which another edition in 2 vols. 4to was published at Brunswick in 1853. There is also an edition by Bekker, Berlin, 1854.

Various critics have laboured on the text of Suidas, among whom Toup is perhaps the most conspicuous for acuteness and diligence.

(Fabricius, *Biblioth. Græca*, vi. 389, ed. Harles; Ludolphi Küsteri, *Præfatio*; *Præfatio Editoris Oxoniensis*.)

SUISSET, R., lived about the middle of the 14th century, and was educated at the University of Oxford. He is principally known as the author of a work printed at Venice in 1505, and again in 1520: the latter edition, the only one we have met with, is entitled 'Subtilissimi Ricardi Suiseth Anglici Calculationes noviter emendatæ atque revisæ.' A complete analysis of a new philosophic theory developed in this work is given in Bruckeri ('Hist. Phil.,' tom. iii., pp. 580-583). Among its contents may be particularly mentioned the chapters 'De intentione et remissione,' 'De loco elementi,' 'De maximo et minimo,' 'De luminositate,' 'De motu locali,' and 'De medio non resistente.' Pits mentions other works by this writer, which do not appear to have been preserved: Tanner altogether omits him. We have placed the initial only of his Christian name at the head of this article, because, although he is called Richard in the title of the work just given, yet the colophon of the very same book writes 'Calculationum Liber Magistri Raymundi Suiseth;' and a contemporary manuscript note in one of the two copies of the book in the British Museum corrects the former appellation to Roger; while Vossius ('De Scient. Mat.,' c. 18) calls him John Suiseth.

SULEYMAN. [SOLIMAN.]

SULLA is the cognomen of a branch of the Patrician gens Cornelia. This branch originally had the name of Rufus or Rufinus, which appears to have fallen into disuse, and to have given way to the new cognomen Sulla, which had the same meaning as Rufus, and was first borne by the Flamen Dialis.

1, PUBLIUS CORNELIUS SULLA (Gellius, i. 12, § 16), who was Prætor Urbanus, in 212 B.C., and, in accordance with an oracle of the Sibylline books, conducted the first celebration of the Ludi Apollinares. Hence he is said to have received the surname of Sibylla,

which was subsequently contracted into Sylla or Sulla. (Macrob., 'Sat.,' i. 17.) This account however is fabulous, for as Rufus and Sulla have the same meaning, it is more probable that the change of the one name for the other was only an arbitrary alteration. Plutarch ('Sulla,' 2) states that the dictator Sulla was the first who bore this surname, from which it is evident that Plutarch had read the memoirs of the dictator, or at least that part in which this point was explained, very carelessly.

2. P. CORNELIUS SULLA, a son of the former (1), was prætor in Sicily in the year B.C. 186. (Liv., xxxix. 6, 8.)

3. SERVIUS CORNELIUS SULLA, a brother of P. Cornelius Sulla (2). In the year B.C. 167 he was one of the ten Roman commissioners who, after the death of Perseus, were sent to Macedonia to arrange the affairs of that country. (Liv., xlv. 17.)

4. L. CORNELIUS SULLA, the father of the dictator Sulla, of whom nothing is known, except that he was not a man of any great property. (Plut., 'Sulla,' 1.)

5. L. CORNELIUS SULLA FELIX, the son of L. Cornelius Sulla (4), was born in B.C. 138, in the consulship of P. Cornelius Scipio Nasica Serapio and D. Junius Brutus Galliaicus. When a young man he lived for a considerable time at Rome in lodgings, and in the same house with a freedman, which was looked upon as a proof of his limited means. But he appears nevertheless to have received an education as good as any of the illustrious young Romans of that time. (Sallust, 'Jug.,' 95.) He indulged however in all kinds of debauchery; and women, actors, mimes, and buffoons were his favourite companions to the last years of his life. He appears to have been foremost among the fashionable young nobles of the time, and was always an especial favourite of the women. His stepmother loved him like her own son, and when she died he came into the possession of all her property. Nicopolis, one of his mistresses, who possessed considerable property, also bequeathed it all to him. His fortune being thus improved, he was enabled to enter into competition with others for the honours of the republic. In B.C. 107 he was appointed quaestor, and was sent with a detachment of horse to join the army of Marius, who was then carrying on the war against Jugurtha. The stern warrior was at first somewhat indignant that such an apparently effeminate young nobleman was sent to him as quaestor in such an important campaign. But Sulla, although he had hitherto appeared totally ignorant of military affairs, soon showed himself to be the most active and skilful officer in the Roman camp, and gained the confidence and admiration of Marius. He also possessed in the highest degree the art of winning the affection of his soldiers. (Sallust, 'Jug.,' 96.) In the battle of Cirta, Sulla commanded the horse, and greatly contributed towards the victory over Jugurtha and Bocchus. (Sallust, 'Jug.,' 101.) After this victory Bocchus began his treacherous negotiations with the Romans, and Marius sent Sulla and A. Manlius as ambassadors to the king. By his duplicity Sulla induced Bocchus to take a decided course, the consequence of which was that Jugurtha was treacherously delivered up into the hands of the Romans. (Sallust, 'Jug.,' 102-13.) Sulla was so proud of having outdone the Numidian king, so famous for his cunning and his prudence, that he had a seal-ring made, on which Bocchus was represented in the act of delivering Jugurtha into the hands of Sulla; and this seal he used to the end of his life. (Plut., 'Sulla,' 3; Plin., 'Hist. Nat.,' xxxvii. 4; Val. Max., viii. 14, 4.)

When Marius, in his second consulship (B.C. 104), undertook the war against the Cimbri and Teutones, he made Sulla his legate, who distinguished himself by making Copillus, a chieftain of the Tectosagi, his prisoner. The year following Sulla remained in the camp of Marius as tribunes militum, and again distinguished himself. But in the third year, B.C. 102, he left Marius and joined the army of Lutatius Catulus, the colleague of Marius, who was stationed with a force in the north of Italy. Plutarch ascribes this step of Sulla to the jealousy of Marius, who, he says, feared lest his own fame might be eclipsed by that of his tribune. But the real cause of this movement was in the actual state of things. Sulla must have been aware that in the army of Catulus, who, although a good man, was not an able general, his services would be much more useful; and that there was a much greater sphere of activity for his talents as an officer in the army of Catulus than in that of Marius. If there existed an ill-feeling at all, it is much more likely that the aristocratic Sulla felt indignant at a plebeian being elected consul uninterruptedly one year after the other. Sulla, while in the army of Catulus, was the soul of all undertakings, and he made several successful expeditions against the Alpine tribes. On one occasion, when the army of Catulus began to suffer severely from want of provisions, Sulla contrived to obtain such plentiful supplies, that Catulus was enabled to send some to the army of Marius.

After the defeat of the Cimbri (B.C. 101) Sulla returned to Rome, where he resumed his old course of life. He did not come forward as a candidate for any public office until the year B.C. 94, when he was a candidate for the prætorship. But he was not elected, because the people, as he himself stated in his Memoirs, wished him first to hold the office of ædile, as they expected that on entering on the ædileship he would amuse them with magnificent games and exhibit African beasts in the Circus, as it was known that he was a friend of Bocchus, who would easily procure for him rare and beautiful animals. (Plut.,

'Sulla,' 5.) In the year B.C. 93 however he gained his object by canvassing and bribing: he was made prætor urbanus (στρατηγία πολιτική, Plut.; comp. Aurel. Vict., 'De Vir. Illust.,' 75), and exhibited to the people the games which they had expected from his ædileship. (Plin., 'Hist. Nat.,' viii. 20.) The year after his prætorship he went as prætor to Cilicia with a commission to restore King Ariobarzanes to his kingdom of Cappadocia, from which he had been driven through the influence of Mithridates. This object was soon accomplished; and this bold and successful undertaking excited the attention of Arsaces, king of the Parthians, who, while Sulla was staying somewhere near the Euphrates, sent a messenger to him soliciting the friendship of the Roman people. The request was granted, though Sulla, who felt the honour of being the first Roman to whom such an application was made by a Parthian king, treated the ambassador with haughtiness and arrogance. In B.C. 91, when Sulla returned to Rome, Caius Censorinus brought against him the charge of repetundæ or malversation, in his office of prætor, but did not follow it up. In this year the Marsic or Social War commenced, and for a time delayed the outbreak of the furious hostility between Marius and Sulla, which was kindled by apparently trivial circumstances. (Plut., 'Sulla,' 6.) Both Marius and Sulla commanded separate divisions of the Roman army, and the latter distinguished himself much more than Marius, who perhaps already began to incline towards the cause of the Italians. In B.C. 89 Sulla was legate of the consul L. Cato, and destroyed the Campanian town of Stabiae. (Plin., 'Hist. Nat.,' iii. 9.) He also defeated L. Cluentius near Pompeii, pursued him as far as Nola and compelled the Hirpini to submit. In Samnium he surprised and routed the army of Motilus, and took Bovianum by storm after a siege of three hours. (Appian, 'De Bell. Civ.,' i. 50.) During this war Sulla left nothing untried to gain the goodwill of the soldiers; and he even connived at their gross excesses. Thus when the soldiers beat to death with sticks his own legate Albinus, a man who had filled the office of prætor, Sulla not only did not punish this outrage, but rather boasted of it, saying that his men would fight all the better for it. (Plut., 'Sulla,' 6.) When the time approached for electing the consuls for the year following, Sulla went to Rome to offer himself as a candidate. His successful campaigns had gained him such popularity, that he was almost unanimously elected consul for the year B.C. 88. (Vellei. Pat., ii. 17.) He was now in the forty-ninth year of his age. His colleague was Q. Pompeius Rufus, who obtained Italy as his province. Sulla had Asia and the command in the war against Mithridates. The Social War was still going on, and Marius was not only exasperated because his former quaestor was now his equal, but was at the same time anxious to get the command in the war against Mithridates, and with this view he persuaded the tribune P. Sulpicius to give him his assistance in depriving Sulla of the power intrusted to him. A direct attempt to this effect would have been imprudent. Marius and Sulpicius therefore first tried to gain the interest of the Italian allies, and to identify the popular cause, represented by Marius, with that of the allies. With this view Sulpicius proposed two measures, first, to recall those who had been exiled on account of the support they had given to the allies; and, secondly, to distribute those Italians who had obtained the franchise, but had been formed into new tribes, among the thirty-five old tribes, the object of which was to increase the weight of their suffrage. (Liv., 'Epit.,' 77; Appian, 'De Bell. Civ.,' i. 55.) These proposals met with the most determinate opposition from the old citizens, and the Forum became the scene of terrible violence. The popular party, by far the most numerous, would have carried the day, but Sulla, who was with his army in the neighbourhood of Nola, returned to Rome, and in order to put an end to the violent proceedings in the Forum, he and his colleague proclaimed a justitium for several days. But Sulpicius and his party, armed with daggers, appeared in the Forum, declared the proclamation of the consuls to be unlawful, and endeavoured to compel them to repeal the justitium. This again increased the tumult, and Pompeius was obliged to take to flight, and his son who had married a daughter of Sulla, was murdered. Sulla himself, who had escaped into the house of Marius, was dragged forth and compelled to repeal the justitium, after which he returned to his army at Nola. In the meantime the rogations of Sulpicius were carried, and the command in the war against Mithridates was given to Marius. When the messengers from Rome came to the camp of Sulla with orders for him to surrender the command, the soldiers, who loved Sulla, and who were of opinion that Marius would not lead them to Asia, where they expected a rich harvest of booty, called on Sulla to lead them to Rome. Several officers of the camp, who were opposed to civil war, retired to the city, while numbers of other persons flocked from the city to the camp of Sulla. All signs and omens, to which Sulla pretended to attribute great importance, were in his favour, and with the declaration that he was going to deliver Rome from its tyrants, he marched with six legions against the city, which he took by storm. A battle followed within the walls, in which Marius and his party were defeated. Marius escaped to Africa, and Sulpicius, betrayed by one of his slaves, was put to death. Sulla and his colleague on this occasion prevented the soldiers as much as possible from committing any outrage upon the citizens. Besides the two leaders of the popular party, ten others were declared enemies of the republic, their property was confiscated, and agents were sent in all directions

to discover them, and either to put them to death or to deliver them up to the consuls. (Appian, 'De Bell. Civ.,' i. 60; Plut., 'Sull.,' 10.)

After this defeat of the Marian party, Sulla repealed the laws of Sulpicius, but he had no leisure for a thorough reform of the constitution, which he appears to have conceived about this time, as his soldiers were anxious to be led to Asia. Appian indeed ascribes some of the most important regulations of Sulla to this time, and it is not improbable that the law which enacted that no measure should be brought before the people which had not previously obtained the sanction of the senate, and another (*lex unciaria*; Fest, s. v. 'unciaria lex'), by which some disputes between debtors and creditors respecting the rate of interest were settled, belong to this period. The other measures, also mentioned by Appian, may have been discussed at the time, but they were not carried into effect until the dictatorship of Sulla. He remained at Rome until the consuls for the year following were elected. The consuls for the year B.C. 87 were Cn. Octavius and L. Cinna. The latter was a man of the popular party, and Sulla, pretending to be glad to see that the people made use of their freedom in the elections, contented himself with making Cinna promise with an oath that he would not disturb the actual order of things. Sulla in the meanwhile felt that his life was not quite safe at Rome, and was therefore constantly accompanied by a strong body-guard. A short time after, the tribune M. Virginius, instigated by Cinna, prosecuted Sulla, who however, without any concern about it, went to Capua to undertake the command of his army, and to proceed with it to Greece, where he intended to commence operations against Mithridates. He landed at Dyrrachium, collected the Roman troops stationed in Greece, and marched towards Athens, which Archelaus, the general of Mithridates, had made his head-quarters. After a long siege and a desperate defence, Athens was taken by storm (B.C. 86), and the garrison of the Acropolis was soon compelled, by want of water and provisions, to surrender at discretion. Piræus also fell into the hands of the victor. (Plut., 'Sull.,' 11, &c.; Appian, 'Mithrid.,' 28-45.) Sulla, who received no supplies from Italy, did not scruple to make use of the rich treasures of the Greek temples, and treated with scorn those who exhorted him not to provoke the anger of the gods. Athens suffered severely, and many of its most magnificent buildings and works of art perished on this occasion, for Sulla's anger had been provoked during the siege by the insulting conduct of Aristion, then tyrant of Athens. Archelaus collected all his forces in Greece, and after having received great reinforcements from Asia, he was determined to dispute with Sulla the possession of Greece. Though the Roman army was far inferior to that of Archelaus, Sulla gained two victories, one at Cheronea (B.C. 86), and the other at Orchomenos in Boeotia (B.C. 85), after which he destroyed the towns of Anthedon, Larymna, and Halæe. (Plut., 'Sull.,' 26.)

Although Sulla might now consider himself master of Greece, and might have carried on the war against Mithridates with the best hopes of success, he thought it advisable not to drive Mithridates to extremities, and therefore consented, soon after his landing in Asia, to conclude a peace with him (B.C. 84) [MITHRIDATES]. There were however other reasons for wishing to put an end to the war. During his absence from Italy the popular party had recovered its ascendancy, and his own party was almost annihilated: his institutions were abolished, his house was destroyed, and his property confiscated, and he himself was declared an enemy of the republic. The most distinguished senators had been obliged to take refuge in his camp in Greece, and they, together with his wife Cæcilia Metella, who had likewise fled from Rome, urged and entreated him not to forsake them. Two years before the peace with Mithridates, the consul L. Valerius Flaccus, who was of the popular party, had appeared with a fleet and an army in the Ionian Sea, under the pretext of carrying on the war against Mithridates, but perhaps with the secret intention of attacking Sulla. This plan however had not been realised, for Valerius Flaccus was murdered (B.C. 85) by his own legate C. Fimbria, who placed himself at the head of the troops, and was successful in several engagements with the army of Mithridates. After Sulla had concluded a peace with the king in the plains of Troas, he set out against Fimbria, who was stationed with his army in the neighbourhood of Thyatira in Lydia. Fimbria, being betrayed by his own soldiers, put an end to his life. (Plut., 'Sull.,' 25.)

Sulla was now at liberty to return with his army from Asia to Italy, but he had still to satisfy the demands of his soldiers, who had expected to enrich themselves in the war against Mithridates. To raise the necessary money, Sulla resorted to the most oppressive measures. Every provincial was obliged to give to every soldier quartered in his house every day a fixed sum of money, and to provide him and as many as he might choose to invite with a daily meal. Besides this, a heavy contribution of 20,000 talents was raised; in short, Sulla treated the country, which he pretended to have delivered, like that of an enemy. (Plut., 'Sull.,' 25.) After he had thus secured the attachment of his soldiers, he left the province of Asia, intrusted the two legions of Fimbria to his legate L. Licinius Murena (Appian, 'Mithrid.,' 64), and sailed with his fleet and the remainder of his army, about 30,000 men, from Ephesus to Piræus. After a voyage of three days he reached Athens. He took the library of Apellicon, the father of Aristion, which according to Athenæus (v. p. 211, &c.), belonged to Athenion, and which contained most of the

works of Theophrastus and Aristotle. Sulla, who was well able to appreciate such a treasure, carried it with him to Rome. [ARISTOTLE.] While in Greece, Sulla had an attack of the gout, of which he was cured by the use of the warm baths of Ædæpæus in Eubœa. During his short stay there he indulged in his usual diversions, and spent the greater part of his time in the company of actors and dancers. He then marched with his army towards the north, through Thessaly and Macedonia to Dyrrachium, and carried his army over to Brundisium in 1200, or, according to Appian ('De Bell. Civ.,' i. 79), in 1600 ships. This passage probably took place in the spring of the year B.C. 83.

The forces of the hostile party in Italy amounted to 200,000 men. (Vell. 'Pat.,' ii. 24.) Cinna had increased his preparations as soon as he heard that Sulla was on his way to Italy. In consequence of a letter which Sulla while yet in Asia had addressed to the senate, it had been decreed that negotiations should be entered into in order to effect a reconciliation between Sulla and his enemies, and that Cinna and Carbo, then consuls, should make no further preparations for war. But the consuls paid no attention to this decree, and made preparations for carrying an army into Dalmatia, in order to bring the war to a close in Greece. But when a part of the army was already transported to Dalmatia, a mutiny broke out among the soldiers, and Cinna was murdered, 84 B.C. (Appian, 'De Bell. Civ.,' i. 78; Liv., 'Epit.,' 83.) The popular party, deprived of their leader, had no alternative but to continue their resistance or to fall victims to the vengeance of Sulla, who declared that he would pardon none of his enemies. The Italians had made common cause with the democratic party, for they had reason to think that Sulla would be the last man to leave them in the enjoyment of the rights which they had lately acquired. But Sulla endeavoured to deprive his enemies of this support, and while he led his army from Brundisium through Calabria and Apulia in Campania, he carefully prevented his soldiers from doing any injury either to the fields or the towns of the Italians; and he even entered into negotiations with some of them, and assured them that he would not attempt to deprive them of their newly-acquired rights. (Liv., 'Epit.,' 86.) Many Romans of distinction also, who had formerly shown themselves rather neutral, such as Pompey, joined his army, and increased his forces considerably. In the first battle which Sulla fought with the consul Narbanus in the neighbourhood of Capua, he was successful, and while a truce was concluded with this conquered enemy, the army of the other consul, L. Scipio, was persuaded to abandon their general. In the following year (B.C. 82), when young Marius and Cn. Papirius Carbo were consuls, the war assumed a more serious aspect. Marius undertook the protection of Rome and Latium, and Carbo that of Etruria and Umbria. Marius however was defeated by Sulla in the battle of Sacriportus, upon which he fled to Præneste, and Rome was taken by the conqueror, after the prætor L. Damasippus, at the request of Marius, had put to death a great number of nobles, and among them even a pontifex maximus, who were suspected of secretly supporting the cause of Sulla. Carbo, who was successfully attacked by Metellus Pius, Pompey, and Sulla himself, was compelled to seek refuge in Africa, after he had made a useless attempt to rescue Marius, who was besieged in Præneste by Q. Lucretius Ofella. The Samnites and Lucanians, who, under the command of Pontius Telesinus and M. Lamponius, likewise made a fruitless attempt to relieve Præneste, and then marched against Rome, were defeated in a great battle at the Colline gate, in which both armies fought desperately (B.C. 82). The number of the slain on that day is stated to have been 50,000. Sulla, in his inveterate hatred of the Samnites, on the third day after this victory, ordered several thousands of them, who had been made prisoners, to be cut down in the Campus Martius. During the time that this slaughter was going on, Sulla held a meeting of the senate near the scene of horror, and when the senators became uneasy at the groans of the dying prisoners, he told them to listen to what he was proposing, and not to mind what was doing outside. (Appian, 'De Bell. Civ.,' i. 84-94; Liv., 'Epit.,' 88; Plut., 'Sull.,' 30.) This victory was soon followed by the taking of Præneste. The Romans who were found there among his enemies were pardoned, but the Samnites and Prænestines, amounting, according to Plutarch, to 12,000, were put to the sword. Marius persuaded a slave to put an end to his life.

Sulla's victory was now complete, although some towns of Italy still continued to offer resistance, and although the war was continued in Africa by Carbo and in Spain by Sertorius. Sulla gratified his vengeance by proscriptions, an invention of his own, by which he was enabled to get rid of those whom he had to fear, and to reward his friends and his soldiers. Many thousands were proscribed, that is, were declared out of the protection of the law and any one was authorized to kill them; and those who killed a proscribed person or gave notice of his place of concealment, received two talents as a reward, and those who gave shelter to one forfeited their own lives. Lists containing the names of the proscribed were put up in public and new names were constantly added. The property of the proscribed was seized and publicly sold or given away. The consequences were according to the will of the tyrant, to extend to the descendants of the proscribed, inasmuch as they were to be excluded from all honours and public offices. Rome was in a state of utter consternation. But the vengeance of Sulla was not confined to the city. All the Italians who

had in any way opposed the party of Sulla were punished in the same manner, and numbers of them were murdered and their property confiscated. Whole cities were punished by the imposition of heavy fines, or by the demolition of their fortifications. Sulla moreover, according to Appian, sent twenty-three, or according to Livy, forty-seven legions to be distributed as garrisons among the towns of Italy, and granted to them the Roman franchise, together with the lands and houses which he had taken from their former owners. In the same manner as he thus secured for himself a strong party in the towns of Italy he formed at Rome for the security of his own person a body-guard consisting of ten thousand slaves, to whom he gave their freedom and their franchise, and who were called after their patron, Corneli. The people were thus silenced by fear, and all the acts committed by the tyrant were ratified by a decree of the people (Appian, 'De Bel. Civ.', 97), and a gilt equestrian statue was erected to him in front of the rostra, with the inscription 'Cornelius Sulla, Imperator Felix.'

Sulla now caused the senate to name an interrex, and Valerius Flaccus being appointed, Sulla made him propose to the senate to appoint a dictator to regulate the affairs of Rome and Italy. In accordance with his own expressed wish, Sulla was made dictator (B.C. 82), an office which had not existed for the last 120 years, and which he was permitted to hold as long as he pleased. In order however to leave to the people some appearance of liberty, he permitted them to elect consuls as usual, and he himself in B.C. 80, held the office of consul in addition to that of dictator. In the year B.C. 81 he enjoyed a triumph for his victories in the war against Mithridates, and his splendid games and feasting, which lasted for several days, made the people forget for a time their wretched condition. (Appian, 'De Bel. Civ.', 101.) After his triumph he claimed the surname of Felix, and pretended that all his success against his enemies was owing to the favour of the gods, especially of Venus, which he had enjoyed from his early youth. Hence he also called himself Epaphroditus. But although he sometimes affected gratitude towards the gods, in reality he cared little about them, and he did not scruple to plunder their temples and to treat with scorn and contempt the signs which appeared to deter him from his sacrilegious actions. (Plut., 'Sull.', 12.)

After Sulla had completely annihilated the popular party, he began to direct his attention to a reform in the constitution and in the administration of justice. Zachariae, a great admirer of the political wisdom of Sulla, divides all his laws which are known under the name of 'Leges Corneliae', into three great classes:—1. constitutional regulations; 2. criminal laws; and 3. those that were intended to improve public morals.

The constitutional laws of Sulla were intended to restore the old aristocratic form of the republic, but such a restoration could only be a matter of form, as it had no longer its hold in the hearts and minds of the Romans. As a politician, Sulla was one of those short-sighted men who believe that old institutions can be revived or preserved by the mere letter of the law, though that which formerly alone gave stability to them, the spirit of the nation, has become entirely altered. The consequence was that the constitution of Sulla did not survive him many years. The principal part of his reform consisted in depriving the comitia tributa of their legislative and judicial powers, and of the right to elect the members of the great colleges of priests, which the people had exercised for some time. He left to the comitia of the tribes only the power to elect the inferior magistrates, as tribunes, aediles, and quaestors. The power of the tribunes of the people thus received a fatal blow. Some writers are of opinion that Sulla abolished the assemblies of the tribes altogether. The whole of the legislative power was given to the Comitia Centuriata, but in such a manner that no legislative measure could be brought before them without having previously received the sanction of the senate. He also allowed no appeal to the people from the sentence of a magistrate. The vacancies which had occurred in the senate through the late calamities were filled up by the admission of 300 of the most distinguished equites (Appian, 'De Bell. Civ.', i. 100). He increased the number of pontiffs and augurs to fifteen.

Sulla appears greatest in his laws relating to the administration of justice. All the Roman writers agree that Sulla gave the judicium (either the publica and privata, or the former alone) to the senate. We cannot enter here into an account of the various laws relating to criminal and civil jurisdiction; but before the time of Sulla, the criminal legislation of Rome was extremely imperfect, and he was the first who brought order and system into this important branch of administration; and this part of his reform was not abolished after his death, but most of his laws continued in force down to the latest times of the empire. His legislation embraced a great variety of subjects. The laws which Sulla enacted with a view to improve the state of public morals, related chiefly to marriage and luxury (leges sumptuariae). But Sulla though apparently anxious to improve the moral condition of the people, himself utterly licentious, was the last man to observe any laws of the kind. (Plut., 'Sull.', 35; 'Comparat. Lysand. c. Sulla'.)

After the annihilation of all his enemies, and the establishment of a new order of things, Sulla once more felt a desire to enjoy those sensual pleasures to which he had been addicted from his early youth, and without the interruption necessarily arising from being at the head of the republic. Accordingly he did not accept the consulship

for the year B.C. 79, and soon after declared to the assembled people that he resigned his power and dignity of dictator, and that he was ready to render an account to them of the manner in which he had exercised his power. As might have been expected, no one ventured to take him at his word; only one young man is said to have dared to accuse him, and to have followed the ex-dictator on his way home with bitter invectives, to which Sulla only made the remark: "This youth will prevent any one in future, after having once acquired great power, from being inclined to lay it down." The abdication of Sulla in the height of his power has called forth the admiration of ancient and modern writers; but an accurate examination of the state of affairs in Rome and Italy, and a consideration of the sensual disposition of Sulla, deprive this act of much of its apparent magnanimity. As regards his own inclination, it can only be said that his love of pleasure unincumbered by public affairs was greater than his love of power. The 10,000 Corneli remained after his abdication as attached to him as they had been before, and they were ready to take up arms for their patron at any moment, as their own safety depended upon his. The party of Sulla was in possession of all the power at Rome, and in Italy his numerous legions were as ready to take up arms in his defence as the Corneli. He could therefore withdraw without any danger or fear, and how well he had calculated is clear from Plutarch ('Sull.', 37), for even during his retirement to private life his will was regarded as law. Soon after his abdication he retired to his villa near Puteoli, where he spent his time partly in literary occupations, partly in hunting and fishing, and partly giving himself up to the pleasures of the table, and of women, actors, and dancers. (Plut., 'Sull.', 36.) He died in the year B.C. 78, at the age of sixty. The cause of his death is not quite certain. Appian ('De Bell. Civ.', i. 105) says he died of an attack of fever, while others inform us that the loathsome disease called phthisias was the cause of his death. (Plut., 'Sull.', 36; Plin., 'Hist. Nat.', xxvi. 86; xi. 39; vii. 44; Aurel. Vict., 'De Vir. Illustr.', 75; Paus., i. 2, 4.) Two days before his death Sulla had finished the twenty-second book of his 'Memoirs', of which we probably possess a considerable part in his Life by Plutarch. His body was carried to Rome with great pomp, and burnt in the Campus Martius according to his own request. A monument was also erected to his memory in the Campus Martius, with an inscription said to have been written by Sulla himself. (Plut., 'Sull.', 38.)

Sulla was married five times, and left two children, Faustus Cornelius Sulla and Fausta, who were twins by his fourth wife Cæcilia Metella. One daughter was born, after his death, by his fifth wife Valeria.

6. FAUSTUS CORNELIUS SULLA, son of the dictator Sulla, (5) and of Cæcilia Metella (Plut., 'Sull.', 34), was born in B.C. 89. After the death of his father he was under the guardianship of L. Lucullus. He was several times in danger of being compelled to restore the money which his father had unlawfully appropriated to himself. The senate however always prevented an inquiry being instituted, as some of the body would have been compromised by it. In B.C. 66 a tribune of the people renewed the attempt, but Sulla again escaped, chiefly through the influence of Cicero, who spoke for him. (Ascon., in 'Cic. Cornel.', p. 72, Orelli; Cic., 'Pro Cluent.', 34; 'De Leg. Agr.' i. 4.) He served under Pompey in Asia, and in B.C. 63 he was the first who scaled the walls of the temple of Jerusalem, for which act of bravery he was richly rewarded. (Joseph., 'Ant. Jud.', xiv. 4; 'Bell. Jud.', i. 7, 4.) In B.C. 60 he gave to the people the gladiatorial games which he had been requested to give by his father in his last will, and on this occasion he treated the people most munificently; he made them donations of money, and allowed them the use of the baths without any payment. (Dion Cass., xxxvii. 25; Cic., 'Pro Sulla', 19.) In the same year B.C. 54 he obtained the quaestorship, after he had some years before been made a member of the college of augurs. (Dion Cass., xxxix. 17.) After the murder of Clodius, Faustus was requested by the senate to restore the Curia Hostilia, and it was decreed that after its restoration it should be called Curia Cornelia. (Dion Cass., xl. 50.) Faustus Sulla did not obtain any higher office than the quaestorship; his dissolute mode of life had ruined his fortune. As regards his political views, he had joined the party of Pompey, whose daughter he married. In B.C. 49 Pompey wished him to be sent as proprietor to Mauritania, but it was prevented by the tribune Philippus. (Cass., 'De Bell. Civ.', i. 6.) During the troubles of the civil war between Pompey and Caesar, Sulla's only object appears to have been to enrich himself. He was present in the battle of Pharsalus, and thence fled to Africa, where his fate was decided in the battle of Thapsus (B.C. 46). He attempted to escape to Spain, but was taken prisoner and delivered to Caesar, in whose camp he was murdered during a mutiny of the soldiers. His wife and children however were set at liberty. (Cass., 'De Bell. Afr.', 95; Appian, 'De Bell. Civ.', ii. 100.) Of his twin-sister Fausta nothing is known, except that she married twice, and each time was guilty of adultery. (Ascon., in 'Cic. pro Seaur.', p. 29.)

7. P. CORNELIUS SULLA, a son of Servius Cornelius Sulla, was a brother of the dictator, and enriched himself considerably during the proscriptions. (Dion Cass., xxxvii. 27; Cic., 'De Off.', ii. 8.) In B.C. 66, P. Cornelius Sulla and P. Autronius Pæstus were elected consuls; but both were found guilty of ambitus (bribery), and deprived of their

dignity. (Cic., 'Pro Sulla.') He is also believed to have been an accomplice of Catiline in his first conspiracy, and in B.C. 62 he was accused by L. Torquatus of having taken part in both the conspiracies of Catiline. Several men of distinction lent him their protection, and Hortensius and Cicero spoke for him. The speech of the latter is still extant. Sulla was acquitted, but there is every reason for believing that he was guilty of the crime with which he was charged. Cicero's defence was evidently not made without some apprehension and embarrassment. (See also Sallust, 'Cat.' 17.) Cicero subsequently fell out with Sulla, as the latter was to some extent involved in the crimes of Clodius. (Cic., 'Ad Att.' iv. 3.) In the civil war between Pompey and Caesar, Sulla served as legate in the army of Caesar during the battle of Pharsalus. (Appian, 'De Bell. Civ.' ii. 76; Cæsar, 'De Bell. Civ.' iii. 51, 80.) In B.C. 47, when he was commanded to transport the legions destined for Africa from Italy to Sicily, he was pelted with stones by the soldiers of the twelfth legion, and driven away, for before embarking for Sicily they claimed the money and lands which they had been promised during the campaign in Thessaly. (Cic., 'Ad Att.' xi. 21, &c.) During the confiscations and sales of property in the dictatorship of Caesar, Sulla acquired considerable wealth by the purchase of such property. (Cic., 'De Off.' ii. 8; 'Ad Fam.' xv. 19.) In the year B.C. 45 he died on a journey: some said that he had been murdered by robbers, others that he died by over-eating himself; but the people appear to have rejoiced at having got rid of such a worthless person. (Cic., 'Ad Att.' ix. 10; xv. 17.) He left behind him a son, P. Sulla, and a son-in-law of the name of Memmius, of whom nothing worth mentioning is known. (Cic., 'Ad Fam.' xv. 17; 'Ad Q. Frat.' iii. 3; 'Pro Sulla,' 31.)

8. SERVILIUS CORNELIUS SULLA, a brother of P. Cornelius Sulla (7). He took part in the conspiracy of Catiline (Sallust, 'Cat.' 17, 47); but he was not condemned to death, although his guilt was so manifest, that no one would undertake his defence. (Cic., 'Pro Sull.' 2.)

The last person of any note bearing the name of Sulla in the history of Rome occurs in the reigns of Claudius and Nero. He was a son-in-law of the Emperor Claudius (Suetonius, 'Claud.' 27; Tacitus, 'Annal.' xiii. 23), and was consul in A.D. 52. According to the information of one Petus, Pallas and Burrhus intended to raise him to the imperial power. This charge was found to be false; but Nero nevertheless dreaded Sulla, believing him to be a cunning and crafty person. Some false report subsequently increased this fear of Nero, who, in A.D. 59, sent him into exile to Massilla. (Tacit., 'Annal.' xiii. 47.) But as the emperor apprehended that Sulla might here induce the German legions to revolt, he ordered him to be put to death, which took place in A.D. 63. (Tacit., 'Annal.' xiv. 57.)

(Respecting the history of the family of the Sullas, see Orelli, *Onomasticon Tullianum*, ii. p. 192, &c.; Drumann, *Geschichte Roms in seinem Ueberzuge, &c.*, ii. p. 426, &c.; Pauly's *Real-Encyclopæd. der Alterthumswissenschaft*, ii. p. 668, &c. For the history of the dictator Sulla, and his legislation in particular, see Zachariæ, *L. Cornelius Sulla, genannt der Glückliche, als Ordner des Römischen Freystaates*, Heidelberg, 2 vols. 8vo, 1834; Vocekeart, *Dissertatio Historico-Juridica de L. Cornelio Sulla legislatore*, Lugd. Bat., 8vo, 1816; A. Wittich, *De Rei Publice Romanæ ea forma, qua L. Cornelius Sulla dictator totam rem Romanam ordinibus, magistratibus, comitiis commutavit*, Lipsiæ, 8vo, 1834; and a Latin dissertation by C. Ramshorn, which bears the same title as that by Wittich, and was published at Leipzig, 8vo, in 1835.)

SULLY, MAXIMILIEN DE BETHUNE, DUC DE, born at Rosny on the 18th of December 1560, was descended from a younger branch of the family of Bethune, in the Netherlands. His ancestors had by their own exertions and wealthy marriages raised themselves to importance in their adopted country of France; but the grandfather of Maximilien had squandered away his inheritance, and left to his son nothing but a proud name and his mother's dowry. François de Bethune, baron of Rosny, was a sagacious man, but not possessed of sufficient talent to re-establish the family fortune; and his adoption of the Protestant religion, by alienating him from his relations, forbade all hopes of improving his inheritance. His eldest son was feeble in mind and body, and the cherished wish to see prosperity return to his house rested upon the second—the more energetic Maximilien. His expectations from this quarter were strengthened by the predictions of astrologers. The first lesson impressed upon the boy's mind was the duty of devoting himself to the aggrandisement of the family. The moral and religious tenets of the Huguenots were at the same time sedulously instilled into him. These early impressions moulded a strong, fearless, and enterprising character, and decided his career in life.

In 1572 François de Bethune carried his son to the court of Henri, the young king of Navarre, then in his twentieth year, having previously commanded the boy in a solemn and impressive manner to live and die with the master he gave him. Young Rosny accompanied the king of Navarre, who was at that time on his way to Paris to conclude his matrimonial engagement with the king's sister. In Paris he paid his court daily to Henri, but resided at some distance, in the quarter where most of the colleges were situated, with a governor, and attended the classes of the College of Burgundy. By the assistance of the principal of that institution he escaped the massacre of St. Bartholomew, though the horrors of that night left a lasting impression

on his mind. At the command of his father he continued to reside in Paris, but his literary studies were abruptly closed. His governor perished in the massacre; and his preceptor was too terrified to remain in Paris. The king of Navarre however supplied the place of the tutor with one who gave Rosny instructions in history and mathematics, and the rest of the boy's time was spent, according to his own account, in learning to read and write well. He continued occupied with these pursuits till the beginning of 1575, when he accompanied Henri in his escape from the state of confinement in which he was kept by the French court.

The Protestants had by this time recovered from the dismay into which the massacre of St. Bartholomew had thrown them, had made common cause with their Roman Catholic fellow-subjects in remonstrating against fiscal grievances, and had at last ventured to take up arms again. The king of Navarre and the prince of Condé were in a great measure identified with the Protestant cause; and the Duke of Anjou, who had at this time some cause of quarrel with the court, formed an alliance with them. Immediately after the escape of Henri these three princes found themselves at the head of a mixed army of Roman Catholics and Protestants, amounting to 35,000 men. The civil war which immediately broke out was continued with a few brief intervals of hollow truce till 1594. The studies of Rosny, who accompanied Henri in his flight from Paris, were finally broken off by that event. In his fifteenth year he was immersed in the toils and cares of active life: the death of his father about the same time left him entirely his own master. It was in nineteen years of civil war that he developed and cultivated without guide or master the character and talents which he displayed as minister of France.

At first Rosny accepted an ensignship in the regiment of foot of which his relation Lavardin was colonel. In the first skirmishes in which he was engaged he evinced so much temerity, that Henri was more than once obliged to rebuke him. It was only in battle however that he showed any degree of boyish thoughtlessness: in the management of his pecuniary affairs he displayed a prudence beyond his years. The rents of his property and the booty he obtained in the storming of several towns, enabled him to maintain a small company of men-at-arms; and with these, resigning his ensignship, he attached himself exclusively to the person of the king of Navarre. The courage and enterprise of so young a lad, the enthusiasm with which he sought to make himself master of the art of gunnery, and above all the prudence which he manifested in his domestic arrangements, led Henri to cherish so promising a servant. Rosny was made a councillor of Navarre in his twentieth year, with a salary of 2000 livres.

It was soon after this promotion that he was induced to make one in the retinue of the Duke of Anjou, who had been invited to assume the sovereignty of the Low Countries. The bait which attracted Rosny was the promise of having his claims to the inheritance of the Viscount of Ghent supported by the new king, and the opportunity of reconciling himself to his Flemish relations. He found himself disappointed in both, and returned in 1583 to the king of Navarre, no otherwise benefited by his excursion to the Netherlands than by the acquisition of more knowledge of the world and greater experience in war. He was almost immediately despatched to Paris to keep an eye upon the intrigues there going forward.

In December 1583, he married Anne de Courtney, and spent the whole of 1584 with his young wife upon his estate at Rosny. Though retired from public life, he was not idle: he had been obliged on several occasions to deal extensively in horses for the purpose of mounting his troop; and during the year he resided in the country he extended his dealings, sending out agents, who purchased horses in Spain and other countries at mere nominal prices, and sold them at a high rate in the provinces which were the seat of hostilities. His husbandry was so good, that when he rejoined Henri in 1585, he carried not only himself and his troop, but a good round sum of money to assist his master in prosecuting the war. Rosny's devotion to the cause of Henri was deep and unalterable. It was a mixture of personal attachment, of a sense of duty, on account of the solemn injunction of his father, and of a steady belief, resting partly upon the conclusions of his own shrewd judgment and partly upon belief in the predictions of astrologers, that his master was destined to be one day king of France, and himself to rise to eminence in his service. Henri was at the moment in need of such an able and devoted servant. As presumptive heir to the crown of France, he had an interest apart from that of the Protestants; and at the same time the leaders of the Protestant party were anxious to make of France a federation of independent principalities, while his policy was to consolidate the power of the crown. His Roman Catholic retainers were even less to be depended upon than the Protestants, for their aversion to his heresy naturally rendered them lukewarm in his service. In the course of some conferences of the Protestant leaders, Rosny zealously opposed the specious pretences by which they sought to cloak their efforts for personal aggrandisement, and maintained the necessity of concentrating their forces under one leader. At the close of one of these discussions the king of Navarre told him that now was the time for acting as well as arguing boldly: asked whether he was willing to put all to the hazard in his service, and pledged his honour that, should he succeed, Rosny should share in his prosperity. Rosny promised that all his means should be at Henri's disposal; and was from that moment one

of his master's most valued counsellors, as he was one of his bravest soldiers. He was employed in many delicate and difficult negotiations; and at the battle of Coutras (20th of October 1587), where he commanded the small park of artillery, he contributed mainly by his skilful employment of it, to the gaining the victory.

That victory was thrown away in consequence of the disunion of the Protestant leaders; and the ensuing year was wasted in skirmishes which led to nothing. The death of the queen-mother, in January 1589, followed in rapid succession by the assassination of the Duke of Guise and the insurrection of the Parisians, forced on an alliance between Henri III. and his heir presumptive. Rosny was not in a condition to take an active part in the operations which ensued. The death of his wife kept him fettered for some time in hopeless gloom, and when he rejoined the army before Paris, it was in the mood of a man who braved death as a relief from painful thoughts. He was startled out of his despondency by the assassination of the king of France (2nd of August 1589), and the succession of the king of Navarre as Henri IV. The services of Rosny from this time till the entry of Henri into Paris (21st of March 1594) were many and weighty. He fought at the battle of Arques; he was dangerously wounded at the battle of Ivry; he detected the intrigues on foot among the Roman Catholics with the view of forming a 'tiers parti,' which those who distrusted the League might be induced to join, and which should be equally hostile to Henri. This last discovery opened the eyes of Sully to the impossibility of a Protestant obtaining secure possession of the throne of France; and from that moment his part was taken. He urged upon Henri the necessity of re-entering the Roman Catholic Church, and ultimately succeeded in overcoming his not very strong reluctance to the step. Rosny was thus the main instrument in opening the gates of Paris to his master; and to this obligation he added, about the same time, that of gaining for him the services of the Grand-Admiral Villars and the possession of Rouen. Amid all these occupations he found time to marry again, in May 1594: his second wife was Rachel Cochefilet, widow of the Sieur de Châteaupers.

Long before Henri, by changing his religion and obtaining possession of Paris, had established himself securely on the throne of France, he had felt severely the dilapidated state of the national finances. One of his first wishes, on finding himself in a state of comparative tranquillity, was to secure the services of Rosny, in whose fidelity and talents he had the greatest confidence, in this important department of the state. Two difficulties prevented the immediate gratification of this wish; the danger of exciting jealousy by advancing a Protestant, and the reluctance of the professional financiers to admit one not of their class into a knowledge of its secrets. The king hesitated for two years before he could gather courage to beat down these obstacles; but the malversations continued to increase so shamelessly, that in 1596 Rosny was formally installed a member of the great council of finance.

His first step was to obtain from the king the appointment of a commission of inquiry into the state of the revenue and its collection in all the districts into which the kingdom was divided for financial purposes. Four of the principal districts were reserved for his own inspection. In the course of a tour he made through them he detected the various means by which money was diverted from the treasury, and the king kept poor at the same time that over-exactions were levied upon the people. He collected arrears of taxes which had been allowed to lie over, and returned to Paris not only with evidence of abuses in the management of the finances, but with a considerable sum of money in hand. An assembly of notables was held at Rouen soon after his return. The king left Rosny to deal with the representatives of the states, and succeeded in obtaining a grant of some new imposts for the king, and frustrating in a manner that gave no umbrage an attempt made by the assembly to establish a board of control over the royal treasury. He was now promoted to be superintendent of finance, and entered upon the discharge of his duties with a zeal that amounted almost to a passion. He was indefatigable in his examination of the state records, with a view to make himself familiar with the origin and actual character of the different branches of revenue, and the methods of levying them and securing the money they yielded. Having mastered this knowledge, he availed himself of it to organise thoroughly the financial establishment; and he superintended with unremitting vigilance the working of the machine which he constructed. Soon after he commenced operations, he induced the king to order that the surplus receipts of each year should at its close be deposited, in money, in the Bastille. When he undertook the management of the finances, in 1597, the treasury was empty and in debt; after the death of Henri IV., in 1610, 42,000,000 of livres were found in it.

The method and regularity which Rosny had introduced into the finances, suggested a wish that he should lend his assistance towards bringing the other departments of government into similar order. He was appointed in succession to be grand-master of the artillery, director of the marine, master of works, and director of bridges and highways. He became in fact sole minister of France. Six days of the week councils were held every morning and evening. On the Mondays, Thursdays, and Saturdays, the council of state and finances sat both in the forenoon and the evening; on the other three days special councils were held—of war, commerce, &c. Rosny attended

all, and presided in all when the king was absent, which was frequently the case.

In addition to these duties of routine, he was frequently engaged in important negotiations. In 1601 he was delegated to meet Queen Elizabeth at Dover, where arrangements were made for an alliance against the house of Austria. In 1603 he was sent as ambassador to James I. on his succession. Honours and emoluments flowed in upon him. The grand-mastership of the artillery produced him an annual income of 24,000 livres; his office of counsellor of state as much; he held several governments, the appointment of a counsellor of Navarre, the command of a troop, to all of which considerable pensions were attached, and he received from time to time considerable presents from Henri. In 1606 he was created Duc de Sully and a peer of France. And his advice was taken and his services employed by the king in his most delicate family arrangements, as well as in the affairs of the state.

The murder of Henri IV. in 1610 terminated the career of Sully as minister. He stood alone after the death of him to whom alone he had devoted himself; obnoxious to envy and intrigue on account of his power and wealth, doubly obnoxious as a Protestant. He continued for some time to attend the council as usual, but finding himself systematically thwarted by the favourites of the new court, he made preparations for resigning in the commencement of 1611, and early in that year formally gave up the offices of superintendent of finance and governor of the Bastille.

From that time the château of Villebon became his principal residence. In the spring and autumn of every year he visited Sully and Rosny. He had retained his government of Poitou, and the direction of the artillery, the fortifications, and the roads and bridges; so, though retired from court, his life was neither private nor inactive. He attended at least one conference of the Protestants; but refused to take part in any of their armaments. He retained the respect of the court, and was appointed a marshal of France by Louis XIII., in 1634. The favourite amusement of his declining years consisted in preparing his *Memoirs* "of the great and royal economies of Henri IV." for publication. He took a keen interest in the management of his estates. The prodigality of his son (who died before him) involved him in some disagreeable embarrassments; and the decision against him of a suit which his grandson had been instigated to commence is supposed to have hastened his death. He died at Villebon, December 22, 1641.

Sully was essentially a man of action; except for history, and those branches of knowledge which are useful to the soldier and practical statesman, he seems to have had little literary taste. He was fearless, enterprising, and persevering. His appetites were not inordinate, and were held in constant control by his powerful will. He had a clear and just perception of character. He had naturally a love of order and despatch, which were strengthened by habit. His theoretical views of society and political economy do not evince much profundity; and the strange and cumbrous arrangements of his *Memoirs* would seem to indicate that he laboured under the same inability to tell a plain story briefly and intelligibly, which has been observed in others eminent for the clearness of apprehension displayed in their actions. His moral creed seems to have closely resembled that of the contemporary Puritans of England. It is more difficult to conjecture what were his religious opinions. With great temptations to abjure the Protestant faith, he continued to profess it to the last. Yet he advised Henri IV. to reconcile himself to the Roman Catholic Church, and his affection for that king is beyond a doubt. Nor can his adherence to Protestantism be explained upon the assumption that he was influenced by a partisan point of honour; for he was more a Frenchman than a Protestant, and invariably sacrificed the party interests of the Huguenots to the broad interests of the nation. His devotion to Henri was not without a tinge of superstition; it was long affected by the predictions of astrologers, if it was ever entirely cleared of them. His love of state, and display in his apparel, household, and attendants, is another indication of something imaginative peeping out from under his stern practical character; as is also the fragment of a romance of the Scudery school found among his papers after his death. Yet he had no tolerance for what weaklings call sentiment, as may be gathered from his own account of his first marriage; and from his sturdy and fearless opposition to the follies into which that weakness frequently led his master. Sully was not a person exactly to be loved, but he was one to be revered and implicitly trusted. He was perhaps a servant such as no king but Henri IV. ever had; as Henri on his part was qualified to win the affectionate devotion of such a servant beyond any king who ever existed. The administration of Sully is an important chapter in the history of France: the subsequent fortunes of that nation cannot be thoroughly understood unless by one who has studied attentively his operations.

(The principal authority for the facts stated in this sketch is Sully's own work; but some assistance has been derived from De Thou and other contemporary writers.)

SULPICIA, a Roman poetess, of whose productions we possess only one Satire, consisting of seventy verses, which is usually called 'De Edicto Domitiani, quo Philosophos Urbe exegit.' She is generally supposed to be the same as the Sulpicia mentioned by Martial

(x. 35 and 38), and to have been the wife of Calenus: she was accordingly a contemporary of Domitian and of Martial. The poem of Sulpicia is on the whole stiff, and shows little imagination. It is usually annexed to the editions of Persius and Juvenal; the best separate edition is that by J. Gurlitt, 'Cum Commentariis C. G. Schwartzii,' 2 parts, 4to, Hamburg, 1819. It is also printed in the 'Anthologia Latina' of Burmann, and Wernsdorf, 'Poetæ Latini Minores.'

(Burmann, 'Antholog. Lat.,' ii. p. 408, &c.; Wernsdorf, 'Poet. Lat. Min.,' iii. p. lx., &c., and p. 83, &c.)

In the fourth book of the 'Elegies' of Tibullus there are several letters written in the name of Sulpicia, which in their character and diction present some slight differences from the other poems of Tibullus. Some modern critics, as Barth ('Adversaria,' liv. 16) and Brouckhuis (ad Tibull., p. 384), have therefore supposed that they were written by the Sulpicia above-mentioned. This opinion however cannot be reconciled with several historical allusions in these letters, which clearly point to the age of Augustus. For this reason Heyne (ad Tibull., iv. 2, p. 350, &c.) conjectured that they were the work of a Sulpicia who lived in the time of Tibullus. But this opinion too rests on very weak grounds, and we cannot indeed see any sufficient reason for supposing that these letters, notwithstanding their slight peculiarities, were not written by Tibullus himself.

(Compare Bähr, *Geschichte der Röm. Literatur*, p. 250 and 279.)

**SULPICIUS RUFUS.** P. Sulpicius Rufus was born in the year B.C. 124, and was ten years older than the orator Hortensius. In the year B.C. 94 he prosecuted C. Norbanus for the offence of majestas, under the provisions of the Lex Apuleia, a circumstance which brought him into notice. (Cic., 'Off.,' ii. 14.) In the following year he was quaestor, and he served in the Social war as legate of Cn. Pompeius Strabo. He was tribune plebis in the year B.C. 88, and supported the faction of Marius. Cicero heard many of his speeches during his tribunate, and thoroughly studied his style of oratory: "He was," says Cicero, "of all the orators that I ever heard, the most dignified, and, if one may use the expression, the most tragic: his voice was powerful, sweet, and clear; his gesture and every movement graceful; and yet he seemed as if he were trained for the forum, and not for the stage: his language was rapid and flowing, and yet not redundant or diffuse." (Cic., 'Brut.,' 55; comp. Cic., 'De Orat.,' iii. 8.) Among other measures of his tribunate, Sulpicius brought forward and carried a rogatio, by which the command of the Mithridatic war was transferred from Sulla to Marius. Sulla, who was then at Nola with his army, marched to Rome, of which he took possession. [SULLA.] Twelve persons were proscribed, among whom were Marius and Sulpicius. Marius escaped, but Sulpicius was betrayed by his slave, and murdered in a villa near Rome.

Sulpicius left no writings, and Cicero states that he had often heard him say that he was not accustomed to write, and that he could not write. ('Brut.,' 56.) There were however orations attributed to him, but they were supposed to be the work of P. Canutius. P. Sulpicius is one of the interlocutors in Cicero's dialogue 'De Oratore.'

It does not appear how P. Sulpicius was related to Servius Sulpicius Rufus. As he was a tribune, he must have been of a plebeian family, or at least must have been adopted into a plebeian family, and it may be that he was of a different family from Servius Sulpicius.

**SULPICIUS LEMONIA RUFUS, SERVIUS,** the friend and contemporary of Cicero, was nearly about the same age as Cicero ('Brut.,' 40), and consequently was born about B.C. 106. He was of a patrician family, and yet Cicero says that his father was only an eque. He began his career as an orator, and might have attained the first place or have been only inferior to Cicero, if he had not directed his energies to the study of the law. It is said that on one occasion he applied to Q. Mucius Scaevola the Pontifex for his advice on a question of law, and that Scaevola, perceiving Servius did not understand what he said, reproached him for his presumption in undertaking the conduct of causes, when he was ignorant of the law which was necessarily involved in them. This determined him to devote himself to the law. The time at which Servius began his legal studies does not appear. He accompanied Cicero to Rhodes, B.C. 78 ('Brut.,' 41), and it may be inferred from the passage of the 'Brutus' that he commenced his legal studies after his return, or perhaps it was after his return that he devoted himself exclusively to the law. His object in visiting Rhodes was to improve himself.

Servius filled several public offices. He was quaestor of the district of Ostia (Cic., 'Pro Muren.,' 8), curule ædile, and prætor for Questions Peculatus. The first time that he was a candidate for the consulship he was rejected, and L. Murena was elected, whom Servius prosecuted for ambitus (bribery): Murena was defended by Hortensius, M. Crassus, and Cicero. In the year B.C. 51 he was elected consul with M. Claudius Marcellus, in preference to Cato, who was rejected. In the year preceding his consulship he had been interrex, in which capacity he returned Cn. Pompeius as sole consul. In the war between Cæsar and Pompey he does not appear to have taken any decided part, though it seems probable that he most inclined to Cæsar's side; at least, after the defeat of Pompey at Pharsalia, Cæsar made him governor of Achaë, where he was at the time when Cicero addressed to him one of his extant letters. ('Ad Div.,' iv. 3.) During the residence of Sulpicius at Athens his former colleague Marcellus

was assassinated in Piræus; Sulpicius had him honourably buried in the gymnasium of the Academia, where a marble monument was erected to his memory. This tragical event is communicated by Sulpicius to Cicero in an extant letter, which is characterised by great simplicity. After the death of Cæsar he was sent by the senate, with L. Philippus and L. Piso, on a mission to Antony, who was then besieging D. Brutus in Mutina, for the purpose of negotiating with Antony before the senate declared him an enemy to the state. He was then in bad health, and only just lived to reach the camp of Antony, where he died, B.C. 43. Cicero pronounced an eulogy on his friend in the senate, and on his motion a bronze statue was erected to the memory of Servius, which existed for some time. (Cic., 'Phil.,' ix.; 'Dig.,' i. tit. 1, s. 2, § 43.) The terms of the senatus consultum, which was drawn up by Cicero ('Phil.,' ix. 7), included the honours of a public funeral. He left a son Servius, who is mentioned by Cicero. His wife's name was Postumia. (Cic., 'Ad Div.,' iv. 2.) The fourth book of Cicero's letters ('Ad Diversos') contains his letters to Sulpicius and two letters from Sulpicius to Cicero.

Servius was an accomplished man, as well as a distinguished orator; but as a lawyer he was, in the opinion of Cicero, pre-eminent and unrivalled. His teachers were L. Lucilius Balbus and C. Aquilius Gallus. Cicero ('Brut.,' 41) attributes his excellence as a lawyer to the philosophical discipline which he had undergone. He observes that others possessed a knowledge of the law, but Servius alone possessed it as an art. This art, he adds, he could never have derived from mere knowledge of the law; but he had acquired that dialectic skill, the greatest of all arts, which enabled him to dispel the obscurity that characterised the responsa and speeches of other lawyers. "He distributed the matter of a thing into its parts; he developed by definition what was latent; he cleared up what was obscure by correct interpretation: he first ascertained and then separated what was ambiguous; lastly, he had a measure by which to estimate truth and falsehood, and to determine what consequences followed and what did not follow from premises." To these requirements, and to a profound knowledge of the law, he added an acquaintance with letters and an elegant diction. Such a combination of talent seldom appears.

Servius was a voluminous writer. Cicero speaks of his works as being unequalled. We may judge of his style from his letter of consolation to Cicero on the death of his daughter Tullia. (Cic., 'Ad Div.,' iv. 5.) He wrote nearly a hundred and eighty treatises on law, many of which existed in the time of Pomponius, that is, in the time of Antoninus Pius. He probably wrote a commentary on the Twelve Tables: he was also the author of a treatise on the Edict, and notes on a work on the civil law by Q. Mucius Scaevola the Pontifex (Gell., iv. 1); of a book 'De Dotibus,' and several books 'De Sacris detestandis' (adoption, probably). There are extant various fragments of his belonging to treatises the titles of which are not known. He is often mentioned in the 'Digest,' particularly by Alfenus, but there is no excerpt from his works in that collection. It seems a probable conjecture that when Alfenus quotes another person without mentioning a name, his master Servius Sulpicius is meant. (Bynkershoek, 'Observe,' viii. 1.)

Servius founded a numerous school of lawyers, but we are only acquainted with the names of those who were known as writers. His most celebrated pupils were Alfenus Varus and Aulus Otilius: there were also among others Aufidius Tucca, C. Ateius Pacuvius, and Antistius Labeo, the father of a more distinguished son.

Our information about Servius Sulpicius is mainly derived from his friend Cicero, who gives him a high character for integrity. He is said to have written some erotic poems. (Ovid, 'Trist.,' ii. 1, 141; Plin., 'Ep.,' v. 3.)

**SULPICIUS SEVERUS,** a Christian writer belonging to the end of the fourth and the beginning of the fifth century of our æra. He is generally supposed to have been born about the year A.D. 366, in Aquitaine, and was descended from a distinguished family. He first followed the legal profession and gained great reputation as an orator; but after the death of his wife who belonged to a consular family and died at an early age, Sulpicius withdrew himself entirely from the world, and with a few friends led a retired and monastic life as a presbyter in Aquitaine. He commenced this life about 392, at the same time that his intimate friend Paulinus adopted the same mode of life, who in his letters commends Sulpicius for his conduct, and the more as the father of Sulpicius had disinherited his son for the step he had taken. (Paulin., 'Epist.,' v. 1; xi. 5; xxiii. 3, &c.) But what Sulpicius thus lost through the anger of his father, was amply made up by the munificent liberality of his father-in-law. Sulpicius made several journeys to Tours, the bishop of which place Martinus inspired him with such admiration, that Sulpicius who gradually formed an intimate friendship with him, resolved to become his biographer. Further particulars respecting the life of Sulpicius are not known, except that during his last years he abstained altogether from speaking, as he considered his former habits to have been rather loquacious, for which he meant to atone by perfect silence. (Gennadius, 'De Viris Illustr.,' 19.) The time of his death is very uncertain: some assign it to 420, others to 422, and others again to 432; but the most probable opinion is that he died about A.D. 410, or soon after.

We possess of Sulpicius Severus four different works: 1. 'Vita Sancti Martini Turonensis,' which is written in the panegyrical style,

and is full of miraculous events in the life of his hero. It was however not published till after the death of Martinus about 400. The work is preceded by an epistle 'Ad Desiderium Fratrem,' and at the end of it there are three letters describing the death, burial, and those virtues of Martinus which were not sufficiently set forth in the biography itself. 2. 'Historia Sacra,' or 'Chronica Sacra,' in two books. This is a brief history of religion from the creation down to the consulship of Stilicho and Aurelian (A.D. 400). The first book and the first twenty-six chapters of the second treat of the history of the Jews; and the remaining portion chiefly contains accounts of the life of Christ, the persecutions of Nero, the history of Constantine, and in general of the most important events in the early history of Christianity. Here too, as in his life of Martinus, the author shows a great partiality for what is marvellous. 3. 'Dialogi Tres,' or it should rather be 'Dialogi Duo,' as the second dialogue is only part of the first: the principal object of these dialogues is to describe the merits and virtues of the monks and hermits of the East. 4. 'Epistolæ,' the genuineness of some of which is very doubtful.

Notwithstanding the superstitious tone which pervades all the works of Sulpicius, they have a charm arising from their purity of diction which scarcely any other writer of this age possesses. His language is clear and concise, and he seems to have taken Sallust as his model in this respect. Some writers have therefore called him the Christian Sallust.

His 'Vita Martini' has often been printed. The editio princeps of his 'Historia Sacra' appeared at Basel, 1556, 8vo.; it was followed by the editions of Signonius with a commentary, 8vo, Bononiæ, 1581; and of J. Drusius, 8vo, Arnheimii, 1607. A collection of his works appeared under the title 'Severi Opera emendata et illustrata à V. Gaielino,' 8vo, Antwerp, 1574, and fol., Paris, 1575. The latter however only contains his 'Vita Martini' and the 'Historia Sacra.' Other editions of all the works of Severus are those by G. Hornius, 8vo, Lugdun. Bat., 1647, 1654, 1665; by J. Vorstius, 12mo, Berolini, 1668, 8vo, Lipsiæ, 1703, 1709. The best edition is that by Hieronymus de Prato, 4to, Veronæ, 1741 and 1754, which however does not contain the letters. His works are also printed in the 'Bibliotheca Patrum Max.' Lugdun., vol. vi. p. 324, &c., and in Galland's 'Bibliotheca Patrum,' vol. viii., p. 355, &c.

(G. Vossius, *De Historicis Latinis*, p. 209, &c.; Bähr, *Geschichte der Röm. Lit.*, 2te abtheil., *Die Christlich-Römische Theologie*, p. 219, &c.)

SULZER, JOHANN GEORG, the youngest of a family of twenty-five children, was born October 16th, 1720, at Wintherthur, in the canton of Zürich, where his father held the office of 'Seckelmeister,' or registrar of public accounts. Losing his parents, both of whom died on the same day, while he was yet in early youth, it was with difficulty that he was enabled to pursue his education for the church, according to their wishes, but with little inclination on his own part. In 1736 he was placed at the gymnasium at Zürich, and immediately on quitting it, three years afterwards, was ordained and became curate to the pastor of Machwanden. Ill health however soon compelled him to resign his clerical duties, nor did he ever re-assume them. He now returned to his first and favourite studies of natural history, mathematics, and philosophy, and after residing about four years at Magdeburg as private tutor in the family of a wealthy merchant, received the appointment of professor of mathematics at the Joachimsthal gymnasium at Berlin, in 1747, and so recommended himself both by his ability as a teacher and by his attainments, that in 1750 he was admitted into the Academy of Sciences. The same year was that of his marriage with an amiable woman, whom he had the misfortune to lose in 1760; in consequence of which bereavement he quitted Berlin, and made a visit to his native country, where he recovered his wonted health and spirits, and where he first conceived the plan of his great work, the 'Theory of the Fine Arts.' He would have gladly remained in Switzerland, and he made application to that effect, but instead of listening to it, the king made him a professor at the newly-established 'Ritter-Academie,' or military college, with a very considerable pension, and also bestowed on him a piece of ground in the immediate environs of Berlin, where he afterwards built himself a villa and laid out a botanical garden. He accordingly returned to Prussia in 1763, where he remained till 1775, when he was advised to travel for the benefit of his health, then greatly impaired. He visited the south of France, Switzerland, and Lombardy, of which tour he kept a journal that was published shortly after his death. On his return to Berlin, his health, which had been considerably improved, again declined. He died February 25, 1779.

Great as was the distinction he acquired among his contemporaries in other and far different branches of knowledge, Sulzer's fame now rests chiefly upon his 'Allgemeine Theorie der Schönen Künste,' a cyclopædia of literature and the fine arts; and, as Herder says of it, "one that is in itself an entire academy." Although this work was announced by its author in 1760, it did not appear till 1771-74, for Sulzer had not calculated upon the time it would take to render its execution satisfactory to himself as well as the public. The second edition, in four volumes 8vo, with a supplement containing additions and corrections, was published in 1792-94; and in 1799 came out an appendix to it, forming a complete Index of all the writers, artists, &c. referred to in it. There are also distinct works intended as accompaniments to the 'Allgemeine Theorie'—one by Blankenburg, entitled

'Literary Additions,' &c., 3 vols. 8vo, 1796-98; the other 'Nachträge' (supplementary articles), by Schatz and Dyck, 8 vols. 8vo, 1792-1808. Of Sulzer's other writings the principal are—'Moral Reflections on the Works of Nature,' Berlin, 1741; and 'Philosophical Pieces,' 1773-86.

SUMAROKOV, ALEXANDER PETROVITCH, whose name was after that of his contemporary and literary rival Lomonosov, almost the only one that, until of late years, was known in this country as that of a Russian poet, was born at St. Petersburg in 1718, and was the son of a general officer. He was educated first at home, and afterwards in the Land Cadet Corps, where he soon distinguished himself by his ability. The study of Corneille and Racine inspired him with a taste for dramatic composition; and at about the age of twenty-five he began to attempt it. His tragedies were at first performed at court before the Empress Elizabeth, for there was then no public theatre, and as they satisfied the principal person, they were loudly applauded by the rest of the audience. This success encouraged Sumarokov, who was naturally of a vain disposition, and he determined to establish a permanent theatre in the capital; an attempt in which he was greatly aided by the influence of his father (Peter Pankratievich), who, besides being a person of some consequence in other respects, held a post near the person of the grandduke Peter. The result was, that the theatre was opened in 1756, under the immediate patronage of the court, and Sumarokov appointed its director; whence he has been generally considered the founder both of the Russian theatre and the Russian drama. But dramatic entertainments were not totally unknown to his countrymen before his time, for they had been introduced at court at the close of the preceding century, and the scriptural pieces of Demetrius, bishop of Rostov (b. 1651, d. 1709), had been performed. At the very time too that Sumarokov was organising his plans, there was not only a small theatre at Yaroslavl, but it was thence that he obtained his chief performers, including the celebrated Volkov [VOLKOV, P. G.] and Dmitrevsky, who afterwards obtained the appellation of the Russian Garrick.

Still, if not literally the originator, Sumarokov may be regarded as the founder of the drama in Russia: he brought it at once to comparative perfection; and frequently approached and perhaps would have surpassed his models, if he had not allowed himself to be trammelled by them, and if he had not, while aiming at the merits, adopted all the defects, the conventionalities, and rigorous poetical etiquette of the French stage and its rhymed Alexandrine versification. Among his tragedies, his 'Semira,' and 'Sinov and Truvor,' are his best and most original productions, notwithstanding they are not, like his 'Demetrius,' on the list of acting pieces. As a comic writer, he hardly deserves mention, for his dramas of that class are little more than farces, occasionally coarse in expression, but less gross and less immoral than many comedies that, being less indelicate, are tolerated as decent. They have one merit, that of setting the example of prose dialogue as the most suitable for the drama of ordinary life: but their language is now become quite antiquated: a disadvantage more sensibly felt in Sumarokov's prose than in his poetry. There are indeed many exceedingly beautiful passages in his tragedies; so poetical in sentiment, and so felicitously turned, that they hardly suffer at all by comparison with any specimens of Russian poetry at the present day. Sumarokov attempted not only every species of the drama, including operas, but almost every form of poetical composition. He versified the 'Psalms' in ten books, and wrote a vast number of odes, satires, epistles, fables, eclogues, elegies, sonnets, epigrams, songs, and other pieces, besides several in prose, including some historical and didactic ones, and his 'Dialogues of the Dead,' &c. The first complete edition of his works was published in ten volumes, 8vo, in 1787, ten years after his death, which happened at Moscow, October 1, 1777.

\* SUMNER, JOHN BIRD, D.D., Archbishop of Canterbury, was born in 1780, at Kenilworth, Warwickshire. His father, the Rev. Robert Sumner, vicar of Kenilworth and Stoneleigh, was the son of Dr. John Sumner, provost of King's College, Cambridge. He was educated at Eton and at King's College; and obtained university honours as Browne's Medallist, and Hulse's Prizeman. In 1815 he published his first work, entitled 'Apostolical Preaching.' In 1816 appeared his 'Records of Creation.' To this remarkable work was awarded the second prize of 400*l.*, under the will of a Scotch gentleman, named Burnett. All his numerous theological works are distinguished by their earnest piety, their depth of thought, and elegance of language. When a Fellow of Eton College he addressed a series of discourses to the scholars, and the effect of his winning and impressive eloquence was a marked improvement in the moral habits of the whole school. Dr. Sumner, who was a canon of Durham in 1820, was consecrated bishop of Chester in 1823. In this district he gave a most remarkable impetus to the building of churches, and the foundation of schools, especially of infant schools. In 1848 he was translated to the archbishopric of Canterbury.

SUMNER, CHARLES RICHARD, D.D., Bishop of Winchester, younger brother of the archbishop, was born at Kenilworth in 1790. He was educated at Eton, and at Trinity College, Cambridge. In 1824, being then librarian and historiographer to King George IV., he was chosen to superintend the publication of Milton's Latin Treatise on Christian Doctrine, which was discovered in the State Paper Office; of which work he made a translation, which was published in 1825. Dr. Sumner was then a prebendary of Canterbury. He was promoted

to the see of Llandaff in 1826, with which he held the deanery of St. Paul's. In 1827 he was translated to the bishopric of Winchester.

SUNDERLAND, HENRY SPENCER, FIRST EARL OF (of that name), was born in 1623, and was the eldest son of Henry, second Baron Spencer of Wormleighton, which title he inherited on his father's death in December 1636. While still a minor he married the beautiful lady Dorothy Sidney, daughter of the earl of Leicester, and sister of Algernon Sidney, the Sacharissa of the poet Waller; but on the breaking out of the civil war, and the erection of the royal standard at Nottingham in August 1642, Lord Spencer conceived himself bound in honour to repair thither, although like many others who took the same course, by no means desirous of setting the prerogative above the law, but rather siding with the king against the parliament as only the least unhappy alternative offered by the crisis. Some confidential and affectionate letters to his wife, which are printed in Collins's 'Sidney State Papers,' show the position in which he found himself, and the feelings with which he regarded the royal cause. In one dated Shrewsbury, 21st September 1642, he says: "How much I am unsatisfied with the proceedings here, I have at large expressed in several letters. Neither is there wanting, daily, handsome occasion to retire, were it not for grinning honour. For let occasion be never so handsome, unless a man were resolved to fight on the parliament side, which for my part I had rather be hanged, it will be said without doubt that a man is afraid to fight. If there could be an expedient found to save the punctilio of honour, I would not continue here an hour. The discontent that I and other honest men receive daily is beyond expression." Very much of the discontent here spoken of seems to have arisen from the influence in the royal councils possessed by the popish party, already strong in the support of the queen. Lord Spencer however, although he did not accept any military commission, drew his sword with the rest, and distinguished himself by his gallantry when the two armies joined battle for the first time at Edgehill, 23rd October 1642. The following year on the 8th of June, he was raised (it has been said, as a reward for accommodating the king with the loan of 15,000*l.*) to the title of Earl of Sunderland, a title which had become extinct about three years before by the death of Scrope, Earl of Sunderland (previously Lord Scrope), upon whom Charles had conferred it in the beginning of his reign. But on the 19th of September thereafter, the new-made earl fell at the (first) battle of Newbury, the same fatal fight which deprived the king of the Earl of Carnarvon, and Clarendon's great hero Lord Falkland. The royalist historian describes the Earl of Sunderland as "a lord of great fortune, tender years (being not above three and twenty years of age), and an early judgment; who having no command in the army, attended upon the king's person under the obligation of honour; and putting himself that day in the king's troop a volunteer, before they came to charge was taken away by a cannon bullet." By his wife who afterwards married Robert Smythe, Esq., he left a son who succeeded him in the peerage, a daughter Dorothy, who became the wife of Charles II.'s famous minister, the first Marquis of Halifax, and another daughter Penelope, who died unmarried.

SUNDERLAND, ROBERT SPENCER, SECOND EARL OF, the only son of Henry, the first earl, was probably born in 1641 or 1642. His first entrance into public life appears to have been in 1671, in the latter end of which year he was nominated ambassador to Spain. In 1672 he went to Paris in the same capacity, and he was one of the three plenipotentiaries appointed to proceed to Cologne in the following year when England and France were engaged in a war with the Emperor, Spain, and Holland, to open negotiations for a general peace, which however proved abortive. He had already evinced a remarkable talent in the conduct of affairs. "Lord Sunderland," says Burnet, in mentioning this appointment "was a man of a clear and ready apprehension, and a quick decision in business. He had too much heat both of imagination and passion, and was apt to speak very freely both of persons and things. His own notions were always good [the bishop seems to mean correct or judicious]; but he was a man of great expense. . . . He had indeed the superior genius to all the men of business that I have yet known." In 1678, on the recall of Mr. Ralph Montague from Paris, at the instigation of the Duchess of Portsmouth, whose enmity and vengeance he had incurred by being detected in making love at the same time to herself and her daughter, Sunderland was again sent ambassador to France; but on the change of government at home in the beginning of the following year, he was recalled and made secretary of state in the room of Sir Joseph Williamson. From this time at least, if not from an earlier date, Sunderland especially attached himself to the Duchess of Portsmouth, availing himself of her patronage or instrumentality as one of the principal props of his ambition. At first he and lords Essex and Halifax united in opposing Shaftesbury on the question of excluding the Duke of York, and keeping the chief direction of the state in their hands they were popularly styled the triumvirate. "Lord Sunderland," says his friend and admirer Burnet, "managed foreign affairs, and had the greatest credit with the Duchess of Portsmouth." This original triumvirate however did not last long: before the end of the year Sunderland had shaken off both the others; and the kingdom was now governed by a new junta, consisting of himself, Lord Hyde, and Godolphin. To this date is to be assigned the commencement of Sunderland's relation to the prince of Orange, afterwards King William. Burnet states that he

entered into a particular confidence with the prince, "which he managed by his uncle Mr. Sidney, who was sent envoy to Holland." He and Godolphin now also followed the Duchess of Portsmouth in declaring openly for the exclusion. But immediately after the dissolution of the last of the exclusion parliaments, in March 1681, another change of government suddenly threw Sunderland, with the rest of the popular members of administration, out of office. Evelyn has a notice of him immediately after this, which is interesting:—"16 May (1681). Came my Lady Sunderland to desire that I would propose a match to Sir Stephen Fox for her son Lord Spencer to marry Mrs. Jane, Sir Stephen's daughter. I excused myself all I was able. She was now his only daughter, well bred, and likely to receive a large share of her father's opulence. Lord Sunderland was much sunk in his estate by gaming and other prodigalities, and was now no longer secretary of state, having fallen into displeasure of the king for siding with the Commons about the succession; but this I am assured he did not do out of his own inclination, or for the preservation of the Protestant religion, but by mistaking the ability of the party to carry it." Evelyn pressed by the lady, went through the form of executing her commission; but his interview with Sir Stephen merely ended in an understanding between them that nothing more should be done in the matter, and that he should "put it off" as civilly as he could. Sunderland's fortunes however soon brightened again. In January 1682, he was recalled to office: "the king," says Burnet, "had so entire a confidence in him, and Lady Portsmouth was so much in his interests, that upon great submissions made to the duke, he was again restored to be secretary." Hyde, now created Viscount Rochester, was, it seems, the person who prevailed upon the duke to accept the said submissions, for which he incurred the implacable enmity of Halifax, who, Burnet tells us, "hated Lord Sunderland beyond expression, though he had married a sister;" but this did not prevent Sunderland from, a few years after, becoming Rochester's rival and enemy. He remained in power during the rest of this reign; and notwithstanding that he had again been detected towards its close in intriguing, along with the Duchess of Portsmouth, Godolphin, and the French ambassador Barillon, for the exclusion of James from the throne, when that prince became king he was not only retained in office, but acquired a greater ascendancy in the administration than ever. This extraordinary fortune he owed in part to his admirable talents for business, which made him almost indispensable; in part to his equally unrivalled skill in the art of insinuation, a skill moreover which he practised with the great advantage of being utterly unrestrained either by principle (at least as commonly understood) or by any attempt to preserve the appearance of consistency.

He now found a new patron in the queen, to whom he professed to give himself entirely up. When the Marquis of Halifax was turned out for refusing to vote for the repeal of the Test Act, Sunderland was, in the beginning of December 1685, declared president of the council, still retaining his place of secretary. "Lord Sunderland," writes Evelyn, in February following, "was now secretary of state, president of the council, and premier minister." And again, on the 12th of May 1687—"Lord Sunderland, being lord president and secretary of state, was made knight of the garter and prime favourite." It is worthy of notice that all this success in political life was achieved by Sunderland without the faculty of public speaking: he scarcely ever opened his lips to express more than a simple assent or dissent either in parliament or at the meetings of the cabinet. There is a curious account of his drawing, affected mode of utterance, when he did say a few words, in North's 'Examen,' p. 77. One of his methods of despatching business also was sufficiently singular, if we may believe Lord Dartmouth, who, in a note upon Burnet's 'History,' tells us, on the authority of one of Sunderland's clerks, that "he never came to the secretary's office, but they carried the papers to him at his house, where he was usually at cards, and he would sign them without reading, and seldom asked what they were about."

Throughout James's unhappy reign the principal direction of affairs was in the hands of Sunderland and Father Petre (whom he made use of with his usual dexterity), they two constituting what was called the secret council. At last Sunderland, about the end of the year 1687, fairly turned Roman Catholic. "He made the step to popery," says Burnet, "all of a sudden, without any previous instruction or conference; so that the change he made looked too like a man who, having no religion, took up one rather for to serve a turn than that he was truly changed from one religion to another." To make matters even however Lady Sunderland took to professing a hotter Protestantism than ever. The Princess (afterwards queen) Anne writes to her sister the Princess of Orange, 13th March 1688: "This worthy lord does not go publicly to mass, but hears it privately at a priest's chamber, and never lets anybody be there but a servant of his. His lady too is as extraordinary in her kind; for she is a flattering, dissembling, false woman; but she has so fawning and endearing a way that she will deceive anybody at first, and it is not possible to find out all her ways in a little time. She cares not at what rate she lives, but never pays anybody. She will cheat, though it be for a little. Then she has had her gallants, though maybe not so many as some ladies here; and, with all these good qualities, she is a constant churchwoman: so that to outward appearance one would take her for a saint, and, to hear her talk, you would think she

were a very good Protestant; but she is as much one as the other; for it is certain that her lord does nothing without her." And again, under date of the 20th:—"I can't end my letter without telling you that Rogers's wife (i.e. Lady Sunderland) plays the hypocrite more than ever: for she goes to St. Martin's morning and afternoon, because there are not people enough to see her at Whitehall chapel, and is half an hour before other people come, and half an hour after everybody is gone, at her private devotions. She runs from church to church after the famous preachers, and keeps such a clatter with her devotions that it really turns one's stomach. Sure there never was a couple so well matched as she and her good husband; for as she is throughout in all her actions the greatest jade that ever was, so he is the subtlest working villain that is on the face of the earth." (Dalrymple's 'Memoirs,' Append., part i., pp. 299-301.) Against all this indeed, Lady Sunderland, who was undoubtedly a woman of remarkable talents, ought to have the benefit of the high character given of her by Evelyn, who, after telling us that she is one whom, for her distinguished esteem of him, he must ever honour and celebrate, adds, "I wish from my soul the lord her husband, whose parts and abilities are otherwise conspicuous, was as worthy of her as, by a fatal apostacy and court ambition, he has made himself unworthy. This is what she deplores, and it renders her as much affliction as a lady of great soul and much prudence is capable of." ('Diary,' 18 July 1688.) It is known now however that if Lady Sunderland professed to Evelyn to be opposed to the courses her husband pursued, she must have been imposing upon him; for she was certainly his confidant and associate in the darkest of his political intrigues and duplicities. As for Sunderland, one excuse that has been made on probable grounds for the worst things he did during his administration of affairs under James, is that he was all the while in secret league with the Prince of Orange and doing his best to drive matters to a revolution. "After the revolution," says Lord Dartmouth, "he and his friends for him pleaded that he turned Papist for the good of the Protestant religion;" and Burnet, in the passage to which this note is appended, admits that his change of religion had since been imputed to his desire "to gain the more credit, that so he might the more effectually ruin the king." James however at last either came to suspect him or thought to lighten the crazy vessel of the state by throwing the unpopular minister overboard. He was dismissed on the 28th of October 1688. "This change," says the 'History of the Desertion,' "pleased all men, but it came too late."

On the arrival of the Prince of Orange, Sunderland went over to Amsterdam, whence however he and his wife wrote to the prince, claiming his protection on the ground that they had all along been in his interest. (See their Letters, in Dalrymple, Append., part ii. pp. 3-5.) On the 23rd of March 1689, also, Sunderland published at London a defence of his conduct in the form of a letter to a friend, which is printed in the 'History of the Desertion,' pp. 28-33, and in Cogan's 'Tracts,' vol. iii. Here he professes, but does not support his assertions by any evidence, to have all along done his utmost, though unsuccessfully, to check James's illegal and headlong course, only taking blame to himself for consenting to remain in office when his advice was so entirely disregarded. The statement contains also some very thickly laid on flattery of King William. "Sometime after," he says in one place, "came the first news of the prince's designs, which were not then looked on as they have proved, nobody foreseeing the miracles he has done by his wonderful prudence, conduct, and courage; for the greatest thing which has been undertaken these thousand years, or perhaps ever, could not be effected without virtues hardly to be imagined till seen nearer hand." The conclusion of this precious effusion is rich:—"I lie," says his lordship, "under many other misfortunes and afflictions extreme heavy, but I hope they have brought me to reflect on the occasion of them, the loose, negligent, unthinking life I have hitherto led, having been perpetually hurried away from all good thoughts by pleasure, idleness, the vanity of the court, or by business; I hope, I say, that I shall overcome all the disorders my former life had brought upon me, and that I shall spend the remaining part of it in begging of Almighty God that he will please either to put an end to my sufferings or to give me strength to bear them; one of which he will certainly grant to such as rely on him, which I hope I do, with the submission that becomes a good Christian." Sunderland, who had of course been excepted out of the act of indemnity, remained abroad about two years, and then, not a little to the surprise of the general public, returned to be taken into favour by the new king. Under date of the 24th of April 1691, Evelyn writes: "I visited the Earl and Countess of Sunderland, now come to kiss the king's hand, after his (the Earl's) return from Holland. This is a mystery." For some years he did not take any public office, but it was well understood that he was nevertheless William's principal adviser. The admission of the Whigs to a share in the government, which took place in 1693, when Trenchard was made secretary of state and Somers keeper of the great seal, was well known to be his doing.

In the course of a progress through the northern counties, in November 1695, his majesty spent seven or eight days at Sunderland's magnificent house at Althorpe, "which," says Burnet, "was the first public mark of the high favour he was in." On the 1st of December following, Evelyn records, "I dined at Lord Sunderland's (in London), now the great favourite and underhand politician, but not adventuring

on any character, being obnoxious to the people for having twice changed his religion." Immediately after this he was made lord chamberlain: Lord Dartmouth asserts that the king gave the Earl of Dorset 10,000*l.* to resign in his favour; "upon which," he adds, "Lord Norris fell very violently upon him in the House of Commons, as a man whose actions had been so scandalous during his whole life, that he never had any way to excuse one crime but by accusing himself of another; therefore hoped they would address his majesty to remove him from his presence and councils, which, though not seconded, was universally well received." In a note on the same passage of Burnet's 'History,' Lord Hardwicke says, "I have always been persuaded, from the signal confidence which King William reposed in this lord through the whole course of his reign, that he had received some particular services from him at the time of the Revolution which no one else could have performed." According to the usage of that day, Sunderland, as lord chamberlain, took his seat at the council-table; and he continued to direct affairs as the acknowledged head of the government for about two years longer. At last, in the end of the year 1697, he thought proper suddenly to resign his office, and to retire into private life. "He was often named," says Burnet, "in the House of Commons with many severe reflections, for which there had been but too much occasion given during the two former reigns. The Tories pressed hard upon him, and the Whigs were so jealous of him, that he, apprehending that, while the former would attack him, the others would defend him faintly, resolved to prevent a public affront, and to retire from the court and from business; not only against the entreaties of his friends, but even the king's earnest desire that he would continue about him: indeed, upon this occasion his majesty expressed such a concern and value for him, that the jealousies were increased by the confidence the court saw the king had in him. During the time of his credit things had been carried on with more spirit and better success than before; he had gained such an ascendancy over the king, that he brought him to agree to some things that few expected he would have yielded to; he managed the public affairs, in both Houses, with so much steadiness and so good a conduct, that he had procured to himself a greater measure of esteem than he had in any of the former parts of his life; and the feebleness and disjointed state we fell into after he withdrew contributed not a little to establish the character which his administration had gained him." A note of Speaker Onslow's upon this passage, which is too long to be extracted, records some curious particulars which show the panic precipitation with which Sunderland fled from what his fears represented to him as impending destruction. He never returned to court, but spent the remainder of his life at Althorpe, where he died on the 28th of September 1702.

It is said that when Edmund Smith was applied to by Addison, at the instance of the Whig ministry of Queen Anne's time, to write the history of the Revolution, he started an objection to which no reply could be made, by asking "what shall I do with the character of Lord Sunderland?" The best thing perhaps that can be done in the case, is to allow the facts of his history to speak for themselves—which they do plainly enough.

Lord Sunderland's wife was Anne, daughter of George Digby, second earl of Bristol. Of the children of Lord and Lady Sunderland, the eldest son, Robert, died unmarried, in France, before his father, so that the title fell to the second son, Charles. Evelyn, who knew all the family well, speaks very unfavourably of the elder brother. Of several daughters, one, Elizabeth, was married to the Earl of Clancarty, in Ireland; another, the Lady Anne, described by Evelyn as "a young lady of admirable accomplishments and virtue," to James Lord Arran, the eldest son of the Duke of Hamilton, but she died in 1690, before her husband succeeded to the title.

SUNDERLAND, CHARLES SPENCER, THIRD EARL OF, the second son of Robert, second earl, was born in 1674. Evelyn mentions him in 1688 as "a youth of extraordinary hopes, very learned for his age, and ingenious, and under a governor of great worth." From Swift's 'History of the Last Four Years of Queen Anne,' this governor or tutor appears to have been Dr. Trimmell, afterwards bishop of Winchester. He was returned to the House of Commons for Tiverton at the general election in 1695; and he sat for the same place in three succeeding parliaments, which met in December 1698, in February 1701, and in December 1701. The death of his father made him a peer about six months after the accession of Anne, and before her first parliament met. He had become Lord Spencer, by the death of his elder brother, before 1690; "but in his father's lifetime," says Swift, "while he was a member of the House of Commons, he would often, among his familiar friends, refuse the title of Lord (as he had done to myself), swear he would never be called otherwise than Charles Spencer, and hoped to see the day when there should not be a peer in England." It is remarkable that in the lists of members given in the 'Parliamentary History' he is always called 'Charles Spencer,' without any title. Afterwards however it was noted that he had "much fallen from the height of those republican principles with which he had begun."

His first public employment was his appointment as envoy extraordinary and plenipotentiary to the court of Vienna in 1705, on the accession of the Emperor Joseph. Some years before this he had married (for his second wife) a daughter of the Duke of Marlborough;

and this connection led to his being selected by the Whig section of the ministry to displace Sir Charles Hedges, when, in December 1707, they found themselves strong enough to force the queen to give them a person of their own politics as one of the secretaries of state, their opponent Harley still continuing to be the other, which he did however only for a few months. The history of this movement is told at great length by the Duchess of Marlborough, in her 'Account of her Conduct,' p. 172, &c. Its result was to produce a completely Whig government, in which Sunderland retained his office of secretary till June 1710, when his dismissal, without any reason being assigned, was the first intimation of the complete break-up of the ministry, which immediately followed. It is said that Anne, who never liked the notion of taking away a man's income, even when she wished to deprive him of power, offered to compensate Sunderland when thus turned off by a pension of 3000*l.* a year, to which he replied, that "he was glad her majesty was satisfied he had done his duty; but if he could not have the honour to serve his country, he would not plunder it." He remained out of office for the rest of this reign; but the ability he had shown during the short time he was a member of the government, and the prominent part he continued to take in the debates of the House of Lords, made him be generally regarded as the head of the Whig party, and the man most likely to be placed at the head of affairs when the Hanover family should come to the throne. When George I. came over, in September 1714, Sunderland was received with distinguished marks of regard by his majesty; such indeed as could not be omitted to one who had always been looked upon as the most devoted friend of the Hanoverian succession: but it had already excited some surprise that he had not been nominated one of the lords justices to whom the government was committed on the death of the queen, and it soon appeared that there was another interest more powerful than his at the new court. His rival was Lord Townshend, the friend of Walpole, who had obtained the first place in the favour of Bothmar, the Hanoverian resident, and who, on his recommendation, was now appointed secretary of state, while Sunderland was obliged to put up with the lord-lieutenancy of Ireland, which he considered a kind of exclusion and banishment. "Though he did not openly show his disgust," says Coxe, "yet he scarcely took any active part in defending the measures of government. He, who was before accustomed to make a conspicuous figure in every debate, seems to have remained almost uniformly silent; and from the accession of George I. till the beginning of 1717 his name seldom occurs in the proceedings of the House of Lords." It is probable that his relationship to the Duke of Marlborough, who was personally disliked by George I., had much to do with his being thus kept in the background. In August 1715, soon after the death of the Marquis of Wharton, he was made lord privy seal; but this place still gave him little or no share in the direction of affairs, and did not remove his disgust. Nor did he remain inactive. On the contrary, he sought support for himself, and the means of annoying and weakening his opponents, from all quarters. He, "increased his party," says Coxe, "with a number of disaffected persons. He particularly gained among the Whigs Carleton, Cadogan, Lechmere, and Hampden; courted the Tories; entered into cabals against his colleagues; and was prepared to use all his efforts and employ any opportunities which might offer to prejudice the king against them." His majesty had gone over to Hanover, attended by secretary Stanhope, in July 1716. "One of the principal charges," says Coxe, "which Stanhope had received from his friends in England was to be on his guard against the intrigues of Sunderland, who had, under pretence of ill health, obtained the king's permission to go to Aix-la-Chapelle. Although at the time of his departure he had given the most positive assurances of repentance and concern for his late endeavours to remove his colleagues, and, after the most solemn professions of friendship and union, had condescended to ask their advice for the regulation of his conduct at Hanover, to which place he intended to apply for leave to proceed, Townshend and Walpole suspected his sincerity: they had experienced his abilities; they knew his ambition; and they dreaded the ascendancy which he might obtain, through the channel of the Hanoverians, over the king. But they implicitly trusted in the sagacity and integrity of Stanhope, either to prevent his appearance at Hanover, or, if he came, to counteract his views. Stanhope however did not follow their directions; for when Sunderland demanded access to the king, instead of opposing, he promoted the request with all his influence." This statement is however undoubtedly overcharged. It is certain that Walpole and Townshend wished Stanhope to place no obstacle in the way of Sunderland's visit to Hanover, however desirous they may have been that his proceedings should be watched whilst there. The result was that Sunderland, who had arrived at Hanover in the latter part of October, soon acquired the complete confidence both of the king and of Stanhope. Lord Townshend, after much complicated manœuvring and intriguing by the faction in whose hands the king was, and much indecision on the part of his majesty himself, was removed; Sunderland was in the first instance appointed treasurer of Ireland for life, resigning his office of lord privy seal to the Duke of Kingston; and finally, in April 1717, a complete reconstruction of the ministry was effected by the resignation of Walpole, Devonshire, Pulteney, and others of their friends, and by the appointment of Sunderland and his friend Addison as secretaries of state (the former

also holding for some months the presidency of the council, which he eventually resigned to the Duke of Kingston), with Stanhope as first lord of the treasury and chancellor of the exchequer—an arrangement which about a year after was modified by Stanhope (now a peer) taking the office of secretary, and Sunderland who had all along been the head of the government, going himself to the treasury, the chancellorship of the exchequer being given to Mr. Aislable. [STANHOPE, JAMES, EARL.] About the same time the opportunity was taken of substituting Craggs for Addison as the other secretary.

On the 5th of March, 1719, the famous bill for limiting the number of peerages was first brought into the House of Lords. "This bill," says Coxe, "was projected by Sunderland: his views were to restrain the power of the Prince of Wales when he came to the throne, whom he had offended beyond all hopes of forgiveness, and to extend and perpetuate his own influence by the creation [of course the reverend historian must mean before the measure should pass] of many new peers." The bill was abandoned that session; but it was brought forward again in the next, the first of a new parliament, when it was passed by the Lords, 30th November, 1719, apparently without a division, and was only defeated in the Commons, after it had been read a second time, on the motion for its committal, principally by the strenuous exertions of Walpole. Coxe asserts that before the new parliament met no means had been left unemployed by Sunderland to secure the success of this measure; "bribes were profusely lavished; promises and threats were alternately employed, in every shape which his sanguine and overbearing temper could suggest." Now that he found himself signally beaten however—for Walpole's eloquence and influence had procured the triumphant majority of 269 to 177 against the ministerial project—he deemed it his best policy to enter into an alliance with the potent commoner; and accordingly, in the beginning of June 1720, Walpole and his friend Townshend were both reinstated in the government, the former being appointed paymaster of the forces, the latter president of the council. This proved a fortunate arrangement for Sunderland: in the beginning of the following year came the investigation by the House of Commons into the transactions connected with the South Sea scheme, in which Sunderland, with others of the ministers, had been deeply involved; the secret committee had reported that of the fictitious stock distributed by the directors of the company, with the object of influencing or bribing the government and the legislature, 50,000*l.* had been given to Sunderland: Lord Stanhope and Secretary Craggs, who were also implicated, had only escaped prosecution by having both suddenly died in the midst of the investigation, nor did even his death save the estate of the latter: Aislable, the chancellor of the exchequer, had already been expelled and committed to the Tower; when, on the 8th of March, Walpole's earnest entreaties with difficulty prevailed upon the House to adjourn the consideration of the part of the committee's report relating to Lord Sunderland till the 15th. In the interval Walpole exerted himself privately to gain votes for an acquittal by representing to his Whig friends in strong colours the disgrace and possible ruin that would be brought upon their party by the conviction of the prime minister. "His personal weight," to adopt the language of Coxe, "his authoritative and persuasive eloquence, were effectually employed on this occasion, and aided by the influence of government, met with success. The minister was acquitted by a majority of 61 votes, 233 against 172." It is right to state however that the evidence in support of the charge was far from being perfectly satisfactory, coming as it did principally from one of the directors, himself convicted of gross fraud. "Although the public voice," Coxe adds in a note, "notwithstanding his acquittal by so large a majority, criminated Sunderland, yet several extenuations may be urged in his favour. For it appears from private documents which have casually fallen under my inspection, that so early as July he had refused to recommend to the directors any more lists for subscriptions: that he did not at least enrich himself or his friends; that he expressed great satisfaction that neither himself nor his friends had sold out any South Sea Stock, as he would not have profited of the public calamity." It is said that if he had sold out the stock he held at one time, he might have realised by it not less than 300,000*l.*

Notwithstanding his acquittal, it was found impossible to retain him in office; he was very reluctant to go out, and the king was equally averse to parting with him: in particular, it is said, he desired to be allowed to retain the disposal of the secret service money; but he was at last forced to give up everything, and on the 3rd of April Walpole was appointed both to his place of first lord of the treasury, and to that of chancellor of the exchequer, of which Aislable had been deprived. Sunderland however still retained the most unbounded influence over the king; he even regulated the appointments to the highest offices in the government, carrying his nominations in several instances against the united efforts of Townshend and Walpole. Coxe asserts, on the evidence of private papers, that he not only set himself industriously to undermine the cabinet, but even intrigued with the Tories, and made overtures to Bishop Atterbury, the agent of the Pretender. He proposed to the king, according to Coxe, when the ferment of public indignation occasioned by the explosion of the South Sea scheme was at its height, to dissolve the parliament, with the view of bringing in a Tory majority, who under his conduct would quash all inquiry on the subject: the

project obtained his majesty's concurrence, but was defeated by the firmness and intrepidity of Walpole. "The Pretender and the Jacobites certainly at this time," Coxe adds, "entertained the most sanguine hopes. Sunderland became a great favourite with them and the Tories, his health was constantly drunk by them, and they affected to be secure of attaining, by his means, the accomplishment of their wishes." There are some strong assertions by Pope as to Sunderland's dealings with the Pretender, both at this and at an earlier period, in Spence's 'Anecdotes,' p. 313; but it is certain that the Pretender himself did not place any hope in Sunderland, and it seems probable that his negotiations with the Jacobites were carried on as far as they went with the full knowledge and approval of the king. (Mabon's 'England,' vol. ii. c. 11.) Another assertion is, that he had contrived a plot for the political annihilation of Walpole by persuading the king to offer to make him postmaster-general for life, with a view that if Walpole accepted the office, it would take him out of parliament, or, if he refused it, that he would give offence to his majesty. The king however, when he found that Walpole had never expressed any desire for the place, nor was even acquainted with Sunderland's proposal, refused to allow the offer to be made to him. Sunderland nevertheless, by persevering, or shifting his mode of attack, might possibly have succeeded ere long in effecting the downfall of his rival; but in the midst of his intrigues he was suddenly arrested by death, on the 19th of April 1722, being as yet only in the forty-seventh year of his age. He had been thrice married: first, in 1695, to the Lady Arabella Cavendish, daughter of Henry, duke of Newcastle, by whom he had a daughter; secondly, in or before 1702, to the Lady Anne Churchill, second daughter of the Duke of Marlborough, by whom he had three sons, and who died 15th April 1716; thirdly, to Judith, daughter of Benjamin Tichbourne, Esq. (a younger brother of Viscount Tichbourne, in Ireland), by whom according to some of the peerages, he had no issue, but who is stated in other works of the kind to have borne him a son, who died three days after himself, a daughter who died in infancy, and a second son which came into the world five months after his death, and died at six months old. Of his three sons by his second wife, Robert, the eldest, succeeded to the earldom, and died unmarried, 27th of November 1729; Charles, the second, became Earl of Sunderland on the death of his elder brother, and on the death of his aunt, in 1733, became Duke of Marlborough; and John, the youngest, who then succeeded to the family estates, was the father of the first Earl Spencer.

Lord Sunderland, who associated much with the wits and literary men of his day, was one of the members of the famous Kit-Kat Club, and was also one of the set of noblemen who, about the beginning of the last century, used to make a weekly perambulation among the old book-shops in the metropolis in search of early-printed books, scarce pamphlets, manuscripts, and other rarities and curiosities of literature. To this fashion of collecting early literature, which then prevailed, we are undoubtedly indebted for the preservation of many things of more or less interest or value; and the great libraries of Althorpe, Devonshire House, Blenheim, and the Harleian collection of manuscripts, probably acquired in this way many of what are now accounted their most precious articles.

SURREY, HENRY HOWARD, EARL OF, son of Thomas Howard, third duke of Norfolk, by his second duchess Elizabeth Stafford, daughter of Edward duke of Buckingham, was born about the year 1516, but the exact time and place of his birth are uncertain. Nothing particular is known of his life until his marriage in 1532, at which time he could not have been more than sixteen. In that year he visited France in company with the Duke of Richmond, Henry VIII's natural son, and was present at the interview between Henry and the king of France. At Anne Boleyn's coronation (1533) he bore one of the swords in the procession, and soon after paid that visit to Windsor which he notices in one of his sweetest poems; this at least is the opinion of the author of his life prefixed to Pickering's edition of his poems, while Dr. Nott, his more learned but less judicious biographer, supposes the visit to have been made in his childhood. In 1536 his eldest son was born. We find him soon after assisting at Anne Boleyn's trial, and in the same year he lost by death his friend the Duke of Richmond. In 1540 he served his first campaign in France, and two years afterwards was elected a knight of the garter. The short remainder of his life appears to have been clouded by misfortunes, the first of which was his quarrel with John à Leigh, and consequent imprisonment in the Fleet. This was soon followed by a summons from the Privy Council for eating flesh in Lent, and for walking about the streets at night in a "lewd and unseemly manner," and breaking windows with a cross-bow. On the first charge he excused himself; the second he confessed, and on it he was again confined. Dr. Nott, with singular obtuseness, appears utterly to misunderstand a poem in which Surrey defends himself in a half-jocose manner, and assumes the whole proceeding to have been one of sober purpose, not a mere freak of youthful folly. In the next October he made another campaign in France, and after his return took Hadrian Junius into his family as physician. In July 1546 he was again imprisoned for using bitter language against the Earl of Hertford, after which nothing further is worth note until his last imprisonment, the real grounds of which are doubtful; the king's suspicious temper and Surrey's haughty spirit would however supply ample means of accusa-

tion to an unprincipled enemy. He was arrested on the 12th of December. The charge was that of having quartered the royal arms with his own, which it appears he had a right to do, although the point is not quite clear. This however was taken as a proof of treasonable intentions, and by the joint testimony of his sister the duchess of Richmond and of his father's mistress he was condemned and executed January 21, 1547. His father, who was involved in the same charge, had the better fortune of a reprieve, which, by the king's death in the same week with Surrey's execution, was converted into a release.

Surrey seems to have been on bad terms with his mother, and as he was betrayed by his sister, he could not have been fortunate in family matters. The controversy respecting the existence of Geraldine, his supposed mistress, can hardly be said to be determined; it appears however that there was an Irish lady of that name, the daughter of Gerald Fitzgerald, Earl of Kildare, to whom the famous sonnet no doubt refers; but it is evident that Dr. Nott has understood other of Surrey's poems to refer to Geraldine, when they do not; and all the romantic incidents connected with his 'passion' for the lady, related by the earlier biographers, may be regarded as utterly exploded.

Surrey's works are principally remarkable as forming an important era in English literature. He was the first whose ear taught him to substitute the present method of poetical accent for that which we find in the writings of Chaucer and his followers. He is also the earliest writer of English blank verse, of which his translation of some parts of the 'Æneid' is a beautiful example. In addition to both these characteristics he is the leader of the second school of English poets who admired and followed the Italian models. As such, Spenser directly, and Milton indirectly, are indebted to Surrey, who, if for no other reason, for this at least deserves remembrance. His works went through four editions in two months, and through seven more in the thirty years after their appearance in 1557, besides appearing in garlands, broad-sheets, and miscellanies. Many people who could not afford to buy printed copies multiplied them in manuscript, which sufficiently proves their popularity. It is a curious fact however that the literary tyranny of Pope was so absolute, and the national taste so much altered, in the beginning of the 18th century, that the booksellers, who reprinted Surrey's poems about the year 1714, apologised for their audacity in thus restoring to notice a forgotten and antiquated poet by a reference to the authority of Mr. Pope.

SUSARION, son of Philinus, was a native of the ancient village of Tripodiscus, in the territory of Megara. He lived about the time of Solon (about Ol. 50), and the Parian Marbles ('Ep.' 39) call him the inventor of comedy, and seem also to indicate that he gained the prize of comedy then instituted, which consisted of a basket of figs and a jar of wine. But as regards Susarion's invention of comedy the matter is not quite clear. We know indeed that the Megarians were very fond of farcical entertainments, but it is also certain that the invention of real and written comedies belongs to a later time; and there is indeed, as Bentley ('A Dissert. on the Epist. of Phalaris,' p. 144) has shown, no evidence that the four iambic verses of Susarion still extant formed part of a play. It is further probable that he performed his extempore farces upon a waggon, as was customary at the country Dionysia in Attica. The place where he acted his farces was Icarium, a hamlet of Attica, whence some writers call him an Icarian. What is called his invention of comedy must therefore have consisted in introducing into Attica the Doric form of comedy, or he introduced some innovation into these farces, and constructed them on better dramatic principles, which seems to be implied in the statement that he employed a chorus, which had not been the case before. But whatever we may think of his improvements, a considerable time passed from the period in which he acted at Icarium, until comedy experienced real improvement, and was composed on artistic principles.

(Bentley, *A Dissert. on the Epist. of Phalaris*, p. 144-152; Müller, *Dor.*, iv. 7, § 2; *Hist. of the Lit. of Ant. Greece*, chap. xxvii. § 3.)

SUSRUTA, one of the earliest and most celebrated of the Hindoo writers on medicine, was the son of Viswamitra, and the pupil of Dhanwantari. Nothing is known of the events of his life, and his date is rather uncertain. His medical work is still extant, and was published in 2 vols. 8vo, Calcutta, 1835-36. It is unquestionably of some antiquity, but it is not easy to form any conjecture as to its real date, except that it cannot have the prodigious age which Hindoo fable assigns it; it is sufficient to know that it is perhaps the oldest work on the subject which the Hindoos possess, excepting that of Charaka. The only direct testimony that we have with respect to the dates of Charaka and of Susruta is that of Professor Wilson, who states that, from their being mentioned in the *Puranas*, the 9th or 10th century is the most modern limit of our conjecture; while the style of the authors, as well as their having become the heroes of fable, indicate a long anterior date. One commentary on the text of Susruta, made by Ubhatta, a Cashmirian, is probably as old as the 12th or 13th century, and his comment, it is believed, was preceded by others. The work is divided into six portions: the 'Sutra St'hana,' or Chirurgical Definitions; the 'Nidana St'hana,' or Section on Symptoms, or Diagnosis; 'Sarira St'hana,' Anatomy; 'Chikitsa St'hana,' the internal administration of Medicines; 'Kalpa St'hana,' Antidotes; 'Uttara St'hana,' or a supplementary section on various local diseases, or

affections of the eye, ear, &c. In all these divisions however surgery, and not general medicine, is the object of the book of Susruta; though, by an arrangement not uncommon with our own writers, he introduces occasionally the treatment of general diseases, and the management of women and children, when discussing those topics to which they bear relation. As this is the only Sanscrit medical work which (as far as the writer is aware) has been published, it will not be out of place here to give some account of the state of medicine among the Hindoos, extracted from two notices by Professor Wilson, published originally in the 'Oriental Magazine' (Calcutta, February and March, 1823), from which several passages are inserted by Professor Royle in his 'Essay on the Antiquity of Hindoo Medicine,' 8vo, London, 1837. The instrumental part of medical treatment was, according to the best authorities, of eight kinds—'Chhedana,' cutting or scission; 'Bhedana,' division or excision; 'Lek'hana,' which means 'drawing lines,' appears to be applied to scarification and inoculation; 'Vyad'hana,' puncturing; 'Eshyam,' probing or sounding; 'Aharya,' extraction of solid bodies; 'Visravana,' extraction of fluids, including venesection; and 'Sevana,' or sewing. The mechanical means by which these operations were performed seem to have been sufficiently numerous: of these, the principal are the following:—"Yantras," properly 'machines,' in the present case 'instruments'; but to distinguish them from the next class, to which that title more particularly applies, we may call them 'implements'; 'Sastras,' weapons or instruments; 'Kshara,' alkaline solutions or caustics; 'Agni,' fire, the actual cautery; 'Salaka,' pins or tents; 'Sringa,' horns, the horns of animals open at the extremities, and, as well as 'alabu,' or gourds, used as our cupping-glasses; the removal of the atmospheric pressure through the first being effected by suction, and in the second by rarifying the air by the application of a lamp. The next subsidiary means are 'Jalauka,' or leeches.

"Besides these, we have thread, leaves, bandages, pledgets, heated metallic plates for erubescents, and a variety of astringent or emollient applications."

The descriptions of the very numerous Hindoo instruments not being very minute or precise, Professor Wilson says we can only conjecture what they may have been from a consideration of the purport of their names, and the objects to which they were applied, in conjunction with the imperfect description given.

"The 'sastras,' or cutting instruments, were of metal, and should be always bright, handsome, polished, and sharp, sufficiently so indeed to divide a hair longitudinally.

"The means by which the young practitioner is to obtain dexterity in the use of his instruments are of a mixed character; and whilst some are striking specimens of the lame contrivances to which the want of the only effective vehicle of instruction, human dissection, compelled the Hindoos to have recourse, others surprise us by their supposed incompatibility with what we have been hitherto disposed to consider as insurmountable prejudices. Thus the different kinds of scission, longitudinal, transverse, inverted, and circular, are directed to be practised on flowers, bulbs, and gourds. Incision, on skins or bladders filled with paste and mire; scarification, on the fresh hides of animals from which the hair has not been removed; puncturing or lancing, on the hollow stalks of plants, or the vessels of dead animals; extraction, on the cavities of the same, or fruits with many large seeds, as the Jack and Bel; sutures, on skin and leather; and ligatures and bandages, on well-made models of the human limbs. The employment of leather, skin, and even of dead carcasses, thus enjoined, proves an exemption from notions of impurity we were little to expect, when adverting to their actual prevalence. Of course their use implies the absence of any objections to the similar employment of human subjects; and although they are not specified, they may possibly be implicated in the general direction which the author of the 'Susruta' gives, that the teacher shall seek to perfect his pupil by the application of all expedients which he may think calculated to effect his proficiency.

"Of the supplementary articles of Hindoo surgery, the first is 'Kshara,' alkaline or alkalescent salts. This is obtained by burning different vegetable substances, and boiling the ashes with five or six times their measure of water. In some cases the concentrated solution is used after straining, and is administered internally, as well as applied externally.

"Care is enjoined in their use, and emollient applications are to be applied, if the caustic occasions very great pain. At the same time these and the other substitutes for instrumental agents are only to be had recourse to where it is necessary to humour the weakness of the patient. They are especially found serviceable where the surgeon has to deal with princes and persons of rank, old men, women and children, and individuals of a timid and effeminate character.

"The cautery is applied by hot seeds, combustible substances inflamed, boiling fluids of a gelatinous or mucous consistence, and heated metallic bars, plates, and probes. The application is useful in many cases, as to the temples and forehead, for headaches; to the eyelids, for diseases of the eyes; to the part affected, for indurations in the skin; to the sides, for spleen and liver; and to the abdomen, for mesenteric enlargements. As amongst the Greeks, however, the chief use of the cautery was in the case of hemorrhages, bleeding being stopped by searing the wounded vessels.

"If leeches, when applied, are slow and sluggish, a little blood may be drawn from the part by a lancet, to excite their vivacity; when they fall off the bleeding may be maintained by the use of the horns and gourds, or the substitutes already mentioned for the cupping-glasses of our own practice."

The operations are rude, and very imperfectly described. They were evidently bold, and must have been hazardous: their being attempted at all is however very extraordinary, unless their obliteration from the knowledge, not to say the practice, of later times be considered as a still more remarkable circumstance. It would be an inquiry of some interest, to trace the period and causes of the disappearance of surgery from amongst the Hindoos; it is evidently of comparatively modern occurrence, as operative and instrumental practice forms so principal a part of those writings which are undeniably most ancient, and which, being regarded as the composition of inspired writers, are held of the highest authority.

Besides these sacred writings, there are many valuable professional tracts which correspond with, and are in fact commentaries on them. These are said to have been composed by prophets and holy men (Maha Rishis), to whom is generally given a divine origin.

The different nations of India have their respective medical authors, in the peninsula and the south of India, in Tamil; those of the Telingas, in Telooquo; in Bengal and the northern provinces the works in use among the Hindoos are in Sanscrit; while among the Mohammedan population Persian works and translations from the Arabic are chiefly in use.

The work of Susruta was one of those ordered to be printed by the Indian government for the use of its native subjects; but the printing of this, as well as of many others, was stopped, when most of them were nearly completed—the first volume and three-fourths of the second of the Susruta having been printed. Fortunately, the Asiatic Society of Calcutta, with the spirit and zeal which has ever distinguished it, undertook at their own risk to complete the works. The treatise of Susruta was published by the society in 1836, in 2 vols. 4to. It has been translated into Latin by F. Hessler, 3 vols. 4to, Erl., 1846-50.

SUSSEX, DUKE OF. [AUGUSTUS FREDERICK.]

SUSTERMANS, JUSTUS, a distinguished Flemish painter, was born at Antwerp in 1597. He was the pupil of William de Vos. He is little known in Flanders; he lived chiefly in Florence, where he was appointed his court painter by the Grand-Duke Cosmo II. He was favoured also by Ferdinand II., whose portrait he painted, and who ennobled him. His master-piece is a large picture of the Florentine nobility swearing allegiance to Ferdinand upon his succession. He died at Florence in 1681. There are several portraits by him in the Pitti Palace at Florence. Rubens is said to have pronounced Sustermans an honour to his country. (Descamps, *La Vie de Peintres Flamands*, &c.; Lanzi, *Storia Pittorica*, &c.)

\* SUTZOS, ALEXANDROS, one of two brothers who have taken a conspicuous share in the politics of Greece, and who are at the same time the Castor and Pollux of its modern poetical literature. Alexandros was born at Constantinople, in 1802: his mother, the sister of the Greek poet, Rizo Nerulos, was the wife of Constantine Sutzos, or Soutzo, of a Fanariote family, which has given many Hospodars to Wallachia and Moldavia. On the death of their father the children were adopted by their uncle, Alexandros, hospodar of Wallachia, who, in 1820, sent Alexandros and Panagiotos to Paris to be educated. Their elder brother, Demetrius, who remained at home, took part in the unsuccessful outbreak of Ypsilanti, encouraged by Michael Sutzos, hospodar of Moldavia, which commenced the Greek insurrection, became one of the chiefs of the 'Sacred Battalion,' and fell at Dragatsan, in 1821, fighting with the Turks. Alexandros returned to Greece to take part in the war, and in 1826 made his first appearance as a poet by the publication of five satires against the government, which at once established his reputation as the most conspicuous rising poet of Greece. At the close of the war he again visited Paris, and published in French an 'Histoire de la Révolution Grecque' (Paris, 1829), or 'History of the Greek Revolution, by an eye-witness of a great part of the events described.' The history is dedicated "to the manes" of his brother Demetrius; the style is animated, but more poetical than historical; and the French is so classical that it received the praise of Chateaubriand. The volume concludes with an anticipation of benefit to Greece from the government of Capodistria, which the writer soon thought he saw cause to abandon. One of his first productions, on his return to Greece in 1830, was a collection of satirical poems on Capodistria and his party entitled 'The Panorama;' and after the assassination of Capodistria, Sutzos was still more vehement against him in his 'Ἐξόριστος τοῦ 1831,' or 'Exile of 1831,' a political novel published at Athens in 1838. He greeted with a poetical epistle the arrival of King Otho in Greece, in 1833, and satirised those who deprecated the government of the Bavarians; but here again he saw reason to change his opinions, and was a few years after one of the most energetic opponents of the Bavarian ministry. The interference of foreigners in general with the affairs of Greece became the object of his denunciations, and "the wild English," and "the tame Russians" were stigmatised as equal enemies of Greek independence. His poem 'Ὁ Περιπλανώμενος,' 'The Wanderer' (1839), perhaps his finest work, is a mixture of a love-story, descriptive of the character of nations and countries in the

style of 'Childe Harold,' and of political diatribe, chiefly directed against the Bavarians. He seems in consequence to have found it expedient to quit the country, and his next volume appeared at Brussels, in 1843. "I draw out of my poetical portfolio," he says at the beginning of the preface, "two dramas, entitled 'The Prime Minister,' and 'The Unshaken Poet.' I sketched some scenes of the former in Greece; I composed the whole of the latter at a distance from her, seeking more inspiration in the land where Coray died, and on the shores where Byron was born." He concludes by saying that he shall return to Greece, where, he says, "full of the confidence given me by a good conscience I shall place myself between the nation and the government, between the law and violence." Soon after his return the establishment of the constitution of Greece took place on the 15th of September 1843; and this event, which fulfilled the poet's warmest wishes, led almost instantaneously to a fresh banishment. The publication of a series of miscellaneous prose and poetry on the subject 'The Revolution of the 3rd of September' (the Greeks retain the old calendar) excited the displeasure of the ministry. The house of Sutzos was assailed by a mob on the 30th of November, and he received, it is said, an intimation from the ministry that he could not in safety continue at Athens, which made him consider it expedient to disappear. His friends, and among others Spiridion Trikupis, the present Greek envoy to England, demanded explanations in the assembly from the ministry, which was supposed to have instigated the riot; and in reply Metaxa, the minister, disclaimed all knowledge of the transaction, and said that Sutzos had gone away to suit his own pleasure, and might return when he pleased. The poet however thought it advisable to continue for some time absent. In 1850 he published four cantos of an epic poem on the history of his country, entitled 'Η Τροπαιομένης Ἑλλάδος,' but this is not considered equal to his former efforts. He is said to be now engaged in a great historical work, on the history of Greece from the 13th century to the year 1828.

His brother PANAGIOTES, born at Constantinople in 1806, was sent to Paris for his education and afterwards studied at Padua and Bologna. He was residing at Kronstadt in Transylvania when in 1828 he composed his first poem 'Ο Οδοιπόρος,' or 'The Traveller,' a drama, but in its general character more lyrical than dramatic, and full of fine passages. His brother's subsequent poem of 'The Wanderer' bears some resemblance to it, and his brother's novel of 'The Exile of 1831,' was also preceded by a novel by Panagiotis intitled 'Leander,' which in many points suggests a comparison. 'The Traveller' was first published in 1831 at Nauplia as part of a volume of poems which includes among other things an elegy to the memory of the assassin of Capodistria, whose deed is described as that of an ardent and deserving patriot, a strong instance of the force of political prejudice. In 1839 Panagiotis who avowed in the preface that he had primarily been an unbeliever, celebrated his conversion to Christianity by a sacred drama entitled 'The Messiah.' He has also written some historical tragedies founded on some of the most striking events in modern Greek history, 'Euthymius Vlacavas,' 'Georgios Karaiskos,' and 'The Unknown.' He has been successively the editor of four political journals at Athens, 'The Sun' (in which he was assisted by his brother), 'Regenerated Greece,' 'The Union,' and 'The Age.' Much attention was excited by an article in 'The Age' at the outbreak of the Russo-Turkish war in 1853, in which he excited the Greeks to a denunciation against the Turks, and the Greek government was remonstrated with on the subject by the French and English ambassadors, but excused itself by alleging the liberty of the press. Sutzos is one of the most active agents in the philological revolution which is now going on in Greece, to purify the common language of its barbarisms and restore as much as possible the ancient Greek language, a measure which has had an astonishing degree of success, and which is one of the most interesting philological experiments it is possible to conceive. The two brothers though exhibiting some instability and much violence in their opinions and conduct, have both a reputation for their patriotism, and are considered to have deserved much of their country. Their poetical talents are unquestionable, and some of their productions are of a high order.

SUVOРОВ - RYМНИКСКИ, ALEXANDER VASSILIVICH, COUNT, PRINCE ITALINSKI, field-marshal and generalissimo of the Russian forces, one of the most celebrated generals of the eighteenth century, was born in Finland on the 13th of November 1730. His family was of Swedish origin, and, before its settlement in Russia, was called Suvor. The father of Suvorov had distinguished himself in the army, and had been promoted to the rank of *général-en-chef* in the reign of Catherine I. Upon his retiring from service he was made senator, and lived at his country-seat in the south of Russia, upon a moderate income which his services had procured him. The predilection he had for a military life induced him to put his son in the army at the age of thirteen years. Young Suvorov remained in the regiment of Semenov until 1754, when in the twenty-fifth year of his age, he obtained a lieutenancy in a regiment of the line, and distinguished himself so much, that three years after the date of his commission he was raised to the rank of first lieutenant, and in 1758, when the war with Prussia broke out, he was entrusted with the command of the garrison of Memel. But this situation was ill-suited to the active spirit of young Suvorov, whose energies demanded a far wider field of action. He begged to be sent on active service. His

petition was granted, and in 1759 he was present at the battle of Kunersdorf. He continued in the rank of first lieutenant until the death of the empress Elizabeth, when the Russian troops were recalled from Prussia. Suvorov, who during the war had received the approbation of his superior officers, was despatched in 1763 to announce to the court of St. Petersburg the return of the Russian army. A letter of introduction brought him before Catherine II., who named him colonel of the Astrakhan regiment of infantry. Five years afterwards he was commanding officer of a part of the Russian troops which were engaged in warfare with the confederation of Bary in Poland. Here he first showed how worthy he was of the command entrusted to him: in a time almost incredibly short he dispersed the armies of both Pulawskis, took Cracow by storm, and obtained so many advantages over the enemy, that the success of the campaign has chiefly been attributed to him. On his return he was made major-general, and such was the fame he had already acquired, that in 1773 he was sent against the Turks: field-marshal Rumyantsov was commander-in-chief. Three victories by Suvorov over the troops of Mustapha III., which were commanded by the khan of the Crimea, prepared for the complete defeat of the Turks, and having effected a junction with the army of General Kamenskoy, a fourth victory put an end to the contest. This battle, one of the most sanguinary in this war, was fought at Kasledgi, about the end of June 1774.

In the meantime Pugacheff, a Cossak of the Don, who pretended that he was Peter III., had assembled a numerous army. A formidable insurrection threatened to overthrow the throne of Catherine; the negotiations with the Ottoman Porte had scarcely terminated when Suvorov was ordered to meet the insurgents. He settled the troubles and soon restored perfect tranquillity to the empire. In 1783 he subjugated the Cuban Tartars and those of Budziac, and having forced them to swear allegiance to the Russian crown, the empress raised him to the chief command, which he held throughout the second Turkish war, which broke out in 1787. He had now no superior to bear off the credit of his actions, and could show that his skill as a tactician was fully equal to his courage. Suvorov was well aware of the enormous responsibility which now lay upon him; his measures therefore were extreme, and although he is accused of having sacrificed too many lives, he cannot be charged with not exposing his own. It was in this war that he first made almost exclusive use of the bayonet, which afterwards so much distinguished the Russian troops. In the battle of Kinburn, in 1787, he ordered his regiments of infantry to throw away their knapsacks and to attack the enemy with the bayonet. The Turks, who occupied a position much stronger than he suspected, repelled the repeated attacks of the Russians; Suvorov himself was wounded, his cavalry fled, and the Cossaks retreated from the field of battle. In this critical moment, Suvorov, regardless of his wound, mounted his horse, overtook his flying horsemen, and, throwing himself in the midst of them, exclaimed, "Run, cowards, and leave your general to the mercy of the Turks." The effect was instantaneous, and notwithstanding the disadvantages he had to contend with, the battle was won. Nevertheless his courage frequently led him into difficulties which he could have avoided, as at the siege of Oczakow (December 17, 1788), where he would have been irretrievably lost, if Prince Repnin had not come to his assistance. The celebrated battle of Fokshany, which took place on the 1st of August 1789, between the Seraskier Mehmet Pasha and the Prince of Coburg, who commanded a part of the Russian army, was chiefly won through Suvorov's intrepidity. In September of the same year the Prince of Coburg was surrounded by the Turks; and the Russian army stationed on the river Rymnik was in imminent danger. Suvorov reached the spot with a comparatively small force; the armies met on the 22nd of September, and the Turks were completely defeated. It was for this victory that the Emperor Joseph II. raised him to the rank of count of the empire, and Catherine to the dignity of a Russian count with the name of Rymnikski (i.e. he of the Rymnik).

The fortress of Ismail had in the course of this war withstood repeated attacks from the Russian armies. Prince Potemkin at last gave orders to Suvorov for its reduction. Suvorov was determined to take the fortress; he promised his soldiers the plunder of the place, and ordered them to give no quarter. The evening before the storming, he said to his soldiers: "To-morrow morning, an hour before daylight, I shall rise, say my prayers, wash myself and dress, then crow like a cock, and you will storm according to my orders." The signal was given, and the army began the attack. The Russians were twice forced to give ground under the overwhelming fire of the enemy; at last they succeeded in scaling the walls. Thirty-three thousand Turks were killed or severely wounded, and ten thousand were made prisoners after the slaughter had ceased. Suvorov's report to the empress on this occasion is laconic. "Praise be to God, and praise be to you: the fortress is taken, and I am in it." Eight days were required to bury the dead. Suvorov took a horse to supply the place of the one he had lost in the action, and this was all the share he had in the booty.

In 1792, when peace was made between Russia and the Porte at Yassy in Moldavia (January 9), the Empress Catherine appointed Suvorov governor-general of the province of Yekaterinoslav, the Crimea, and the lately acquired provinces round the mouth of the Dniester. Kherson was the chief town in these districts, and there

Suvórov remained two years. In 1794, when the Poles revolted, Suvórov received the command of the regiments destined to repress the insurrection. He gained several victories over the insurgents, and the storming of Praga, which was taken after a desperate fight of four hours, and which opened to him the gates of Warsaw, on the 9th of November, reduced the Poles to obedience. On this occasion Catherine made him a field-marshal, and gave him a staff of command made of gold, with a wreath of jewels in the form of oak-leaves, the diamonds alone of which were valued at 60,000 roubles.

In 1795 Catherine died, but Suvórov did not lose any of his authority. In 1799 the Emperor Paul gave him the command of the troops which fought in Italy against the French. The Russian armies combined with those of Austria, and Suvórov was appointed to the chief command. His brilliant victories, as those of Piacenza, Novi, and Alessandria, and the activity with which he took from the French all the towns of Upper Italy, procured him the title of Prince Italinski. In consequence of a change in the plan of operations, he crossed the Alps and Mount St. Gothard, in order to help Prince Korsakov in the neighbourhood of Zürich. Through mismanagement on the part of the Austrians, Suvórov came too late, and Korsakov was defeated by Massena, and obliged to retreat over the Rhine. This mishap, as well as the want of energy shown by the Austrians, obliged Suvórov to retreat as far as the lake of Constance. His object was to join the army of Korsakov. The French general tried to prevent this junction. Suvórov was surrounded by them, and entirely enclosed in the valley of the Reuss. On the 28th of September he threw himself into the valley of Schlacken, and led his men, one by one, along a footpath, known only to chamois hunters, over steep rocks and bordered by deep abysses, into the village of Mulden, where Korsakov's troops were stationed. The extraordinary behaviour of the Austrian army and the apathy of the court of Vienna roused the indignation of Paul, and he recalled his forces. The protestations of Suvórov were in vain, and his representations regarding the necessity of the war being continued were rejected. Meanwhile the emperor had given orders for the reception of the generalissimo. He was to make a triumphal entry into St. Petersburg, and apartments were prepared for him in the Imperial palace. Scarcely however had Suvórov arrived in Russia, when a severe illness obliged him to stay at his country-seat in Lithuania. The emperor's own surgeon was despatched to him. Yet in the midst of the preparations for Suvórov's triumphal procession Paul changed his mind; and Suvórov learnt in Riga that he was in disgrace; nevertheless he continued his journey to St. Petersburg, and was received in the house of a niece. Sixteen days after his arrival at St. Petersburg, on the 18th of November 1800, Suvórov died, at the age of seventy.

His funeral was celebrated with great solemnity, and 15,000 of his soldiers accompanied his body to the grave. The Emperor Alexander erected in St. Petersburg, in 1801, a colossal statue of the first of Russian generals. Suvórov was an extraordinary man. Though thin and of a weak constitution, he maintained himself in good health by severe exercise and cold baths. He slept on a bed of straw or hay, under a light blanket, and his food was the same as that of his soldiers. Change in his fortune did not induce him to change his diet. His wardrobe consisted merely of his uniform and a sheepskin. Owing to his temperate mode of life, he preserved his youthful vigour even in his old age. He was very strict in performing all the duties of the Russian church, and compelled all who were under his command to observe them with the same strictness. He was equally firm in his resolves and true to his promises; and his quickness of decision showed itself in the short and laconic style of his orders. A studied conciseness was likewise observable in his conversation, where, as well as in his writings, he frequently used rhyme. His rough and uncouth manners made him the favourite of his soldiers, for whom he had peculiar terms of endearment. Although he used to say that the whole of his tactics consisted in the two magic words, 'Stupay i bey!' ('Advance and strike!') he showed in the course of his career great skill in the higher parts of the art of war. He has been accused of cruelty and blamed for want of deliberation; nevertheless he is one of the few generals who never lost a battle.

\*SWAIN, CHARLES, known by the name of the 'Manchester Poet,' was born in Manchester in 1803; his father being an Englishman and his mother a native of France. His father dying when he was a child, he was taken charge of by his mother's brother, M. Tavaré, an intelligent and educated man, who was owner of extensive dye-works in Manchester. After receiving a good education at school, Mr. Swain entered his uncle's establishment at the age of fifteen, and remained in it fourteen years; when he exchanged the dyeing business for that of an engraver, in which he still continues. While yet with his uncle he began to write for periodicals, chiefly in verse; and in 1828 (having married in the preceding year), he published his first work, called 'Metrical Essays on Subjects of History and Imagination.' This was followed, in 1831, by 'Beauties of the Mind: a Poetical Sketch, with Lays Historical and Romantic.' These poems, and one entitled 'Dryburgh Abbey,' written in 1832, by way of elegy on Sir Walter Scott's death, obtained the author much reputation; and Southey, amongst others, predicted that Manchester would be proud of her poet. Mr. Swain's subsequent publications have been a 'Memoir of Henry Leversedge,' 1835; 'The Mind' and other

Poems' (a re-publication), 1841; 'Rhymes for Childhood,' 1846; 'Dramatic Chapters, Poems, and Songs,' 1847; 'English Melodies,' 1849; and 'Letters of Laura d'Auverne,' 1853. Not long ago the people of Manchester showed their respect for Mr. Swain by presenting him with a testimonial.

\*SWAINSON, WILLIAM, one of the most copious of living writers upon natural history. In early life he travelled much in various parts of the world, and made collections of natural history objects,—devoting especial attention to birds and insects. In 1820 he commenced the publication of a series of descriptions of animals with the title 'Zoological Illustrations, or Original Figures and Descriptions of New, Rare, or Interesting Animals.' In 1821 he commenced a work on the Mollusca, entitled 'Exotic Conchology,' 4to, London. Of this work a new edition by Mr. S. Hanley, appeared in 1841. In 1822 he published a work entitled 'The Naturalist's Guide for collecting and preserving all Subjects of Natural History and Botany, particularly Shells,' &c. From this time he published a large number of valuable papers in the 'Journal of the Royal Institution,' the 'Zoological Journal,' and the 'Magazine of Natural History,' descriptive of new birds and shells.

In 1834 he published the first of a series of volumes on natural history in Lardner's 'Cabinet Cyclopædia.' This work was entitled 'A Preliminary Discourse on the Study of Natural History.' In 1835, in the same series, appeared a treatise 'On the Geography and Classification of Animals.' In 1835, a treatise 'On the Natural History and Classification of Quadrupeds.' This was followed in 1836 by a treatise 'On the Natural History and Classification of Birds.' In 1838 and 1839 appeared 'The Natural History and Classification of Fishes, Amphibians and Reptiles, or Monocaudian Animals.' In 1838 also a volume in the same series on 'Animals in Menageries.' In 1840 a volume on the 'Habits and Instincts of Animals.' In these works Mr. Swainson advocated a special system of the classification of animals known as the Quinary Arrangement. Besides these works he published several other independent volumes, amongst which the following demand particular notice. Two volumes in 1837 on the 'Birds of Western Africa,' and in 1838 one volume on the 'Fly Catchers,' a group of birds, all in Jardine's 'Naturalist's Library.' In 1840 'A Treatise on Malacology, or the Natural Classification of Shells and Shell-fish.' From 1834 to 1841, a series of 'Ornithological Drawings,' being a selection of Birds from the Brazils and Mexico.

In 1831 Mr. John Richardson published the second part of his 'Fauna Boreali Americana,' which was devoted to the description of North American birds, and in which he was assisted by Mr. Swainson. In conjunction with Mr. Shuckard, Mr. Swainson published, in 1840, a volume on the 'History and Natural Arrangement of Insects.' About the year 1841 Mr. Swainson emigrated with his family to New Zealand, where he now resides.

SWAMMERDAM, JOHN, was born at Amsterdam in 1637. His father was an apothecary in that city, and was celebrated for a large collection of objects of natural history and other curiosities which he had formed. His grandfather first took the name of Swammerdam from the place of his birth, a village on the Rhine between Leyden and Woerden.

John Swammerdam was originally intended for the church, but he preferred medicine. During his preparatory studies, following the example of his father, he devoted himself with great ardour to the study of natural history, and especially that of insects, in which he is said to have obtained, even while a young man, far more knowledge than the writers of all preceding ages. In 1651 he went to Leyden, and studied under Van Horne and Francis Sylvius. He applied himself very diligently to minute dissections of the human body, and bringing with him the tact which he had acquired in the examination of insects, was eminently successful. After two years' residence at Leyden he went to Saumur in France, where he continued his observations upon insects, and in 1664 discovered the valves of the lymphatics, but lost the full credit of his industry by Ruysch having at the same time made similar observations, and published them before his were printed. From Saumur Swammerdam went to Paris, and lived with Nicolas Steno, with whom he had been a fellow-pupil and an intimate friend at Leyden. Here also he gained the acquaintance of M. Thévénot, who was afterwards his chief patron, and obtained leave for him, on his return to Amsterdam, to dissect the bodies of those who died in the hospital. In 1666 he went again to Leyden, and made numerous anatomical researches in company with Van Horne. Early in the following year he first employed the method of preparing the blood-vessels by means of waxen injections, and was soon after admitted doctor of medicine: his thesis was an essay on respiration. About this time also he invented the method of making dry preparations of hollow organs, which is now usually employed.

After receiving his diploma, Swammerdam devoted nearly all his time to the study of the anatomy and the natural history of insects; and in 1669 he first published his general history of them. In 1672 he communicated to the Royal Society of London some plates of the human uterus, together with an account of his injections of the spermatric vessels, and some specimens of the success of his invention. At this time also he was engaged in numerous dissections of fishes, especially of their glands; and made several useful investigations respecting the pancreatic fluid. In 1673 he discovered an important

error in the received opinions respecting hernia, and proved that when the intestine is protruded, the peritoneum is not torn, but stretched, so as to form a sacular prolongation from the lining of the abdomen; a fact which was first published, with several other results of Swammerdam's inquiries, in Schrader's observations. In the same year he published his treatise on the natural history of bees; "a work," says Boerhaave, "which all the ages from the commencement of natural history have produced nothing to equal—nothing to compare with." But the labour it had cost him, and the incessant fatigue to which he had been exposed in making microscopic observations for hours together under the heat of a burning sun, destroyed his health, which had always been delicate, and he determined to sell his museum, and renounce all his former pursuits for a religious life, for which his desire had been excited by Antoinette Bourignon, with whom he had long maintained a correspondence. But it was not easy to find a purchaser for so extensive a collection: his friend Steno, on the part of the Duke of Tuscany, offered him 12,000 florins for it if he would become a Roman Catholic; but this he angrily refused, and Thévénot tried in vain to dispose of it in France. While various negotiations were pending, he completed the arrangement of his museum, and made catalogues of it; and in 1675 published his last work, on which he had been engaged for more than ten years—"The Anatomy of the Day-fly." In 1676 he went to Copenhagen with another disciple of Antoinette Bourignon, to obtain from the king of Denmark leave for her to reside in his kingdom, the Lutheran divines of Holland having endeavoured to remove her from Holstein. His application however was unsuccessful; and on his return to Amsterdam he found his father enraged at him for his continued neglect of all profitable employment, and determined to allow him but an insufficient income for his maintenance. He was in utter despair what course to pursue consistently with his anxiety for a life of quietude and religion. In a few months his father died. Instead however of inheriting money enough for the purpose of his retirement, he found himself involved in a dispute with his sister respecting the division of the property, which, with his continued anxieties about the sale of his museum, brought on a severe illness, with melancholy, and he died early in 1681.

Swammerdam left all his manuscripts on insects to Thévénot, after whose death, having passed through several different hands, they were bought by Boerhaave, and published in one volume. His heirs endeavoured to obtain 5000 florins for his museum, but in vain; and it was at length broken up and sold in small portions to different purchasers. All the works of Swammerdam were translated from the Dutch into Latin by Gaubius, and most of them at different periods into English, French, and German. Boerhaave, with his edition, published a *Life of the Author*, which is added to the English translation of 'The Book of Nature, or the History of Insects,' by Thomas Floyd, folio, London.

SWANEVELT, HERMANN VAN, called the Hermit of Italy, one of the most eminent landscape painters of the Dutch school, was born in 1618 or 1620, at Woerden. It is generally supposed that he was at first a pupil of Gerard Douw; he however went, very young, to Italy, where, having chosen landscape painting as the branch of the art most conformable to his taste, he became a pupil of Claude Lorraine, and soon proved himself worthy of so great a master. He was unremitting in his study of nature, and his retired way of life, which was wholly devoted to his art, caused him to be called 'the hermit,' by which name he was soon generally known. All his works, his paintings, his drawings, and his etchings bear the stamp of a faithful imitation of nature. The scenes which he represents are diversified and picturesque; the perspective, light and shade, the tone of the sky, are admirable, and expressed with a firmness and decision that indicate the hand of a master. It is said that, in company with Claude, he was fond of observing the effect of the first faint tinge of the morning light on the surfaces of objects, and the changes that gradually take place as the sun rises higher in the heavens, and as he progressively declines from his meridian splendour.

Swanevelt's pictures have the sweetness and tenderness of Claude, but they want his warmth, and are less striking in their effect; but his figures both of men and animals are superior to those of Claude. His paintings are excessively rare, as well as his drawings. His etchings, 116 in number, have never been surpassed in the choice of the subjects, the judicious distribution of light and shade, the pleasing groups of figures with which they are adorned, and the spirit and perfection of the execution. To appreciate their merit, we must have good impressions, which usually have the master's name on them; for the plates have passed through many unskilful hands, and many can scarcely be recognised. His pictures were so much sought for, even in his life, that they were sold at excessively high prices. The time of his death, which took place at Rome, is rather uncertain; some say it was in 1690, others in 1680: the latter date appears to be the more correct.

SWARTZ, OLOF, a celebrated Swedish botanist, was born in the year 1760, at Norrköping in East Gothland, where his father was a considerable manufacturer. He commenced his studies at Upsal, in 1778, in the year that Linnæus died. Having acquired a taste for botany, he made several excursions in the years 1779, 1780, 1781, and 1782, through various districts of Sweden, for the purpose of studying their botany, and visited Lapponia, Finland, and Gothland. In 1781

he took his degree as doctor of medicine, having presented a thesis entitled 'Methodus Muscorum Illustrata.' In this work he gave a new arrangement of the mosses, and laid the foundation for a larger work, entitled 'Dispositio Systematica Muscorum Frondosorum Sueciae,' which was published at Erlangen in 1799. This work was illustrated with plates and descriptions of many new mosses. In 1783 he made a voyage to the western coast of America, and visited Jamaica and other islands in the West Indies; and, loaded with botanical treasures, he visited England on his return home, in 1788. He remained in this country a year, during which time he was occupied in examining the herbaria of Sir Joseph Banks, Sloane, and other botanists. He returned to his own country in 1789, and was elected a member of the Royal Academy of Sciences of Stockholm in 1790, and was appointed professor of natural history in the Medico-chirurgical Institution at Stockholm. He was also honoured by being made a knight of the order of Vasa and of the Polar Star. In 1788 he published at Stockholm his 'Nova Genera et Species Plantarum,' this work contained a description of the plants which he had collected in the West Indies; most of them had never before been described. This work was succeeded by his 'Observationes Botanicae,' containing remarks on the structure and affinities of the plants of the West Indies, in 1791. From 1794 to 1800 he published in folio the 'Icones Plantarum Inocognitarum,' which contained drawings of the rarer plants which he had discovered in the West Indies. He completed his labours on the botany of this part of the world by the publication of his 'Flora Indica Occidentalis' in 1806, which appeared in 3 volumes, illustrated with plates. The above works on West Indian botany were entirely devoted to the phanerogamic or flowering plants; but he did not neglect cryptogamic plants, and in 1806 he published the 'Synopsis Filicum,' which contained a number of new genera and species of ferns. After these publications he turned his attention more particularly to the botany of his own country, and published anonymously at Stockholm, in 1814, a work entitled 'Summa Vegetabilium Scandinaviae systematicè co-ordinatorum.' He also contributed the text from the 5th to the 8th volume of the 'Svensk Botanik,' a national work on the botany of Sweden, produced by several authors. In addition to the above works, he contributed a number of papers on botanical subjects to the Transactions of various societies; amongst others, to the 'Philosophical Transactions,' and to the 'Transactions of the Linnæan Society,' of which he was a foreign fellow. He also contributed several papers on zoology to various journals and Transactions. He died in the year 1818.

As a botanist Swartz ranked amongst the first of his day, and was a worthy disciple of the school of Linnæus. His principal labours were directed to descriptive botany, in which he was remarkable for acuteness without prolixity, purity of expression, and freedom from novel technicalities. He has contributed greatly to our knowledge of the vegetable kingdom, having added upwards of 50 genera and 850 species to the list of flowering plants, besides a great number to the class of Cryptogamia. A genus of Leguminous plants has been named after him Swartzia. A volume of his posthumous papers, with notices of his life and labours, by Sprengel and Agardh, was published at Stockholm in 1829, by J. E. Wickström, under the title 'Adnotationes Botanicae quas reliquit O. Swartz.'

SWEDBERG, JESPER, a Swedish prelate and theological writer, was born on the 28th of August 1653, at Sveden, near Fahlun, the estate of his parents, Daniel Isaacson and Anne Bullernesia, who were members of a respectable family among the miners of Stora Kopparberg. Swedberg took his degree at Upsala in 1682, was appointed chaplain to the Royal Guards in 1684, chaplain to the court in 1685, and was promoted to the living of Vingåker in 1690. He was called to Upsala as professor of theology in 1692, and made primate and provost of the cathedral of that place in 1694. Charles XI. appointed him over the Swedish communities in Pennsylvania (America); and in 1702 Charles XII. created him bishop of Skara in Westrogothia. In 1705 he became Doctor of Theology at Upsala; and in the same year Charles XII. placed him over the Swedish communities in London. He procured for the city of Skara a privileged press, to which he gave employment by his numerous writings. In 1712 the episcopal palace was destroyed by fire, and the bishop lost his library and many manuscripts. In 1719 the whole town of Skara was burnt, but the gymnasium and cathedral were rebuilt in five years through his exertions. On the 3rd of May 1719 his family was ennobled by the name of Swedenborg. In 1730 another fire deprived him of nearly the whole of his property. He was vigorous and active to the end of his life, which terminated on the 26th of July 1735. He died at the age of eighty-two, and was buried in the convent-church of Varnhem. Bishop Swedberg was three times married: first, to Sarah Behm [SWEDENBORG, EMANUEL]; secondly, to Sarah Berghia; and thirdly, to Christina Urhusia. He had seven children, four daughters and three sons, of whom the eldest was Emanuel Swedenborg, the subject of the following notice. (Gezelius, 'Försök til et Biographiskt Lexicon,' 8vo, Stockholm, 1778-80.)

The bishop's writings are voluminous, and they are not confined to theology, but take in a wide range of subjects. He was one of the earliest writers on Swedish orthography: his book on the subject drew down on him the censure of one Urban Hjaerne, who, in a violent pamphlet that he put forth in the form of a dialogue, accused

the worthy bishop of *πολυπραγμοσύνη* (in fact, of being a busybody in literature). A very complete list of Swedberg's extensive works may be seen in the 'Catalog. Libr. Impr. Biblioth. Reg. Acad. Upsal.,' 3 tom. 4to, Upsal, 1814.

Many particulars of his history are given in Lagerbring's 'Sammandrag af Swea-Rikes Historia,' 8vo, Stockholm, 1778-80; and a good biography of him is prefixed to Dr. Tafel's 'Swedenborg's Leben,' Tübingen, 1841, pp. 1-43. He left behind him in manuscript an autobiography in 1002 folio sheets, a copy of which he is said to have given to each of his children. The title of this document (which is written in Swedish, and still extant in Sweden) may be translated as follows:—"Manuscript: The Life of Jesper Swedberg, Bishop of Skara, written in detail by himself, in accordance with the truth; in order to remind him of the goodness of God and of his wonderful Providence; and to give to his children and posterity necessary instruction for passing through life happily; whereto may God grant them his grace." Brunso, Nov. 15, 1728. (Warmholtz, 'Bibliotheca Sueo-Gothica,' 8vo, Upsal, 1782, et seqq.)

SWEDENBORG, EMANUEL, the second child and eldest son of Jesper Swedberg, bishop of Skara, the subject of the preceding article, and of his first wife, Sarah Behm, daughter of Albert Behm, assessor of the board of mines, was born at Stockholm, on the 29th of January 1688. Of his childhood and youth there is no record, except that his mind was early occupied by religious subjects. "From my fourth to my tenth year," says he, in a letter to Dr. Beyer, "my thoughts were constantly engrossed by reflecting on God, salvation, and the spiritual affections of man. From my sixth to my twelfth year, it was my greatest delight to converse with the clergy concerning faith, and I often observed to them that charity or love is the life of faith, and that this vivifying charity is no other than the love of one's neighbour."

Bishop Swedberg bestowed great care on the education of his son, which he received principally at the University of Upsala. He was uncommonly assiduous in the study of the learned languages, mathematics, and natural philosophy. At the age of twenty-two he took his degree of Doctor of Philosophy, and published his first essay—the academical dissertation which he had written for the degree. This essay is entitled 'L. Annæi Senecæ et Pub. Syri Mimi, forsan et aliorum selectæ sententiæ, cum annotationibus Erasmi et Græcæ Versione Jos. Scaligeri. Quas cum consensu Ampl. Fac. Philos. notis illustratas sub præsidio Viri amplissimi Mag. Fabiani Törner, Philos. Theoret. Prof. Reg. et ord. publico examini modeste submittit Emanuel Swedberg in audit. Gustav. maj. d. 1. Jun, 1709, Upsaliæ;' reprinted with his Latin poems, by Dr. J. F. I. Tafel, Tübingen, 1841.

In 1710 Swedberg came to London, just at the time the plague was raging in Sweden, when all Swedish vessels were commanded by proclamation to keep strict quarantine. He was persuaded to land (probably in ignorance of the regulation); and he has recorded, in his *Itinerarium* of these travels, that he narrowly escaped being hanged for the offence. He spent some time at Oxford, and lived afterwards for three years abroad, chiefly in Utrecht, Paris, and Greifswalde, returning to Sweden in 1714, through Stralsund, just as Charles XII. was commencing the siege of that city. His next productions were, a small volume of fables and allegories in Latin prose ('*Camæna Borea, cum heroum et heroidum factis ludens, sive Fabellæ Ovidianis similes, sub variis nominibus scriptæ, ab E. S., Sueco, Liber I. Gryphiswaldiæ*,' 1715) ('*Act. Liter. Sueciæ*,' vol. i, p. 589), and a collection of Latin poems ('*Ludus Heliconius, seu Carmina Miscellanea quæ variis in locis cecinit Eman. Swedberg, Skaræ*'). In 1716 Swedberg commenced his '*Dædalus Hyperboreus*,' a periodical record of inventions and experiments by Polhem and others, and of mathematical and physical discoveries of his own. This work was published at Upsal in Swedish, in six parts (the fifth part with a Latin version); it is said to contain the incubations of a scientific society which was instituted by Berzelius among the professors of the university. ('*Nov. Act. Reg. Soc. Scient.*,' vol. v., Upsal, 1792.) In the course of 1716 Swedberg was invited by Polhem, the great Swedish engineer, to repair with him to Lund to meet Charles XII., on which occasion he was admitted to much intercourse with the king, who, without solicitation on Swedberg's part, and while he was yet at the university, appointed him assessor in the Royal Metallic College of Sweden. The diploma conferring the appointment, dated at Lund, the 18th of October, also stated "that the king had a particular regard to the knowledge possessed by Swedberg in the science of mechanics, and that the royal pleasure was that he should accompany and assist Polhem in constructing his mechanical works." These works were to consist of the formation of the basin of Carlscrona, and of locks between Lake Wener and Gottenburg, among the rapids and cataracts at Trolhätta. ('*Hist. de Ch. XII. de Nordberg*,' tom. iv., app. n. ccxxi.) The king also had the design of uniting his engineers by closer ties, for he recommended Polhem to give his daughter in marriage to Swedberg: the match was however prevented by the lady, who had a more favoured suitor.

The '*Dædalus Hyperboreus*' was completed in 1718, in which year "Swedberg executed a work of the greatest importance during the memorable siege of Frederickshall, by transporting over mountains and valleys, on rolling machines of his own invention, two galleys, five large boats, and a sloop, from Stromstadt to Iderfjol, a distance of fourteen miles. Under cover of these vessels the king brought his

heavy artillery, which it would have been impossible to have conveyed by land, under the very walls of Frederickshall." (Sandel's 'Eulog.') Swedberg's next literary works were, 1. 'The Art of the Rules' (an Introduction to Algebra, of which a full analysis may be seen in the '*Acta Literaria Sueciæ*,' vol. i., pp. 126 to 134); only a part of this work was published: the manuscript portion, according to Lagerbring, contains the first account given in Sweden of the Differential and Integral Calculus; 2. 'Attempts to find the Longitude of places by means of the Moon.' (A. L. S., vol. i., pp. 27 and 315.) These treatises were both in Swedish, and were both published at Upsal in 1718.

In 1719 he was ennobled by Queen Ulrica Eleonora under the name of Swedenborg. From this time he took his seat with the nobles of the Equestrian order in the triennial assemblies of the states. His new rank conferred no title beyond the change of name, and he was not, as is commonly supposed, either a count or a baron: he is always spoken of, in his own country, as 'the assessor Swedenborg.' In this year he published three works in Swedish: 1. 'A Proposal for a Decimal Arrangement of Coinage and Measures, to facilitate Calculation and suppress Fractions' (Stockholm); 2. 'A Treatise on the Motion and Position of the Earth and Planets' (Skara); 3. 'Proofs derived from appearances in Sweden, of the depth of the Sea, and the great Force of the Tides in the earliest ages' (Stockholm). Occasional papers by him appeared in the '*Acta Lit. Suec.*' for 1720-21. Two of these have been translated into English. (See '*Acta Germanica*,' pp. 66 to 68, and pp. 122 to 124, vol. i., London, 1742.)

In the spring of 1721 he again went abroad through Denmark to Holland, and published the six following small works at Amsterdam: 1. 'A Specimen of Principles of Natural Philosophy, consisting of New Attempts to Explain the Phenomena of Chemistry and Physics by Geometry' (*Prodromus Principiorum Rerum Naturalium, sive novorum tentaminum Chemiam et Physicam experimentalem Geometrice explicandi*); 2. 'New Observations and Discoveries respecting Iron and Fire, with a new mode of constructing Stoves' (*Nova Observata et Inventa circa ferrum et ignem; una cum nova camini inventione*); 3. 'A new method of finding the Longitude of Places, on Land or at Sea, by Lunar Observations' (*Methodus nova inveniendi Longitudines Locorum, Terra Marique, Opæ Lunæ*); 4. 'A mode of constructing Docks' (*Modus construendi Receptacula Navalia*); 5. 'A new way of making Dykes' (*Nova Constructio Aggeris Aquatici*); 6. 'A mechanical method for Testing the Powers of Vessels' (*Modus Mechanice explorandi Virtutes Navigiorum*). From Amsterdam he went to Aix-la-Chapelle, Liège, and Cologne, and visited the mines and smelting-works near those places. He arrived at Leipzig in 1722, and there published in three parts, 'Miscellaneous Observations on Natural Objects, particularly Minerals, Fire, and Mountain-strata' (*Miscellanea Observata circa Res Naturales, præsertim mineralia, ignem et montium strata*). At Hamburg, during the same year, he published a fourth part, 'On Minerals, Iron, and the Stalactites in Baumann's Cavern' (*Præcipue circa mineralia, ferrum, et stalactitas in Cavernis Baumannianis*). ('*Act. Erudit. Lipsiens.*' 1723, p. 96 97.) This work, like those which precede it, shows a rare power both of accumulating facts and applying principles. We learn from it that Swedenborg, among his other employments, was officially appointed to visit, and to propose for selection the parts of the Swedish coast which were best fitted for the preparation of salt; on which subject the 'Miscellaneous Observations' contain an admirable business-like memoir. The fourth part gives the substance of several conversations between Charles XII. and Swedenborg, in which the king proposed a new 'sexagenarian calculus.' Swedenborg made the last-mentioned tour principally to gain a practical knowledge of mining. At Blankenburg he experienced great kindness from Louis Rudolph, duke of Brunswick, who defrayed the whole expense of his journey, and at his departure presented him with a golden medallion and a weighty silver goblet. After being abroad a year and three months, he returned home, and in the course of 1722 he published anonymously, at Stockholm, a work entitled 'Om Svenska Myntets Förnedring och Förhöjning' ('On the Depreciation and Rise of the Swedish Currency'), ('*Cat. Bibl. Upsal.*' Upsal, 1814); and at the end of the same year he entered, for the first time, on the actual duties of the assessorship, the functions of which he had been unwilling to exercise before he had perfected his knowledge of metallurgy. For the next ten years he divided his time between the business of the Royal Board of Mines and his studies. In 1724 he was invited by the consistory of the university of Upsala to accept the professorship of pure mathematics, vacant by the death of Nils Celsius, because "his acceptance of the chair would be for the advantage of the students, and the ornament of the university;" but he declined the honour. In 1729 he was admitted a member of the Royal Academy of Sciences at Upsala. In 1733 he again travelled into Germany. It seems from his posthumous '*Itinerarium*' (edited by Tafel, Tübingen, 1840), that he visited Berlin, Dresden, Prague, and Carlsbad, and, arriving at Leipzig at the end of the year, put to press a great work he had just completed. During the printing of this work he spent twelve months in visiting the Austrian and Hungarian mines.

Swedenborg's '*Opera Philosophica et Mineralia*' were published in 1734, in 3 vols. folio, at Dresden and Leipzig; his patron, the Duke of Brunswick, at whose court he was a visitor, defrayed the cost of

the publication. This last work consists of three distinct treatises. The first volume is 'Principles of Natural Philosophy, consisting of new attempts to explain the phenomena of the elemental world in a philosophical manner' (*Principia Rerum Naturalium, sive Novorum Tentaminum Phenomena Mundi Elementaris Philosophice explicandi*). It is dedicated to the Duke of Brunswick, and has an engraved likeness of the author, but of very inferior execution. The 'Principia' is an attempt to construct a cosmology *à priori*. The second and third volumes are together called the 'Regnum Minerale'; the second is on iron, the third on copper and brass. They treat of the methods employed in all parts of Europe, and in America, in preparing and working these metals. Part of the second volume has been translated into French, and inserted in the 'Description des Arts et Metiers.' Each volume is subdivided into three parts, and illustrated by numerous copper engravings. In the same year, and at the same places, Swedenborg published 'An Introduction to the Philosophy of the Infinite, and the Final Cause of Creation; treating also of the Mechanism of the Operation between the Soul and the Body' (*Prodromus Philosophiæ Ratiocinantis de Infinito, et Causa Finali Creationis; deque Mechanismo Operationis Animæ et Corporis*). This work connects his cosmology with his physiology.

Swedenborg's reputation was now established throughout Europe, and Christopher Wolff and other foreign literati eagerly sought his correspondence. On December 17th, 1734, the Academy of Sciences of St. Petersburg appointed him a corresponding member. In 1736 he again travelled, and in 1738 visited Italy, and spent a year at Venice and Rome. The journal of his tour, from 1736 to 1739, is in manuscript in the Academy at Stockholm. At this time he no doubt applied himself particularly to anatomy and physiology, of a masterly acquaintance with which he gave evidence in his 'Economia Regni Animalis' (Economy of the Animal Kingdom), a large work in two parts, 4to, which he published at Amsterdam in 1740-41. The first part treats of the blood, the arteries, the veins, and the heart, concluding with an introduction to rational psychology. The second part treats of the coincidence between the motions of the brain and the lungs, of the cortical substance of the brain, and of the human soul. In 1741 he became a Fellow, by invitation, of the Royal Academy of Sciences of Stockholm, the 'Memoirs' of which he enriched with a paper on inlaying. ('Kongl. Swenska Wetens. Acad. Handlingar,' xxiv. 107-113.) He still continued earnest in the pursuit of physiology, and in 1744 published the 'Regnum Animale' (Animal Kingdom), parts i. and ii., 4to, at the Hague, and in 1745, part iii. in London. The first part of this work is an analysis of the abdominal viscera; the second, of the thoracic viscera; the last treats of the skin, of the senses of taste and touch, and of organised forms in general. The plan of both the foregoing works is peculiar to Swedenborg. Although he cultivated anatomy practically, he considered that the standard authorities of his time were more to be relied on than his own dissections ('Econ. Reg. An.'), on which account he premised the descriptive statements of Heister, Winslow, Malpighi, Morgagni, Boerhaave, Leeuwenhoek, Swammerdam, &c., as his basis for induction. On the facts supplied by these authorities he built his own superstructure, which, if not strictly a physiological one in the modern meaning of the word, is at least an elevated and original system of animal geometry and mechanics. These great works were regarded by him as only the commencement of a work in which he designed to embrace the entire circle of physiology and psychology. ('Reg. Anim.,' n. 14.)

At the beginning of 1745 Swedenborg published in two parts, 4to, 'De Cultu et Amore Dei' (The Worship and Love of God): the first part, on the origin of the earth, on paradise, and the birth, infancy, and love of the first man; the second part, on the marriage of the first man, and on the soul, the intellectual mind, the state of integrity, and the image of God. This book is a sublimation of Swedenborg's scientific system, with a correlative statement of his psychical doctrines, in which both are blended, and clothed with the narrative form: it is the link between his physiology and a class of doctrines which was yet to come.

A number of unpublished scientific manuscripts, written by him previously to this period, and which are preserved in the Royal Academy of Sciences at Stockholm, manifest his industry and the largeness of his designs. The most important of these papers appear to be—'De Magnete,' p. 273, 4to; 'De Sale Communi,' p. 343; 'Principia Rerum Naturalium, ex priori et posteriori educta,' p. 569; 'De Sensatione,' cap. xiii.; 'De Actione,' cap. xxxv.; 'De Cerebro, Medulla Oblongata, et Spinali, de Nervis, analytice, physice, philosophice;' 'De Aure Humana;' 'Tractatus Partium Generationis utriusque Sexus, et de Processu Generationis.' ('Intellectual Repository,' January 1836; 'Rep. of London Printing Society,' 1841.)

We shall now endeavour to take a brief review of Swedenborg's scientific progress, with particular reference to method, principles, and doctrines. His proper career may be dated from the publication of the 'Prodromus Principiorum.' In this work he attempted to account for chemical combination by a theory of the forms and forces of the particles of bodies, and to resolve chemistry into natural geometry, that it might have the benefit of first principles, and the rank of a fixed science. Of these forms he gave many delineations. (Plates to 'Prodr. Princip.') He broached the ingenious doctrine that the particles of primary solids are moulded in the interstices of fluids, and take

the shape of these interstices; and that particles so modelled, by undergoing fracture at their weakest points, give rise to new shapes, which become the initial particles of new substances. He anticipated Dr. Wollaston's suggestion of the spheroidal composition of crystals, as well as the atomic theory of Dalton, and even some of its details, as when, geometrically predicting the composite nature of water, he assigned to it the equivalent of 9. ('Prodromus Principiorum.')

The rules which he proposed for investigating the constitution of the magnetic, luminous, and atmospheric elements come next under our notice. "1. That we take for granted that nature acts by the simplest means, and that the particles of elements are of the simplest and least artificial forms. 2. That the beginning of nature is the same as the beginning of Geometry: that natural particles arise from mathematical points, precisely as lines, forms, and the whole of geometry; and this, because everything in nature is geometric; and vice versa. 3. That all the above elements are capable of simultaneous motion, in one and the same place; and that each moves naturally without hindrance from the others. 4. That ascertained facts be the substratum of theory, and that no step be taken without their guidance." ('Miscell. Obs.,' part iii.)

From these rules we pass to their application, in the outset to which Swedenborg boldly avowed that the records of science, accumulating as they had been for thousands of years, were sufficient for an examination of things on principles, and *à priori*; that a knowledge of natural philosophy does not presuppose the knowledge of innumerable phenomena, but only of principal facts which proceed directly, and not of those which result obliquely and remotely, from the world's mechanism and powers; and that the latter species of facts confuse and disturb, rather than inform the mind. Also, that the restless desire, from age to age, for more facts, is characteristic of those who are unable to reason from principles and causes, and that no abundance would ever be sufficient for such persons. ('Principia, de Mediis ad Ver. Philos.,' pp. 3, 4.) The following is a statement of the doctrine of the elemental world proposed in the 'Principia':—"1. In the simple (substance) there is an internal state and corresponding effort tending to a spiral motion. 2. In the first finite which arises from it there is a spiral motion of the parts; so also in all the other finites. 3. From this single cause there arises in every finite a progressive motion of the parts, a motion of the whole on its axis, and if there be no obstacle, a local motion also. 4. If a local motion ensues, an active arises; each active similar to the others. 5. From finites and actives arise elementaries, each so similar to the others, as to differ from them only in degree and dimension. Thus we presume the existence of only three kinds of entities—finites, actives, and their compounds, elementaries, of which the finites occupy the surface, the actives the interiors. With regard to the finites, one is generated from the other, and they are all exactly similar, except in degree and dimension: thus the fifth finite is similar to the fourth, the fourth to the third, the third to the second, the second to the first, and the first to the simple; so that when we know the nature of one finite, we know that of all. Precisely the same may be said of the actives and of the elementaries. In the same effort of the simple towards spiral motion lies the single cause and the first force of all subsequent existences." ('Principia,' p. 450-1.) Swedenborg first states these doctrines synthetically, and then educes the same from, and confirms them by, the phenomena of nature. We may here, with propriety, introduce a remark from Sandel:—"He thus formed to himself a system founded upon a certain species of mechanism, and supported by reasoning; a system, the arrangement of which is so solid, and the composition so serious, that it claims and merits all the attention of the learned; as for others, they may do better not to meddle with it."

In approaching the human body he again insisted on the necessity for principles and generalisation, without which, he said, "facts themselves would grow obsolete and perish;" adding that, "unless he were much mistaken, the destinies of the world were leading to this issue." A knowledge of the soul became the professed object of his inquiry, and he "entered the circus with a resolve to examine thoroughly the world, or microcosm, which the soul inhabits, in the assurance that she should be sought for nowhere but in her own kingdom." In this search he repudiated synthesis, and "resolved to approach the soul by the analytic way," adding, "that he believed himself to be the first investigator who had ever commenced with this intention;" a surmise in which he is probably correct. We shall here content ourselves with a brief illustration of one of those doctrines which, "with the most intense study," he elaborated for his guidance, we mean the "doctrine of series and degrees." Each organ, he observed, commences from certain unities or least parts which are peculiar to it, and derives its form from their gradual composition, and its general function from the sum of their particular functions. The mass is therefore the representative of its minute components, and its structure and functions indicate theirs. The vesicles or the smallest parts peculiar to the lungs are so many least lungs; the biliary radicles of the liver, so many least livers; the cellules of the spleen, so many least spleens; the tubuli of the kidneys, so many least kidneys; and the same function is predicable of these leasts, as of their entire respective organs, but with any modification which experience may declare to be proper to the minuter structures. This new method of analysis, in which the greatest things were presumed

to indicate the least, with just such reservation as our experience of the least necessities, was designed to throw light on the intimate structure and occult offices of single organs—the same way indentified the higher with the lower groups of organs—the cranial with the thoracic, and both with the abdominal viscera. Whatever is manifested in the body is transferable to the brain, as the source of all functions and structures. If the abdominal organs supply the blood with a terrestrial nourishment, the thoracic supply it with an aerial, and the brain with an ethereal food. If the first-mentioned organs, by the urinary and intestinal passages, eliminate excrements and impurities, so the lungs by the trachea, and the brain through the sinuses, reject a subtler defilement. If the hearth and blood-vessels are channels of a corporeal circulation, the brain and nerves, or spirit-vessels, are channels of a transcendent or spirituous circulation. If the contractility of the arteries and of muscular structures depends on the nervous system, it is because that system is itself eminently contractile, and impels forwards its contents in the most perfect manner. If the lungs have a respiratory rising and falling, and the heart a contraction and expansion, so the brain has an animatory movement, which embraces both the motions of the lower series. Thus every function is first to be traced to its essential form in the bosom of its own organ, and thence, through an ascending scale, to the brain, “which is eminently muscle, and eminently gland; in a word, which is eminently the microcosm, when the body is regarded as a macrocosm.” (‘Econ. R. A.’; ‘Regn. Anim.’)

On the whole we may admit these works to be a grand consolidation of human knowledge;—an attempt to combine and re-organise the opinions of all the schools of medicine since the days of Hippocrates. The doctrines of the fluidists, of the mechanical and chemical physicians, and of the vitalists and solidists, as well as the methods of the dogmatists and empirics, and even the miscellaneous novelties of the present day, have each a proportion and a place in the catholic system of Swedenborg. His works however are a dead letter to the medical profession, or known only to its erudite members through the mis-statements of Haller. (Haller’s ‘Bibliotheca Anatomica,’ tom. ii. pp. 328, 329, Tiguri, 1777.)

Swedenborg was in his fifty-eighth year when he published the last of the foregoing volumes, and from this period he assumed a new character, of which he gave the following account:—“I have been called to a holy office by the Lord, who most graciously manifested himself in person to me, his servant, in the year 1745, and opened my sight into the spiritual world, endowing me with the gift of conversing with spirits and angels.” However repulsive such statements are to the generality of mankind, they are not *a priori* objectionable to those who admit the inspiration of the seers and prophets of the Bible: after such an admission of the supernatural, each particular case of the kind becomes a simple question of evidence. The event above alluded to happened to Swedenborg in the middle of April 1745, at an inn in London. The manner of its occurrence is recorded by M. Robsahm, director of the bank of Stockholm, who was a trusted friend of Swedenborg, and had the narration from him personally. (See Robsahm’s ‘Memoiren,’ in Tafel’s ‘Swedenborg’s Leben,’ pp. 8 to 10, Tübingen, 1842.) From this period, Swedenborg entirely forsook the pursuit of science, nor does he once allude, in his works on theology, to his former scientific labours. He still however took part in the proceedings of the Diet, and in that of 1761 he is stated by Count Hopken to have presented the best memorial on the subject of finance.

He returned from London to Sweden in August 1745, and immediately devoted himself to the study of Hebrew and the diligent perusal of the scriptures. He continued to discharge the duties of assessor of the Board of Mines till 1747, when he asked and obtained his majesty’s permission to retire from it; adding also two other requests, which were granted—that he might enjoy as a pension the salary of the office; and that he might be allowed to decline the higher rank which was offered him on his retirement. The materials for the subsequent part of Swedenborg’s biography are exceedingly scanty. He was now either actively engaged in writing his theological works, or was travelling in foreign countries to publish them. When he was at home he had a house in the environs of Stockholm, with a large garden, in which he took great delight. He frequently resided in Amsterdam and in London. The highest personages in Sweden testified to the consistency with which he maintained the assertion of his spiritual intercourse. On one or two occasions, they say, he gave proof of his professions. Baron Grimm, after describing him as “a man not only distinguished by his honesty, but by his knowledge and intelligence,” says of one of these occurrences, “This fact is confirmed by authorities so respectable, that it is impossible to deny it; but the question is, how to believe it.” (‘Mém. Hist. Lit. et Anecdote,’ &c., par le Baron de Grimm, tom. iii. p. 56, ed. London, 1813.) Immanuel Kant sifted another of these stories to the bottom, and declared that “Professor Schlegel had informed him that it could by no means be doubted,” and added, “they set the assertion respecting Swedenborg’s extraordinary gift beyond possibility of doubt.” (‘Darstellung des Lebens und Charakters Immanuel Kants,’ Königsberg, 1804.) Swedenborg however laid no stress on such proofs, “because,” said he, “they compel only an external belief, but do not convince the internal.” During his latter years, Bishop Filenius and Dr. Ekebon

instigated a prosecution against him in the consistory of Gottenburg, whence it was transferred to the Diet. Dr. Ekebon denounced his doctrines as “full of the most intolerable fundamental errors, seducing, heretical, and captious;” and stated furthermore, that he “did not know Assessor Swedenborg’s religious system, and would take no pains to come at the knowledge of it.” Swedenborg came out of these trials with safety, unaccused by the Diet, and protected by the king. Towards Christmas 1771, while in London, he had a stroke of the palsy, from which he never perfectly recovered. A report has been circulated that he recanted his claims during his last illness, but this is a mistake. M. Ferelius, minister of the Swedish Lutheran church in London, who visited him on his death-bed, and administered the sacrament to him, wrote as follows (31st March 1780) to Professor Trütgard of Greifswalde, “I asked him if he thought he was going to die, and he answered in the affirmative; upon which I requested him since many believed that he had invented his new theological system merely to acquire a great name (which he had certainly obtained), to take this opportunity of proclaiming the real truth to the world, and to recant either wholly or in part what he had advanced; especially as his pretensions could now be of no further use to him. Upon this Swedenborg raised himself up in bed, and, placing his hand upon his breast, said with earnestness, ‘Everything that I have written is as true as that you now behold me: I might have said much more had it been permitted me. After death you will see all, and then we shall have much to say to each other on this subject.’ (Fernelius, ‘Ueber Swedenborg’s Ende,’ in Tafel’s ‘Leben.’) Swedenborg died at London, in Great Bath Street, Coldbath Fields, on the 29th of March 1772, in the eighty-fifth year of his age. His body was buried in the Swedish church in Ratcliff Highway.

The following is a list of his theological works:—1, ‘Arcana Coelestia,’ 8 vols. 4to, London, 1749 to 1756; 2, ‘An Account of the Last Judgment and the Destruction of Babylon;’ 3, ‘On Heaven and Hell;’ 4, ‘On the White Horse mentioned in the Apocalypse;’ 5, ‘On the Earths in the Universe;’ 6, ‘On the New Jerusalem and its Heavenly Doctrine,’ 4to, London, 1758; 7, ‘The Four leading Doctrines of the New Church—on the Lord, on the Holy Scriptures, on Life, and on Faith;’ 8, ‘A continuation of the Account of the Last Judgment;’ 9, ‘On the Divine Love and Wisdom,’ 4to, Amsterdam, 1763; 10, ‘On the Divine Providence,’ 4to, Amsterdam, 1764; 11, ‘Apocalypse Revealed,’ 4to, Amsterdam, 1766; 12, ‘Delights of Wisdom concerning Conjugal Love, and Pleasures of Insanity concerning Scortatory Love,’ 4to, Amsterdam, 1768; 13, ‘On the Intercourse between the Soul and Body,’ 4to, London, 1769; 14, ‘A brief Exposition of the Doctrine of the New Church,’ 4to, Amsterdam, 1769; 15, ‘True Christian Religion,’ 4to, London, 1771. As a specimen of Swedenborg’s interpretation of the Holy Scripture, the reader may consult the ‘Apocalypse Revealed;’ for a concise view of his alleged experiences, the ‘Heaven and Hell’ may be resorted to; for a view of that part of his system which relates to the creation and government of the universe, we recommend the perusal of the ‘Divine Love’ and ‘Divine Providence;’ for his doctrine concerning the relation of the sexes, and its eternal origin and perpetuity, and for his code of spiritual legislation on marriage and divorce, see the ‘Conjugal Love,’ one of the most remarkable of these works: finally, the student will find a compendium of the whole of the theology of the New Church in the ‘True Christian Religion,’ the last and perhaps the finest of the writings of Swedenborg. The whole of these works, originally published in Latin, have been translated into English, and some of them have passed through several editions both in England and in America. The translations are contained in about thirty octavo volumes.

Swedenborg’s theological manuscripts, which are preserved in the Royal Academy at Stockholm, are very voluminous. The following have been published:—‘Coronis ad veram Christianam Religionem,’ 4to, Lond., 1780; ‘Apocalypsis Explicata,’ 4 tom. 4to, Lond., 1785-86-88-89; ‘Index Rerum in Apocalypsi Revelatarum,’ 1813; ‘Index Verborum, &c., in Arcanis Coelestibus,’ 1815; ‘Doctrina de Charitate,’ 8vo, Lond., 1840; ‘De Domino,’ 8vo, Lond., 1840; ‘Canones Novæ Ecclesiæ,’ 8vo, Lond., 1840; ‘Adversaria in Libros Veteris Testamenti,’ 7 vols.; and his ‘Diarium Spirituale,’ which is an unreserved record of his experiences, ranging over a period of sixteen years. Of this extensive work seven parts have been published in ten volumes, of which two volumes are a common index to the Memorabilia of both the ‘Diarium’ and ‘Adversaria;’ this is perhaps the most valuable of Swedenborg’s works, as going far to supply data for a theological biography of the author.

Swedenborg did not lay claim to inspiration, but to an opening of his spiritual sight, and a rational instruction in spiritual things, which was granted, as he said, “not for any merit of his,” but to enable him to convey to the world a real knowledge of the nature of heaven and hell, and thus of man’s future existence. According to Swedenborg, heaven and hell are not in space, but they are internal and spiritual states, so that intromission into the spiritual world is only the opening of an interior consciousness. The outward face of the spiritual world resembles that of the natural world in every particular, and man’s spiritual body appears precisely similar to his natural body; but the difference is that all the objects of the spiritual world represent and change with the spiritual states of its inhabitants; the magnificent

objects in the heavens being actually determined according to the good affections of the angels; and the terrible appearances in the hells being an outbirth of the evil and falsity of the infernals. Heaven and hell are from mankind, and all angels and devils have once been men, either on this or other planets; for all the planets are inhabited, since the human race, and the formation of heaven therefrom, is the final end of creation. The Satan and Devil of Holy Scripture is not a person, but a collective name of hell. The "last judgment mentioned in the Gospels" does not mean the destruction of the world, which, like every divine work, has respect to infinity and eternity, and will endure for ever, but "a judgment in the spiritual world, since all who die are gathered together there, and since it is man's spirit which is judged." This judgment commences for every individual immediately after death. Judgment is carried into effect on a church when its charity is extinct, and faith alone remains, and such judgment is attended by a plenary separation of the good from the evil, that is, by a formation of new heavens and new hells, and followed by the institution on earth of a new church. The judgment on the first Christian church took place in the year 1757 (so Swedenborg asserts), and was witnessed by him in the spiritual world, after which commenced the descent from the new heaven of the new church and its doctrine, signified by the Apocalyptic New Jerusalem. The particulars of the faith of this church on the part of man are—1. "That there is one God; that there is a Divine Trinity in Him, and that he is the Lord God and Saviour Jesus Christ. 2. That saving faith consists in believing on Him. 3. That evil actions ought not to be done, because they are of the devil, and from the devil. 4. That good actions ought to be done, because they are of God and from God. 5. And that they should be done by man, as of himself; nevertheless under the belief that they are from the Lord, operating in him and by him. The two first particulars have relation to faith; the two next, to charity; and the last, to the conjunction of charity and faith, and thereby of the Lord and man." Concerning the Word of God, Swedenborg taught that in its origin it is the divine truth itself, infinite in the Lord; that in proceeding through the three heavens it is accommodated to the reciprocity of the angels by successive veillings; that in the highest heaven it puts on an appearance accommodated to angelic affections, and is there read in its celestial sense; in the middle and lower heavens it is clothed by forms adequate to the intelligence and knowledge of the angels there, and is read in its spiritual sense; and in the Church it is presented in a natural and historical form, which is adapted to the understandings of men on earth. This last form thus contains and corresponds to a spiritual and celestial form or meaning, which Swedenborg declares he was taught by the Lord in the spiritual world, and which he unfolded at length in his great work, the 'Arcana Celestia.' "The Books of the Word," says Swedenborg, "are all those that have the internal sense; but those which have not the internal sense are not the Word. The Books of the Word in the Old Testament are the five Books of Moses, the Book of Joshua, the Book of Judges, the two Books of Samuel, the two Books of Kings, the Psalms, the Prophets Isaiah and Jeremiah, the Lamentations, the Prophets Ezekiel, Daniel, Hosea, Joel, Amos, Obadiah, Jonah, Micah, Nahum, Habakkuk, Zephaniah, Haggai, Zechariah, and Malachi. In the New Testament, Matthew, Mark, Luke, John, and the Apocalypse." Although the writings of Paul and the other apostles are not in this list, and are described by Swedenborg, in a letter to Dr. Beyer, to be "dogmatic (or doctrinal) writings merely, and not written in the style of the Word;" yet in the same letter he says, "Nevertheless, the writings of the Apostles are to be regarded as excellent books, and to be held in the highest esteem, for they insist on the two essential articles of charity and faith in the same manner as the Lord himself has done in the Gospels and in the Apocalypse."

Swedenborg was a methodical man, and laid down certain rules for the guidance of his life. These are found written in various parts of his manuscripts as follows:—"1. Often to read and meditate on the Word of God. 2. To submit everything to the will of Divine Providence. 3. To observe in everything a propriety of behaviour, and always to keep the conscience clear. 4. To discharge with fidelity the functions of his employment and the duties of his office, and to render himself in all things useful to society." On these precepts he formed his character. Count Hopken, prime minister of Sweden, says of him, "I have not only known Swedenborg these two-and-forty years, but some time since frequented his company daily: I do not recollect to have ever known any man of more uniformly virtuous character." Sandel says, "He was the sincere friend of mankind, and, in his examination of the character of others, he was particularly desirous to discover in them this virtue, which he regarded as an infallible proof of many more. As a public functionary he was upright and just: he discharged his duty with great exactness, and neglected nothing but his own advancement. He lived in the reigns of many princes, and enjoyed the particular favour and kindness of them all. He enjoyed most excellent health, having scarcely ever experienced the slightest indisposition. Content within himself, and with his situation, his life was in all respects one of the happiest that ever fell to the lot of man." Swedenborg was never married. He was about five feet nine inches high, rather thin, and of a brown complexion: his eyes were of a brownish-gray, nearly hazel, and somewhat small.

He was never seen to laugh, but always had a cheerful smile on his countenance. "Many would suppose," says Feresius, "that Assessor Swedenborg was a very eccentric person; but, on the contrary, he was very agreeable and easy in society, conversed on all the topics of the day, accommodated himself to his company, and never alluded to his principles unless he was questioned, in which case he answered freely, just as he wrote of them. But if he observed that any one put impertinent questions, or designed to trifle with him, he answered in such a manner that the querist was silenced without being satisfied."

(For further particulars the reader may consult Sandel's *Eulogium to the Memory of Swedenborg*, pronounced Oct. 7, 1772, translation, London, 1834; *Documents concerning the Life and Character of E. Swedenborg*, collected by Dr. I. F. I. Tafel, Tübingen, and edited in English by Rev. I. H. Smithson, London, 1841; Swedenborg, *Diarium Spirituale; Life of Swedenborg, with an Account of his Writings*, by Hobart, Boston, U.S., 1831; Tafel's *Swedenborg's Leben; The New Jerusalem Magazine*, 1790-91; F. Walden's *Assessor Swedenborg's Levnet, Adskillige Udtog af sammes skrifter nogle blandede Tanker, tilligemed Swedenborg's System i kort udfog*, Kiøbenhavn, 1806 and 1820; Lagerbring, *Sammandrag af Swea-Rikes Historia*, 8vo, Stockholm, 1778-80; *Introduction, &c. to Swedenborg's Writings*, by J. J. Garth Wilkinson.)

THE SWEDENBORGIANs, as the people are called who believe in the mission of Emanuel Swedenborg to promulgate the doctrines of the New Church, signified by the New Jerusalem in the Apocalypse, may in this country be divided into two portions:—one of which forms the denomination known as such to the world; while the other portion remains without visible separation from the communion of the Established Church. The first public association of the Swedenborgians took place in 1788, in Great Eastcheap, London; since that time, societies have been formed in nearly all our large towns, until they now amount to about fifty, of which the greater number are in Lancashire and Yorkshire. On the Census Sunday, March 30, 1851, there were fifty places of worship belonging to the New Church in England and Wales, containing accommodation for 11,865 persons, and actually attended by 4652 persons in the morning and 2978 in the evening; but, as noted in the Census Report, it is maintained by members of the Church "that the mere number of their chapels gives a very inadequate idea of the prevalence of their opinions; as many, they say, ostensibly connected with other churches, entertain the prominent doctrines of the New Church." The societies send delegates to an annual conference. In the United States of America the members of the New Jerusalem Church are numerous and well organised; they have three distinct annual conventions, of which that for the Eastern States meets at Boston; that for the Southern at Philadelphia; and that for the Western, at Cincinnati. In France the doctrines of Swedenborg have excited much attention, partly through the writings of his eloquent disciple Richer, of Nantes; and through the French translations of Swedenborg's works, which were executed by J. P. Moet, and published by John Augustus Tulk. In Germany, Swedenborg has long had isolated readers, like the learned librarian to the King of Würtemberg, Dr. I. F. I. Tafel, known through Germany for his editions of the original works of Swedenborg, for his translations of the same, and for the elaborate works he has published in their defence. In Sweden, bishops and doctors of the Lutheran Church have favoured the claims of Swedenborg. Swedenborgianism has also taken deep root in several of the British colonies. The non-separatist Swedenborgians comprise many members, and even clergymen, of the Church of England. The Rev. Thomas Hartley, rector of Winwick, in Northamptonshire, the Rev. John Clowes, rector of St. John's, Manchester, and the Rev. William Hill, were the first translators of the large works of Swedenborg. The Swedenborgians have several public institutions, the most flourishing of which is that entitled the 'Society for printing and publishing the Writings of Emanuel Swedenborg, instituted in London in 1810,' which annually prints and circulates a great number of his works. They have also a London Missionary and Tract Society, and Tract Societies at Bath, Birmingham, Glasgow, and Manchester. There are two Liturgies in general use among the Swedenborgians: 1, The 'Book of Worship,' Boston, United States, embodying a very simple form of worship, consisting chiefly of passages from the Scripture, and chants from the Psalms; 2, The 'Liturgy of the New Church, prepared by order of the General Conference,' London, which is used throughout this country, and contains a more formal service than that adopted in America. From the latter we may conveniently borrow the twelve 'Articles of Faith,' "condensed," as they are, "from the Writings of Swedenborg, adopted by the General Conference, and recognised as a standard of Doctrine by the whole body of Swedenborgians."

"The Articles of Faith of the New Church signified by the New Jerusalem in the Revelation are these:—

"1, That Jehovah God, the creator and preserver of heaven and earth, is love itself and wisdom itself, or good itself and truth itself: that he is one both in essence and in person, in whom, nevertheless, is the Divine Trinity of Father, Son, and Holy Spirit, which are the essential divinity, the divine humanity, and the divine proceeding, answering to the soul, the body, and the operative energy in man; and that the Lord and Saviour Jesus Christ is that God.

"2, That Jehovah God himself descended from heaven, as divine truth, which is the Word, and took upon him human nature, for the

purpose of removing from man the powers of hell, and restoring to order all things in the spiritual world, and all things in the church: that he removed from man the powers of hell, by combats against and victories over them; in which consisted the great work of redemption: that by the same acts, which were his temptations, the last of which was the passion of the cross, he united, in his humanity, divine truth to divine good, or divine wisdom to divine love, and so returned into his divinity in which he was from eternity, together with, and in, his glorified humanity; whence he for ever keeps the infernal powers in subjection to himself: and that all who believe in him, with the understanding, from the heart, and live accordingly, will be saved.

"3, That the Sacred Scripture, or Word of God, is divine truth itself, containing a spiritual sense heretofore unknown, whence it is divinely inspired and holy in every syllable; as well as a literal sense, which is the basis of its spiritual sense, and in which divine truth is in its fullness, its sanctity, and its power: thus that it is accommodated to the apprehension both of angels and men: that the spiritual and natural senses are united, by correspondences, like soul and body, every natural expression and image answering to, and including, a spiritual and divine idea; and thus that the Word is the medium of communication with heaven and of conjunction with the Lord.

"4, That the government of the Lord's divine love and wisdom is the divine providence; which is universal, exercised according to certain fixed laws of order, and extending to the minutest particulars of the life of all men, both of the good and of the evil: that in all its operations it has respect to what is infinite and eternal, and makes no account of things transitory but as they are subservient to eternal ends: thus, that it mainly consists, with man, in the connection of things temporal with things eternal; for that the continual aim of the Lord, by his divine providence, is to join man to himself and himself to man, that he may be able to give him the felicity of eternal life: and that the laws of permission are also laws of the divine providence; since evil cannot be prevented without destroying the nature of man as an accountable agent; and because, also, it cannot be removed unless it be known, and cannot be known unless it appear: thus, that no evil is permitted but to prevent a greater; and all is overruled, by the Lord's divine providence, for the greatest possible good.

"5, That man is not life, but is only a recipient of life from the Lord, who, as he is love itself and wisdom itself, is also life itself; which life is communicated by influx to all in the spiritual world, whether belonging to heaven or to hell, and to all in the natural world; but is received differently by every one, according to his quality and consequent state of reception.

"6, That man, during his abode in the world, is, as to his spirit, in the midst between heaven and hell, acted upon by influences from both, and thus is kept in a state of spiritual equilibrium between good and evil; in consequence of which he enjoys free will, or freedom of choice, in spiritual things as well as in natural, and possesses the capacity of either turning himself to the Lord and his kingdom, or turning himself away from the Lord and connecting himself with the kingdom of darkness: and that, unless man had such freedom of choice, the Word would be of no use; the church would be a mere name; man would possess nothing by virtue of which he could be conjoined to the Lord; and the cause of evil would be chargeable on God himself.

"7, That man at this day is born into evil of all kinds, or with tendencies towards it: that, therefore, in order to his entering the kingdom of heaven, he must be regenerated or created anew; which great work is effected in a progressive manner, by the Lord alone, by charity and faith as mediums, during man's co-operation; that as all men are redeemed, all are capable of being regenerated, and consequently saved, every one according to his state; and that the regenerate man is in communion with the angels of heaven, and the unregenerate with the spirits of hell: but that no one is condemned for hereditary evil, any further than as he makes it his own by actual life; whence all who die in infancy are saved, special means being provided by the Lord in the other life for that purpose.

"8, That repentance is the first beginning of the church in man; and that it consists in a man's examining himself, both in regard to his deeds and his intentions, in knowing and acknowledging his sins, confessing them before the Lord, supplicating him for aid, and beginning a new life: that, to this end, all evils, whether of affection, of thought, or of life, are to be abhorred and shunned as sins against God, and because they proceed from infernal spirits, who in the aggregate are called the Devil and Satan; and that good affections, good thoughts, and good actions are to be cherished and performed, because they are of God and from God: that these things are to be done by man as of himself; nevertheless, under the acknowledgement and belief that it is from the Lord, operating in him and by him: that so far as man shuns evils as sins, so far they are removed, remitted, or forgiven: so far also he does good, not from himself, but from the Lord; and in the same degree he loves truth, has faith, and is a spiritual man: and that the Decalogue teaches what evils are sins.

"9, That charity, faith, and good works are unitedly necessary to man's salvation, since charity, without faith, is not spiritual, but natural; and faith, without charity, is not living, but dead; and both charity and faith, without good works, are merely mental and perish-

able things, because without use or fixedness: and that nothing of faith, of charity, or of good works is of man, but that all is of the Lord, and all the merit is his alone.

"10, That Baptism and the Holy Supper are sacraments of divine institution, and are to be permanently observed: baptism being an external medium of introduction into the church, and a sign representative of man's purification and regeneration; and the Holy Supper being an external medium, to those who receive it worthily, of introduction, as to spirit, into heaven, and of conjunction with the Lord; of which also it is a sign and seal.

"11, That immediately after death, which is only a putting off of the material body, never to be resumed, man rises again in a spiritual or substantial body, in which he continues to live to eternity: in heaven, if his ruling affections, and thence his life, have been good; and in hell, if his ruling affections, and thence his life, have been evil.

"12, That now is the time of the second advent of the Lord, which is a coming, not in person, but in the power and glory of his Holy Word: that it is attended, like his first coming, with the restoration to order of all things in the spiritual world, where the wonderful divine operation, commonly expected under the name of the Last Judgment, has in consequence been performed; and with the preparing of the way for a New Church on the earth,—the first Christian Church having spiritually come to its end or consummation, through evils of life and errors of doctrine, as foretold by the Lord in the Gospels: and that this New or Second Christian Church, which will be the Crown of all Churches, and will stand for ever, is what was representatively seen by John, when he beheld the holy city, New Jerusalem, descending from God out of heaven, prepared as a bride adorned for her husband."

(For further particulars see *Reports of the Society for Printing and Publishing the Writings of the Hon. E. Swedenborg*, London; *Reports of the London Missionary and Tract Society of the New Jerusalem Church*; *Minutes of the General Conference of the New Church, signified by the New Jerusalem in the Revelation*; also *Tafel, Magazin für die wahre Christliche Religion*, pp. 1 to 70, Tübingen, 1841, which contains an elaborate account of all the Swedenborgian periodicals.)

SWIETEN, GERARD VAN, was born at Leyden in 1700. He received his general education there and at Louvain, and studied medicine at Leyden under Boerhaave, of whom he soon became the favourite pupil, and by whose influence he was appointed to a professorship of medicine very soon after taking his diploma of doctor in 1725. His lectures were well attended, but objections were made against him on the ground of his being a Roman Catholic, and he was obliged to resign his chair. In 1745 Maria Theresa of Austria appointed him her first physician, and in this capacity he used his influence to establish a system of clinical instruction at Vienna, to rebuild the university, and accomplish many other important measures for the advancement of science. During eight years also he lectured on the 'Institutes' of Boerhaave. He died in 1772, and Maria Theresa, who, besides many other honours, had made him a baron of the empire, had a statue to his memory placed in the hall of the university.

Van Swieten was one of the few great physicians of his day, who, though he founded a school (and that one of the most important of the time), did not attempt to establish himself as the head of a sect. He was content to adopt the system of Boerhaave; in his commentaries on whose aphorisms he has embodied the results of a most extensive experience in clinical medicine, and has shown himself to have been a physician of great erudition and of some practical merit. The work is entitled 'Commentaria in Hermannii Boerhaavi Aphorismos de cognoscendis et curandis morbis'; it was first published at Leyden in 5 volumes, 4to, between 1741 and 1772; and has since been repeatedly edited in Latin, English, French, and German. It consists of long commentaries, not only on each aphorism, but on every portion of each of them. To confirm their truth he introduces passages from the writers of all preceding times and countries, and relates numerous cases from his own and their practice. Van Swieten wrote treatises also on the diseases of armies, on epidemics, and on the structure and offices of arteries; but they are of little importance in comparison with his commentaries, and are now seldom referred to. He maintained also a long opposition against the practice of inoculating small-pox.

SWIFT, JONATHAN, D.D., Dean of St. Patrick's Cathedral, Dublin, was descended from an ancient family which was originally settled in Yorkshire. His grandfather, the Rev. Thomas Swift, was vicar of Goodrich, in Herefordshire; and had ten sons, Godwin, Thomas, William, Dryden, Willoughby, Jonathan, Adam, and three others, of whom Godwin, William, Jonathan, and Adam settled in Ireland; he had also four daughters. Dryden was named after his mother, who was a near relation of Dryden the poet. Jonathan was the father of the dean of St. Patrick's: he married Abigail Erick, of an ancient family in Leicestershire, but poor. He was bred to the law, and in 1665 was appointed steward of the King's Inns, Dublin. He died in 1667, leaving his widow in great poverty, with an infant daughter, and pregnant with the future dean of St. Patrick's.

Jonathan Swift was born in Dublin, November 30, 1667. When about a year old he was carried to Whitehaven, in Cumberland, by his

nurse, who went there to receive a legacy; he remained with her in that town nearly three years, and she had taught him to spell before he was taken back to his mother in Dublin. Mrs. Swift's means of support for herself and her two children were derived chiefly from her brother-in-law Godwin, who was a lawyer, and was supposed to be rich. Jonathan, when six years old, was sent to the school of Kilkenny, whence he was removed to Trinity College, Dublin, where he was received as a pensioner, April 24, 1682. The cost of his education and maintenance was defrayed by his uncle Godwin, who however supplied him with the means of subsistence in so niggardly and ungracious a manner, that Swift ever afterwards spoke of him with great asperity. Before Swift's education was completed, Godwin died, and it was then discovered that he had for some time been in embarrassed circumstances, the result of unsuccessful speculations. The charge of Swift's education now devolved chiefly upon his uncle William, of whom he always spoke with affectionate gratitude as "the best of his relations;" not that he was much more liberally supplied with money than he had been by Godwin, for William also was in difficulties, but for the kindness with which it was bestowed. The degree of B.A. was conferred on Swift, February 15, 1685: this was done, as he himself says, *speciali gratia*, which, he informs us, was, in Trinity College, a discreditable intimation of scholastic insufficiency. Indeed there is abundant evidence that he had not only neglected the study of the school logic which was then required in order to qualify him for taking a degree, but that, after he had taken his degree, as well as before, his conduct generally was careless, irregular, and reckless, and that he had incurred frequent penalties and censures. It is probable however that he had a scholarship in Trinity College, for he remained there till 1688, when, on the breaking out of the war in Ireland, he passed over into England, and travelled on foot to Leicester, where his mother had been residing for some years in a state of precarious dependence on her relations, one of whom was the wife of Sir William Temple, whose seat was Moor Park, near Farnham, in Surrey.

Swift, after residing some months with his mother, waited upon Sir William Temple, by whom he was received with kindness, and was admitted into his family. From this time Swift's careless and idle habits were entirely abandoned; he studied eight hours a day, and became useful to his patron as his private secretary. A surfeit of stone-fruit, to which Swift always ascribed the giddiness with which he was afterwards so severely afflicted, brought on an ill-state of health, for the removal of which, after he had been about two years with Sir William, he went to Ireland, but soon returned. He was now treated with greater kindness than before: he occasionally attended King William, who was a frequent guest at Moor Park, in his walks in the garden, while Temple was laid up with the gout, and won so much on his majesty's favour, that he not only taught him how to cut asparagus in the Dutch manner, but offered to make him captain of a troop of horse, which however Swift declined. Sir William employed him to endeavour to persuade the king to consent to the bill for triennial parliaments, and Swift's vanity was much hurt when he found that his reasoning was not sufficiently strong to overcome the king's obstinacy.

Swift went to Oxford in 1692, and entered himself of Hart Hall, for the purpose of taking his degree of M.A., to which he was admitted on the 4th of July in that year, together with Thomas Swift (the son of his uncle Thomas), who had studied with Jonathan at Trinity College, Dublin, and was afterwards rector of Puttenham in Surrey. Some time after his return to Moor Park, finding that no provision was made for him beyond subsistence in Sir William's family, Swift became tired of his state of dependence, and in some degree dissatisfied with his patron. He made his complaint to Sir William, who then offered him a situation worth 100*l.* a year in the Rolls in Ireland, of which Sir William was Master. Swift declined the offer, and said he preferred going to Ireland and endeavouring to obtain preferment in the church. They were both displeased, and so parted. Swift went to Ireland, but was deeply mortified when he found that he could not obtain orders without a certificate from Sir William, which he was therefore compelled to solicit from his offended patron. The certificate was given; Swift was admitted to deacon's orders, October 18, 1694, and to priest's orders, January 13, 1695. Soon afterwards Lord Capel, then Lord-Deputy of Ireland, bestowed upon him the prebend of Kilroot, in the diocese of Connor, worth about 100*l.* a year, whither he immediately went to perform the duties of a country clergyman.

Sir William Temple appears to have soon felt the want of Swift's services, and it was not long before he sent him a kind letter, with an invitation to return to Moor Park. Swift, on the other hand, however fond of independence, must have felt strongly the contrast between the dull life of a clergyman in a remote town in Ireland and the refined society of Moor Park. He did not hesitate long to accept Sir William's invitation; and having become acquainted with a learned and worthy curate in his neighbourhood, who had a family of eight children, and only 40*l.* a year, he rode to Dublin, resigned his prebend, and obtained a grant of it for his poor friend.

Swift, on his return to Moor Park in 1695, was treated by Sir William Temple rather as a friend than as a mere secretary, and they continued to live together till Sir William's death, January 27, 1698. Some time before his death, Temple had obtained from King William

a promise that Swift should have a prebend of Canterbury or Westminster: Sir William also left him a legacy, with the task of editing his posthumous works, and any benefit which might arise from the publication of them.

During the the early part of his residence at Moor Park, Swift wrote some Pindaric Odes, which he is said to have shown to Dryden, who, after having read them, said, "Cousin Swift, you will never be a poet;" a remark which is supposed to have occasioned that feeling of dislike which Swift always manifested towards Dryden. These Odes are written in the style of the Pindaric Odes of Cowley, and are indeed bad imitations of a bad model. Swift also wrote, as he himself has stated, a great number of other things, nearly all of which he destroyed. During the latter part of his residence at Moor Park he wrote the 'Battle of the Books in St. James's Library,' in support of Sir William Temple, and in opposition to Dr. William Wotton and Dr. Bentley. A dispute had arisen in France as to the superiority of ancient or of modern writers: the dispute passed over to England, and the cause of the moderns was supported by Wotton, in his 'Reflections on Antient and Modern Learning.' Temple took the part of the ancients, but unfortunately praised the 'Epistles of Phalaris,' which Bentley, in an Appendix to the second edition of Wotton's 'Reflections,' proved to be spurious. Swift's work is a well-constructed allegory, abounding in wit and humour. It was not published however till after Sir William's death. Swift is supposed to have likewise finished about this time his 'Tale of a Tub,' a satirical allegory, in ridicule of the corruptions of the Church of Rome and the errors of the Dissenters, and in favour of the Church of England, though not without an occasional touch at her faults also. This is one of his most laboured and most perfect works. Though he completed it at Moor Park, there is evidence that he had sketched it out roughly at Trinity College.

It was during Swift's second residence at Moor Park that the acquaintance commenced between him and Miss Esther Johnson, more generally known by the poetical name which he gave to her of *Stella* (the Star). Her father was a London merchant, according to Scott, or steward to Sir William Temple, according to Sheridan. Swift himself however says that she was born at Richmond in 1681, "her father being the younger brother of a good family in Nottinghamshire, her mother of a lower degree," and hence it has been suggested that she was an illegitimate daughter of Sir William Temple, and a sort of half-sister to Swift. But that Swift was so closely related to Temple has been satisfactorily disproved, and there seems to be no real ground for the other part of the scandal. Her mother lived with Lady Gifford, Sir William Temple's sister, who, with Mrs. Johnson and her daughter, resided at this time at Moor Park. Swift assisted in her education, which appears to have been little attended to previously, and she seems to have acquired a fondness for her tutor.

Swift however, previously to his acquaintance with Miss Johnson, had professed an attachment to Miss Jane Waryng, on whom he bestowed the title of *Varina*; she was sister of a fellow-student at Trinity College, and Swift offered to marry her; but she was coy and cold, and gave a temporary refusal on the plea of ill-health. By degrees, as Swift's passion abated, hers grew warmer, and she wrote to express her willingness to accept his former offer. Swift did not refuse to fulfil his promise, but in his reply laid down such conditions as to the duties of her who should become his wife, that no further correspondence took place between them.

After Sir William Temple's death Swift repaired to London to superintend the publication of his patron's posthumous works, a task which he performed carefully, and prefixed a Life of Sir William and a dedication to the king; but finding that the king took no notice of the works, the dedication, or himself, he accepted an offer made to him by Lord Berkeley in 1699, who had just been appointed one of the lords justices of Ireland, to attend him there as his chaplain and private secretary. He acted as secretary till they arrived in Dublin, when a person of the name of Bush obtained the office for himself by representing to Lord Berkeley the unsuitableness of such an office to the character and duties of a clergyman. Lord Berkeley however, to compensate Swift for the loss of his office, promised that he should have the first good preferment in his gift that became vacant. To this arrangement Swift assented. The rich deanery of Derry was soon afterwards at Lord Berkeley's disposal, and Swift intimated to him that he expected him to keep his word. Lord Berkeley told him that Bush had obtained the promise of it for another, but, observing Swift's indignation, advised him to apply to Bush to see if the matter could not be arranged: he did so, when the secretary frankly told him that 1000*l.* had been offered for it, but that if he would put down the same sum he should have the preference. Swift, in a rage, exclaimed, "God confound you both for a couple of scoundrels," and immediately left the castle, intending to return no more. Lord Berkeley however was unwilling, if it could be avoided, to risk exposure; he therefore offered to him the rectory of Agher and the vicarages of Laracor and Rathbeggan, then vacant, in the diocese of Meath. Though not worth a third of the deanery, as they only amounted together to 230*l.* a year, Swift deemed it prudent to accept the livings: he still retained his office of chaplain, and continued to reside with the family till Lord Berkeley retired from the government of Ireland. The prebend of

Dunlavin was bestowed upon him in 1700, which increased his income to between 350*l.* and 400*l.* a year. While he resided in Lord Berkeley's family he produced some of the first specimens of that original vein of humour on which, more perhaps than on any other of his rare talents, his reputation is founded: among these are 'The Humble Petition of Frances Harris,' and the 'Meditation on a Broomstick.'

About this time Swift's sister married a person of the name of Fenton. Swift had expressed himself strongly against this marriage, and when it took place he was highly offended. Scott, on the authority of Theophilus Swift, says that Fenton was a worthless character, on the point of bankruptcy at the time, and that Swift afforded his sister the means of decent support in the destitution which her imprudence brought upon her.

In the year 1700, on the return of Lord Berkeley to England, Swift took possession of his living at Laracor. He performed his duties as a country clergyman with exemplary diligence, and expended a considerable sum in repairing the church. Some years afterwards he purchased for 250*l.* the tithes of the parish of Effernock near Trim, which he left by his will to the vicars of Laracor for the time being, as long as the present episcopal religion continues to be the established faith in Ireland; but if any other form of Christian religion becomes the established faith, he then directs that the profits as they come in shall be paid to the poor of the parish of Laracor.

Swift had not been long at Laracor when it was arranged between Miss Johnson and himself that she should come to reside in his neighbourhood. She had a small independence, about 1500*l.*, of which 1000*l.* had been left to her as a legacy by Sir William Temple, since whose death she had resided with Mrs. Dingley, a relation of the Temple family, a widow of middle age, whose income was only about 25*l.* a year. Mrs. Johnson continued to reside with Lady Gifford. When Miss Johnson removed to Ireland she was accompanied by Mrs. Dingley; and the ostensible ground for leaving England on the part of both was that the rate of interest was much higher in Ireland: it was then 10 per cent. They took lodgings in the town of Trim, where they generally resided, except in Swift's absence, when they occupied the vicarage-house. Miss Johnson was then about eighteen years of age; her features were beautiful, her eyes and hair black, and her form symmetrical, though a little inclined to fullness. She was a woman of strong sense, though not highly educated, of agreeable conversation, and elegant manners.

Swift appears to have passed over to England at least once a year, and remained two or three months, chiefly in London, where he officiated as chaplain in Lord Berkeley's family, but generally paid a visit to his mother at Leicester. In 1701, during the first of these annual residences in England, he published his first political tract, 'A Discourse on the Contests and Dissentions between the Nobles and Commons at Athens and Rome.' It was intended to check the popular violence which had occasioned the impeachment of Lords Somers, Halifax, Oxford, and Portland for their share in the Partition Treaty. It was published anonymously, but attracted much attention. On his second visit to England, in 1702, he avowed himself to be the author of this tract, and was immediately admitted into the society of the leading Whigs, Somers, Halifax, and Sunderland, and also into that of the leading wits, Addison, Steele, Arbuthnot, and others, who used then to assemble at Button's coffee-house.

In 1704 Swift published anonymously the 'Tale of a Tub,' together with 'The Battle of the Books.' The 'Tale of a Tub' was at the time generally supposed to be Swift's, and its wit was much admired, but it made him some powerful enemies by its imputed irreligious tendency.

In 1708 Swift was employed by the Irish prelates to solicit a remission of the first fruits for Ireland, which had already been granted in England. His application was made to Lord Godolphin, but was unsuccessful. About this time there were two or three plans for Swift's preferment, but all of them were failures. He was to have accompanied Lord Berkeley as secretary of embassy to Vienna, but Lord Berkeley found himself too infirm to venture upon the employment: he was to have gone out to Virginia as a sort of metropolitan over the colonial clergy in America, but neither did this appointment take place; and he was promised Dr. South's prebend of Westminster, but South, though very old, continued to live for several years longer.

During the years 1708 and 1709 Swift published several tracts. 'An Argument against abolishing Christianity,' is a piece of grave irony; 'A Project for the Advancement of Religion,' was dedicated to Lady Berkeley, who was a woman of strict piety, highly respected by Swift: it is the only work to which he ever put his name: it made a strong impression on the religious classes, and was very favourably received by the public. In his 'Letter on the Sacramental Test' he opposed any relaxation of the restrictive laws against the Dissenters. In this opinion he differed strongly from the Whigs, and this difference seems to have been a principal cause of his soon afterwards joining the Tories. About this time he also published the 'Sentiments of a Church-of-England Man,' as well as some of his lighter pieces, especially the humorous attacks on Partridge the almanac-maker, which came out under the name of Isaac Bickerstaff. In 1710 Swift's mother died. "If the way to heaven," said he, "be through piety, truth, justice, and charity, she is there."

On the change of ministry in 1710 the hopes of the Irish prelates

were again revived for a remission of the first-fruits; and Swift was again deputed, in conjunction with the bishops of Ossory and Killaloe, to solicit the boon. On the 1st of September 1710, he left Ireland on this mission, but found, on his arrival in London, that the bishops, who had gone to England before him, had left that country without having done anything.

Swift now found himself courted by the leaders of both parties, with the exception of Godolphin, who treated him with such marked coldness that he vowed revenge, a vow which he performed on the 1st of October, by the publication of 'Sid Hamet's Rod.' Swift soon made up his mind to join the Tories, and on the 4th of October was introduced to Harley, then chancellor of the exchequer, by whom he was received with the most flattering kindness, and was introduced by him to St. John, who was then one of the secretaries of state. In a few days he received a promise that the first-fruits should be remitted, and immediately began to put his literary battery in action in the defence of his new friends. During the time that Swift remained in London on this occasion he wrote a Journal, or diary, which was addressed in a series of letters to Miss Johnson and Mrs. Dingley, but obviously intended for the former. This Journal, written as it was chiefly in the morning and evening of each successive day of the most busy part of Swift's life, affords a picture as minute as it is evidently trustworthy of the events in which he was concerned and the thoughts which arose out of them.

'The Examiner,' a weekly periodical, had been begun by St. John, Prior, and others, in support of the new ministry. Thirteen numbers had been published with little effect, when it was taken up by Swift, November 10, 1710, and was continued by him till June 14, 1711, a period of seven months, when he resigned it into other hands. Every one of these papers was written by himself, besides several satirical pamphlets. He assailed his opponents not only as a body, but individually: the shafts of his satire were particularly directed against Wharton, Godolphin, Walpole, Sunderland, Cowper, and Marlborough. With surprising readiness and versatility, he assumed every shape suitable for the annoyance of his enemies or the support of his friends. Harley, who, though he maintained the most friendly and confidential intercourse with Swift, seems not at that time to have properly appreciated his character or understood his views, sent him a note for 50*l.*, which Swift indignantly returned, and obstinately refused his invitation till he had made an apology. After the attempt upon the life of Harley by the Marquis de Guiscard, he was created lord treasurer and Earl of Oxford, in May 1711, and offered to make Swift his chaplain, who refused this offer also. "I will be no man's chaplain alive," says he in his Journal. He evidently thought that his services and his merits deserved no worse a place than a bishopric. He continued, as long as he remained in England, to be treated, both in private and public, with the most flattering civility, especially by Lord Oxford, and also by St. John, who in July 1712, was created Lord Bolingbroke. He formed the society of Brothers, which consisted of sixteen persons of the highest rank and most distinguished talents among the Tories, of which society indeed he was the most active member.

It having become obvious that the existence of the Tory government depended upon making peace with France, Prior was sent to Paris to enter into a negotiation for that purpose, and Swift, in furtherance of the same object, wrote 'The Conduct of the Allies,' which was published anonymously, November 27, 1711, while the question of peace or war was under discussion in parliament. The sale of this tract was unprecedented at that time, four large editions having been exhausted in a week. It furnished the Tory members in the House of Commons with facts and arguments, while the Whigs in the Lords threatened to bring the author to the bar of the house. The effect upon the public mind was such as to produce a determined spirit of opposition to the war, proving, as it did, that the allies, the late Whig ministry, and especially the Duke of Marlborough, were the only parties who had derived advantage from the expenditure of so much English blood and treasure.

The Peace of Utrecht was concluded May 5, 1713, and Swift undertook to write the history of it, but the progress and publication of the work were hindered by the growing dissension between Oxford and Bolingbroke. This work he afterwards expanded into the 'History of the Four last Years of Queen Anne's Reign,' but it was not published till 1758, some years after his death. The only work unconnected with politics which Swift produced during this busy period of his life, was his letter to the Earl of Oxford, containing 'A Proposal for correcting, improving, and ascertaining the English Tongue,' an object which was to be accomplished by a society similar to that of the French Academy. Swift was very anxious to have this scheme carried into effect, but Oxford was too busy at that time to second his views, which indeed met with little favour from the public.

While Swift was thus assisting his friends, he obtained nothing for himself but empty honour, a species of reward which hardly any man ever valued less. He was too proud to make any direct solicitation; he was aware that Lord Oxford well knew what he expected, but he was not aware that he had a private and obstinate enemy in Queen Anne, who had been taught by Archbishop Sharp that the supposed author of the 'Tale of a Tub' was little, if at all, better than an infidel. He now felt that his situation was uncomfortably

awkward, and began to anticipate that he might be allowed to return to Ireland neither higher in the church nor richer than he left it. He became impatient and restive. The bishopric of Hereford became vacant, and Oxford and Lady Masham, the queen's favourite, exerted themselves to obtain her consent to bestow it upon him, but the opposition of the Duchess of Somerset, the queen's other favourite, whom Swift had labelled in his 'Windsor Prophecy,' frustrated their efforts. As soon as Swift knew that the bishopric had been given to another, he sent notice to Lord Oxford of his determination to retire. The ministry now saw, that unless something were done for him, they would lose his powerful aid, which had kept their enemies at bay, and had helped so effectively to keep themselves in possession of the government. Thus pressed, Oxford, with the concurrence of the Duke of Ormond, proposed that Dr. Sterne should be removed to the bishopric of Dromore, in order to make room for Swift in the deanery of St. Patrick's. This they accomplished; and, with the view of retaining him in England, an effort was made by Oxford and Lady Masham to exchange the deanery for a Windsor prebend; but the queen's determination against this arrangement was not to be shaken. The warrant for the deanery of St. Patrick's was signed February 23, 1713, and early in June the same year Swift set out for Ireland to take possession.

In the early part of his Journal Swift expresses a continual desire to return to Laracor and the society of his beloved Stella, but this feeling evidently becomes gradually weaker. The splendid society in which he moved, and the sort of homage with which he was treated, such as perhaps no other person of his rank ever received, had long before his return to Ireland taken strong possession of his heart; so that when he entered into the possession of his deanery, it was with feelings in the highest degree dissatisfied and desponding.

Swift was scarcely settled in his deanery when he received the most pressing invitations from the friends of the Tory administration to return to England, for the purpose of reconciling, if possible, Oxford and Bolingbroke, whose dissension endangered the very existence of the Tory government. He came over to England without delay, and soon afterwards published 'The Public Spirit of the Whigs,' a bitter attack on Steele as well as the party to which he belonged. In this pamphlet the Scotch were spoken of as "a poor fierce northern people," with several other offensive remarks, directed especially against the Duke of Argyle. A prosecution was instituted against Barber the printer, which the ministers managed to set aside; but the Scotch peers went up in a body to complain to the queen of the indignity with which they had been treated.

Finding that Oxford and Bolingbroke could not be reconciled, Swift retired to the house of the Rev. Mr. Geary, Upper Letcombe, Berkshire, at the beginning of June 1714. Here he wrote his 'Free Thoughts on the State of Public Affairs.' Bolingbroke was now about to supplant Oxford, and left no means untried to conciliate Swift. The queen, at Bolingbroke's earnest request, signed an order on the treasury for 1000*l.*, which Swift had in vain endeavoured to obtain through Oxford, to relieve him from the debts—amounting to at least that sum—which he was obliged to incur on entering his deanery. This sum however he never received, the death of the queen having occurred before the order was presented for payment. At the same time Lady Masham wrote to him, conjuring him not to desert the queen, and Barber was commissioned by Bolingbroke to say that he would reconcile him to the Duchess of Somerset. Almost the next post brought a letter from Lord Oxford, now dismissed and going alone to his seat in Herefordshire, requesting Swift to accompany him. His gratitude and his affection for Lord Oxford did not allow him to hesitate a moment in accepting the invitation of the disgraced minister, and he wrote immediately to Ireland to get an extension of his leave of absence, which was now nearly expired, to enable him to do so. Within three days the death of Queen Anne and the accession of George I. put an end to the power of the Tories. Lord Oxford was arrested and imprisoned, and Swift wrote to him with a touching earnestness to request that he might be permitted to attend him in his confinement. Lord Oxford however refused to accede to his request. Bolingbroke and Ormond fled to France, and Swift returned to Ireland.

Not long after Swift came to London, to solicit the remission of the first fruits; he was introduced to the acquaintance of Mrs. Vanhomrigh, the widow of Bartholomew Vanhomrigh, a Dutch merchant, who at his death had left to his widow a life interest in 16,000*l.*, which sum was afterwards to be divided equally among his children, two sons and two daughters. When Swift became intimate in this family, Miss Esther Vanhomrigh, the eldest daughter, was under twenty years of age, not remarkable for beauty, but well educated, lively, graceful, spirited, and, unfortunately for Swift, with a taste for reading. He became the director of her studies, and their friendly intercourse was continued till Miss Vanhomrigh made a declaration of affection for him, and proposed marriage. How that declaration was received is related in Swift's poem of 'Cadenus and Vanessa.' Cadenus is decanus (dean) by transposal of letters, and Vanessa is the poetical name which he gave to Miss Vanhomrigh. The proposal was declined; but Swift, from vanity or fondness, or both, had not firmness enough to relinquish their affectionate intercourse.

After his return to Ireland, Swift, conscious of his imprudence,

endeavoured to limit as much as possible the correspondence between himself and Vanessa, probably expecting that her attachment would be diminished by absence; but hers was a deep and uncontrollable passion. She wrote to him frequently, and complained bitterly of his not replying to her letters. At length Mrs. Vanhomrigh died; her two sons died soon afterwards; and the circumstances of the two sisters being somewhat embarrassed by imprudent expenses, they resolved to retire to Ireland, where their father had left a small property near Celbridge. Swift, in his diary, though he mentions occasionally his calling at Mrs. Vanhomrigh's, makes no allusion to her daughter. Notwithstanding this caution, obscure murmurs of the intercourse between Swift and Vanessa had reached Stella soon after its commencement. In 1714 Vanessa arrived in Dublin, to the annoyance of Swift and dread of Stella. Swift saw her very seldom: he introduced Dean Winter to her, a gentleman of fortune, as a suitor for her hand; and proposals of marriage were made to her by Dr. Price, afterwards bishop of Cashel; but both offers were rejected. Stella's jealousy at length became so restless that Swift is said to have consented to their marriage, and the ceremony was performed in 1716, in the garden of the deanery, by the Bishop of Clogher; and though Swift never acknowledged the marriage, and no change took place in their intercourse, the evidence, though imperfect, has been usually considered to leave little doubt of the fact. But on the other hand, in her will made during her last illness (December 1727), and drawn up, as Mr. Wilde—who first printed it (in his 'Closing Years of Dean Swift's Life,' 1849)—thinks, after a careful comparison of it with Swift's own will, by Swift himself, she describes herself as "Esther Johnson, of the city of Dublin, spinster." At length, in 1717, Vanessa and her sister retired to Marley Abbey, near Celbridge, where Swift does not appear to have visited them till 1720, when Vanessa's sister became dangerously ill: during that illness his visits were frequent, and were continued occasionally to Vanessa after her sister's death. Vanessa by degrees became more impatient, and at length wrote to Stella to inquire into the nature of her connection with Swift. Stella, highly indignant, sent the letter to Swift, and immediately retired to the house of Mr. Ford, near Dublin. Swift, in a paroxysm of rage, rode instantly to Marley Abbey. Vanessa, on his entering the room, was struck dumb by that awful sternness which his countenance assumed when he was in anger, and to which she more than once alludes in her letters to him. He flung the letter on the table without saying a word, instantly left the house, and rode back to Dublin. Poor Vanessa sank under the blow. In a few weeks afterwards she died, in 1723, leaving her property to Dr. Berkeley, afterwards bishop of Cloyne, and to Mr. Marshall, one of the judges of the Irish court of Common Pleas. The poem of 'Cadenus and Vanessa' was published soon after Miss Vanhomrigh's death; but Berkeley is said to have destroyed the original correspondence: a full copy however remained in the possession of Mr. Marshall, and it was published for the first time (with the exception of one or two letters) in Scott's edition of Swift's Works.

Swift, in an agony of shame and remorse, retreated to some place in the south of Ireland, where he remained two months, without the place of his abode being known. On his return to Dublin, Stella was easily persuaded to forgive him. After their reconciliation, Stella continued to be the friend of Swift, the companion of his social hours, his comforter and patient attendant in sickness; and she presided at his table on public days: but they were never alone together; their union as husband and wife was merely nominal.

In 1720 Swift published 'A Proposal for the Universal Use of Irish Manufactures.' This honestly-meant tract was represented as a seditious libel: the printer was brought to trial: the verdict of the jury was 'Not Guilty;' but Judge Whithed kept them eleven hours, and sent them back nine times, till they reluctantly left the matter in his hands by a special verdict. The public indignation however was roused, and the government by a 'nolle prosequi,' were obliged to relinquish the contest.

In 1723, there being a scarcity of copper coin in Ireland, George I. granted to William Wood a patent right to coin farthings and half-pence to the amount of 108,000*l.* The grant was made without consulting the lord-lieutenant or privy council of Ireland: it had been obtained by the influence of the Duchess of Kendall, the king's mistress, who was to have a share of the profits. The Irish parliament expressed their dislike to it by a remonstrance, of which no notice was taken, when a voice was heard which apparently arose from one of the trading classes: a letter was published signed 'M. B., drapier (draper), Dublin,' and was followed by five or six more. The effect of these letters is known. All Ireland was roused. No one would touch the contaminated coin. A reward of 300*l.* was offered for the discovery of the author of the Drapier's fourth letter. A bill against the printer was about to be presented to the grand jury, when the Dean addressed to them "Some seasonable Advice;" and the memorable quotation from Scripture was circulated, "And the people said unto Saul, shall Jonathan die, who hath wrought this great salvation in Israel? God forbid: as the Lord liveth, there shall not one hair of his head fall to the ground; for he hath wrought with God this day. So the people rescued Jonathan that he died not." The grand jury wrote 'ignoramus' on the bill, and Judge Whithed could only vent his rage by dismissing them. Ultimately the patent was withdrawn, and Wood was compensated by a grant of 3000*l.* yearly for twelve years.

Swift's popularity was now unbounded. The Drapier's head was painted on signs, engraved on copper-plates, struck on medals, woven on pocket-handkerchiefs. As if to shelter himself from this storm of public applause, he retired with Stella and Mrs. Dingley to Quilca, a country-house belonging to Dr. Sheridan, in a retired situation about seven miles from Kells, where he remained several months. He had the company of Dr. Sheridan and other friends, and produced several light pieces of humour, in which he was emulated by Sheridan, who followed him at no great distance. He also occupied himself in revising and completing the 'Travels into several remote Nations of the World, by Lemuel Gulliver.'

In 1726 Swift visited England again, for the first time since Queen Anne's death. Bolingbroke was now returned from exile. The Dean resided at Twickenham with Pope, but made frequent visits to Dawley, the residence of Bolingbroke. His other associates were chiefly Arbuthnot, Gay, and Lord Bathurst.

At this time the Prince of Wales, afterwards George II., and the Princess of Wales, afterwards Queen Caroline, kept a sort of court at Leicester House. The favourite of the princess was Mrs. Howard, afterwards Countess of Suffolk. Pope, Gay, and Arbuthnot were frequent attendants at this court. Swift was introduced to the princess by Arbuthnot, at her own particular request. His visits afterwards were frequent, especially when she resided at Richmond, but always by special invitation from the princess.

In July 1726 the Dean received letters informing him that Stella was in a state of dangerous illness. He hastened to Ireland, and was gratified, on his arrival in Dublin, to find that her health was better. He now made the world acquainted with the 'Travels of Gulliver.' The work was published in London, anonymously as usual, through the agency of his friend Charles Ford. Such was the interest and admiration which it excited, that the price of the first edition was raised before the second could be printed.

Stella being now in a tolerably good state of health, Swift, in March 1727, paid his last visit to London. His reception by his friends and at Leicester House was as cordial as ever. After spending the summer with Pope at Twickenham, he contemplated a voyage to France for the benefit of his health, when the death of George I. seemed to open a new prospect to the friends of the Princess of Wales. It was expected that Walpole's dismissal would have taken place forthwith; and the Dean, at the earnest request of his friends, especially of Mrs. Howard, who said that his going abroad at that time would look like disaffection, remained in England.

Swift was suffering under a severe attack of deafness, which seems generally to have been more or less combined with his other and worse complaint, vertigo, when he received information that Stella was again in danger. He left England suddenly, almost capriciously as it appeared to his friends, who had but an indistinct notion of his connection with Stella, and in October 1727, landed in Dublin to find his companion on the brink of the grave. She died January 28, 1728. When Swift had somewhat recovered from this last and severest shock, he found Walpole still in power, and high in favour with the queen as well as the king. He now kept no terms with the court; he attacked Walpole especially, and the ministry generally, and did not spare even the king and queen. At the same time he applied himself vigorously to the affairs of Ireland: he published several tracts for the amelioration of the unhappy state of that country; and, with the same object in view, commenced a periodical publication, in conjunction with Dr. Sheridan, called 'The Intelligencer,' which however was soon dropped. In 1728-9 the Dean spent about a year with Sir Arthur Acheson, at his seat of Gosford, in the north of Ireland; here he wrote several light pieces of poetry, which were intended for the amusement of the family and guests; among these was 'The Grand Question debated, whether Hamilton's Bawn should be turned into a Malthouse or a Barracks,' affording evidence that age had not in the least impaired those peculiar powers of humour which he had first displayed in the family of Lord Berkeley. In 1730 the Dean was a guest for six months in the house of Mr. Leslie at Market Hill, a small town at a short distance from Sir Arthur Acheson's. Near this town he intended to build a house, on ground to be leased from Sir Arthur, and which was to have been called Drapier's Hill; an intention however which he did not carry into effect.

In a satire upon the Dissenters, in 1733, the Dean had directed a few lines against "the booby Bettesworth," who was a serjeant-at-law and a member of the Irish parliament, and who, on reading the lines was so highly incensed that he drew a knife, and swore he would cut off the Dean's ears; he proceeded direct to the deanery with that intention, but as Swift was on a visit at Mr. Worrall's, Bettesworth went there, and requested to speak with the Dean alone, whom he addressed with great pomposity, "Dr. Jonathan Swift, Dean of St. Patrick's, I am Serjeant Bettesworth." "Of what regiment?" asked Swift. An altercation ensued, which soon became so loud and violent, that the servants rushed into the room and turned Bettesworth into the street. To guard against any similar attack in future, the Dean's neighbours formed an association, for the purpose of watching the deanery, and guarding the person of the Dean from violence. In the year 1735 he supported the clergy in their claim of the tithe of pasturage, or agistment tithe, in opposition to the Irish House of Commons, and gave vent to his indignation against the

obnoxious members in one of the last but most animated and pointed of his satires, 'The Legion Club.' The poem was hardly finished when he had one of the most intense and long-continued attacks of vertigo which he had ever suffered, and from which indeed he never thoroughly recovered. In 1736 Swift opposed the primate Boulter's scheme for regulating the exchange with Ireland by diminishing the value of the gold coin in order to increase the quantity of silver; he spoke against it in public; he wrote ballads against it; and on the day when the proclamation of the government for carrying the measure into effect was read, the bells of the cathedral rang a muffled peal, and a black flag was seen to wave on the steeple.

Swift's public life may now be said to have closed. From 1708 to 1736 he had been actively, strenuously, and often dangerously busied in guiding by his pen the course of public affairs; but during the latter part of this period his infirmities and sufferings rapidly increased. In 1732 Bolingbroke had attempted to bring him to England by negotiating an exchange of his deanery for the living of Burfield in Berkshire, worth about 400*l.*, but it was too late; the sacrifice of dignity and income was greater than, at that period of his life, he was willing to submit to. He still continued to correspond with Bolingbroke, Pope, Gay, the Duchess of Queensberry, and Lady Betty Germain, by all of whom he was constantly pressed to come over to England; but as his attacks of deafness and giddiness became more frequent, more violent, and continued longer, he did not think it prudent to venture. Gay died in 1732, and Arbuthnot in 1734, and Bolingbroke went to France. With Pope he kept up an affectionate correspondence as long as he retained the power of expressing his thoughts upon paper. For several years before his mind gave way, he was hardly ever free from suffering, and never from the fear of it; and it was his custom to pray every morning that he might not live another day, and often when he parted at night with those friends who were dearest to him, after social hours spent at the deanery, he would say with a sigh, "I hope I shall never see you again." In the intervals of his fits of giddiness his powers of judgment remained unimpaired, but his memory failed rapidly. On the 26th of July, 1740, in a short note to Mrs. Whiteway, he says—"I have been very miserable all night, and to-day extremely deaf and full of pain. I cannot express the mortification I am under of body and mind. All I can say is, that I am not in torture, but I daily and hourly expect it. Pray let me know how your health is, and your family. I hardly understand one word I write. I am sure my days will be very few; few and miserable they must be. I am, for those few days, yours entirely, J. Swift. If I do not blunder, it is Saturday."

In 1741 Swift's memory had almost failed, his understanding was much impaired, and he became subject to violent fits of passion, which soon terminated in furious lunacy. He was intrusted to the care of the Rev. Dr. Lyons, who was gratefully attached to him. He continued in this state till 1742, when, after a week of indescribable bodily suffering, he sank into a state of quiet idiocy, in which he continued till the 19th of October 1745, when he died as gently as if he had only fallen asleep. He was in his seventy-eighth year. The immediate cause of death, and probably of the giddiness which had so long afflicted him, was found to be water on the brain.

On the announcement of his death, the enthusiasm of Irish gratitude broke out as if there had been no interruption of his public services. The house was surrounded by a mournful crowd, who begged the most trifling article that had belonged to him to be treasured as a relic—"yea, begg'd a hair of him for memory." He was buried, according to his own direction, in the great aisle of the cathedral, where there is a Latin inscription to his memory, written by himself:—"Hic depositum est corpus Jonathan Swift, S. T. I., Iujus Ecclesiæ Cathedralis Decani, ubi sæva indignatio ulterius cor lacerare nequit. Abi, viator, et imitare, si poteris, strenuum pro virili libertatis vindicem. Obiit," &c.

Swift left the bulk of his property, the savings of about thirty years of his life, to found and endow an hospital for lunatics and idiots. In 1735 he presented a memorial to the corporation of Dublin, praying that a piece of ground on Oxmantown Green might be assigned for the purpose, which was immediately assented to, but the site which he ultimately fixed on was in James-street, Dublin, near Stevens's Hospital. The funds which finally devolved upon the hospital amounted to about 10,000*l.*

For some years before his intellect failed, the general superintendence of the Dean's domestic affairs had been intrusted by him to Mrs. Whiteway, who was a daughter of his uncle Adam: she was a woman of property, of superior understanding, and elegant manners. She was not his housekeeper, as has been erroneously stated. His housekeeper was Mrs. Brent, who by a second marriage became Mrs. Ridgeway.

Swift in his youth was considered handsome: he was tall, muscular, and well made; his complexion was dark, and his look heavy, but Pope says that his "eyes, which were azure as the heavens, had an expression of peculiar acuteness." His face was generally expressive of the stern decision of his character. He never laughed, and seldom smiled, and when he did smile it was

"As if he mock'd himself, and scorn'd his spirit  
That could be moved to smile at anything."

In his person he was scrupulously clean; in his habits he was regular;

he was a strict economist of time and money, and kept minute accounts of the expenditure of both; he used much exercise, both walking and riding; he drank wine daily, but never to excess; in eating he appears to have been somewhat of an epicure. In his disposition he was social; and when his company pleased him his conversation was delightful, abounding in anecdote, and rather distinguished for liveliness and humour than for seriousness. In repartee he was considered unrivalled. He had peculiarities of manner, which however were not constant and habitual, but generally arose from the indulgence of some occasional whim. From the time of his admission into Trinity College he had mixed much in society, generally of the best kind: he was an observer of society of a lower kind, but he never willingly mixed with it. He spoke in public with force and fluency. The distinguishing feature of his character was pride—a complete consciousness and appreciation of the value of the power which he had acquired by a severe course of study and observation, combined as it was with a determination of purpose which no danger could intimidate, and which turned aside from no labour necessary to the accomplishment of his aims. He was thoroughly honest, but his honesty was often combined with a straightforward bluntness which was offensive to fastidiousness and vanity. In spite of the sternness of his character, which was often indeed more in appearance than reality, he was a man of deep feeling, devotedly attached to his friends, and active in promoting their interests; nor were his friends less attached to him.

There was much appearance of paradox in Swift's character, which often arose from his assuming, in speaking and writing, a character which did not belong to him. He hated hypocrisy, he hated the assumption of virtue, and he ran into the opposite extreme. Thus the levity of manner with which he censured the corruptions of Christianity induced many to suppose that he was not a Christian; and the tone of misanthropy which pervades many of his writings was ill suited to the real character of one who annually expended a third part of his income in well-directed charity; who, of the first 500*l.* he had to spare, formed a loan fund for the use, without interest, of poor tradesmen and others; who was a warm and steady friend, a liberal patron, and a kind master. He who always spoke of Ireland as a country hateful to him, was yet the firm, fearless, and constant assertor of her rights and protector of her liberties. Johnson speaks of his love of a shilling. Habits of strict economy have given many a man the appearance of loving a shilling who thinks nothing of giving away pounds. We have spoken of the use which he made of his money: in the obtaining of it he was no less free from sordidness. Of the numerous works which he published, most of which were extremely popular, it is doubtful if he ever received for any one a single shilling of direct remuneration. Pope obtained something for Swift's share of the 'Miscellanies,' but there is reason to suspect that he directed his friend, who did love a shilling, to keep the sum for his trouble.

Swift's conduct towards Stella and Vanessa is that part of his character of which least can be said by way of justification. We have given the details of that conduct briefly, and leave the reader to draw his own conclusions.

In his political principles he was rather a Whig than a Tory, but party, as a distinction which prevents the intercourse of individuals, he regarded with dislike and scorn. He approved of triennial parliaments, nay annual parliaments; he was the defender of popular rights, and frequently exposed himself to danger in defending them; he was a steady advocate of constitutional freedom. His hatred of tyranny was almost a passion. The oppression which he saw practised in Ireland was one chief cause of his dislike to living in that country. He was vexed to see the tame submission with which the Irish yielded to the tyranny of their rulers. He always spoke of his residence in Ireland as an exile, and, with intense bitterness of feeling, of himself as one condemned to die there "like a poisoned rat in a hole." The separation from his friends in England certainly contributed to produce this feeling.

In his religious principles he was a violent high-church bigot. He would admit of no toleration either of Roman Catholics or of Dissenters as a body, and Jews he classed with infidels. But he did not extend these intolerant principles to individuals. Probably he did not know that Bolingbroke was an infidel, but he did know that Pope was a Roman Catholic.

Swift's acquaintance with the Greek and Latin writers was extensive, but not profound. French he wrote and spoke with facility, and he understood Italian. He was well read in Chaucer and Milton, but never mentions Shakspeare, and does not appear to have had a copy of his works. His acquaintance with English prose writers was chiefly among the historians, especially Clarendon.

Swift, almost beyond any other writer, is distinguished for originality. He was an observer for himself, and was disdainful of obligation for anything but such facts as were not within his reach. His modes of combining and comparing those facts, whether ludicrous or serious, were always his own.

As a prose writer, his style is distinguished by plainness, simplicity, and perspicuity; it is sometimes ungrammatical and often heavy, but is occasionally forcible and pointed. As to his numerous political tracts, when they had accomplished the end for which they were

written, he cared no more about them; and most readers now care as little. He could hardly be said to be at all ambitious of the reputation of an author. His object in writing was to produce an effect upon the public, or to please his friends. The object once attained, he thought no more about the means by which it had been accomplished. His letters, of which a great number have been published, are excellent specimens of that species of composition; written, without any view to publication, either to keep up the intercourse of friendship or for purposes of business, they abound in practical good sense, clear, unaffected, unembellished, with occasional touches of wit and humour, such as appear to have arisen, without being sought for, in the writer's mind at the moment of writing. A few of his Sermons have been published; they are of the most plain and practical character. As a party writer, he used no arms but such as are considered fair in that species of warfare. He was not one of those who make false statements; he was no assailant of virtuous character. The vices and faults of those public men to whom he was opposed were censured with unsparing severity, or covered with ridicule; but the men were such as Wharton and Wood and Bettesworth. Men of less objectionable character were touched more lightly.

Swift's permanent reputation as a prose writer is likely to depend, to a considerable extent, upon his humorous pieces, but chiefly upon his 'Gulliver's Travels.' For this satirical romance he derived hints from Lucian, Bergerac, and Rabelais; but he derived nothing more than hints. His claim to originality is unaffected by any resemblance which his romance bears to these sources. The style of the work is an admirable imitation of the plain, dry, and minute style of the old voyagers, such as Dampier; and the character of Gulliver himself, as a representative of this class, is never for a moment lost sight of. The work consists of four voyages. The Voyage to Lilliput is for the most part a satire on the manners and usages of the court of George I. The Voyage to Brobdingnag is a more extended satire on the politics of Europe generally. These two voyages are indisputably the most delightful parts of the book; and are read by most readers with great pleasure as mere tales, with such admirable skill is an air of truth and reality thrown over the narrative. The Flying Island is a satire directed against speculative philosophy, especially mathematics. For this part of his task Swift was but poorly qualified, and except that part which is aimed at projectors and quacks, the satire for the most part falls harmless. The fourth voyage, in which Gulliver gets among the Houyhnhnms and Yahoos, is an exaggerated satire on the vices of mankind. The fiction is in itself unnaturally impossible, and the details are sometimes disgustingly filthy.

Swift's poems are not, properly speaking, poetry, nor is Swift a poet; his imagination is not of the kind which produces poetry; it is not filled with the beauty and magnificence of nature, but with the petty details of artificial life; he is a satirist of the first class; as a poetical describer of manners, he has never been excelled: as a poetical humourist he almost stands alone; indeed the most delightful of his poems are those in which he expresses the notions and uses the language of some assumed character, as in 'Mrs. Harris's Petition.' In this species of humour he had no model, and, with the exception of Thomas Hood, no imitator has ever approached him. Of the general style of his poems, Dr. Johnson remarks that "the diction is correct, the numbers are smooth, and the rhymes exact. There seldom occurs a hard-laboured expression or a redundant epithet. All his verses exemplify his own definition of a good style—they consist of proper words in proper places."

SWIFT, DEANE, was the grandson of Godwin Swift, the eldest of the uncles of the Dean of St. Patrick's. The Christian name of Deane was derived from his grandmother, daughter and heiress of Admiral Deane, who served the Commonwealth during the civil wars. He studied at Trinity College, Dublin, and afterwards resided at Goodrich in Herefordshire. He married a daughter of Mrs. Whiteway by her first husband, the Rev. T. Harrison. Deane Swift wrote an 'Essay upon the Life, Character, and Writings of Dr. Jonathan Swift; interspersed with some occasional Animadversions upon the Remarks of a late critical Author, and upon the Observations of an anonymous Writer on these Remarks; to which is added that Sketch of Dr. Swift's Life, written by the Dr. himself, which was lately presented by the Author of this Essay to the University of Dublin,' 8vo, London, 1755. He also published 'The Works of Dr. Jonathan Swift, Dean of St. Patrick's, collected and revised by Deane Swift, Esq., of Goodrich in Herefordshire,' 12mo, London, 1765, about 20 vols. Deane Swift contributed a portion of correspondence to Nichols's edition of Swift's Works, 19 vols. 8vo. He died at Worcester, July 12, 1783.

SWIFT, THEOPHILUS, was the son of Deane Swift, and was born at Goodrich in Herefordshire. He wrote 'The Gamblers,' a poem, 4to; 'The Temple of Folly,' in 4 cantos, London, 1787; 'Poetical Addresses to his Majesty,' 4to, 1788; 'Letter to the King on the Conduct of Colonel Lennox,' 4to, 1789. His remarks in this letter gave offence to Colonel Lennox, who demanded satisfaction, and a duel was the consequence, in which Swift received a pistol wound. In the year 1790 a man lurked at night in the streets of London, and wounded females with a sharp instrument. He escaped detection for some time, and the public called him 'The Monster.' A person of the name of Williams, an artificial-flower maker, was at length arrested, tried, found guilty, and sentenced to six months' imprisonment.

Theophilus Swift seems to have thought that this man was innocent, and exerted himself both at the trial and afterwards, to prove his innocence. He wrote a 'Vindication of Renwick Williams, commonly called the Monster,' London, 1790. Theophilus Swift wrote an 'Essay on the Rise and Progress of Rhyme,' which was printed in the 'Transactions' of the Irish Academy, vol. ix., 1801; and in 1811 he published at Dublin 'Mr. Swift's Correspondence with the Rev. Mr. Dobbin and his Family.' Scott's edition of Swift's Works contains several communications from Theophilus Swift. He inherited from his grandmother, Mrs. Whiteway, a considerable estate in the county of Limerick. He died in Ireland, in the summer of 1815.

SWINBURNE, HENRY, an English traveller, was born in May 1752. He was the third son of Sir John Swinburne, Bart., of Capheaton, in the county of Northumberland, of an ancient Roman Catholic family. He received his education at the monastic seminary of Lacelle, in France, where he made rapid progress in the study of ancient and modern literature and in drawing. By the death of his eldest brother, he became possessed of an annuity and of a small estate at Hamsterley, in the county of Durham, and was thus placed in independent circumstances. He now set out on a tour, in which he visited Turin, Genoa, Florence, and other parts of Italy, improving himself on his route in the knowledge of works of art and in drawing. On his way home through Paris, he became acquainted with and married Miss Baker, daughter of the then solicitor-general of the West Indies, and, returning to England, resided with her some time at his estate at Hamsterley, where he amused himself with gardening and laying out grounds. He soon recommenced travelling, and reached Paris, in March 1774; in the autumn of the same year he proceeded to Bordeaux, and, after spending a year in the south of France, accompanied his friend Sir Thomas Gascoigne on a tour in Spain; they travelled along the coast from Barcelona to Cadiz, and thence through the interior to Madrid, Burgos, and Bayonne, where they arrived in June 1776. At the close of this year Swinburne, in company with his wife, left Marseille for Naples. He remained in Italy till June 1779, during which period, after staying a year at Naples, at the court of Ferdinand IV., he visited Sicily, Rome, Florence, and Turin, whence he returned to France. About this time he published an account of his Spanish tour in a series of letters, and spent the latter part of the year 1779 in England. The next year he travelled through France and Italy to Vienna, where he was received with much kindness by the Empress Maria Theresa, and her son Joseph II. He was again in England in 1781, and in 1783 set out for Paris to seek indemnity from the French government for the loss of his West India property, which had been devastated during the war. Through the favour of Maria Antoniette, he obtained in compensation a grant of land in the island of St. Vincent, the value of which was however much reduced on the cession of the island to Great Britain. In 1786 Swinburne again went to Paris, and returned in 1788.

After having long solicited a diplomatic appointment from the British government, he was appointed, in 1796, commissioner for the adjustment of the cartel then proposed for the exchange of prisoners-of-war between France and England. In the performance of this service great difficulties occurred from the refusal of the French to give up Sir Sidney Smith; and, after long and fruitless negotiations, Swinburne was finally recalled at the close of the year 1797. His latter years were saddened by the loss of his son, who was shipwrecked on his way to Jamaica, and by the diminution of his fortune, which induced him, in 1801, to accept the offices of vendue master in the island of Trinidad, and commissioner for the restoration of the Danish islands. After a few months' residence at Trinidad, Swinburne fell a victim to the climate, April 1, 1803.

His works are—'Travels through Spain in the years 1775 and 1776,' 8vo, London, in a series of Letters; 'Travels in the Two Sicilies in the Years 1777, 1778, 1779, and 1780;' and a Correspondence extending from the year 1774 to that of his death, edited by Charles White, Esq., under the title of the 'Courts of Europe at the close of the Last Century,' 2 vols., 8vo, London, 1841. This publication contains many curious details concerning the courts of Louis XV. and Louis XVI., and the most stirring periods of the French Revolution. Swinburne is a lively and sensible writer; he describes everything in an easy, unaffected, and sometimes forcible style; he is an attentive observer of national characteristics, and has selected with judgment such anecdotes and incidents as best illustrate the manners of different countries.

SWITHIN, SAINT, seventeenth Bishop of Winchester, was born in the early part of the 9th century, but the exact year is not ascertained. He was ordained priest in 830 by Helmstan, bishop of Winchester, and was soon after appointed by King Egbert his chaplain, and tutor to his son Ethelwulf. In the reign of the latter he became chancellor, and was entrusted with the education of Alfred, whom he accompanied to Rome. The services rendered by Swithin to Ethelwulf in the direction of the ecclesiastical affairs of his kingdom were rewarded by his elevation in 852 to the see of Winchester, vacant by the death of Helmstan. He is supposed to have been the originator of the payment of 'Peter-pence' to Rome, though there is much reason to believe that this tribute had an earlier origin, and also to have procured the first act of the Wittenagemot for enforcing the universal payment of tithes.

BIOG. DIV. VOL. V.

William of Malmesbury says of St. Swithin that "he was a rich treasure of all virtues, and that those in which he took most delight were humility and charity to the poor." He adds, that he built several churches, and devoted himself exclusively to the spiritual administration of his diocese; in his frequent visitations of it he travelled with his clergy on foot, and for the most part by night, in order to avoid the suspicion of ostentation. He died in the reign of Ethelbert, on the 2nd of July 862. His last request was that he should be buried in the churchyard of Winchester, "ubi cadaver et pedibus prætereun- tium et stillidiis e colo rorantibus esset obnoxium." Within a century afterwards, his name having been admitted into the calendar as that of a canonised saint, it was resolved to transfer his remains to the cathedral, and to place them in a magnificent shrine prepared for the purpose by King Egbert. The translation, which was to have taken place on the 15th of July, was delayed for forty days in consequence of the severe rainy weather which occurred, and hence arose the well-known tradition that if it rain on St. Swithin's day there will be rain for forty days after. In France the day of the festival of St. Gervais (June 19th) is marked by a similar superstition. These superstitions are not however altogether unfounded on facts, experience having shown that whenever a wet season sets in about the end of June to the middle of July, it generally continues for a considerable period, and that, in a majority of our summers, a rainy season of about forty days comes on nearly at the time indicated by the tradition of Saint Swithin.

The festival of St. Swithin in the Roman Martyrology is the 2nd of July, the day of his death; but in England it was celebrated on the 15th of July, the day appointed for the translation of his relics to the Cathedral of Winchester.

SYDENHAM, CHARLES EDWARD POULETT THOMSON, LORD, was the son of John Poulett Thomson, Esq., of Waverley Abbey and Roehampton in Surrey, the head of the mercantile firm of J. Thomson, T. Bonar, and Co., which had been long one of the most eminent houses engaged in the Russian trade. Mr. John Thomson, who assumed the name of Poulett by sign-manual, in 1820, in memory of his mother, married, in 1781, Charlotte, daughter of Dr. Jacob of Salisbury, and by her he had a family of nine children, of whom the subject of the present notice, born at Waverley on the 13th of September 1799, was the youngest. There were two elder sons, Andrew and George, of whom the latter, now George Poulett Scrope, Esq., is the present member for Stroud, and the author of 'Principles of Political Economy,' 12mo, 1833, and of 'The Life of Lord Sydenham,' 8vo, 1843.

Lord Sydenham was never at any public school or university; and he left his native country at the age of sixteen, to be placed in his father's house of business at St. Petersburg, then under the chief direction of his eldest brother. He returned to England in ill-health in 1817; then made a tour to the south of France, Switzerland, and Italy; after which he took his place in his father's counting-house in London, in the summer of 1819. In the spring of 1821 he was again sent out to St. Petersburg, this time as a partner in the firm; and here he remained for two years. The greater part of the winter and spring of 1823-24 he spent in Vienna; whence returning by Paris to England, he assumed, in conjunction with his brother Andrew, the chief conduct of the business in London.

Sanguine, ambitious, and self-confident, he involved himself to some extent in the American mining speculations of 1825. Meanwhile he had become intimate with young Mr. Bentham and Mr. James Mill, with Mr. Warburton, Mr. Hume, Dr. (now Sir John) Bowring, and Mr. McCulloch, and had set his heart upon entering public life. He obtained a seat in parliament for Dover, after an expensive contest, at the general election in the summer of 1826. His rise from this date was very rapid. Voting steadily with the extreme section of the Opposition, he spoke but seldom, and almost exclusively upon commercial questions. On the first occasion however on which he delivered himself at any length, in a debate on the state of the shipping interest, on the 7th of May 1827, he made a very favourable impression on the House, and had the gratification of being warmly complimented by Mr. Huskisson. After this, whenever he rose he was listened to with attention. He was again returned for Dover in 1830; and when the Whigs came into power, in November of that year, he was appointed to the offices of Vice-President of the Board of Trade and Treasurer of the Navy. He was returned again for Dover after his acceptance of office, and also to the succeeding parliament, which met in June 1831. At the general election in December 1832, he was returned both for Dover and for Manchester; he elected to sit for the latter place; and continued to represent Manchester as long as he remained in the House of Commons. Meanwhile on the reconstruction of the ministry in June 1834, occasioned by the secession of Lord Stanley and Sir James Graham, Mr. Poulett Thomson was made President of the Board of Trade, in the room of Lord Auckland, who was removed to the Admiralty; and on the recovery of power by his party in April 1835, after Sir Robert Peel's short administration, he resumed that office with a seat in the cabinet. So early as in the beginning of the year 1836, if there be no misprint of the date in Mr. P. Scrope's narrative, it had been in contemplation to remove him to the House of Lords, in order to relieve him from the fatigues of the long night sittings in the Commons, under which his health was already beginning to break down;

but circumstances, it is added, for a time put a stop to this plan. At last, towards the close of the session of 1839, on the elevation of Mr. Spring Rice to the peerage, he was offered his choice between the chancellorship of the exchequer and the government of Canada; and accepted the latter. He was sworn into his new office before the Privy Council on the 29th of August; he left England on the 13th of September, and landed at Quebec on the 19th of October. Of his administration in Canada, which was highly successful, Mr. Scrope has published a very full narrative, which was drawn up by Mr. Murdoch, the civil secretary. In August 1840, the governor-general was raised to the peerage by the title of Baron Sydenham, of Sydenham, in Kent, and Toronto, in Canada. But on the 4th of September 1841, while in a weak state of health, he had the misfortune to be thrown from his horse, which stumbled and fell upon him, and to sustain a fracture of the principal bone of his right leg, besides other serious injuries; and his death followed on Sunday the 19th of the same month. The most remarkable quality that Lord Sydenham possessed was great decision of character, arising from clearheadedness and self-reliance. His activity, zeal, and extensive information also made him an excellent man of business, and his attractive manners added to his value as a partisan.

SYDENHAM, FLOYER, was born in 1710, and was educated at Wadham College, Oxford, where he took the degree of M.A. in 1734. Having undertaken the laborious and unproductive task of translating Plato into English, he issued proposals for publishing his work by subscription in 1759, accompanied by a 'Synopsis, or General View of the Works of Plato.' The subscribers were few, and some, it is said, failed in their engagements; and after a life of labour and want he died in old age (April 1, 1787), imprisoned for a debt contracted at the eating-house which he frequented. Melancholy as was his end, it was honoured in its results; for in consequence, "one of the members of a club at the Prince of Wales Coffee-House proposed that it should adopt as its object some means to prevent similar afflictions, and to assist deserving authors and their families in distress;" and this was the origin of that valuable institution, the Literary Fund, from an account published by which the above quotation is taken. Sydenham is therein characterised as "a man revered for his knowledge, and beloved for the candour of his temper and gentleness of his manners."

Between 1759 and 1780 Sydenham published translations of the *Io*, *Greater and Lesser Hippias*, *Banquet*, *Rivals*, *Meno*, *First and Second Alcibiades*, and *Philebus*, with notes: these are collected in three quarto volumes. These versions were afterwards included by Thomas Taylor in his complete translation of Plato, 1804, revised, and with a selection of the notes. Taylor complains, while paying tribute to Sydenham's natural powers, that from early prejudices, and the pressure of distress, he was unequal to the reception and explanation of "Plato's more sublime tenets. His translation however of other parts, which are not so abstruse, is excellent. In these he not only presents his reader faithfully with the matter, but likewise with the genuine manner of Plato." (Introduction.)

Sydenham's other works are—'A Dissertation on the Doctrine of Heraclitus, so far as it is mentioned or alluded to by Plato,' 1775; 'Onomasticon Theologicum, or an Essay on the Divine Names, according to the Platonic Philosophy.'

SYDENHAM, THOMAS, one of the most distinguished of English physicians, was the son of a country gentleman at Winford Eagle in Dorsetshire. He was born there in 1624, and was admitted a commoner of Magdalen Hall, Oxford, in 1642. The occupation of that city as a garrison by Charles I. interrupted his studies for a time; but he returned to Magdalen Hall when Oxford was given up to the parliamentary forces, and in 1648 he took the degree of Bachelor of Physic.

It has been stated that Sydenham served for some time in the royal army during the commotions of the civil war; but this assertion rests on no good authority, and all Sydenham's connections belonged to the republican party. His elder brother William was a colonel in the parliamentary army, and rose during the commonwealth to the highest posts. It was also through the interest of his party that Sydenham obtained, about 1648, a fellowship of All Souls' College, in the place of a person who had been ejected for his royalist opinions. He pursued his studies at Oxford for some years, and is said by the famous French surgeon Desault to have visited Montpellier, where there was a medical school, which then enjoyed a very high reputation. Subsequently he quitted Oxford, and having taken the degree of Doctor of Medicine at Cambridge, he became a licentiate of the College of Physicians, and settled in London.

He soon rose to the top of his profession, and between the years 1660 and 1670 had a more extensive practice than any other physician. This success must have been entirely due to himself, for, from some cause of which we are ignorant, the College of Physicians as a body were hostile to him; while his known relations to the republican party would cut off court patronage or favour. After suffering for many years from the gout, he died on the 29th of December 1689, at his house in Pall Mall, and was buried in the aisle of St. James's church, Westminster.

In 1666 Sydenham published his first work, which consisted of observations upon fevers. An enlarged edition of this treatise appeared under a new name in the year 1675. This second edition

contained his remarks on the small-pox and on other eruptive fevers, and is remarkable not only for the singularly accurate description of symptoms, but also for the recommendation of a practice directly opposed to the heating and stimulating plan of treatment which then universally prevailed. Remarks on the epidemic diseases of London from 1675 to 1680; a treatise on dropsy and on the gout; and a tract on the rise of a new fever, were his principal other publications.

From the nature of their subjects, we cannot here enter upon an examination of these works; but it is worth while, in the case of a man who acquired such high eminence as Sydenham, to inquire what were the causes to which he owed his great celebrity. He was not a learned man, and his works, written by him originally in English, were translated into Latin before publication by his friends Dr. Mapletoft and Mr. Havers. He constructed no brilliant theory, and indeed was not always consistent in following that which he adopted. Were we to reckon Sydenham among the followers of any particular school, it would be among those of the chemical physicians, who sought for the causes of disease in a supposed fermentation and chemical decomposition of the fluids of the body. Sydenham's method of treating small-pox however, though so great an improvement on the practice which then prevailed, was in opposition to the theory which he had embraced. But his chief merit consists not so much in his method of treatment, which is not unfrequently defective, as in his singular talent for observation. The pictures which he has drawn of diseases are so accurate, that in many instances it would not be possible to improve upon them. He betook himself to carefully noting the symptoms of disease, and the encouragement of his friend Locke assured him that his was the right method of seeking for truth. This it is which constitutes his merit, that, in an age of brilliant theories, he applied himself to questioning Nature herself; justly thinking that though "the practice of physic may seem to flow from hypotheses, yet, if the hypotheses are solid and true, they in some measure owe their origin to practice." By treading in this path, Sydenham has gained a name which will last; while many, his superiors in learning, perhaps his equals in genius, are forgotten, or remembered only as instances of the misapplication of great gifts to little purpose. Sydenham's works have passed through various editions, both in this country and on the Continent. The edition entitled '*Opera Medica*,' published at Geneva, in 2 vols. 4to, in 1716, is preferable to the English editions. The translation of his works by Dr. Swan is well executed; the best edition of it is that of Dr. Wallis, in 2 vols. 8vo, published in 1789.

SYDNEY. [SIDNEY.]

SYLBURG (Latinised SYLBURGIUS), FREDERIC, was born in 1536, in the village of Wetter, near Marburg, whence he generally calls himself *Fredericus Sylburgius Veterensis*. His father was a farmer in middling circumstances; but the son received a good education, and during the time he spent at the University of Jena, he chiefly devoted himself to the study of Greek under Rhodomannus. After the completion of his academical course, he had the management of several public schools, first that of Lich, in the county of Solms, and then that of Neuhaus, near Worms. But he had no particular liking for the business of teaching, and his occupation took up all the time which he wished to devote to literary labours. Accordingly he gave up his post, and entered into a connection with the printer Andrew Wechel, of Frankfurt-on-the-Main, for whose establishment Sylburg undertook to edit Greek works. He continued at Frankfurt until 1591, when he went to Heidelberg, and formed a similar connection with the printer Hieronymus Commelin. In both places Sylburg, who had the superintendence of the printing of all Greek works, as well as the preparation of them, performed these duties with the utmost accuracy, and showed an extraordinary critical talent in the notes which accompanied almost all his editions. He thus gained great celebrity, and the Landgrave of Hessen munificently rewarded him with an annual pension from the funds of the University of Marburg. Further particulars of his life are not known. He died at Heidelberg, on the 16th of February 1596, as is stated on his tomb-stone, which still exists at Heidelberg.

Sylburg was one of the most eminent and most industrious Greek scholars of the 16th century, and the greatest men of the age, such as Casaubon and De Thou, entertained a profound admiration for him. He was a worthy contemporary of Henry Stephens, whose *Thesaurus of the Greek language* contains many articles by Sylburg. The editions of Greek writers by Sylburg are still very valuable, and in critical accuracy they are not inferior to those of Stephens, although they are not so beautifully printed. Some of his editions have never yet been excelled. His first publications were new editions of some elementary Greek grammars which were then generally used. In 1583 he published, at Frankfurt, in one volume, folio, his edition of Pausanias, with notes by himself and Xylander, and an improved reprint of the Latin translation by Romulus Amaseus. It also contains a dissertation by Sylburg, '*De Grammaticis Pausaniæ Anomalis*.' The whole was reprinted in 1613. Between 1584 and 1587 he published at Frankfurt a complete edition of Aristotle, in 11 parts, or 5 vols. 4to. This edition only contains the Greek text with the various readings, and is still one of the very best and most correct editions of all Aristotle's works. In 1585 he edited four discourses of Isocrates (*ad Demonium, ad Nicoclem, Nicocles, contra Sophistas*), 8vo, Frank-

furt. The year following there appeared by him the first complete edition of the works of Dionysius of Halicarnassus, 2 vols. folio, Frankf. It contains the improved Latin translation of the Roman Antiquities by Gelenius, with very useful notes and indices. This edition was reprinted, but very incorrectly, in 2 vols. folio, Leipzig, 1691. From 1588 to 1590, he published, at Frankfurt, in 3 vols. folio, the valuable collection of ancient writers on the history of Rome, under the title 'Romanæ Historiæ Scriptores, Latini et Græci, addita variantis scripturæ notatione et notis.' Vol. i. contains the Fasti Capitolini, Messala Corvinus, L. Florus, Velleius Paterculus, S. Aurelius Victor, S. Rufus, Eutropius, Cassiodorus, Jornandes, and Julius Exsuperantius. Vol. ii. contains Suetonius, the Scriptores Historiæ Augustæ, Ammianus Marcellinus, Pomponius Laetus, J. Bapt. Egnatius, Ausonii Epigrammata in Cæsares, Romanorum Imperatorum Catalogus, and Romanæ Urbis Descriptio. Vol. iii. contains the Scriptores Græci Minores Historiæ Romanæ, that is, the Fasti Consulares (Greek and Latin), Pæaninus, Xiphilinus, Herodian, Zosimus Julian's Cæsars, Olympiodorus, and extracts from Suidas. In 1590 he published, at Frankfurt, in 4to, the work of the grammarian Apollonius, 'De Syntaxi, seu Constructione Orationis.' The last work that he published in the establishment of Wechel was a collection of some Greek gnomic poets, 'Epicæ Elegiacæque Minorum Poetarum Gnomæ, Græcæ et Latine,' 8vo, Frankf., 1591. A second and much improved collection appeared at Heidelberg in the year of Sylburg's death. All the subsequent editions of Sylburg were published in the printing establishment of Commelin at Heidelberg. In 1592 he edited in 1 vol. folio, the commentary of the Apocalypse, by Andreas Cretensis, in Latin and Greek; and in the same year he published the editio princeps of the Greek text of the work of Theodoretus, entitled 'Remedia contra Morbos Græcos,' with the Latin translation of Zenobius Acciajuoli, and notes by himself. In 1592 he also edited the complete works of Clemens of Alexandria, with notes, folio; and in 1595, in folio, all the works of Justin the Martyr. This edition is founded upon that by Robert Stephens in 1551, but Sylburg improved the text, and added very useful notes: it is still the standard edition. In 1594 he edited the 'Etymologicum Magnum,' in folio, with notes and a very useful index. The year after he edited 'Saracenia, sive Collectio Scriptorum de Rebus ac Religione Turcarum, Græcæ et Latine,' in 8vo. Among other less important works, it contains a refutation of Mohammedanism by Euthymius Zigabenus, and a Life of Mohammed by an anonymous Greek writer. Sylburg, on his death, left in manuscript a considerable number of materials which he had collected for an edition of Herodotus, and which were afterwards made use of by Jungermann in his edition of Herodotus, folio, Frankfurt, 1608.

(J. G. Jung, *Vita Frederici Sylburgii*, 8vo, Berleburg, 1745.)

SYLVERIUS, son of Bishop Hormisdas, and a native of Campania, succeeded Agapetus as bishop of Rome in 535. Theodatus, the Gothic king of Italy, is said to have influenced his election. Soon after, Belisarius came with an army sent by the Emperor Justinian, defeated the Goths, and took possession of Rome. Vigilius, a deacon of Rome, intrigued with the court of Constantinople to have Sylverius deposed, on the pretence that he favoured the Goths, and Sylverius was accordingly seized by order of Justinian, and sent into exile to Patara in 537, where he soon after died, and Vigilius was put in his place. (Platina and Panvinio, *Le Vite dei Pontefici*.)

SYLVESTER I. succeeded Melchisedes as bishop of Rome in 314. The Christian Church was now in the ascendant throughout the Western world, under the protection of the Emperor Constantine. By Constantine's orders a council was assembled at Arelatum (Arles) in 314, at which some deputies of the bishop of Rome were present, and in which the Donatists were condemned. But the principal event of Sylvester's pontificate was the great council of Nicæa in 325, which defined the articles of the Christian faith, and also determined the order of the hierarchy in the various provinces of the empire. The Bishop of Rome was thereby made primate over the sees of the provinces styled Suburbicaria, which, under the new distribution of the empire made by Constantine, were placed under the jurisdiction of the Vicarius Urbis, or imperial vicar of Rome. Sylvester did not repair to the council, but sent thither two presbyters as his deputies, Vitus and Vincentius, who do not appear to have had any particular distinction or post of honour in the assembly. The story of the donation made by Constantine to Pope Sylvester of temporal jurisdiction over the suburbicarian provinces is now universally rejected as apocryphal; it may have originated from the church chroniclers confounding the temporal with the spiritual jurisdictions.

Constantine made a short residence at Rome in Sylvester's time in 326, but soon left it, being, it seems, dissatisfied with his reception by the people. [CONSTANTINUS, FLAVIUS VALERIUS, vol. ii. col. 366.] The papal historians speak of numerous churches raised and endowed by Constantine at or near Rome.

Sylvester died in 335, and was succeeded by Marcus. His supposed epistles and decretals are now considered apocryphal.

SYLVESTER II. [GERBERT.]

SYLVESTER, styled III., Antipope, was proclaimed pope by a faction in Rome in opposition to Benedict VIII., 1013; but after a few weeks a fresh tumult at Rome drove away Sylvester, and reinstated Benedict.

SYLVESTER, JOSHUA, was born in 1563. He appears to have engaged in mercantile pursuits, and was a member of the company of merchant-adventurers at Stade, for whose secretaryship he was a candidate in 1597, recommended by the Earl of Essex. He seems to have always remained a poor man, and to have been of a roving disposition. In the latter part of his life he emigrated to Holland, and died at Middelburg in 1618. Both in his opinions and in his choice of friends he was strongly puritanical; and those numerous versified works, chiefly translations from the French, to which he owed his literary reputation, show a warmly devotional and serious tone of feeling. He was not however remiss in courting the patronage of the great. To King James VI. he addressed many adulatory dedications; and it was probably in compliment to him that he selected the topic of one of his original poems, which is thus entitled: 'Tobacco battered, and the Pipes shattered (about their Ears that idly idolize so base and barbarous a Weed, or at leastwise over-love so loathsome a Vanitie), by a Volley of holy Shot thundered from Mount Helicon.' He is chiefly known now on account of the obligations said to have been incurred by Milton to his principal translation, that of the 'Divine Weeks and Works' of Du Bartas. [BARTAS, DU]. There are two collected editions of Sylvester's works, both in folio, and commencing with the translation of Du Bartas. Their dates are 1633 and 1641. The second of them contains a supplement of posthumous poems; among which is that tasteless alteration of the 'Soul's Errand,' which caused this fine poem to be erroneously attributed to Sylvester.

SYLVIVS, ÆNEAS. [PIUS II.]

SYMEON, SETH. [SIMEON, SETH.]

SYMMACHUS THE SAMARITAN, so called because he was a native of Samaria, and at first also of the Samaritan religion. He afterwards became a Jew, and then a Christian of the sect of the Ebionites. The time in which he lived is not quite certain, though it is probable that it was in the reign of the emperor Septimius Severus, about A.D. 200.

Although subsequently to the Septuagint two other Greek translations of the Old Testament had been made by Aquila and Theodotion, Symmachus undertook the same task again. His translation differed in many points from those of his predecessors, but it was held in high esteem, and is often referred to by subsequent writers: it is especially praised for the perspicuity and elegance of the style. Symmachus himself published a second and improved edition of it. We only possess a few fragments of this translation, which are printed, together with those of Aquila and Theodotion, in the collections of Morinus Drusius and Montfaucon. Symmachus also wrote a Commentary on the Gospel of St. Matthew, in which he is said to have endeavoured to establish the dogmas of the Ebionites, and also to have attacked Matthew's genealogy of Christ.

(Fabricius, *Biblioth. Græca*, iii., p. 695, &c.; Schöll, *Geschichte der Griech. Litt.*, ii., p. 301, &c.)

Among the scholiasts on the comic poet Aristophanes there is one whose name was Symmachus; some specimens of his scholia are extant. (Fabricius, *Biblioth. Græca*, ii., p. 374, n. cc.)

SYMMACHUS, QUINTUS AURELIUS, the son of L. Aurelius Avianus Symmachus, who was a man of great worth, and in A.D. 365 was prefect of the city of Rome. (Ammian. Marc., xvii. 2; Symmach., 'Epist.' i. 38.) The time when his son Q. Aurelius Symmachus was born is uncertain; some would place it as early as the year 314, which is scarcely credible. As he belonged to one of the most illustrious Roman families, his education was conducted with the greatest care. He was instructed in rhetoric by a Gaul, whose name is not known. (Symmach., 'Epist.' ix. 86.) In 370 he was proconsul of Africa, and fourteen years later, 384, he was prefect of the city, and in 391 consul with Tatianus. The time of his death is uncertain, though it is evident from his writings that he was alive in 404.

Symmachus was a man of ability and character, and during the difficult and dangerous situations into which he was thrown by the events of the time, he showed a degree of honesty and prudence which are rarely met with in the history of those times. He was one of the last great bulwarks of paganism, and exerted all his powers to prevent its overthrow, especially during the period of his prætorship of the city. We still possess an address of his to the emperors Valentinianus, Theodosius, and Arcadius (Symmach., 'Epist.' x. 61), in which he endeavours to persuade the emperors not to remove the altar of victory from the curia Romana. However, his exertions were fruitless, and his address was refuted by St. Ambrose. His assertion that the Christian religion was the cause of the decline of the empire provoked many Christians of his own and of subsequent times to refute the charge. His partiality for paganism and its superstitions arose from his general attachment to the institutions of his forefathers, and his sincerity in this respect was acknowledged even by his adversaries. During the greater part of his life he was actively engaged in various branches of the administration, but he devoted to study all his leisure time, which he spent in retirement in some of his numerous country-seats.

There is extant a collection of letters by him, which was made and published by his son, Q. Flavius Memmius Symmachus, who was prefect of the city in 415, after the death of his father. The collection consists of ten books; much care has evidently been spent upon the

style, and, like all the letter-writers of that time, he took the letters of the younger Pliny as his model. The style is concise and animated, but is far from the natural and beautiful simplicity which characterises the letters written in the better period of Roman history. Yet the letters of Symmachus, especially those of the tenth book, which give a full account of the manner in which he discharged his duties as prefect of Rome, and also contain the above-mentioned address to the emperors, are of peculiar interest in regard to the history, constitution, and administration of the Roman empire. Many points connected with these subjects and with the history of the Roman law would be entirely unintelligible to us without these letters. Symmachus also distinguished himself as an orator, but his orations are lost, with the exception of some fragments. A. Mai discovered fragments of eight orations of Symmachus in a palimpsest of the Ambrosian library at Milan, which he published under the title 'Q. Aurelii Symmachi Octo Orationum ineditarum partes. Inventit notisque declaravit A. Mai, Mediolani, 8vo, 1815. (Reprinted at Frankfurt, in 8vo, 1816.) Afterwards some other fragments of the orations of Symmachus were discovered in a palimpsest of the Vatican library, which are printed in an appendix to 'Juris Civilis Antejustiniani Reliquiæ ineditæ,' &c., cura A. Mai, Romæ, 8vo, 1823. These fragments were again increased by Peyron with some new ones from a MS. now at Turin. They are printed in his 'Annotationes ad Inventarium Bibliothecæ Bobbiensis,' p. 182, &c. The style of these orations is on the whole the same as that of the letters, and they are equally valuable as historical documents for the history of the empire during the time of Symmachus.

The first edition of the letters of Symmachus appeared at Strasburg in 4to, 1510. This edition however contains only 317 letters, whereas all the subsequent editions contain 965. A complete edition was published at Basel, 8vo, 1549. After this there followed three other important editions; one by Juretus, Paris, 1580, and a second edition, 4to, 1604, with notes; the second by Jac. Lectius, Geneva, 1587, and reprinted, 8vo, 1599; it contains the notes of Juretus with some by Lectius. The third and best edition is that by C. Sciooppius, Moguntiae, 4to, 1608. Other editions are that of Philip Pareus, Neapoli Nemetum, 1617 and 1628; reprinted at Frankfurt, 8vo, 1642, and that of Leyden, in 12mo, 1653.

(*Symmachi Vita*, by J. Gothofredus, in the edition of Pareus; Heyne, *Opusc. Acad.* vi., p. 15, &c.; J. Gurlitt, *Susana in Symmachum*, Hamburg, 4to, 1818; Fabricius, *Biblioth. Lat.* iii., p. 204, &c.; A. Mai, in the introduction to his edition of the Orationes of Symmachus.)

Besides the three persons of the name of Symmachus mentioned above, there are several others of the same name who lived about or after the time of the one whose name is at the head of this article. L. Aurelius Symmachus was consul in A.D. 330, together with Gallicanus: another of precisely the same name was consul with Aetius, in A.D. 446. Q. Aurelius Memmius Symmachus, perhaps a grandson of the letter-writer and orator Symmachus, was consul in A.D. 485, and was the father of Rusticiana, the second wife of Boethius. (Alicimus Avitus, 'Epist.' 31; Ennodius, vii. 25.) His grandson Q. Aurelius Anicius Symmachus was consul with Boethius, the son of the great Boethius, in A.D. 522.

Besides these there are several Latin writers of the name of Symmachus, of whom however nothing is known: 1. Symmachus, the author of an historical work consisting of several books. Jornandes, in his work 'De Rebus Geticis' (c. 15, &c.), quotes a long extract from the fifth book, which relates to the history of the emperor Maximinus. 2. Several poets of the name of Symmachus: one is simply called Symmachus, another Q. Aurelius Symmachus, and a third L. Aurelius Avianus Symmachus. Several epigrams of these poets are still extant.

(Burmann, *Anthol. Lat.*, ii. 143; H. Meyer, *Antholog. Veter. Latin. Epigrammatum et Poemat.*, i., p. 105, &c.)

SYMMACHUS, a native of Sardinia, and a deacon, was elected bishop of Rome, by part of the clergy, A.D. 493, after the death of Anastasius II., whilst another part of the clergy, supported by several senators, elected a priest called Laurentius. The matter was referred to Theodoric, king of Italy, who decided in favour of Symmachus. The schism however continued for several years, and in the year 500 the partisans of Laurentius rose in arms, and a great tumult took place at Rome, in which much blood was shed, and the virgins consecrated to God were violated. At last Theodoric came to Rome, and convoked a council, 502, known in church history by the name of 'Concilium Palmarum,' in which Symmachus cleared himself of several charges of licentiousness and rapacity, and was confirmed in his see.

Symmachus is said to have condemned the Manichæans, and burnt their books at Rome. He wrote an apologetic treatise, in which he repelled several insinuations against his doctrines, which were put forth by Anastasius I., emperor of the East, and at the same time censured that emperor for the part he had taken in favour of Acacius, the late patriarch of Constantinople, who had opposed the decrees of the council of Chalcedon. Trasmund, king of the Vandals, in Africa, having exiled to Sardinia several African bishops, Symmachus sent them assistance from Rome. Symmachus also repaired and embellished many churches at Rome, founded hospitals, and ransomed many slaves. He died in 514, and was succeeded by Hormisdas.

SYMMONS, REAR-ADMIRAL SIR WILLIAM, C.B., F.R.S., Surveyor of the Navy, was born on the 24th of September 1782, entered the navy at an early age, and during the early part of his career was much engaged in active service on the coasts of France and Spain, and in the West Indies. But his reputation chiefly rests upon his skill as a naval architect. Notwithstanding the innovation in established usage which had been made by the genius and vigour of Seppings [SEPPINGS, SIR ROBERT] destroying the force of those prescriptive restraints which had so long trammelled the older shipwrights, enterprise in naval architecture was still checked by the custom of building ships of certain dimensions, which had been officially established, a restriction with respect to tonnage was always imposed on constructors. It remained for Commander Symonds to procure the removal of this restriction. He was first allowed, but under, it is said, a very unusual and restrictive penalty, to construct a corvette, the *Columbine*. To her he was appointed, December 4, 1826, and so great was the success which attended him in the experimental cruises he made during the next twelve months, that he was advanced, as a reward, to post-rank, by a commission bearing date December 5, 1827. In these cruises the sailing qualities of Captain Symonds's ship were compared with those of other ships constructed respectively by Sir Robert Seppings, the School of Naval Architecture, and Captain Hayes. And although no fact directly conducive to improvement in naval architecture was established by these and subsequent trials, it was found that great superiority in cruising was exhibited by the *Columbine*, and the zeal and devotion of Captain Symonds were further rewarded. At the beginning of 1831, by the munificence of the late (fourth) Duke of Portland, he was enabled to build, as an improvement upon the *Columbine*, the 10-gun brig *Pantaloon*, the triumph of which vessel led to the construction, under his superintendence, of the *Vernon* 50, *Vestal* 26, *Snake* 16, and other ships. Improved velocity and greater stability, obtained by great breadth of beam, and diminution of breadth immediately below the water-line, were the characteristics of these new vessels. The restriction arising from the prescribed limit of tonnage was first broken through in the case of the *Vernon*, which Captain Symonds was allowed to construct free from that impediment. And, even whilst she was upon the stocks, she was considered to present such excellent qualities, that it was deemed Captain Symonds had already given sufficient proof of his skill in naval architecture to be entitled to the highest post and responsibility in that profession. In 1832 on the 9th of June, he was offered, and accepted, the office of Surveyor of the Navy, in succession to Sir Robert Seppings. This appointment was associated with the entire removal of restriction as to the amount of tonnage in ships of the navy. Captain Symonds therefore had liberty for the exercise of judgment and talent in designing ships, which had not been granted to the commissioners or surveyors of the navy before; so that he might at once build ships on the best conditions of excellence that both science and practice had yet indicated. This freedom from conditions in determining the dimensions of ships, was taken ample advantage of by him; having a great principle to bring out in practice, he applied it with a decision, which, in a short time, altered the general character of no inconsiderable part of our navy. He had the merit of having boldly taken the lead in a path which future constructors, intending to carry on improvements in our ships, may pursue with the highest advantage. Considerable difference of opinion exists as to the value of the totality of qualities possessed by Captain Symonds's ships; but it was remarked in 1849, two years after he had retired from office, that of the 180 vessels of different kinds, built during the period of sixteen years, for which he was surveyor of the navy, and all upon the same principles of construction, as already noticed, and as originally adopted in the *Pantaloon*, none had foundered.

Captain Symonds received the honour of knighthood in 1836. He had received the thanks of the Admiralty in 1830 for a memoir containing 'Sailing Directions for the Adriatic Sea;' and again, in 1837, for "the valuable qualities of his several ships, and for improvements introduced by him into the navy," he was elected a Fellow of the Royal Society on June 4th, 1835, and nominated a C.B. of the Civil division in 1848. In 1854 he became a Rear-Admiral on the retired list. He died, March 30, 1856, on his voyage from Malta to Marseille.

(O'Byrne, *Naval Biographical Dictionary*; Fincham, *History of Naval Architecture*, &c.)

SYNCELLUS, GEORGE (Γεώργιος Σύνκελλος), was a monk and abbot at the end of the 8th and the beginning of the 9th century after Christ. His surname was given him from his being the 'Syncellus' of Tarasius, patriarch of Constantinople, who died in A.D. 806. George Syncellus died about the year 800.

His 'Chronography' (Ἐκλογὴ χρονογραφίας) is a history of the world, arranged in chronological order, from the Creation to the reign of Diocletian. The intention of the writer was to include the whole period down to A.D. 800. It is little more than a copy of the 'Chronicon' of Eusebius. It was published from a manuscript in the royal library at Paris, which was obtained at Corinth in 1507 by Jac. Goar, in a folio volume, containing the Greek text, a Latin version, and notes, together with the 'Breviarium' of Nicephorus, Paris, 1652, reprinted at Venice in 1729. It is also contained in the Bonn collection of the Byzantine writers, in which it forms, with 'Nicephorus,' two volumes,

edited by W. Dindorf, from two important manuscripts at Paris, in 1829. The 'Chronography' of Syncellus was continued by Theophanes from A.D. 885 to 813. Among the manuscripts of the Royal Library at Paris are fragments of other historical works ascribed to Syncellus.

(Fabricius, *Biblioth. Græc.*, vii., p. 457, ed. Harles; Schöll, *Geschichte der Griech. Lit.*, iii., p. 253.)

SYNE'SIUS (Συνέσιος), a Christian philosopher of the school of the New Platonists, was born at Cyrene in Africa, of a high family, in the year 378. He studied mathematics and philosophy at Alexandria under Hypatia, and at the same time gave attention to poetry and eloquence. When only in his nineteenth year he was sent by his fellow-citizens at the head of an embassy to Constantinople, to present a golden crown to the Emperor Arcadius, to whom he addressed a very suitable oration, which is still extant. At this period he was a heathen, but he was soon after converted to Christianity and baptised by Theophilus, bishop of Alexandria. He still however retained his fondness for the new Platonic philosophy; and partly for this reason, partly from unwillingness to be separated from his wife, he long resisted the desire of Theophilus to consecrate him to a bishopric. At last he yielded, and became bishop of Ptolemais in the year 410. The time of his death is not known, but it was probably before 431, since in this year his brother Eupotius appeared at the council of Ephesus, as his successor in the bishopric of Ptolemais.

Synesius was one of the most remarkable men of his age, though certainly more eminent as a philosopher than as a Christian. His writings are in a pleasing style, sometimes rising to eloquence. With a peculiarly clear statement of the most abstract philosophical opinions, he mingled interesting illustrations from the early historians, fabulists, and poets.

The following are his chief works: 1, The Oration to Arcadius, mentioned above, *Περὶ βασιλείας* ('On Royalty'). 2, *Δίον, ἢ περὶ τῆς καθ' αὐτὸν διαγωγῆς* ('Dion, or on Self-Discipline'). 3, *Φαλκίπρας ἐγκώμιον* ('The Praise of Baldness'), a witty imitation of Dion Chrysostom's 'Praise of Hair.' 4, *Αἰγύπτιος, ἢ περὶ προνοίας* ('An Egyptian Fable, or, on Forethought'), an application of the fable of Osiris and Typhon to the then state of the Roman empire. 5, *Περὶ ὀνείρων* ('On Dreams'). 6, *Πρὸς Παύλιον ἐπὶ τοῦ δάρον λόγος* ('A Discourse to Pæonius concerning a Present'). The present was an astrolabe, and the discourse recommended the study of astronomy. 7, One hundred and fifty-five letters. Some of these letters are free and interesting epistles to his friends; and others, on matters of business, contain much information of great value to the church historian. 8, Ten hymns, formed of a most singular mixture of Christian truths, poetic images, and New Platonic dreams. 9, Four epigrams in the 'Greek Anthology' are ascribed to Synesius.

A complete edition of the works of Synesius, in Greek and Latin, was published by Petau, folio, Paris, 1612, reprinted in 1631, 1633, and 1640. There are several later editions of portions of his works.

(Fabricius, *Bibl. Græc.*, viii., p. 221, old edition; ix., p. 193, Harles; Schöll, *Geschichte der Griech. Lit.*, iii., p. 365.)

There was another philosopher of the same name, of whom nothing more is known than that he was the author of a commentary on Democritus, which is printed in Fabricius, 'Bibliotheca Græca,' vol. viii., p. 233, old edition. (Schöll, iii., p. 445.)

SYNE'SIUS (Συνέσιος), a Greek medical writer, of whom nothing is known except that a treatise on fever goes under his name: his date also is uncertain. Sprengel places him in the reign of the Emperor Manuel (A.D. 1143-80), apparently because he supposed the 'Zîdu l-Mosâfer,' or 'Viaticum Peregrinantis,' of Abû Jafer Ahmed Ben Ibrahim Ben Abû Châlid Ibnu l-Jezzar to have been written at the end of the 11th century after Christ. As however Ibnu l-Jezzar died about A.D. 1004 (A.H. 395), (Wüstenfeld, 'Gesch. der Arab. Aerzte,' Götting, 1840), Synesius, who translated his work into Greek, under the title 'Ἐφόδια τοῦ Ἀποδημούντος,' may have lived much earlier than Sprengel places him; and this is the more probable if it be true that his translation was of service to Constantinus Afer, who died about A.D. 1087 (Choulant, 'Handb. der Bücherk. für die Ältere Medicin,' Leipzig, 1841), in composing his 'Viaticum Peregrinantium;' if indeed, as from the close resemblance of their works seems not improbable, Synesius and Constantinus Afer are not the same person. The treatise ascribed to Synesius is part of his translation of Ibnu l-Jezzar's work, the whole of which, in seven books, is said to be still in existence in manuscript in the Royal Library at Paris. Reiske compared it with the original Arabic, and found it a very exact translation, with some few exceptions, as, for instance, in page 136, where Synesius has made some additions to the Arabic text. In two passages we find the Arabic word added to his translation in Greek characters, namely, in page 76, *ἐντεχε*, 'an-nat'ho, sweat;' and in page 120, *ἐλμουθελλεθ*, 'al-muthelleth, a tertian fever.' Sprengel remarks ('Hist. de la Méd.') that his theory of fever is taken entirely from Galen; and that the symptoms of a fever produced by continual grief are well described (p. 30); he approves also of his moral treatment of febrile affections (p. 53). The means of cure mentioned by Synesius are in conformity with the habits and natural productions of Arabia. He constantly recommends water, sugar, and oil of roses; his purgative medicines are prunes, myrobalans, and cassia; he also exhibits camphor internally (p. 240). The most curious part of the work is the description of the small-pox, which he calls *φλυκταίνουσα λοιμική*, and which he distinguishes from the measles,

or *ἐτέρα λεπτή καὶ πυκνὴ λοιμική*. Synesius is the first Greek author who notices these two diseases; but all the details that he mentions concerning them are taken from the treatise by Rhazes on the same subject. [RHAZES.] The work was edited by J. St. Bernard, Amstel. and Ludg. Bat., 8vo, 1749, with the title, 'Synesius De Febribus, quem nunc primum ex Codice MS. Biblioth. Ludg. Batav. edidit, vertit, notisque illustravit J. St. B.; accedit Viatiki, Constantino Africano Interprete, libri vii. pars.' The first six chapters are inserted in the Venice collection of writers, 'De Febribus,' folio, 1576; the last two are in the first volume of the 'Opera' of Constantinus Afer, folio, Basil, 1536.

SY'NTIPAS, a Persian philosopher, to whom is attributed a collection of stories, of which we possess only a Greek version, bearing the name of Michael Andreplus. It is hardly necessary to remark that the Eastern collections of moral stories are usually so told as to grow one out of the other, in a manner, of which we have an instance in the 'Arabian Nights;' but a much better example in a work not so popularly known, the English translation of the fables commonly known as those of Pilpay. [PILPAY.] Indeed many of our best European fictions, as well single stories as whole collections, may be traced from Europe to Arabia, and from Arabia to India, and the Indian form of the story or collection almost invariably bears the marks of an earlier origin than any other form, and appears to be, if not the original form, at least the oldest surviving one. This fact, interesting in itself, becomes doubly so when taken in connection with the philological discoveries of the latest period of etymological research; discoveries which have placed the language of India in much the same relation to the oldest known form of the German, as we have supposed the fictitious literature of India to hold to that of Europe. Many of the stories of Syntipas are found almost verbatim in an Arabic manuscript of the 'Arabian Nights,' in the British Museum, but the whole style of the stories points evidently to an Indian origin.

Syntipas is the name of a philosopher to whom is committed the education of a certain Persian prince, the son of a king Cyrus. By his judicious management he teaches the boy more in six months than he had learnt from his other masters in as many years; but at the time when the king wishes in person to prove the acquirements of his son, the preceptor discovers by his skill in astrology that a great danger hangs over his pupil, which can only be averted by the silence of the latter during seven days. The king and his courtiers are naturally "much perplexed" by this unlooked-for event, and many ingenious guesses are wasted as to the cause; at last one of the king's women undertakes to bring her step-son to speech. After trying many blandishments, she confesses to him in plain words a passion which she has conceived for him, proposing to him to poison his father, and to take her to his arms and his throne. Horror at this treason extorts from the young man that speech which it had been prophesied was to be so dangerous, and the queen, following the example of every heroine of a similar story, accuses the prince of attempted violence. The king wishes to put his son to death, but is dissuaded by one of the instructors of the prince, who tells one of the most elegant stories in the series, on the evil of hasty judgments. A certain king, says the sage, attempted to seduce the wife of one of his attendants, but was repulsed by her virtue, and desisted from his design, leaving however his ring on a couch. The husband finding this token of his wife's infidelity as he imagines, separates himself from her, but assigns no reason for this till his wife's brothers complain of his conduct to the king, making their accusation under the parable of a man to whom they had let a field, and who had suffered it to lie waste. Following up the metaphor, the husband assigns as the reason of his conduct, that he has seen the footprints of a lion in his ground. The king acknowledging this ingenious reproof, confesses that the lion has indeed been there, but that he has in nowise injured the field, and that he will not return to it again.

The same counsellor tells the story of the parrot set by its master to watch his wife and report to him her conduct during his absence. The bird informs his master that his wife receives the visits of a lover; but on a subsequent evening the woman, by pouring water over his cage, and counterfeiting the noise of thunder, induces him to report to his master that a violent storm has hindered him from noting what has passed; and the master, knowing this story to be incorrect, imagines that the more important one previously told him was as little worthy of belief. This same tale is told with some amplification in the Tooti Nameh. The queen then tells an unimportant story of a father attempting to save his son from drowning, and being himself carried away by the current. The application she makes of this story is, that the king had need beware, lest in his compassionate willingness to spare his treacherous son, he should be himself betrayed to death. The second sage then tells a story, which, like others of the series, is found in the Pancha Tantra (the Indian original of the Fables of Pilpay), of a woman who, while in company with her lover's page, perceives his master approaching. The page is hidden, and whilst she is entertaining her lover, the husband comes in. Seeing him at a distance, she directs her lover to take a stick in his hand, and go away as if in anger; and she explains to her husband, that this man, their neighbour, had come to look for his page, who had taken refuge in her house, and had gone away angry, being unable to find him. In counteraction of this, the lady relates

the story of the young prince betrayed by his counsellor into the hands of the Ghoule, as told in the 'Arabian Nights.' The Ghoule is a Lamia in this version, and the young man cries to Christ instead of Mohammed. The third counsellor relates how two tribes were involved in war for a vessel of honey. He also tells how a certain woman, going to buy rice, was offered sugar with it, gratis, on condition of certain complaisances to the vendor. While she is within the house, the shop-boy empties the sugar from the bag and fills it with dust. When this is discovered by her husband, she pretends that, having dropped the money, she gathered up the dust, hoping to discover in it what she had lost. The husband helps to sift the dust, and so says the malicious narrator, "defiled his own beard." The queen hereupon relates how a prince on his way to his bride was decoyed by his father's vizir to drink of a fountain which changed him into a woman. A traveller whom he meets, hearing his miserable story, consents to exchange sexes with him, on condition of a restoration within a certain time. At the time fixed however, the transformed woman informs the prince she is pregnant, and he, pleading the injustice of taking upon himself this additional burden, refuses to complete his agreement. The fourth philosopher then tells a story of a bathkeeper giving up his wife to a young prince, in the false hope of obtaining profit without dishonour. The same sage tells another story, of a man leaving his wife, each taking to the other an oath of perfect fidelity during their separation. Towards the end of this term, a young man seeing the wife becomes enamoured of her, and seeks to be introduced to her through the intervention of an old woman in the neighbourhood. This latter persuades the wife to grant her employer a meeting, by a story of her daughter having been turned into a black bitch for her cruelty to a lover. The old woman going out to seek her employer is unable to find him, but brings with her the first man she meets, who proves to be the absent husband. The point of the story is in the readiness with which the wife vindicates herself, and puts her husband in the position of the injuring party, by representing the whole occurrence as a trap laid to try his fidelity. The queen tells a foolish story of a wild boar, who, looking up in vain for the figs which he expected an ape to throw down to him, burst the arteries of his neck and was killed. The story of the fifth sage is that of the hound slaying the serpent in defence of his master's child, of which we have a current European version in the legend of 'Beth Gellert.' He tells also another story of an old woman who procures the expulsion of a wife from her husband's house by laying a man's cloak, known to the husband, under his couch; and afterwards contrives to restore the wife by professing to have left the cloak there by forgetfulness. The queen then tells the story of a thief coming into an inn by night to steal the travellers' mules, and finding there a lion which had come for the same purpose, and which he mistook for a mule and mounted. The lion, taking this man for the "guardian dæmon of the night," is terrified, and suffers him to keep his place quietly till the morning, when the man escapes into a tree. A monkey meeting the lion, asks the cause of his terror, and assuring him that the supposed dæmon is a man, persuades him to return to the tree to kill him. The lion consents; but the thief contriving to kill the monkey in the tree, the lion, still more terrified than before, takes a precipitate flight.

The two doves is a story told by the same sage, as a warning against hasty judgments. They had gathered a provision of corn for the winter, which being wet shrank in drying. The male dove, seeing this, accused his mate of having clandestinely robbed the store, and on her denial of this charge killed her. When the rains came, and the grain swelled to its original size, he discovered his error, and too late repented of it. This is one of the fables of the Kalilah wa Dimna, or Arabic version of the Pancha Tantra, but is not found in the Hitopadesa, the later Indian version. The story of the woman into whose basket had been introduced a honey-cake elephant is much of the same stamp as that of the woman buying rice (already quoted), but is hardly decent enough for quotation. The same judgment may be passed on the man with three wishes—a satire on the vanity of human desires which has been repeated in a hundred different forms. The next story is also one of those malicious yet favourite jests of which every nation has a copy. A certain scholar has occupied himself, like the husband of the Wife of Bath, in collecting the wiles of women; of the folly of which attempt the wife of his host convinces him by a story and a practical exemplification.

At this point the prince, whose days of trial are accomplished, breaks silence, and explains the perfidy of his stepmother. This, though the end of his danger, is not the end of the story. A question arises, who of all the parties concerned would have been in fault if the prince had been put to death. The blame is successively cast upon every one of the actors in the story, when the prince, premising that his knowledge, compared with that of the sage, is "but as a fly to an elephant," begs permission to relate an apologue. A certain man made a feast, where among other viands there was milk for the guests' drinking. Now as the maid-servant had brought this from the market on her head, a bird with a serpent in its claws had flown over it, and the serpent in its agony disgorged its poison into the vessel. The guests all drank and died, and the question is raised, who was blameable? The prince gives it as his opinion that blame rests upon no one agent concerned, but that the death of the guests was the result of destiny, and applies the same judgment to the hypo-

thetical case of his own condemnation and execution. There are then told three stories: two of the wit of children, and one of the simplicity of an old man. The first of these is of a child who by his extravagant and petulant hunger laid a train for reproving his mother's lover; the second the well-known story of the three men who put their money into the hands of a woman, charging her to return it to the three only. One of these contrives to obtain possession of the money by fraud; and when the other two claim from her their deposit, by the advice of a child she holds them to the words of their bargain, that she was not to deliver up the money except to three; she cannot therefore give it, till the third, the thief, shall appear. The third story is of a merchant selling aromatic woods, who unhappily enters a certain city where the inhabitants all pique themselves upon their knavery. One of these, lighting a fire of aromatic woods, persuades the merchant that they are in that city so cheap as to be commonly used for fuel, and induces him to part with his whole stock at a low rate, for a small coffer full—he does not say of what. A little after this notable bargain, our merchant chances upon a company of these knaves, and is challenged by one of them to a trial of wit, the loser to be subject to the command of the elder. The merchant is beaten, as may be supposed, and is enjoined by the victor to drink up the waters of the sea—an old quibble. Putting off the execution of this arduous duty till the morrow, he is assailed by another knave, a one-eyed worthy, who insists that the merchant, grey-eyed like himself, has stolen his missing optic, and drags him before the judge. On his way he is met by his hostess, who engages for his re-appearance and takes him home. After a feminine lecture to him for slighting her advice, for she had warned him of the character of her fellow-townsmen, she informs him that an old man holds a sort of school of knavery, whither the townspeople resort to receive his judgment upon their day's proceedings; and she advised him to be present there in disguise. Acting upon this suggestion, he hears his three friends severally recount their adventures, and the archmime blames each of them in turn: the first, because he might be required by the merchant to fill the stipulated measure with fleas, half male and half female, part blue-eyed and part dark; the second, because the merchant might if he pleased refuse to drink up the sea unless the rivers kept from flowing into it; and the third, because he has left himself open to an embarrassing demand from the merchant, in case the latter should think of requiring that the eyes of each party should be taken out and weighed, to determine the ownership of the disputed one. Acting upon these hints, the merchant obtains the full value for his merchandise, and makes besides his own terms with his tormentors.

The punishment of the queen is then debated on, one proposing that her hands and feet should be cut off, another that her tongue be cut out, another that her heart be torn from her body. The unhappy woman pleads for herself by the story of a fox which was shut up by accident in a walled city, and, finding no egress, lay counterfeiting death at the closed gate of the city. One passer by dilates on the great virtues of a fox's tail for "sponging mules;" another lauds the virtues of its ears for stopping the crying of a fretful child; a third declared that the teeth of a fox are "the sovereign thing on earth" for a fit of the tooth-ache; and each appropriates to himself the particular part he has eulogised. All this, says our heroine, the fox bore manfully; but when a fourth sage declared that a fox's heart was a remedy for all evils, and took out his knife to possess himself of this panacea, the patient took heart of grace; and, leaping up, escaped safely by the gate, which had by this time been opened. The queen's moral from all this is, that she would bear patiently either of the proposed minor punishments; but that the tearing out of her heart was a "death of all deaths most bitter." Her step-son pleads for mercy, on the ground of the weakness of the sex; and her punishment is commuted to shaving her head, branding her on the forehead, and parading her on an ass's back out of the city. A story to show the uselessness of resisting the decrees of Providence, like a thousand and one stories of the same kind, some of which our readers will remember as given in the 'Arabian Nights,' is the last in the book, and this is closed by a description of the prince's education, and of his examination by his father.

The Greek text of Syntipas was edited from two Paris manuscripts by Boissonade: 'Zuripras. De Syntipa et Cyri filio Andreopuli narratio,' Paris, 8vo, 1828. A translation of Syntipas into modern Greek appeared at Venice in 1805. Another work attributed to Syntipas was also translated into Greek from the Syriac by Andreopulus. It is a collection of sixty-two fables, entitled 'Παραδειγματικοὶ Λόγοι,' and was edited by Matthias, Leipzig, 8vo, 1781.

SYRIA'NUS, a Greek philosopher, born at Alexandria or at Gaza, was the leader of the school of New Platonists at Athens, next after its founder Plutarch, the son of Nestorius. He died in the year A.D. 450. His works, the greater number of which are lost, are enumerated by Suidas. They are—1, 'A Commentary on Homer,' in seven books; 2, 'On the Republic of Plato;' 3, 'On the Theology of Orpheus;' 4, 'On the Gods of Homer;' 5, 'On the Harmony of Orpheus, Pythagoras, and Plato;' 6, 'Ten Books on the Oracles.' The two following works are extant—7, 'A Commentary on some parts of Aristotle's Metaphysics;' and 8, 'A Commentary on the Rhetoric of Hermogenes.'

The Greek text of the Commentary on Aristotle was edited by Leonh. Spengel, in his *Συναγωγή Τεχνών*, 8vo, 1828. Bagolini found a Latin translation of a portion of the work in a manuscript, and published it at Venice, 4to, 1553. The Commentaries on Hermogenes are contained in the second volume of the Aldine edition of the Greek orators, in 2 vols., folio, 1508-1509, and in the 'Rhetores' of Walz, vol. iv., 1833.

He was also the author of two epigrams, one of which is printed without a name in the Palatine Anthology, ii. p. 122; or in the edition of Jacobs, iv., p. 233; the other is preserved by the Armenian philosopher, David, and printed by Schöll. 'Geschichte der Griech.-Lit.,' vol. iii.

SYROPULUS, or SGUROPULUS, SILVESTER, a dignitary of the Greek Church, wrote a history of the Council of Florence, which was convened in 1438 by Pope Eugene IV., at Ferrara, and in 1439 removed to Florence. The principal business of the council was to settle the differences between the Greek and Latin Churches. Syropulus, who was present at the council, writes in a spirit of opposition to the attempted union of the churches, and his work must therefore be considered an ex-parte statement.

This work was published, with a Latin translation and notes by Robert Creighton, an Englishman, at the Hague, folio, 1660. Its publication called forth a work on the opposite side by Leo Allatius [ALLATIUS], entitled 'Exercitationes in Creightoni Apparatum, Versionem, et Notas, ad Historiam Concilii Florentini scriptam à Sguropulo, 4to, Rome, 1674.

SYRUS, PUBLIUS. [PUBLIUS SYRUS.]

\*SZECHENYI, STEPHAN, COUNT VON, was born at Vienna on September 21, 1792, of an old Hungarian family, by whom the dignity of count had been held for more than a century, and who possessed great wealth and influence. In the early part of his life he served in the Austrian army with distinction through the war of liberation, and when that was ended, he travelled through a great part of Europe to acquire a knowledge of its social and political conditions. His father, who died in 1820, had been a liberal benefactor to the Hungarian National Museum, bestowing on it his valuable library and unique collection of Hungarian coins. The young count followed his father's example by giving much time and attention to the real improvement of his country. A few years after his father's death he quitted the military service, in order to devote himself more specially to the intellectual and industrial advancement of his fellow-countrymen. In this course his labours have been incessant, and in the highest degree beneficial. To forward the maintenance of an Hungarian nationality he gave 60,000 florins (5000*l.*) to the Hungarian Academy, an institution which has become very important. In 1826 he formed a society for the improvement of the breeding of horses, and to promote this end, in 1830, he wrote 'Ueber Pferde, Pferdezucht, und Pferderennen' (On Horses, Horse-breeding, and Horseracing). In the same year he wrote a work 'Upon Credit,' which, together with his 'Licht, oder auffallende Bruchstücke und Berichtigung einiger Irrthümer und Vorurtheile' (Light; or striking fragments and rectifications of various errors and prejudices), gave a remarkable impulse to the national movement in favour of reformation. In 1832 he took an influential part in the establishment of a central Hungarian theatre at Pesth, and a superior school for teaching music. At the same period he took a deep interest in the construction of a fixed bridge (there had previously been only a floating one, of course frequently unavailable) between Pesth and Ofen. For this purpose he repaired to England in order to become acquainted with the necessary information and details, the results of which he published in 1833, 'Vorschläge zur Verbesserung' (Proposals for Improvement), and by his advice and influence the magnificent suspension bridge was constructed by W. Tierney Clarke. As early as 1826 two Englishmen, named Andrews and Pritchard, obtained the privilege of running steam-boats on the Danube, but though they received some enlightened support, the project would have failed had not Count Szechenyi taken it up. The great obstacle was the impediments offered by rocks in the river, particularly at the Iron Gates. As royal commissioner he made repeated journeys to England for information and assistance as to his hydraulic measures for removing these impediments, and in November 1834 the first steam vessel was enabled to pass safely through the dangerous passage, thus uniting Germany with the Black Sea, a transit now in constant use, though capable of almost indefinite extension. Count Szechenyi also assisted in forming the Austrian Steam-boat Company, to which the Austrian government has given the exclusive privilege of navigating the Danube and all other Austrian rivers for twenty-five years, a privilege that is now likely to act injuriously if not to give rise to disputes with other powers having access to the Danube from their own territories. In furtherance of this project he wrote in 1836 a work 'Ueber die Donauschiffahrt' (On the Navigation of the Danube). Every other project for the advancement of the industry or for the benefit of his country, found in him an ardent supporter. For a considerable time he was looked upon as the leader of the reform party in Hungary, but he limited his reforms to objects connected with the physical state only of his countrymen, and desired to introduce them through the influence and under the protection of the aristocracy. In this course he effected much, and was appointed minister of public works in Hun-

gary. But the reform party began very quickly to aim at ends far beyond Szechenyi's contemplation. The division became marked in 1840 when Kossuth assumed the leadership of the more zealous reformers. Against the proceedings of this new party, in 1841 he published 'Das Volk des Ostens,' writing also articles in the Hungarian journals (collected and published in 1847 as a Political Fragmentary Programme), and speaking against them in the county assembly of Pesth, with much bitterness, but with little effect. When Kossuth in 1847 was named deputy for Pesth to the Diet, Szechenyi, though possessing a seat in the upper chamber, procured himself to be elected a deputy for Wieselburg in order to confront him, but the eloquence of his opponent, supported as it was by the passions of the people, rendered his struggle as useless as it was short. In 1848 the revolution broke out; the effect upon him was so violent as to affect his mind, and in October of that year it was necessary to place him in a lunatic asylum at Döbling, where he has ever since continued.

SZE-MA-TSEEN, the name of a distinguished Chinese historian, as it is spelt according to Dr. Morrison's system of orthography for Chinese words, the spelling of Abel Rémusat being SHEMA TSHIAN, and of Klaproth SZÜMA-ZI'AN, representing the pronunciation according to the French and German systems of orthography. The words Sze-Ma, which signify 'Commander of Horse,' are a surname, one of the very limited number of surnames—four hundred and sixty-eight in all—which are made to supply the needs of a population now said to amount, according to the new census, to about four hundred and fifty millions. Sze-Ma-Tse'en was born about the year B.C. 145, in the reign of the Emperor Woo-Te, of the dynasty of Han, in honour of which the Chinese are still fond of calling themselves 'the sons of Han.'

The great event, called 'the Burning of the Books,' a memorable epoch in Chinese history, had taken place in the year 213, B.C., when the tyrant Che-Hwang-Te, of the dynasty of Tsin, had ordered the general destruction of all literary and historical memorials, and caused five hundred literary men to be buried alive. For a time even the works of Confucius seemed to have disappeared, and it was not till sixty years afterwards, that, under Wan-Te of the dynasty of Han, an attempt was made to re-discover them. It then became known that an old man of the age of ninety, in a distant province, retained in his memory much of the text of the 'Shoo-King,' or 'Book-Classic,' one of the two historical compilations of Confucius, but he was too feeble to write. A scribe was sent off to take the words down from his mouth, but the old man pronounced so indistinctly that the scribe could not understand him. His daughter alone could comprehend what he said, and by her intervention at last about half of the 'Shoo-King' was put down in writing, and the rest was looked upon as irretrievably lost. Great was the rejoicing therefore when about thirteen years later, in the reign of Woo-Te, on pulling down an old wall, a number of volumes were found in it, which had doubtless been hidden there during the time of Che-Hwang-Te's proscription, and among them a complete copy of the Shoo-King. It was an old copy however, and written in such antiquated characters, that it would have been unintelligible except for the clue supplied by the chapters already on record from the memory of the old man of ninety, which were now found to be marvellously correct. By the aid of these the Shoo-King was restored as it now stands, when, if a new destruction of the books were to take place, it might be recovered from the memories of myriads. Encouraged by the recovery of so many lost treasures, the Emperor named a commission to endeavour to form a collected series of annals of China, and as president of it appointed Sze-Ma-Tan, the father of Sze-Ma-Tse'en and himself descended from a family of historians. Sze-Ma-Tse'en, who was then of the age of five, thus grew up in an atmosphere of learning and literature; at the age of ten he was himself able to read the 'Shoo-King,' and he became a close student of its contents. His attention was particularly attracted by the account given in it of the vast works of draining and canal-making executed by the Emperor Yu; and when he was of the age of twenty, he took a journey to those parts of China where their remains existed, for the purpose of comparing their actual state with the account given in the narrative. Not long after, he was summoned from a military expedition to the death-bed of his father, who, in a speech which is given in Sze-Ma-Tse'en's autobiography, exhorted him to continue the labours of historical research in which he was himself interrupted by death, reminded him that their ancestors from the time of the third dynasty had constantly distinguished themselves in the study of history, and said that the proudest triumph of a son was to reflect back on his parents the glory of a celebrated name. Sze-Ma-Tse'en occupied himself, during the three years of mourning for his father, in putting in order the notes he had made of his travels to visit the canals of Yu; and making other preparations for his literary labours, and was appointed in due time the president of the commission.

In China an historiographer was in those times expected to discharge some of the duties which in modern Europe devolve on a popular journalist,—to give utterance to his opinions on public men and public measures. In doing so Sze-Ma-Tse'en was singularly unfortunate. In the year B.C. 99 he made himself conspicuous by defending against the emperor the General Le-Ling, who having been defeated by the Heung-Neu or Huns, had passed over to their side, intending, Sze-Ma-Tse'en maintained, to become in turn treacherous to them. Woo-Te had the injustice to condemn Sze-Ma-Tse'en to death, and thought he

was giving an instance of clemency in reducing the punishment to a cruel mutilation and perpetual exile. The subsequent career of Le-Ling rather justified the emperor's opinion than the historian's, but Woo-Te saw his error with regard to Sze-Ma-Ts'een and recalled him to favour, repenting of his severity. The precise date of his death is not known, but he died at court in the enjoyment of high literary honours.

It was during his exile that Sze-Ma-Ts'een composed his great historical work for which his previous life had been passed in collecting materials. It was first published after his death by his grandson, under the title of 'Sze Ke,' which may be rendered with sufficient accuracy by 'Historical Records.' The work embraces the annals of China from Hwang-Te about 2697 years B.C. to the reign of Woo-Te in which the author flourished, and is arranged on a peculiar plan, first introduced by Sze-Ma-Ts'een, but since practised by all the official historiographers of China whose works now form a series, known under the name of 'The Twenty-Four Histories.' It has been observed by Schott of Berlin that these works are less a series of histories in the European sense than of encyclopedias of successive generations comprising all that is considered noteworthy in the periods to which they relate. Their divisions in fact bear no slight analogy to those of Henry's 'History of Great Britain,' or the 'Pictorial History of England.' The first division which bears a title corresponding to that of History Proper is occupied with the actions of the emperors and the principal events of the court in chronological order. The second, called 'Tables,' is an enumeration, also chronological, of official promotions and similar occurrences. The third division, entitled 'The Eight Books,' branches into eight subdivisions,—on Rites and Ceremonies, Music, Legislation, Chronology, Astronomy, Sacrifices, Public Works and Buildings especially Canals, and Weights and Measures. The pedigrees of reigning families, and those of their ministers and generals are given in the fourth division, and in the fifth biographies of eminent men of all kinds, statesmen, heroes, philosophers, poets, inventors, men of learning, and men remarkable for any peculiar faculty or circumstance. It is here that Sze-Ma-Ts'een introduces some biographical particulars of his father and himself from which Rémusat has taken some of the information in the 'Biographie Universelle,' which has been transferred to this article. It is in this division also that Sze-Ma-Ts'een inserts, not very logically, some notices of countries foreign to China, which have been found by foreigners by no means the least interesting portion of his work. The 'Sze-Ke' is regarded with so much veneration that the number of Chinese words or characters in it has been counted and found to amount to 526,500 which, as the number of characters in an ordinary octavo page is about 234, would fill 2250 such pages. The translation of the matter in a page of Chinese will generally fill a page of English. The merits of the 'Sze-Ke' are high. The praises of native critics might be viewed with some distrust, but Rémusat bears testimony to the "multitude of facts which it contains, the neat and lively manner in which they are related, the constant simplicity and unbroken dignity of the style." Sze-Ma-Ts'een has been called by some writers the Chinese Herodotus, and he bears in China itself the name of 'the Restorer of Historical Literature.'

SZE-MA-KWANG, a celebrated Chinese historian of the 11th century of our era, bears the same family name Sze-Ma, as his great predecessor Sze-Ma-Ts'een [SZE-MA-TS'EEEN] of twelve centuries before. Sze-Ma-Kwang was born about the year 1018, the second son of a minister of the Emperor Chin-Tsung, of the Sung dynasty. When a child, as he was playing with some other children near one of the large porcelain vases in which the Chinese, then as now, were in the habit of keeping gold fish, one of his companions fell into the vase and was in danger of drowning. The other children fled in terror; but he, with singular presence of mind, took up a large flint stone, broke the vase at bottom, and by letting out the water placed his little comrade at once in safety. The incident is still in fresh remembrance in China, often alluded to by poets, and often delineated on porcelain. When he had reached the age of seven, his father placed in his hands the history of the kingdom of Loo by Confucius, entitled 'Spring and Autumn,' which had as much effect on Sze-Ma-Kwang as the Shoo-King on Sze-Ma-Ts'een. From that time the boy was never seen without a book in his hands; he soon knew by heart the whole of the 'Five Classics,' of which 'Spring and Autumn' is one; and, at the age of nineteen, he took the highest rank at the great literary examinations. This early promotion opened to him a political career, and for some years his time appears to have been occupied with public affairs. As governor of a town on the western frontiers of the empire, he advised some measures against the Tangutans, which proved unsuccessful, and when the general who adopted them was about to be punished for his want of success, avowed the authorship of the plan, and solicited to be punished in his stead. The emperor, Jin-Tsung, pleased with his candour, named him to a more important government, and to the post of public censor and historiographer of the palace, and during his reign Sze-Ma-Kwang, though he often spoke with freedom, always continued in favour. Ying-Tsung, the succeeding emperor, took offence at a remonstrance addressed to him, and the censor was deprived of his offices. Several of his remonstrances, at this and a subsequent period, which are still in existence, are looked upon as models of their kind.

In private life Sze-Ma-Kwang occupied himself in conjunction with a friend, in drawing up a sort of abridgment of the history of his great ancestor Sze-Ma-Ts'een, which he presented to the emperor, who was so delighted with the work, that he at once recalled the author to court, and gave him orders to write a complete history on the same plan. The result was what may be called the standard history of China, the 'Tsze Che Tung K'een,' or Universal Mirror for Rulers. The history embraces a period of 1362 years, and in its composition it occupied nineteen, having been commenced in the year 1066, the date of the battle of Hastings, and finished in 1084. The reign of Ying-Tsung was short; he died in 1068, and was succeeded by Shin-Tsung, under whom Sze-Ma-Kwang occupied a distinguished political position. Wang-Gan-Che, the minister of this emperor, was an advocate of new ideas, while Sze-Ma-Kwang headed the conservative party. When in the year 1069, which was marked with earthquakes, droughts, and epidemic diseases, the censors, and Sze-Ma-Kwang among them, solicited the emperor to examine if there were not some abuses in the government and some errors in his own conduct which might have given rise to these calamities, Wang-Gan-Che opposed the spirit of their observations, and said that earthquakes were to be ascribed to natural causes and not to the actions of men, he was sternly rebuked by Sze-Ma-Kwang, who observed that sovereigns were indeed unfortunate to have about them men who, by removing from their consciences all idea of responsibility to Heaven, destroyed the only restraint that kept in check the possessors of absolute power. The emperor, though he still left Wang-Gan-Che at the head of his councils, showed high esteem for Sze-Ma-Kwang, whom he named President of the 'Han Lin Yuen,' or College of the Forest of Pencils, which remains in our own days the great literary institution of the Chinese empire. Finding however that his councils were unattended to, Sze-Ma-Kwang requested permission to retire into private life, which was finally granted. The public eye was still upon him. On the death of Shin-Tsung in 1086, the empress-regent of the young emperor Che-Tsung summoned him to the court, and named him prime minister. He began with satisfaction to uproot all the changes and reforms introduced by his opponent Wang-Gan-Che, but the fatigues consequent on an expedition which he made in person to conclude a peace with the prince of Tangut, ruined his health, and he died in 1086, at the age of sixty-eight, before he had enjoyed a twelve-month of authority. He was honoured with a magnificent funeral, but the party of Wang-Gan-Che having soon after made its way back to power, the young emperor was persuaded to reverse all the honours which had been rendered to his first minister; Sze-Ma-Kwang's tomb was ignominiously destroyed, and an inscription set up in its place, enumerating what were termed his crimes. His works were publicly burned, and at one time it seemed as if the history of China, of which the reputation has now lasted so many centuries, would disappear with its author. Another posthumous revolution however awaited his name. In 1129, the reigning emperor Kaou-Tsung decreed that his tablet should be placed in the Hall of Ancestors by the side of that of the Emperor Che-Tsung, who had decreed its dishonour. In 1287 his name was inscribed in the temple of Confucius, with the honorary title of 'Prince of Literature,' and in 1530 it received an additional literary canonisation, which it still continues to enjoy.

The great work of Sze-Ma-Kwang has been already mentioned, the 'Tsze Che Tung K'een,' which has been for nearly the last 800 years the most popular history of China. It is constructed on an entirely different plan from that of his celebrated ancestor Sze-Ma-Ts'een; the main body of it presenting a continuous stream of narrative, extending to 294 books, to which is appended a supplement of 30 books of chronological index and 30 of dissertations and discussions. About the middle of the 12th century of our era, Choo-He, one of the most eminent of Chinese authors, conceived the idea of inserting in the great history of Sze-Ma-Kwang a series of summaries, or short recapitulations, which met with such success that the two works have since been always reprinted together, under the title of 'Tung K'een Kang Muh,' which may be rendered, 'The Universal Mirror, Text, and Commentary.' It is this combination which, with numerous continuations, bringing the history up to the 18th century, was translated into French by Father Mailla, and published in 12 vols. 4to by Grosier and Le Roux des Hauterayes, Paris, 1777-83. It is the only great work of Chinese history which has yet appeared in a European language.

Sze-Ma-Kwang, when appointed to the presidency of the Han Lin Yuen, endeavoured to excuse himself on the ground of his want of poetic ability; but the emperor refused to admit the excuse; and in fact a piece of poetry of his composition, entitled 'The Garden of Sze-Ma-Kwang,' is one of the most popular in China, and contains much that is pleasing to a European taste. A translation of it appeared in 1777, in the series of 'Mémoires concernant les Chinois,' and is reprinted by M. Huc in his amusing work on 'The Chinese Empire,' which has attracted so much attention both in France and England. The garden described resembles those that on the Continent bear the name of English gardens, in which the imitation of nature constitutes one of the principal charms. "In the midst," says the description, "is a great hall, in which I have collected five thousand volumes. . . . When I am weary of writing and composing, in the midst of my books in the great hall, I throw myself in a boat, and row to seek the pleasures of my garden. Sometimes I land on the

fishing island, where, protected from the burning sun by my large straw hat, I amuse myself by enticing the fish that sport in the water: at other times, with my quiver on my shoulder and my bow in my hand, I climb to the top of the rocks; and there, spying out, like a traitor, the rabbits as they come forth, I pierce them with my arrow at the entrance of their burrows." . . . "Sometimes the last rays of

the sun surprise me while I contemplate in silence the tender inquietude of a swallow for its young; and the moon is risen before I quit my seat." The whole poem, with its pleasing enthusiasm for leaf and flowers, grottoes and cascades, is well worthy of perusal; and it is interesting to reflect that its author was a contemporary of William the Conqueror.

## T

**TABARI** is the surname of Abú Jaafar Mohammed Ibn Yezid Ibn Jerir, a celebrated Arabian historian, who was called At-tabari because he was a native of Amol, the capital of Tabaristán, where he was born in A.H. 224 (A.D. 839). Tabari was the author of many works on various subjects, such as a commentary on the Korán, which is greatly praised by Abu-l-fedá ('Ann. Mussl.,' iii.), and a treatise on Mohammedan law. But the work by which he is best known in Europe is his general history from the Creation to A.H. 302 (A.D. 314-15). This work was abridged and continued by George, son of Al-'amid, generally called Elmacin, who brought it down to the year 512 of the Hijra (A.D. 1118-19). That portion of the abridgment which begins at the death of the Mohammedan prophet was published in Arabic and Latin by Thomas Erpenius, and printed for the first time at Leyden, fol., 1625, together with the 'Historia Arabum,' by Rodericus Toletanus. Tabari's Chronicles were translated into Persian by Abú Ali Abdull-ghani, vizir of the Samanide prince Mansúr Ibn Núh. Soon after the death of Tabari the copies of his original work became so scarce that the Persian text was retranslated into Arabic; a translation of the Persian version into French by Mr. Dubeux was commenced under the auspices and at the expense of the Oriental Translation Fund, but only one part (4to, 1836) has been published. There is also a Latin translation by G. L. Kosegarten, 'Taberistanensis, sive Abu Dschaferi Mohammed ben Dscherir Ettaberi annales regum et legatorum Dei Arabice ed. in Latium transtulit,' 3 vols. 4to, Gryph., 1853. Tabari died at Bagdad, in A.H. 310 (A.D. 922). (Hamacker, 'Spec. MSS. Orient.,' *Bib. Lugd.-Bat.*, p. 24; D'Herbelot, *Bib. Or.*, sub. voc. 'Tabari.')

**TABERNÆMONTANUS**, JACO'BUS THEODO'RUS, a physician and botanist, was born at Berg-Zabern in Alsace, whence he takes his name. He first practised as an apothecary in his native place, and thence removed to Paris, where he graduated. On returning to his native country, he took up his residence and practised his profession at Worms. He was made physician to the elector-palatine John Casimir, and also to the bishop of Spire. He lived at a time when confidence in vegetable remedies in disease was carried to the greatest extent. He diligently studied this department of his profession, and the result of his labours was given to the world in the form of a large folio volume, under the title 'Neue Vollkommen Kräuterbuch,' or New Complete Herbal. He lived to see only the first part of this volume published, which was in 1588. Several editions of this work were afterwards published in Germany, to which the two last parts were added. The second edition was published at Frankfurt in 1613, by Caspar Bauhin, and contained descriptions of 5800 species of plants, of which 2480 were illustrated by wood engravings. The best and latest edition published is that of Hieronymus Bauhin, which appeared at Basel in 1731. This work appears to have been for a long time a standard botanical authority. The descriptions of the plants are minute, and an immense space is devoted to the consideration of their medical properties. Tabernæmontanus maintained the principle, which has many advocates at the present day, that Providence causes those plants to grow in a district which are beneficial for the diseases that arise in it. To such an extent did he carry his views on this point, that it is said that at the siege of Metz, in 1552, in which he was engaged as physician to the army, he applied nothing but mugwort to the wounds of the soldiers, because it grows plentifully in the neighbourhood. The cuts in the work are badly executed, and are mostly inferior copies from preceding works. This however did not prevent their being republished without the letter-press, by Nicolas Bass, the printer at Frankfurt, in 1590, under the title 'Icones Plantarum,' &c. In the latter part of his life Tabernæmontanus removed to Heidelberg, where he died in 1590. He also published two other works, the first on mineral waters, entitled 'Neue Wasserchatz,' in 1584, and which went through three editions; the second was published in 1586, and is entitled 'Regiment und Bericht wie man sich in Sterbenslaufen halten soll.'

**TACITUS**, CAIUS CORNELIUS, was probably born in the reign of Nero, but neither the place of his birth nor the exact date is known, nor is anything known of his parentage. There is no reason for supposing that he belonged to the illustrious patrician gens of the Corneli, nor any evidence of his having been born at Interamna, as it is sometimes stated. The few facts of his life are chiefly collected from his own works, and from the letters of his friend the younger Pliny. Tacitus was about the same age as Pliny, but the elder of the two. Pliny was born about A.D. 61 [PLINY THE YOUNGER], in the reign of Nero, which commenced A.D. 54.

A passage of the elder Pliny ('Hist. Nat.,' vii. 16) speaks of a son

of Cornelius Tacitus, the procurator of the emperor in Belgic Gaul. Lipsius concludes that this Cornelius Tacitus was the historian; but as Pliny died in 79, it seems hardly probable that the passage can apply to him. It has been conjectured that the procurator was the father of the historian. Tacitus states that he owed his first promotion to Vespasian, and that he was indebted for other favours to his successors Titus and Domitian. ('Hist.,' i. 1.) In the year 77, C. Julius Agricola, then consul, betrothed to him his daughter; and the marriage took place after the consulship of Agricola. Tacitus does not state what places he filled under Vespasian and Titus, but in the reign of Domitian he informs us that he assisted as one of the Quindecimviri at the celebration of the Ludi Seculares, which event took place in the fourteenth consulship of Domitian (A.D. 88). At that time he was also prætor. ('Ann.,' xi. 11.)

He was not at Rome when his father-in-law Agricola died there (A.D. 93), in the reign of Domitian; but it is too much to affirm, as some have done, that he was an exile during the time of Domitian. It has already been shown that he was at Rome in the year 88. A passage in his Life of Agricola (c. 45) rather leads to the inference that he was at Rome during many of the atrocities which Domitian perpetrated after the death of Agricola, though he had been absent from Rome for four years prior to Agricola's death. On the death of T. Verginius Rufus, in the reign of Nerva (A.D. 97), he was appointed Consul Suffectus; and Pliny enumerates it as the crowning event to the good fortune of Verginius, that his panegyric was pronounced by the consul Cornelius Tacitus, the most eloquent of speakers.

Tacitus is recorded by his friend Pliny as one of the most eloquent orators of his age. He had already attained some distinction as an advocate when Pliny was commencing his career. In the reign of Nerva, Pliny and Tacitus were appointed by the senate (A.D. 99) to conduct the prosecution of Marius Priscus, who had been proconsul of Africa, and was charged with various flagrant crimes. On this occasion Tacitus replied to Salvius Liberalis, who had spoken in defence of Priscus: his reply, says Pliny, was most eloquent, and marked by that dignity which characterised his style of speaking. (Pliny, 'Ep.,' ii. 11.)

The contemporaries of Tacitus were Quintilian, the two Plinys, Julius Florus, Maternus, M. Aper, and Vipsanius Messala. He was on terms of the greatest intimacy with the younger Pliny, in whose extant collection of letters there are eleven epistles from Pliny to Tacitus. In one of these letters (vi. 16) Pliny describes the circumstance of the death of his uncle, Pliny the elder, and the letter was purposely written to supply Tacitus with facts for his historical works.

It is not known when Tacitus died, nor whether he left any children. The Emperor Tacitus claimed the honour of being descended from him, but we have no means of judging of the accuracy of the emperor's pedigree; and Sidonius Apollinaris ('Ep.,' lib. iv., 'ad Polemium') mentions the historian Tacitus among the ancestors of Polemius, a præfect of Gaul in the 5th century of our era.

The extant works of Tacitus are, 'The Life of Agricola,' 'The Treatise on the Germans,' 'Histories,' 'Annals,' and the 'Dialogue on Orators, or the causes of the decline of eloquence.' None of his orations are preserved.

'The Life of Agricola' is one of the earliest works of Tacitus, and must have been written after the death of Domitian (A.D. 96). The Proemium, or Introduction to it, was written in the reign of Trajan, and the whole work probably belongs to the first or second year of that emperor's reign. As a specimen of biography it is much and justly admired. Like all the extant works of Tacitus, it is unnumbered with minute irrelevant matter: the life and portrait of Agricola are sketched in a bold and vigorous style, corresponding to the dignity of the subject. The biographer was the friend and son-in-law of Agricola, whom he loved and revered; but he impresses his reader with a profound conviction of the moral greatness of Agricola, his courage and his prudence, without ever becoming his panegyrist. 'The Life of Agricola' was not contained in the earliest editions of Tacitus.

The Histories, which were written before the 'Annals,' and after the death of Nerva, comprehended the period from the accession of Galba to the death of Domitian; to which it was the author's intention to add the reigns of Nerva and Trajan ('Hist.,' i. 1). There are only extant the first four books and a part of the fifth, and these comprehend little more than the events of one year, from which we may conclude that the whole work must have consisted of many

books. Unfortunately the fifth book contains only the commencement of the siege of Jerusalem by Titus.

The 'Annals' comprehended the history of Rome from the death of Augustus to the death of Nero, a period of two and fifty years, which ended with the extinction of the Julian House in Nero. A part of the fifth book of the 'Annals' is lost; the seventh, eighth, ninth, tenth, the beginning of the eleventh, and the end of the sixteenth and last book are also lost. These lost portions comprehended the whole reign of Caligula, the first years of Claudius, and the two last years of Nero's reign. It is said that the preservation of the historical works of Tacitus is due to the Emperor Tacitus (Vopiscus, 'Tacitus,' 10), who caused them to be transcribed ten times every year, and copies to be placed in the libraries. But the works of Tacitus, and more particularly the 'Annals,' were neglected during the decline of the empire, and few copies of them were preserved. The first five books of the 'Annals' were not found till the beginning of the 16th century, when they were discovered in the abbey of Corvey, in Westphalia, and published at Rome, in 1515, by Philip Beroaldus.

The 'Germany' of Tacitus has been the subject of some discussion as to its historical value. The author does not inform us whence he drew his materials for the description of the usages of these barbarians, many of whom could only be known by hearsay even to the Roman traders and adventurers on the frontiers of the empire. The work contains numerous minute and precise details, for which it must be assumed that the writer had at least the evidence of persons conversant with the German tribes on the frontiers; and there is nothing in the description of Tacitus which is substantially at variance with what we know of the early Germans from other sources. The soundest conclusion is that the picture of the Germans is in the main correct; otherwise we must assume it to be either a mere fiction, or a rhetorical essay founded on a few generally known facts: but neither of these assumptions will satisfy a careful reader.

The Dialogue on the causes of the decline of eloquence may have been written in the reign of Vespasian: it is at least probable that it is an early work of Tacitus. It has been sometimes doubted if it is by Tacitus, but the style is in favour of the common opinion, though it presents in many respects a marked contrast to the 'Annals,' the work of his mature years. Messala, one of the speakers, attributes the decline of oratory to the neglect of the arduous method of study adopted by the older orators, who learned their art by attaching themselves to some eminent speaker, and by experience in the actual business of life: in Messala's time the school of the rhetorician was the only place of discipline for the young. But Maternus, another speaker, indicates more truly the causes of the decline of eloquence, by a reference to the political condition of the Romans and the suppression of their energies under the Empire, as compared with the turbulent activity of the republican period.

The 'Annals' of Tacitus are the work of his riper age, on which his historical reputation mainly rests. Though entitled Annals, and generally sufficiently true to the chronological order of events, the title of Annals conveys no exact notion of the character of this work. The writer moulded the matter of his history, and adapted it to his purpose, which was not a complete enumeration of the domestic and foreign events of the period, but a selection of such as portrayed in the liveliest colours the character of the Romans. The central figure in this picture is the Imperial power, and the person who wielded it, the Princeps, and every event is viewed in relation to him. The notion of the Romans of the age of Tacitus is inseparably associated with the notion of the government of one man. The power that had been founded and consolidated by Augustus, had been transmitted through many princes, few of whom had distinguished themselves by ability, and some had sullied the purple with the most abominable crimes. Yet the imperial power was never shaken after it was once firmly established, and the restoration of the old republic was never seriously contemplated by any sober thinker. The necessity of the imperial power was felt, and the historian, while he describes the vices and follies of those who had held it, and often casts a glance of regret towards the republican period, never betrays a suspicion that this power could be replaced by any other in the abject and fallen state of the Roman people. It is this conviction which gives to the historical writings of Tacitus that dramatic character which pervades the whole, and is seen in the selection of events and the mode in which they are presented to the reader. It is consistent with this, that the bare facts, as they may be extracted from his narrative, are true, and that the colouring with which he has heightened them may often be false. This colouring was his mode of viewing the progress of events, and the development of the Imperial power: the effect however is, that the reader often overlooks the bare historical facts, and carries away only the general impression which the historian's animated drama presents.

Tacitus had formed a full, and, it may be, a correct conception of the condition of the empire in his own time, and the problem which he proposed to himself was not only to narrate the course of events from the close of the reign of Augustus, but to develop their causes. ('Hist.,' i. 4.) For his 'Annals' at least he could claim, as he does, the merit of strict impartiality: he lived after the events that he describes, and consequently had no wrongs to complain of, no passions or prejudices to mislead him. ('Annal.,' i. 1.) He observes also, in

the commencement of his Histories (i. 1), that neither Galba, Otho, nor Vitellius had either conferred on him any favour or done him any injury. To Vespasian, Titus, and Domitian he acknowledges his obligations. The reign of Domitian is unfortunately lost; but we may collect from the expressions in the 'Life of Agricola' (43, 45, &c.), that the favours which Tacitus had received did not save this contemptible tyrant from the historian's just indignation.

The tone which characterises the historical works of Tacitus is an elevation of thought which had its foundation in the moral dignity of the writer and the consciousness of having proposed to himself a noble object. He was a profound observer of character: it was his study to watch the slightest indications in human conduct, and by correctly interpreting these outwards signs, to penetrate into the hidden recesses of the heart. His power of reaching those thoughts which are often almost unconsciously the springs of a man's actions, has perhaps never been equalled by any historical writer. If any man has ever approached him in this power, it is Feuerbach, who ('Merkwürdige Criminal-Rechtsfälle,' that is, 'Remarkable Criminal Cases'), while laying bare the inmost soul of a murderer, makes us shudder at the contemplation of enormities of which every man is capable. Tacitus had lived through a time when the value of the lessons of philosophy had to be tasted by their practical application, and his historical studies carried him through a period in which the mass were sunk in sensuality, and the really good and great had no consolation but in the consciousness of their own thoughts. Though he appears to belong to no sect of philosophers, his practical morality was of the Stoic school, the only school which in those degenerate times could sustain the sinking spirits of the Romans, and which even under favourable circumstances guided the conduct of the wise Aurelius, the noblest man that ever possessed sovereign power. The religious opinions of Tacitus partook of the character of his age: he had no strong convictions, no settled belief of a moral government of the world: his love of virtue and his abhorrence of vice were purely moral; they had no reference to a future existence. ('Ann.,' iii. 18; vi. 22.) In one of his earliest productions he hopes rather than expects that the souls of the departed may still live and be conscious of what is passing on earth. ('Agricola,' 46.) But in his latest writings there are no traces that his hopes or his wishes had ever ripened into a belief.

The style of Tacitus, especially in his 'Annals,' is the apt expression of his thought: concise, vigorous, and dramatic. He has perhaps attained as great a degree of condensation as is compatible with perspicuity; sometimes his meaning is obscured by his labour to be brief. His historical works are especially works of art, constructed on a fixed principle, and elaborated in obedience to it. He loves to display his rhetorical skill, but he subdues it to his dramatic purpose. It is a fault that his art is too apparent, that his thoughts are sometimes imperfectly or obscurely expressed, that he affects an air of mystery, that his reflections on events are often an inseparable part of them, and consequently the impressions which it is his object to produce can only be rectified by the rigorous scrutiny of a matured mind. Yet those who have made Tacitus a study generally end in admiring him even for some of those qualities which at first repelled: almost every word has its place and its meaning, and the contrast between the brevity of the expression and the fulness of the thought, as it marks the highest power of a writer, so it furnishes fit matter for reflection to those who have attained a like intellectual maturity.

Tacitus must have had abundant sources of information, though he indicates them only occasionally. He mentions several of those historians who lived near his own time, as Vipsanius Messala and Fabius Rusticus: he also speaks of the memoirs of Agrippina and others. The Orations, Principum, the Fasti, the Acts of the Senate, and the various legislative measures were also sources of which he availed himself. It has been already intimated that the minute detail of events was often foreign to the purpose of Tacitus, and accordingly he is sometimes satisfied with giving the general effect or meaning of a thing without aiming at perfect accuracy. Thus we cannot always collect with certainty from Tacitus the provisions of the *Sanatus-consulta* of which he speaks; and for the purpose of any historical investigation of Roman legislation, his statements must sometimes be enlarged or corrected by reference to other sources, and particularly to the 'Digest.'

The first edition of Tacitus, which is extremely rare, was printed at Venice, in 1470, by Vindelin de Spira: this edition contains only the last six books of the 'Annals,' the 'Histories,' the 'Germany,' and the 'Dialogue.' The subsequent editions are very numerous. One of the best editions is that of Ernesti, by Oberlin, Leipzig, 2 vols. 8vo, 1801: it contains the valuable notes and excursions of Lipsius, the best of all the commentators on Tacitus, and in his department one of the first modern scholars. The last editions are by Immanuel Bekker, Leipzig, 2 vols. 8vo, 1831; by J. C. Orellius, 2 vols. imp. 8vo, Zürich, 1848; and by F. Ritter, 4 vols. 8vo, Col. 1848. Of the 'Germania,' J. Grimm published an excellent edition with the other passages relating to Germany selected from the other writings of Tacitus, Göttingen, 8vo, 1835; and F. C. Wex published an edition of the 'Agricola,' Brunswick, 8vo, 1852. There is a 'Lexicon Taciteum,' by Bötticher, Berlin, 8vo, 1830.

There are translations of Tacitus in Danish, Swedish, Dutch, German, French, Italian, Spanish, Portuguese, and English. The Italian

translation of Davanzati is considered to be a model of condensed and vigorous translation. A French writer considers that his own language is perhaps best capable of representing the thoughts of the eloquent and ingenious historian, of emulating his precision, attaining his elegance, and aspiring to his energy ('Biox. Univ.' art. 'Tacite'); an opinion which is perhaps not true. D'Alembert translated various passages from Tacitus. The earliest English translations are by Henry Saville, 1598, of the 'Histories' and the 'Agricola'; and by Grunway, 1598, of the 'Annals' and the 'Germany.' The English version of Murphy, which first appeared in 1793, is loose, diffuse, and feeble, and hardly expresses the meaning of the original; as a work of art, being a translation of a work which is above all other historical works characterised by its art, it is contemptible. Gordon's version, which appeared before that of Murphy, is a harsh and rugged version; but it is tolerably faithful to the meaning of the original, and was probably useful in helping Murphy to it.

For further information on the editions and translations of Tacitus, and on works in illustration of him, see Hain's *Repertorium*; and Schweigger's *Handbuch der Classischen Bibliographie*.

**TACITUS, MARCUS CLAUDIUS**, a Roman emperor, was the successor of Aurelian. After the interregnum of nearly seven months, which followed upon the death of that prince, the senate, by request of the army, met to elect an emperor. At the advanced age of seventy-five, Tacitus, then princeps senatus, was chosen unanimously in spite of his unwillingness to accept a dignity too great for his declining years. The army confirmed the act of the senate, and the new emperor commenced his reign in September A.D. 275, with the most favourable assurances from all classes of his subjects. Tacitus immediately instituted some salutary reforms relating to the coinage and other matters. He restrained the luxury of the times by sumptuary laws, and was himself an example of the greatest temperance, modesty of deportment, and single-minded magnanimity. He gave up his whole private fortune to the state, and introduced no change in his dress or way of life. He was of very studious habits, and gave orders that the works of the historian Tacitus, from whom he claimed descent, should be preserved with the greatest care in the public libraries, and copies of them made every year. He used his power with great forbearance, except perhaps in the punishment of those concerned in the murder of Aurelian, whom he is said to have put to death without discriminating their several degrees of guilt. The frontiers of the empire were at this time in a disturbed state, and Tacitus committed the chief command of the East to Probus, in whom he reposed entire confidence.

The Scythæ, or Goths, pretending that they had been summoned by Aurelian to aid him in his Persian war, made an irruption at this time from the Palus Mæotis into Pontus and Cappadocia.

Coin of Tacitus.

British Museum. Actual size. Copper. Weight  $54\frac{1}{2}$  grains.  
(The C after IMP denotes Cæsar.)

Tacitus proceeded thither in person with his brother Florianus, and having first tried conciliatory measures, compelled them to retire by force of arms. His reign, commenced with such fair prospects, was now prematurely and abruptly terminated. He had appointed Maximinus governor of Syria, who treated his subjects with such cruelty, that the magistrates of the towns in that province, aided by those yet surviving of the murderers of Aurelian, conspired against him and killed him. Despair of pardon led them to commit a greater crime, and they formed designs against the life of the emperor, who fell a victim to their treason at Tyana in Cappadocia, after a reign of about eight months, in the spring of the year 276. According to one report, he died of disease, harassed by seditions; but the statement of Zosimus and Zonaras, that he was murdered by the conspirators, seems entitled to greater credit. After his death, his brother Florianus seized the empire, but was put to death two or three months afterwards. Gibbon attributes to Tacitus many of the measures introduced at this time to revive the power of the senate. It is certain that he showed great deference to that body; and when they refused to make his brother Florianus consul because the time of election had expired, he expressed himself pleased with their frankness. The coins of Tacitus record his victory over the Scythians by the inscriptions *Victoria Gothi* and *Victoria Pontica*; see also Gruter, cxcii. 5; and for his Life—Vopiscus, in the 'Historia Augusta'; Zosimus; Zonaras; Aurelius Victor, *De Vit. et Mor. Imperat. Roman.*; Tillemont, *Histoire des Empereurs*, iii.; Gibbon, ii.

**TACQUET, ANDREW**, a mathematician of some celebrity, who was born at Antwerp in 1611. He entered at an early age into the order of the Jesuits, and was one of the many members of that body who distinguished themselves by the works which they composed for

the advancement of the sciences. He held the post of professor of mathematics during fifteen years, and died December 23, 1660.

Tacquet published at Antwerp, in 1651, a work in 4to, in four books, on the sections of cylinders and on the figures formed by the revolutions of segments of circles; and to these books he added a fifth in 1659. In the year 1655 he published, in 8vo, 'Elementa Geometriæ planæ ac solidæ, quibus accedunt ex Archimede theorematâ'; and, in the same year, 'Arithmetica Theoria et Praxis accuratè demonstrata.' These two last works appear to have been for a long time in use in the schools of the Jesuits.

A collection of the principal works of Tacquet was published at Antwerp in 1669, in two folio volumes, under the title of 'Opera Mathematica demonstrata et propugnata à S. L., &c. Among these works are *Astronomiæ libri octo*; *Geometriæ Practicæ libri tres*; *Opticæ libri tres*; *Catoptricæ libri tres*; *Architecturæ Militaris liber unus*; *Cylindricorum ac Annularium libri quinque*; and *Dissertatio de Circulorum Volutionibus*.

In the treatise on astronomy, the author, in conformity to the system of Ptolemy, considers that the earth is immovable at the centre of the universe; but it is thought that he adopted this supposition less from a conviction of its truth than through deference to the authority of Riccioli, whose work he follows, and through an unwillingness to admit the hypothesis of Copernicus on account of its contradiction to the letter of certain passages in the Scriptures. In the work on cylinders, &c., he determines the superficies and volumes of bodies formed on cutting a cylinder by planes in different directions; and he investigates the surfaces and volumes formed by the revolutions of different segments of circles and of the conic sections about axes in given positions: the reasonings are conducted by geometrical processes agreeably to the methods then recently introduced by Cavalieri and Gregory of St. Vincent. In treating the theorems selected from Archimedes, Tacquet assumes, in order to diminish the length of the demonstrations, that regular polygons may be inscribed within and described about circles, till at length their areas and peripheries differ respectively from those of the circles by magnitudes less than the least that can be assigned: then, considering the polygons and circles as identical, he obtains the ratio of the peripheries of the circles and the equivalent for their areas: by assuming also that there may be described about a sphere a polyhedron whose surface shall differ from that of the sphere by a magnitude less than the least that can be assigned, he determines both the volume and the superficies of the latter. Archimedes had demonstrated that the volume and superficies of a sphere are to those of a circumscribing cylinder in the ratio of 2 to 3; and Tacquet, by such assumptions as those above mentioned, proved that the same ratio exists between the volumes and superficies of a cylinder and of an equilateral cone, when both are described about the sphere.

**TAFFI, ANDREA**, born at Florence, in 1213, deserves mention as having been the first who introduced among his countrymen the art of painting in mosaic. Having heard of some eminent Greek artists who were executing paintings in mosaic in the church of St. Mark at Venice, he went to that city and formed an intimate friendship with Apollonius, one of the principal of those artists, and prevailed on him to accompany him to Florence, to teach him the best manner of working in mosaic, and the method of compounding the most durable kind of cement. On their arrival at Florence they executed together several works, which were highly admired. Taffi's chief performance was a Dead Christ, of large dimensions, in a chapel at Florence. He died in that city, in 1294, at the age of eighty-one.

**TAGLIACIOZIO, GASPARE**. [TALLIACOTIUS.]

**TALBOT, JOHN, EARL OF SHREWSBURY**, a famous warrior in the reign of Henry VI. and Henry VII. was the second son of Richard Lord Talbot, and was born in 1373 at Bletchmore in Shropshire. He married the heiress of the barony of Furnival, which title he afterwards bore by courtesy. In the first year of the reign of Henry V. (1413) he was confined in the Tower, it is supposed on suspicion of being a favourite of the House of York, but his imprisonment was a short one. In 1414, Ireland being in a very unquiet state, it was thought necessary to appoint a military man as chief governor, and Talbot was selected. While his sovereign was achieving successes in France, Talbot was equally active in Ireland. He subdued many of the chiefs, one after the other, making those he had conquered serve in arms against those remaining in revolt, and he at length captured MacMurrough, the powerful chief of Leinster, who was sent prisoner to the Tower of London. In 1419 he was recalled to England, but in 1425 he was again invested with the office for somewhat less than a year. From 1419 he chiefly served in the French wars under Henry V. and Henry VI.; but it was chiefly in the latter reign, when he was entrusted with separate commands, that he distinguished himself by his courage, generalship and courtesy. After the death of the Duke of Bedford the conduct of the war rested almost entirely upon him. The battles and sieges in which he was engaged while heroically supporting the declining cause of Henry VI. are almost innumerable; but the most remarkable, were the siege of Orleans, where he was associated with the Earl of Salisbury, which was raised in 1429 by Jeanne d'Arc. [JEANNE D'ARC.] To this followed the battle of Patay, in 1429, where, after performing prodigies of valour, he was taken prisoner. The French authorities say that Xaintrailles, one of

the opposing generals, conducted his prisoner to the king, of whom he asked and obtained permission to restore him to liberty without ransom; English authorities state that he was three years a prisoner, and then exchanged for Xaintrilles. After his release, and when the panic occasioned by the deeds of this remarkable woman had passed over, Talbot, who had then the command of the English army, restored its courage, and by taking Pontoise, Crottoy, beating the French army at Rouen, and other successes, gave a parting lustre to the English arms in this unhappy and foolish contest. In 1442 he was created Earl of Shrewsbury in England, and shortly afterwards Earl of Waterford and Wexford in Ireland, titles that continued in his descendants till 1856. In June 1446 he was appointed Lord Lieutenant of Ireland for the third time, and this office he held till 1449, when he was succeeded by Richard Duke of York, who had been recalled from the command of the army in France, to which country Talbot was immediately sent. On his arrival with a small force he captured Rouen; but being afterwards besieged there was obliged to surrender, and was retained as a hostage for the performance of certain conditions. In 1450 he was released; and he then made a devotional journey to Rome. On his return to England, Gascony and Guienne having revolted against France, the command of the army sent to support the insurrection was confided to him. In 1452 he reached Guienne with a force of 4000 men, and a number of forts and towns either voluntarily adhered to him or were subdued, Bordeaux, in which he fortified himself, being one. The French however assembled a large army against him, and laid siege to Châtillon. Talbot with his son, the Lord de l'Isle, proceeded thither with a small force to raise the siege. He attacked the French entrenchments on July 13, 1453, but his force was too small. Although upwards of eighty years of age, and so feeble that he was obliged to ride a small hackney, as Monstrelet states, when all the rest of his force had dismounted, he rode from rank to rank with the most indomitable valour, exhorting his men to fresh efforts, till a ball from a culverin struck down his horse, and a Frenchman slew him as he lay beneath it. His son likewise was slain on the same field, and the event has given occasion to one of the most pathetic scenes in Shakspeare descriptive of the devotion of the father and the son to each other. On their death their army was defeated and dispersed, so that but few escaped. The French themselves have done justice to their redoubted antagonist, whom they characterise as a faithful subject, a sincere patriot, a generous enemy, and an exact observer of his word, never having violated his faith in an age when treason was too common. He was interred with his son by the enemies whose respect he had won by his noble qualities, but his remains were subsequently removed to Whitchurch in Shropshire.

\*TALBOT, WILLIAM HENRY FOX, is the son of William Devonport Talbot, Esq., of Lacock Abbey, Wilts, by the Lady Elizabeth Theresa Fox Strangways, eldest daughter of Henry Thomas, second earl of Ilchester, and represents maternally a branch of the noble house of Talbot, earl of Shrewsbury. He was born in February 1800, and received his early education at Harrow School under the late Rev. Dr. Butler, dean of Peterborough, whence he was removed to Trinity College, Cambridge. Here he gained the 'Porson' prize for Greek Iambic verse in 1820, and was Chancellor's Medallist on taking his degree in the following year. He did not adopt a profession, but in December 1832, he was elected in the Liberal interest for the borough of Chippenham, which he represented down to the dissolution consequent on Sir Robert Peel's first accession to power in December 1834, and did not offer himself for re-election.

Mr. Talbot had devoted himself no less closely to scientific than to literary and antiquarian pursuits, and hence he was led to the discovery, which has resulted in the present art of Photography. In October 1833, whilst amusing himself, as he has related in his 'Pencil of Nature,' in attempting to draw the scenery along the shores of the Lake of Como by means of a camera-lucida, and tired by his many failures with that instrument, he was "led to reflect on the inimitable beauty of the pictures of nature's painting, which the glass lens of the camera throws upon the paper in its focus," and to consider the possibility of rendering these pictures permanent. Fully aware that paper might by chemical means be made sensitive to the action of light, he determined to pursue his idea. Following out an elaborate and carefully-planned course of experiments, he gradually arrived nearer to a satisfactory result; but in his anxiety to present his invention to the world in as perfect a state as possible, he waited just so long as to see the first announcement of a parallel method published by another. In his own words:—"An event occurred in the scientific world, which in some degree frustrated the hope with which he had pursued during nearly five years, this long and complicated, but interesting series of experiments—the hope, namely, of being the first to announce to the world the existence of the new art—which has since been named Photography." This event was the publication in January 1839 by M. Daguerre of the process, which he called the 'Méthode Niépce perfectionnée,' or as it soon came to be more commonly called, *Daguerreotype* [DAGUERRE; NIÉPCE, vol. iv. col. 503.]. Mr. Talbot immediately communicated to the Royal Society his method, which he called at first *Photogenic Drawing*, and afterwards *Calotype*, but for which Sir David Brewster proposed the term, *Talbotype*, in honour of the inventor, and which was generally adopted till it merged in the more

comprehensive term, *Photography*. In Daguerre's process, as is well known, the image was produced upon metal plates; in Talbot's, the image was obtained upon paper. Neither, it is scarcely necessary to say, claimed to be the first who had obtained sun-pictures upon a surface previously rendered sensitive, the principle having been perceived and announced by Thomas Wedgwood in 'An Account of a Method of Copying Paintings upon Glass, and of making Profiles by the Agency of Light upon Nitrate of Silver; with Observations by Humphry Davy,' published in the 'Journal of the British Institution,' in 1802; by Thomas Young; and later by Nicéphore Niépce, who made his researches known in London in 1827, having several years before distinctly announced in Paris the possibility of obtaining sun-pictures; but in none of these was the image either distinct or permanent. M. Daguerre and Mr. Talbot were undoubtedly the first to apply the principle practically, and from them the art may fairly be said to date its origin. The process of Daguerre in the first instance produced much the more definite images, and from the zeal with which M. Arago and other of his eminent scientific countrymen proclaimed its merits, it obtained for awhile a much larger share of public attention, though the greater ease, economy, and applicability of the paper process have now caused it almost to supersede that of metal-plates even in France. Mr. Talbot's method remained however for some time in a very imperfect state, but he continued his experiments, and in September 1840 he made the discovery which laid the foundation of the present form of the photographic art: this was the fact, that sensitive paper, during the first few seconds of exposure to the light, receives an invisible image perfect in all respects, and that in order to render the image visible, it is sufficient to wash the paper over with gallic acid or some similar astringent liquid. When this fact became established and generally known, the images of most objects were very rapidly obtained, it being only necessary for the purpose to obtain an invisible image, which was often effected in an instant. Subsequent photographic methods have all adopted this process as a principle, and must, in fact, be regarded as, in the main, refinements and modifications of it. In 1842 the medal of the Royal Society was presented to him for his discovery.

In 1844 Mr. Talbot published a series of specimens obtained by his process, and multiplied by the now well-known method of photographic printing. In this work, which he entitled 'The Pencil of Nature,' he gave sun-pictures not only of landscape scenery, figures, portraits, and 'still-life,' but copies of engravings, and fac-similes of old printed books and of drawings by ancient masters,—examples, in short, amply sufficient to show the wide application of the infant art, and though, in the copy now lying before us, many of the pictures are greatly faded, many are—at least in parts—scarcely exceeded in brilliancy and delicacy by the most successful photographs of the present day. In 1841 Mr. Talbot, following the example of M. Daguerre in England, had secured his right to the commercial use of his invention by a patent, and granted licences to use the process in the usual way. But when the wide application of photography to scientific, antiquarian, and artistic purposes led to its extended practice by private persons, it was found that the patent rights greatly interfered with the free progress of the art, and Mr. Talbot was induced, chiefly on the representations of various members of the Royal Society, to throw open his patents, with a reservation against taking portraits for sale. Soon after the discovery of the very beautiful 'Collodion process,' the question arose whether that process was embraced within the specifications of Mr. Talbot's patents, and ultimately the question was brought for adjudication before Lord Chief Justice Jervis and a special jury in the Court of Common Pleas, December 20, 1854, when a verdict was returned that "the plaintiff (Mr. Talbot) was the first inventor, but that there was no infringement of his patent by the defendant." Mr. Talbot ultimately acquiesced in the finding of the jury, and in the following year he announced his intention not to apply for a renewal of his patent, but to leave it free for any one to practice the art at his pleasure. In 1851 Mr. Talbot presented to the Royal Society and to the Académie des Sciences an account of experiments for obtaining absolutely instantaneous photographic images; and in April 1853 he published a notice of some successful experiments for engraving photographically on steel plates—an art in which M. Niépce de Saint Victor has however obtained much more important results.

During the last few years Mr. Talbot appears to have devoted much attention to the deciphering of Assyrian cuneiform inscriptions and to cognate studies. He had previously published 'Legendary Tales,' 8vo, 1830; 'Hermes, or Classical and Antiquarian Researches,' 8vo, 1833-39; 'The Antiquity of the Book of Genesis illustrated by some New Arguments,' 8vo, 1839; and 'English Etymologies,' 8vo, 1847.

TALFOURD, SIR THOMAS NOON, Knt., was born January 26, 1795, at Doxey, a suburb of the town of Stafford, where his mother was then on a visit. His birth was premature. His father was a brewer at Reading in Berkshire. His mother was a daughter of Thomas Noon, minister of a congregation of Independents in that town, to which sect his father also belonged. Thomas Noon Talfourd was educated at the grammar-school of Reading, under Dr. Valpy, for whom he always entertained an affectionate respect. In the year 1813 he was placed for legal instruction under Mr. Chitty, the special pleader, and in 1817 commenced practice as a special pleader on his

own account. During many years of the earlier part of his residence in London his income was derived chiefly from his literary labours, as a contributor to the 'London Magazine,' the 'New Monthly Magazine,' and other periodicals. He was called to the bar by the authorities of the Middle Temple, February 9, 1821, and in 1822 he married the daughter of John Towell Rutt, Esq., of Clapton, near London, the editor of Dr. Priestley's works. He soon afterwards joined the Oxford Circuit. By steady application, rather than by any peculiar aptitude or liking for the law, he gradually rose in his profession. He was a fluent speaker, distinguished by feeling and fancy, more than by argumentative powers. After about ten years practice he applied for a silk gown, but his claim of the dignity of Queen's counsel was deferred till his patience was exhausted, and he therefore, in Hilary Term, 1833, assumed the coif, and became Mr. Serjeant Talfourd. He was also for some years Recorder of Banbury.

At the general election in 1835 Mr. Serjeant Talfourd was returned to parliament as one of the members for the borough of Reading, Mr. Fyshe Palmer, the previous liberal member having retired. In 1837 Mr. Palmer again came forward, and was returned with Mr. Talfourd. At the next election two conservatives were returned, and Mr. Talfourd was out of parliament from 1841 to 1847, when he was again returned for Reading, and retained his seat till July 1849, when he vacated it on his being appointed successor to Mr. Justice Coltman in the Court of Common Pleas, on which occasion he also received the honour of knighthood. As a member of the legislature Mr. Serjeant Talfourd may be said to have added two valuable enactments to the statutes of the realm—the Custody of Infants Act (2 & 3 Vict., c. 54), and the Copyright Act, which he first introduced in 1837, but which was strongly opposed, and was not passed into a law till 1842 (5 Vict., c. 45), and then in a modified form, when he was not a member of parliament.

During all this period of legal and parliamentary activity Mr. Talfourd continued his labours in literature. He was for several years law-reporter of circuit cases for the 'Times' newspaper, and he continued to contribute to the 'New Monthly Magazine,' and also to the 'Retrospective Review,' the 'Edinburgh Review,' the 'Quarterly Review,' and the 'Law Magazine,' to which last he furnished in January, 1846, an able article 'On the Principle of Advocacy in the Practice of the Bar.' In 1835, he printed for private circulation two editions of his tragedy of 'Ion.' On the 26th of May, 1836, the tragedy was acted for the benefit of his friend Mr. Macready, at Covent Garden Theatre, and at the same time was published. It was afterwards acted with success at the Haymarket Theatre, and elsewhere. The tragedies of the Greek dramatists were occasionally performed by the scholars at Dr. Valpy's school in Reading, and there Mr. Talfourd acquired his taste for dramatic literature. The first two privately-printed editions of his tragedy of 'Ion' were dedicated to his venerable master, who however died before it was acted, and then a 'Notice of the late Dr. Valpy' was "prefixed instead of Dedication to the first published Edition of Ion." The title is borrowed from the 'Ion' of Euripides, which also suggested the leading incident of a founding youth educated in a temple, and assisting in its services, but nothing more. His next tragedy, 'The Athenian Captive,' was published in 1838, and was performed in the same year at the Haymarket Theatre with moderate success. This tragedy was succeeded by that of 'Glencoe, or the Fate of the Macdonalds,' first represented at the Haymarket, May 23, 1840. 'The Castilian, an Historical Tragedy, in Five Acts,' was published in 1853, but was not acted. In none of these tragedies does he display much of what may be properly called dramatic skill, nor does he excite that kind or degree of interest which arises from distinctness and discrimination of character, depth of emotion, and truthfulness of thought and expression. They may be rather regarded as dramas of poetic sentiment and description. The blank verse is smooth, graceful, and "in linked sweetness long drawn out," but all the individuals use indiscriminately the same elaborate form of expression, and the meaning is not unfrequently rendered obscure by the redundancy of the diction.

In 1837 Mr. Talfourd published the 'Letters of Charles Lamb, with a Sketch of his Life,' 8vo. In 1848, after the death of Lamb's sister, he published 'Final Memorials of Charles Lamb, consisting of Letters, &c.,' 2 vols. 8vo, a domestic tragedy of the most affecting interest, which had been long known to a few friends, but was not till then disclosed to the public. [LAMB, CHARLES.] On the 20th of June 1844, he was created a Doctor of Civil Law by the University of Oxford. In 1845 he published 'Vacation Rambles and Thoughts, comprising the Recollections of Three Continental Tours in the Vacations of 1841, 1842, and 1843,' 2 vols. 8vo, and in 1854, a 'Supplement to the Vacation Rambles, consisting of Recollections of a Tour through France to Italy, and Homeward by Switzerland, in the Vacation of 1846,' fcap. 8vo. The journeys were all rapidly made, and the information which the volumes contain is very scanty. Some of his speeches as an advocate and also as a member of parliament were published in a separate form. He was an eloquent speaker, and had extraordinary command of language, but his style was too florid to be very effective. His reputation is that of a sound lawyer for deciding cases, at the same time that his persevering labour, great practice, and love of justice, made him respected both as an advocate and a judge. In his private character he was amiable and social in an eminent degree, and he had a large circle of friends, chiefly literary and legal.

The death of Mr. Justice Talfourd occurred on the 13th of March 1854. He had opened the assizes at Stafford on Saturday the 11th, and on Monday morning, while delivering his charge to the grand jury, and commenting on the increase of crime and its causes, he was observed to be much excited. Suddenly his face became flushed, his head bent forward, and his body swayed on one side. He was immediately borne out of court to the judge's chambers, where it was found that he had ceased to live. He was buried in the cemetery at Norwood, near London. He left issue three sons and two daughters. In 1855 the members of the Oxford Circuit placed a bust of him, sculptured by Lough, in the Crown Court at Stafford. It is an excellent likeness.

TALIAACOTIUS, GASPAR, TAGLIACOTZIO, or TAGLIACOTZI, was professor of anatomy and surgery at Bologna, where he died in 1553, at the age of 64 years. His name is now known chiefly through his reputation for restoring lost noses; but during his life he was equally celebrated for his knowledge of anatomy and his excellence as a lecturer. These last are indeed the only qualities for which he is praised in a tablet put up after his death in one of the halls of the school at Bologna. A statue erected in the amphitheatre formerly recorded his skill in operating by representing him with a nose in his hand.

Some writers have spoken of the original Taliacotian operation as a mere fable, pretending that it never could have been followed by success. But several credible witnesses have recorded that they either saw Taliacotius operating, or saw patients to whom he had restored noses, which very closely resembled those of natural formation. The truth is that the operation which Taliacotius really performed is not commonly known; the generally-entertained notion of it being derived from the accounts of those who had some reason to misrepresent it. It will therefore be worth while to give a somewhat detailed account of it.

The work in which it is described was first published forty-four years after Taliacotius' death, with the title 'De curtorum chirurgia per insitionem libri duo, Venetiis, folio, 1597.' It is divided into two parts, of which the first is chiefly devoted to a disquisition upon the dignity of the nose, lips, and ears, and upon their offices and general construction, and the theory of the operation, which he considers to be exactly analogous to that of grafting upon trees. In the second book he describes the mode of operating, dwelling first at great length upon the necessary number and character of the assistants, the kind of bed to be used, its position with regard to light, &c., and several other minor matters, on all which he speaks like one thoroughly experienced in surgery. In the operation itself he used the following plan:—A part of the skin of the upper arm of the proper size, and bounded by two longitudinal parallel lines, being marked out over the middle of its fore part, was seized between the blades of a very broad pair of nippers. Each blade was about three inches broad, so that it might include the whole length of the portion of the skin to be removed, and had a long slit near its edge through which a narrow knife could be passed. The portion of the skin of which the new nose was to be formed being raised up by the assistant who held it in the nippers, Taliacotius with a long spear-shaped knife transfixed it through the slits in the blades of the nippers, and cut it through the whole length of the latter from above downwards. Through the aperture thus made, which might be compared to a very broad incision for a seton, a band covered with appropriate medicines was passed, and by being drawn a little every day, the wound was kept open like a seton wound. When all the inflammation had passed away, which was usually in about fourteen days, the flap of skin was cut through at its upper end, and thus a piece bounded by three sides of a parallelogram was raised from the arm, and remained attached to it by nothing but its fourth side or lower end. In this state it was allowed to cicatrize all over, till it acquired the character of a loose process of skin. This being, after some days, completed, and the piece of skin having become firm and hard, it was deemed ready for engrafting. The head therefore being cleanly shaved, a dress and bandage of singular construction, intended for the maintenance of the arm in its due position, were carefully fitted on. Then these being laid aside, the seat of the old nose was scarified in a triangular space till it had a smooth bleeding surface. A pattern of this surface, being taken on paper, was transferred to the inner surface of the piece of skin on the arm, and a portion of the latter, of the same form and size, was in the same manner made raw. Sutures were placed in corresponding parts of the edges of both these wounds, and they were brought together, the arm being held up with its fore part towards the face, and the palm of the hand upon the head, by the dress and bandage already mentioned. The parts were thus retained in apposition for about twenty days, at the end of which, the surfaces having united, the bandages were taken off, and the portion of skin which was now affixed to both the face and the arm was cut away from the latter. It almost directly became white and cold, but it did not slough, and gradually increased in vascularity and heat. In about fourteen days it was usually firm and secure in its place; and as soon as this was evident, the skin was shaped into the resemblance of a nose by cutting it according to carefully-measured lines and by forming the nostrils in it. A tedious succession of operations were performed upon it before the repair was deemed complete; but at length it is said that in general the restoration was truly admirable. Taliacotius himself however admits that it had, even in the best cases, several defects.

After this account, no one can reasonably doubt that Taliacotius's operation was very often successful. That it should be superseded by the Indian method, as it is called, in which the skin for the new nose is taken from the forehead, is due to the latter being a less tedious and less painful operation, rather than to its being more certain of success. The number of instances in which later attempts to imitate the Taliacotian operation have failed, are due to its having been performed not according to the original method, but according to some of the plans which Taliacotius is erroneously supposed to have followed.

The indecent joke which Butler has made popular in his 'Hudibras' has little foundation. Taliacotius does indeed discuss the propriety of taking the skin for a new nose from the arm of another person; and he concludes that for several reasons it would, if it were possible, be better to do so: but he says he cannot imagine how it would be possible to keep two persons fastened together for the necessary time and with the necessary tranquillity, and that he never heard of the plan being attempted. The tale of the nose falling off when the original proprietor of the skin died, is founded on an absurd story which Van Helmont relates to prove at how great a distance sympathy can act. A gentleman at Brussels, he says, had a new nose made for him by Taliacotius from the arm of a Bolognese porter; and about thirteen months afterwards, as he was walking in Brussels, it suddenly became cold and dropped off, at the very instant at which the porter died at Bologna. Similar stories are told by Campanella, Sir Kenelm Digby, and others; but, as already shown, they are not even fair satires, for Taliacotius never attempted to transfer the skin of one man to the body of another.

(Brambilla, *Storia delle Scoperte fatte dagli Uomini Illustri Italiani*, vol. ii.; Sprengel, *Geschichte der Chirurgie*, Zweiter Theil, p. 195.)

TALLART (incorrectly TALLARD), CAMILLE, COUNT, was born on the 14th of February 1652, of an ancient family in Dauphiné. He entered very young into the military service, and made his first campaign under the great Condé in the Netherlands. In 1674 and 1675 he served under Turenne in Alsace, where he greatly distinguished himself. In 1677 he was promoted to the rank of Brigadier, and in 1678 to that of Major-General, and in both capacities ably fulfilled the duties confided to him upon the Sarre and upon the Rhine. In the winter of 1690 he conceived and executed the bold design of leading his army across the Rhine upon the ice: it was completely successful, and the Rheingau was at the mercy of the French army. In 1693 he was made Lieutenant-General, but performed nothing remarkable before the peace of Ryswyk in 1697 terminated for a time his military career. On the 19th of March 1698 he arrived in London as ambassador from Louis XIV., ostensibly to compliment William, but in reality to induce him to join Louis in what is known as the Partition Treaty, for regulating the succession to the throne of Spain. Count Tallart displayed considerable ability in the negotiation, and a treaty was signed; but the young Prince of Bavaria, to whom the crown of Spain had been allotted, dying before Charles II. of Spain, and Louis claiming the succession for his grandson Philip, the War of the Succession broke out, and in 1702 Tallart received the command of an army to operate upon the Rhine, where he was opposed by the Duke of Marlborough. The French would not venture a battle, but saw Landau and several other places taken without an attempt to save them; but his army having been strengthened, he broke up the Dutch camp at Mühlheim, took Trèves and Trarbach, and was rewarded with the marshal's staff. In 1703 he was appointed to the command of the army in Germany under the young Duke of Burgundy, and in November totally defeated the Elector of Hesse near Spire, capturing, as he boastfully related in his despatches to his sovereign, "more standards of the enemy than your majesty has lost men." The reputation of this success occasioned his being transferred to the command of a corps destined to act with Marshals Villeroi and Marsin against Marlborough and Prince Eugene, which terminated in the battle of Blenheim, on the 13th of August 1704. [MARLBOROUGH.] Tallart displayed great courage in this battle, though his want of skill has been severely censured by his own countrymen. In the heat of the contest, being short-sighted, he mistook a party of the allied forces for his own, and was taken prisoner before the disgraceful surrender of a large part of his army, amounting to 13,000 men, with arms in their hands, as prisoners of war. Tallart was sent to London, where he was honourably treated and allowed his liberty on parole; and there he remained for seven years, contributing, it is said, by his representations as an agent of France to the recall of the Duke of Marlborough from Germany. His misfortune at Blenheim had not injured him in the favour of his sovereign, and on his return to France, when released without exchange in 1711, he was appointed to the government of Franche-Comté, and in 1712 created Duc d'Hostun. Louis XIV. also named him by his will a member of the Council of Regency, but he did not act. Some time after the accession of Louis XV. he became for a time minister of state; and he died on the 20th of March 1728. The Duc de St. Simon characterises him as having more ambition than talent, as owing his court favours to the patronage of Villeroi, and as being a man with whom all the world was pleased, but in whom no one confided.

TALLEYRAND-PERIGORD, CHARLES MAURICE DE, was born on the 13th of January 1754, the eldest of three brothers. His family was ancient and distinguished; but he was neglected by his

parents, and placed at nurse in one of the faubourgs of Paris. The effects of a fall when about a year old rendered him lame for life, and being on this account unfit for the military career, he was obliged to renounce his birthright in favour of his second brother, and enter the Church. The contempt and aversion for him, which his parents did not attempt to conceal, imposed a gloomy and taciturn character on the boy. From the charge of his nurse he was transferred to the Collège d'Harcourt, and thence successively to the seminary of St. Sulpice and to the Sorbonne. In all of these institutions he maintained the character of a shy, proud, bookish lad. He showed in after-life a taste for literature, and such an extensive acquaintance with and appreciation of science as sits gracefully on the statesman; and the taste and knowledge must have been acquired at an early age, for his turbulent career after he was fairly launched into busy life left little leisure for that purpose.

By the time he had attained his twentieth year his reputation for talent and his confirmed health appear to have reconciled the vanity of his parents to the necessity of acknowledging him. They introduced him to the society of his equals in rank for the first time at the festivities with which the coronation of Louis XVI. was celebrated (1774), under the title of the Abbé de Périgord. His opinions and tastes, and his temperament, combined to render the clerical profession an object of detestation to him, but he could not escape from it. He availed himself to the full extent of the indulgence with which his age and country regarded the irregularities of the young and noble among the priestly order; but the pride and reserve with which twenty years of undeserved neglect had inspired his confident and strong character served him in part as a moral check. He was a strict observer of the appearances exacted by the conventional morality of society; and this good taste exerted a powerful influence over his whole future career.

In 1776 Voltaire visited Paris. M. de Talleyrand was introduced to him, and the two interviews he had with him left such a deep impression that he was accustomed to talk of them with a lively pleasure till the close of his life. Voltaire and Fontenelle were M. de Talleyrand's favourite authors, upon whom he formed his written and still more his conversational style. Conversational talent was in great demand at Paris when he entered the world, and both his love of pleasure and his love of power prompted him to cultivate that which he possessed. That he did so with eminent success the concurrent views of the best judges of his age declare. Excellence of this kind however is like excellence in acting: it is impossible to convey an adequate impression of it to posterity. The robust and healthy Epicurean who requires the stimulus of intellectual in addition to physical pleasures, is almost inevitably driven to seek the former in the pursuits of ambition. M. de Talleyrand was no exception to the general rule: and the Abbé de Périgord must have displayed, even when he was apparently, when perhaps he believed himself to be, living only for pleasure, qualities which inspired a belief in his business capacity; for in 1780, while yet only in his twenty-sixth year, he was appointed general agent of the clergy of France. He discharged the functions of this important office for eight years. The Gallic Church was all along the most independent in its relations to the Papal chair of any church that remained in communion with Rome. It was also a powerful church viewed in its relations to the state, of which it formed an element. Its revenue derived from landed property was large; that derived from other sources perhaps still larger: it had regular assemblies in which it legislated for itself, determined what contributions it ought to pay to the state, and in what proportions its members were to be assessed. Here was a wide field for cultivating experimentally a talent for administration. Nor was this all: the dignified clergy of France took an active part in secular politics. The general agent of the clergy was their minister of state; and M. de Talleyrand, while he continued to fill the office, was a powerful subject, and occupied a considerable place in the eye of the public. In 1788 he was appointed bishop of Autun.

The commencement of his political career, in the strict acceptation of the term, is synchronous with this promotion. An article upon M. de Talleyrand in an early number of the 'Edinburgh Review'—the materials for which were furnished by Dumont—asserts that he owed his advancement to the see of Autun to a 'Discours sur les Loteries,' which he pronounced in his capacity of agent for the clergy of France, in the Assembly of Notables which met at Versailles in February 1787. As bishop of Autun he was a member of the États Généraux convoked in May 1789, which continued to sit as an Assemblée Constituante till it dissolved itself on the 30th of September 1791. The interval from the meeting of the notables till the dissolution of the Assembly is an important one in any attempt to solve the problem of M. de Talleyrand's real character.

Previously to the meeting of the States-General, M. de Talleyrand indicated the course he intended to pursue, in a discourse which he addressed to the assembled clergy of his diocese, and in which he advocated the equality of all citizens in the eye of the law, and free discussion. When the three orders, by assenting to meet as one body, had enabled the Assembly to proceed to business, the precise directions given by many of the baillages to their deputies were found an impediment in the way of practical legislation: M. de Talleyrand moved that they should be entirely disregarded, and carried his

motion. A constituent committee was appointed immediately after the capture of the Bastille, and he was the second person nominated a member of it. In this capacity he was called upon to take part in maturing measures which have had a lasting influence upon the progress of affairs in France: the first of these was the re-distribution of the national territory into districts better adapted than the old provinces for the purposes of government; the second was the organisation of a system of finance. In the financial discussions which took place in the committee and assembly, M. de Talleyrand retained his dislike of lotteries. He supported all or most of the various loans proposed by Necker; and seconded Mirabeau's exhortations to keep faith with the national creditor. He suggested practical measures with a view to this end, and among others the sale of Church lands (he had previously supported the abolition of tithes), reserving however a competent provision for the priesthood, and even improving the condition of the poorer clergy. He also proposed to establish a 'caisse d'amortissement,' as an additional guarantee to the state's creditors. The task of making arrangements for levying the part of the revenue derived from taxes upon persons exercising professions, and upon transfers of property, devolved upon M. de Talleyrand. Connected with his labours in preparing a new territorial division of France, and a new method of collecting the national revenue, was the motion which he made and carried in the Assembly, in August 1790, to the effect that the king should be intreated to write to his Britannic majesty, to engage the parliament of England to concur with the National Assembly in fixing a natural unit of weights and measures; that, under the auspices of the two nations, an equal number of commissioners from the Academy of Sciences and the Royal Society of London might unite to determine the length of the pendulum in the latitude of 45°, or in any other latitude that might be thought preferable, and to deduce from thence an invariable standard of weights and measures. At the same time that he was taking part with his colleagues of the Constituent Committee in these labours he was charged by them with the important task of preparing the report upon national education, which was read to the Assembly on the 10th, 11th, and 19th of September 1791. The basis of the system advocated in this report was the secularisation of instruction: education was to be the gift of the state, not of the Church; the state was to provide instruction for those who proposed to enter the Church, exactly as it was to provide instruction for those who proposed to enter any of the other learned professions. Equal stress was laid upon the establishment of elementary schools in every canton; and of a higher class of schools, for the benefit of those who were not destined to embrace a learned profession, in the chief town of every district. Two acts of M. de Talleyrand, which have been much commented upon, appear to be as it were necessary corollaries of the principles avowed in the legislative career we have been passing in review: his appearance as principal actor in the theatrical celebration of the anniversary of the capture of the Bastille; and his taking upon him the office of consecrating the national clergy.

It is absolutely necessary that some estimate be formed of the conduct and character of M. de Talleyrand while a member of the first National Assembly, as a guide to an appreciation of his far more enigmatical subsequent career. M. de Talleyrand entered the Assembly with the reputation of a dexterous negotiator, which he had acquired in his discharge of the office of agent to the clergy. He had then, and he retained in after-life, the character of a self-indulgent man, of a man with a large instinct of self-preservation, but also of a humane man. The disciple of Voltaire and Fontenelle could scarcely be a very zealous Christian, but M. de Talleyrand had always been a respecter of conventional morality: his was precisely that kind of disposition and intellect that supports a church not from belief, but as a useful engine for preserving order in society. M. de Talleyrand, like all the literati of his day, had a theoretical belief in the equality of men; at the same time that with regard to the privileges of the nobility, he was inclined to support them in the same way that he did the authority of the Church—as a useful political engine. But involuntarily and perhaps unconsciously M. de Talleyrand was a warmer partisan of the aristocracy than the clergy; he was noble by birth and attached by taste to the habits of a select society, whereas the ecclesiastical character forced upon him against his will had something repulsive to him. In short, M. de Talleyrand saw clearly the rottenness and the absurdity of many of the old institutions of his country: he was willing, desirous, that government should be organised and act in a manner to promote the general happiness: but he had no faith in the capacity of men for self-government; and he had been educated in a church, many of whose members were at that time obliged to reconcile their consciences to remaining in it by adopting the maxim that they were deceiving men for their own good. M. de Talleyrand's idea, and he entertained it in common with a considerable number, was, that the Revolution should be guided, checked and rendered useful by approximating the constitution of the French to that of the English government. He cared little for the creed of the Church, but he wished to preserve the Church, and to render it in France what the Established Church was in England. Hence his care, even while laying hands on the property of the Church for the exigencies of the state, to retain an adequate provision for the clergy, hence his anxiety to identify the clergy with the nation. His

anxiety to establish a constitution modelled upon that of England was always avowed. His views (the views he adopted, it is not meant to attribute originality to them) regarding territorial divisions and the organisation of local government, finance, and education, though overborne for a time in the storm of the Revolution, have revived and been adopted by each succeeding dynasty. The recklessness as to the means by which he attained his ends which he displayed even at this period of his career is no evidence of insincerity, but merely of the want of faith in men, which the treatment he had experienced in early life, and his observation of the society he habitually mixed in, had instilled into him. It was his weakness through life to pride himself in the display of his power of refined mockery, regardless of the enemies it created: he gave vent to his spirit of raillery in actions as well as in words; and thus lent a grotesque colouring to his *coups d'état*, which rendered them more startling than if they had been as prosaic as those of other men. The most startling of his devices is his solemn inauguration of the constitutional monarchy by the religious celebration of the 14th of July. But the love of theatrical presentation and the delusive belief that good may be effected by it is strong in every man at some period of his life. Talleyrand in all likelihood looked forward at that moment to being the founder and future primate of a church which should be to France what the Anglo-Episcopal has been to England. The means to which he was driven to have recourse in order to carry through the installation of the national bishops, undecieved him, and brought back his early disgust for the profession with redoubled force. He not long after resigned his bishopric of Autun, and at the same time renounced his ecclesiastical character.

The history of M. de Talleyrand from the dissolution of the Constituent Assembly, in September 1791, till the overthrow of the monarchy, on the 10th of August 1792, would be instructive were it merely as a demonstration of the folly of the self-denying ordinance with which that body terminated its career. Its members were declared ineligible to the next assembly, and also incapable of receiving any appointment from the crown until two years had elapsed from the date of its dissolution. The consequence was, that M. de Talleyrand among others was rendered incapable of any legislative or ministerial office. It was at that time an object with all who desired that the Revolution should have fair play, to preserve peace with England, which, although still ostensibly neutral, was every day presenting additional symptoms of alienation. The court party hated M. de Talleyrand for having taken part frankly with the Revolution; the republicans hated him for his advocacy of a limited monarchy; all parties distrusted him on account of his eternal sneer; but all parties agreed that he was the only man whose talents fitted him for the delicate mission to England. And it was impossible to appoint him to it. He was despatched however, in January 1792, without any ostensible diplomatic character, to sound the English ministry, and attempt to commence negotiations. His want of an official character allowed the queen to indulge her feelings of personal dislike to the ex-bishop of Autun by turning her back upon him when he was presented at St. James's; and this reception at once ensured his exclusion from general society, and rendered him powerless. After the accession of the Gironde to office, the attempt to ensure at least neutrality on the part of England was renewed: Chauvelin was sent to England as nominal, and along with him Talleyrand as real ambassador. By this time however the French government had become as obnoxious to the general public of England as to the court circles; the torrent was probably too strong to have been stemmed by Talleyrand, even though he had been in a condition to act directly and in person. He could do nothing, forced as he was to act by the instrumentality of a man too jealous and opinionative to conform honestly to the directions of one whose instructions necessarily made him feel himself a mere puppet. Talleyrand's good faith at this period in labouring to preserve peace between England and France, as the only means of rendering a constitutional monarchy possible in his own country, and the steadiness with which he pursued his object, undaunted by the most gross personal insults, are satisfactorily established by the narrative of Dumont.

Talleyrand was at Paris when the events of the 10th of August put an end to the monarchy; and it required all his dexterity to obtain passports from Danton, to enable him to quit Paris. He fled to England, and having saved little of his property, he was obliged to sell his library there to procure himself the means of support. The English government, jealous of his presence, after some time ordered him to leave the country in twenty-four hours; and, proscribed in France, he was obliged, with a dilapidated fortune, to seek refuge in America, when he had almost attained his fortieth year.

Madame de Staël has claimed, and apparently with a good title, the credit of instigating Chénier to demand the recall of M. de Talleyrand after the fall of Robespierre and the termination of the reign of terror. The National Institute was founded about this time, and M. de Talleyrand had in his absence been made a member of the class of moral and political science. At the first sitting of this society which he attended he was elected secretary, an office which he held six months. During this period he read two papers, afterwards published in the 'Mémoires de la Classe des Sciences Morales et Politiques de l'Institut National,' which are justly considered not only as the most able and

original of his published writings, but as those which are most indisputably his own. The first of these is entitled 'Essai sur les Avantages à retirer de Colonies Nouvelles dans les Circonstances présentes;' the second, 'Mémoires sur les relations Commerciales des États-Unis avec l'Angleterre.' The latter is, properly speaking, a supplement—perhaps rather a 'pièce justificative' appended to the other. The great object of both is to point out the importance of colonies to a country like France, in which the revolutionary fervour, though beginning to burn dim, was still sufficiently powerful to prolong the reign of anarchy and suffering, unless measures were adopted to neutralise it. There can be no mistake as to the views being those of M. de Talleyrand himself. They are such as could only occur to a person entertaining the political opinions he had advocated in the Constituent Assembly, who having been exiled by the 'reign of terror' which decimated his countrymen, was living in a country where a successful revolution had quietly and speedily subsided into a settled form of government; in a country where he felt that "an Englishman at once becomes a native, and a Frenchman remains for ever a foreigner." Not satisfied with pointing out in what manner colonies might be rendered powerful assistants in tranquillising France, the essayist entered deeply into the principles of colonisation, explaining the advantages to be derived from colonies, and the law by which their economical advantages might be perpetuated even after their political relations with the mother-country had ceased. In his treatment of his subject he evinces a clear and deep insight into the structure of society both in France and America, and just and extensive views in political economy.

It was not however so much the political talent displayed in these essays, as M. de Talleyrand's skill in employing the reviving influence of the salons of Paris, that obtained him the appointment of foreign minister under the Directory. Here again he was indebted to Madame de Staël, who assisted him through her influence with Barras. M. de Talleyrand accepted office under this unprincipled government with a perfect knowledge of its character and its weakness. His conviction that a Frenchman could never feel at home in America prompted him to grasp at the first opportunity of returning to his native country: his shattered fortune and taste for expensive luxuries rendered employment necessary for him, and political business was the only lucrative employment for which he was qualified. There is nothing in his life to contradict the belief that he again engaged in politics with a desire to promote what was right and useful as far as he could; but he engaged in them aware that he might be ordered to do what he disapproved of, and prepared to do it, under the plea that his functions were merely ministerial, and that the responsibility rested upon his employers. His position under the Directory was consequently an equivocal one. He was engaged, so long as he occupied it, in intrigues which had for their aim the maintenance of himself in office, even if his employers should be turned out; and he was obliged to do their dirty work. The part which he took in the attempt to extort money, as a private gratification, from the American envoys which arrived in Paris in October 1797, was probably forced upon him by the directors: had it been his own project, it would have been conceived with more judgment, and the Americans would not have been driven to extremes, for he understood their national character. But allowing himself to be used in such a shabby business betrays a want of self-respect, or a vulgarity of sentiment, or both. He had his reward; for when public indignation was excited by the statements of the American envoys, the minister of foreign affairs was sacrificed to the popular resentment.

Having adopted a profession in which success could only be expected under a settled government, believing a monarchical government to be the only one which could give tranquillity to his country, and anxious with many others to run up a make-shift government out of the best materials that offered, he naturally attached himself to the growing power of Bonaparte. When the future emperor returned from Egypt, M. de Talleyrand had been six months in a private station; though, had he still retained office, he might with equal readiness have conspired to overturn the Directory. Bourrienne is not the best of authorities, but the earlier volumes of the memoirs which pass under his name are less falsified than the later; and an anecdote which he relates of Talleyrand's interview with the first consul, after being reappointed minister of foreign affairs, is so characteristic, that its truth is highly probable:—"M. de Talleyrand, appointed successor to M. de Reinhardt at the same time that Cambacérès and Lebrun succeeded Siéyès and Roger Ducas as consuls, was admitted to a private audience by the first consul. The speech which he addressed to Bonaparte was so gratifying to the person to whom it was addressed, and appeared so striking to myself, that the words have remained in my memory:—"Citizen Consul, you have confided to me the department of foreign affairs, and I will justify your confidence; but I must work under no one but yourself. This is not mere arrogance on my part: in order that France be well governed, unity of action is required: you must be first consul, and the first consul must hold in his hand all the main-springs of the political machine—the ministries of the interior, of internal police, of foreign affairs, of war, and the marine. The ministers of these departments must transact business with you alone. The ministries of justice and finance have, without doubt, a powerful influence upon politics; but it is more indirect.

The second consul is an able jurist, and the third a master of finance: leave these departments to them; it will amuse them; and you, general, having the entire management of the essential parts of government, may pursue without interruption your noble object, the regeneration of France." These words accorded too closely with the sentiments of Bonaparte to be heard by him otherwise than with pleasure. He said to me, after M. de Talleyrand had taken his leave, "Do you know, Bourrienne, Talleyrand's advice is sound. He is a man of sense." He then added smilingly:—"Talleyrand is a dexterous fellow: he has seen through me. You know I wish to do what he advises; and he is in the right. Lebrun is an honest man, but a mere book-maker; Cambacérès is too much identified with the Revolution: my government must be something entirely new."

Napoleon and Talleyrand may be said to have understood each other, and that in a sense not discreditably to either. The good sense of both was revolted by the bloodshed and theatrical sentiment, the blended ferocity and coxcomby of the Revolution; both were practical statesmen, men with a taste and talent for administration, not mere constitution-makers. Like most men of action, neither of them could discern to the full extent the advantage an executive government can derive from having the line of action to a considerable extent prescribed by a constitution; but Talleyrand saw better than Napoleon that the laws which protect subjects by limiting the arbitrary will of the ruler, in turn protect him by teaching them legitimate methods of defending their rights. In another respect they resembled each other—neither was remarkably scrupulous as to the means by which he attained his ends; though this laxity of moral sentiment was kept in check by the natural humanity of both. Their very points of difference were calculated to cement their union. Each of these men felt that the other was a supplement to himself. Talleyrand really admired and appreciated Napoleon. If he flattered him, it was by the delicate method of confirming him in the opinions and intentions which met his approbation. He dared to tell the first consul truths which others were afraid to utter; and he ventured to arrest at times the impetuosity of Napoleon, by postponing the fulfilment of his orders until he had time to cool. Napoleon's frequent recurrence, in his conversations at St. Helena, to the subject of Talleyrand's defection, his attempts to solve the question at what time that minister "began to betray him," show his appreciation of the services he had received from him. For a time their alliance continued harmonious, and that was the time of Napoleon's success. The arrangement of the Concordat with the pope was the basis of the future empire, and that negotiation was accomplished by Talleyrand. The treaty of Luneville, secularising the ecclesiastical principalities of Germany; the treaty of Amiens, recognising on the part of England the conquests of France, and the new form given to the Continental states by the Revolution; the convention of Lyon, which gave form to the Cisalpine republic; all bear the impress of the peculiar views of M. de Talleyrand. And the minister of foreign affairs was fully aware of his own consequence. In 1801, when obliged by the state of his health to use the waters of Bourbon l'Archambaud, he wrote to Napoleon:—"I regret being at a distance from you, for my devotion to your great plans contributes to their accomplishment." After the battle of Ulm, Talleyrand addressed to the emperor a plan for diminishing the power of Austria to interfere with the preponderance of France, by uniting Tyrol to the Helvetic republic, and erecting the Venetian territory into an independent republic interposed between the kingdom of Italy and the Austrian territories. He proposed to reconcile Austria to this arrangement by ceding to it the whole of Wallachia, Moldavia, Bessarabia, and the northern part of Bulgaria. The advantages he anticipated from this arrangement were that of removing Austria from interfering in the sphere of French influence without exasperating it, and that of raising in the East a power better able than Turkey to hold a balance with Russia. Napoleon paid no attention to the proposal. After the victory of Austerlitz, Talleyrand again pressed it upon his notice, but equally without effect. No change in the feelings of the emperor and his minister can positively be traced to this event; but we see on the one hand a pertinacious repetition of a favourite proposal, and on the other a silent and rather contemptuous rejection of it. We find at a much later period Napoleon complaining of the pertinacity with which Talleyrand was accustomed to repeat any advice which he considered important; and we find Talleyrand speaking of Napoleon as one who could not be served because he would not listen to advice. And we cannot but see in the difference of opinion just mentioned the commencement of that coolness which induced Talleyrand, on the 9th of August 1807 to resign the portfolio of foreign affairs and accept the nominal dignity of vice-grand-elect of the empire in addition to the titles of grand-chamberlain and prince of Benevento, which had previously been conferred upon him. An unprecedented career of victory had rendered Napoleon impatient of success; the consciousness of important services had rendered Talleyrand impatient of neglect; and the alienation thus originated was increased and confirmed by the dashing but vulgar soldiers, who formed such an influential part of the emperor's court, and their silly and vulgar wives, who could not pardon M. de Talleyrand his superior refinement, and who had all in turn smarted under his insupportable sarcasm. Napoleon in exile is said to have represented the resignation of M. de Talleyrand as involuntary, and rendered necessary by his stock-jobbing propensities.

It is not impossible that the minister may have speculated more deeply in the funds than was proper; but had there been no other reason for his dismissal, Napoleon could, and often did, wink at more flagrant pecuniary delinquencies. M. de Talleyrand, in his character of grand-chamberlain, did the honours of the imperial court at Erfurt; and was on more than one occasion privately consulted by the emperor, who one day said, "We ought not to have parted." In 1809 however the ex-minister was so loud and unreserved in his condemnation of the Spanish expedition, that Napoleon, on his return from the Peninsula, deprived him of the office of chamberlain. The last five years of the empire elicited many caustic criticisms from M. de Talleyrand, which were duly carried to the ears of the emperor, who retorted by sallies of abuse which irritated the prince without rendering him less powerful. In 1812 M. de Talleyrand is said to have predicted the overthrow of the empire. In 1813 overtures were made to him with a view to his resuming the portfolio of foreign affairs, but without success. In 1814 he re-appeared on the stage of active life on his own account.

In 1814, as vice-grand-elect of the empire, he was a member of the regency, but was prevented joining it at Blois by the national guard refusing to allow him to quit Paris—not much against his will. When Paris capitulated, the Emperor Alexander took up his residence in the house of the prince of Benevento. The words attributed by the *Memoirs of Bourrienne* to Talleyrand, in his conversations with those in whose hands the fortune of war had for the time placed the fortunes of France, are characteristic, true, and in keeping with his opinions and subsequent conduct:—"There is no other alternative but Napoleon or Louis XVIII. After Napoleon there is no one whose personal qualities would ensure him the support of ten men. A principle is needed to give consistency to the new government, whatever it may be. Louis XVIII. represents a principle. Anything but Napoleon or Louis XVIII. is an intrigue, and no intrigue can be strong enough to support him upon whom it might confer power." This view lends consistency to the conduct of M. de Talleyrand at the close of Napoleon's career. Their alliance had long been dissolved; they stood confronting each other as separate and independent powers. M. de Talleyrand had advocated a limited monarchy, until the old throne was violently broken up and overturned; he had lent his aid to construct a new monarchy and a new aristocracy out of the fragments of old institutions which the Revolution had left; he saw France again without a government, and, with his principles, he might have consistently taken office under any government, holding, as he did, the opinion that any government is better than none, and that any man may hold office under it provided he take care to do as much good and as little harm as he can. But M. de Talleyrand did more: he exerted the influence he possessed over Alexander to obtain the combination of constitutional forms with the recognition of legitimacy. Louis XVIII. saved appearances by insisting upon being allowed to grant the charter spontaneously, but it was M. de Talleyrand's use of the remains of the revolutionary party that made him feel the necessity of this concession. As minister Talleyrand insisted upon its observance with a precision that rendered him as much an object of annoyance to the courtiers of the Restoration as ever Clarendon was to the gay triflers who surrounded Charles II. When he set out for the congress of Vienna, in September 1814, the court of France is said to have presented the aspect of a school at the commencement of the holidays. The powers who had refused to concede to Napoleon at the head of a victorious army anything beyond the limits of France in 1792, gave more favourable terms to M. de Talleyrand, the representative of a nation upon which they had just forced a king. He baffled the Emperor Alexander, who said angrily, "Talleyrand conducts himself as if he were minister of Louis XIV." On the 5th of January 1815, he signed, with Lord Castlereagh and Prince Metternich, a secret treaty, having previously obliged Prussia to remain contented with a third of Saxony, and Russia to cede a part of the grand-duchy of Warsaw. The imbecility of the Bourbons, by inviting the descent of Napoleon at Frejus, again unsettled everything. M. de Talleyrand dictated the proclamation of Cambay, in which Louis XVIII. confessed the faults committed in 1814, and promised to make reparation. He suggested the more liberal interpretation of the charter, announced from the same place. He obtained an extension of the democratic principle in the constitution of the Chamber of Deputies, recommended the rendering the peerage hereditary, and induced the king, restored for a second time, to institute a cabinet council, of which he was nominated the first president.

The constitutional monarchy, the object of his earlier wishes, was now definitively established; but the part he was destined to perform in it was that of a leader of opposition. In his note of the 21st of September 1815, he protested, as a prime minister, against the new terms which the allies intended to impose upon France. He said they were such conditions as only conquest could warrant. His argument was fruitless: Louis XVIII. bowed to the dictation of his powerful allies; and M. de Talleyrand resigned office two months before the conclusion of the treaty which narrowed the frontiers of France and amerced her in a heavy contribution. By this step M. de Talleyrand enabled himself to contribute essentially to strengthening the constitutional monarchy, to which, if he had any principle, he had through life preserved his attachment. Had he been a party to the

treaty, he must have shared with the elder branch of the Bourbons the odium which attached to all who had taken part in it; and hence thrown the opposition into the hands of the enemies of the constitution. By resigning office, he obtained a voice potential in the deliberations of the opposition; and no English nobleman born and bred to the profession could have discharged more adroitly the functions of an opposition leader. For fourteen years his *salon* was a place of resort for the leaders of the liberal party; in society he aided it by his conversational talents; in the chamber of peers he lent it the weight of his name and experience. He defended the liberty of the press in opposition to the censorship; he supported trial by jury in the case of offences against the press; and he protested against the interference of France in the internal affairs of Spain in 1823. By this line of conduct he was materially instrumental in creating a liberal party within the pale of the constitution; and to the existence of such a party was owing in no small degree the result of the revolution of 1830, in which, though the dynasty was changed, the constitution survived in its most important outlines. That revolution also placed Prince Talleyrand in a condition to realise what had been one of his most earnest wishes at the outset of his political career—an alliance between France and England as constitutional governments. To accomplish this he had laboured strenuously in 1792; to accomplish this was one of the first objects he aimed at when appointed minister for foreign affairs under the consulate: he accomplished it as representative of Louis Philippe.

M. de Talleyrand was appointed ambassador extraordinary and minister plenipotentiary to the court of Great Britain on the 5th of September 1830; and he held the appointment till the 7th of January 1835, when he was succeeded by General Sebastiani. During these four years, M. de Talleyrand, besides obtaining the recognition of the new order of things in France by the European powers, procured a similar recognition of the independence of Belgium, and concluded the quadruple alliance of England, France, Spain and Portugal, for the purpose of re-establishing the peace of the Peninsula.

After his return from the mission to England, M. de Talleyrand retired from public life. The only occasion on which he again emerged from domestic retirement was when he appeared at the *Académie des Sciences Morales et Politiques*, to pronounce the *éloge* of Count Reinhard, only three months before his own death. He died on the 20th of May 1838, in the eighty-fourth year of his age.

The object of this sketch has been to present, as far as the very imperfect materials which are attainable would permit, a view of this very extraordinary man undistorted by any partisan feeling either with regard to his person or principles. It must be admitted in favour of M. de Talleyrand that he was warmly beloved by those who were his intimate friends, and by all who were at any time employed under him. It must also be allowed that when his life is contemplated as a whole, it bears the imprint of a unity of purpose animating his efforts throughout. Freedom of thought and expression, the abolition of antiquated and oppressive feudal forms and the most objectionable powers of the church, the promotion of education, the establishment of a national religion, and a constitutional government compounded of popular representation and an hereditary sovereign and aristocracy—these were the objects he proposed for attainment when he entered the arena of politics. He attempted to approach this ideal as far as circumstances would admit at all periods of his long career; and he ended by being instrumental in establishing it. No act of cruelty has been substantiated against him; and the only charges of base subservency that appear to be satisfactorily proved, are his participation in the attempt to extort a bribe from the American envoys, and in the violation of an independent territory in the seizure of the Duc d'Enghien. His literary was subordinate to his political character. It is difficult to say how much of the writings published in his name were really his own. Latterly, we are informed upon good authority, he was in the habit of explaining his general views on a subject to some one whom he employed to bring this communication into shape; and when the manuscript was presented to him he modified and retouched it until it met his views, throwing in a good deal of that wit which gave zest to his conversation. The domestic life of M. de Talleyrand has not been alluded to; for almost every statement regarding it is poisoned by the small wit of the coteries of Paris.

The report upon education of 1791; a report to the first consul upon the best means of re-establishing the diplomatic service of France; the essays upon colonisation, and the commercial relations of England and America; and the *éloge* of M. de Reinhard—all are regarded as his own composition. The first is the most commonplace; the other three are master-pieces in their different ways. They bespeak an elegant and accomplished mind, a shrewd insight into character and the structure of society, and a felicitous and graphic power of expression. The wit of M. de Talleyrand was the wit of intellect, not of temperament. It was often full of meaning; always suggestive of thought; most frequently caustic. His reserve, probably constitutional, but heightened by the circumstances of his early life, and cultivated upon principle, was impenetrable. In advanced life it seemed even to have affected his physical appearance. When at rest, but for his glittering eye it would have been difficult to feel certain that it was not a statue that was placed before you. When his sonorous voice broke upon the ear it was like a possessing spirit

speaking from a graven image. Even in comparatively early life, his power of banishing all expression from his countenance, and the soft and heavy appearance of his features, were remarked as contrasting startlingly with the manly energy indicated by his deep powerful voice. Mirabeau in the beginning, Napoleon at the close of the Revolution, threw him into the shade; but he outlasted both. The secret of his power was patience and pertinacity; and his life has the appearance of being preternaturally lengthened out, when we recollect the immense number of widely-removed characters and events of which he was the contemporary. It may be said on the one hand that he accomplished nothing which time did not in a manner bring about; but on the other it may be said, with equal plausibility, that scarcely any of the leading events which have occurred in France in his day would have taken the exact shape they assumed had not his hand interfered to give them somewhat of a bias or direction. Next to Napoleon I, he certainly is the most extraordinary man the revolutionary period of France has given birth to.

TALLIEN, JEAN-LAMBERT, the leader of the coalition of parties by whom Robespierre was overthrown, was the son of the house-steward to the Marquis de Bercy, and was born in Paris in 1769. Being a quick, sprightly lad, he was noticed by the marquis, who undertook the charge of his education. Although he never deserved the title of 'savant,' which he afterwards acquired, he obtained a general smattering of knowledge, which, joined to great fluency of speech, was mistaken for learning by the multitude. Before his patron's death in 1790, he had spent some time as a copying clerk in an attorney's office, then in that of a notary; after which the deputy Broustaret made him his amanuensis. He also held for several months the situation of reader and corrector in the printing-office of the 'Moniteur.'

In August 1791, by the advice it is said of his friend Marat, he began to make himself known by placarding the walls of Paris with a sheet journal called 'L'Ami du Citoyen.' The object of this newspaper was to excite the people against Louis XVI. and his court: a section of the Jacobin Club defrayed its cost. Towards the end of 1791, Tallien drew attention in that club by an address on the causes and effects of the Revolution, which, being printed and circulated, rendered him still more popular. His reputation as a patriot now stood so high, that on the 8th of July 1792 he was chosen by one of the sections as their orator, and appeared at their head before the bar of the Assembly. He was connected with many of the powerful republicans, and was a favourite with Danton, who constantly employed him as one of his agents. At Danton's instigation he took a decided part on the 10th of August; immediately after which revolt he received the appointment of Secrétaire-Greffier to the Commune. The self-elected members of this corporation, who soon became the rulers of France, took up their quarters at the Hôtel-de-Ville, and there a large proportion of the intrigues and conspiracies, plots and massacres which followed during many months were concocted.

On the 26th of August Tallien again appeared at the bar of the Assembly, to expostulate on the numerous applications for passports then making by members of the Chamber, to leave the city. He informed them that the Commune had refused to grant them. On the 30th he presented himself a third time, to remonstrate with the members for having repealed the decree relating to the refusal of passports, lauded his own services in arresting the conspirators and priests, and concluded a most intemperate harangue by saying: "They are all immured, and the soil of liberty shall soon be purged of their presence." This was spoken only four days before the massacres began. The part he played during those sanguinary days has since been disputed by his apologists; but the signature of Tallien still appears among the public records to most of the warrants for arrest preceding the massacres, and to the orders for payment given to the executioners and assassins. The circular letter, summoning the confederates to the slaughter, and signed by Tallien and Manuel, still exists. It was Tallien who received the clothes, the watches, the jewels, the money, brought to his office by the assassins who had stripped the killed. It was he who issued, with the official stamp of the minister Danton, on paper belonging to the government (all the addresses being written by clerks in the public service) the infamous circular of the 3rd of September, composed by Marat, and recommending the slaughter of the prisoners in the provincial towns. The memoirs of Senart, one of the secretaries of the Committee of Public Safety, throw much light upon these events, and upon Tallien's share in them. Tallien is generally stated to have refrained from pillage during the Revolution; but Senart accuses him of having secreted the spoils of the victims, and of having "locked them up in a chest of which he kept the key himself."

In consequence of his exertions during these events, and supported by the influence of Danton, still Minister of Justice, Tallien was returned as deputy to the National Convention for the department of Seine-et-Oise. He was one of the most virulent persecutors of Louis XVI. during the trial, and voted for his death without appeal. On the 27th of February 1793 he defended Marat most earnestly in the Convention, as he subsequently did on other occasions.

In April 1793, he was sent as commissioner into the Western provinces, then in revolt against the republic; but in this mission he evinced unusual indulgence, and Senart charges him with having spared several royalists, a course considered very criminal at that period. To him at all events the credit is due of having induced the

Convention to revoke the decree, placing the city of Orleans in a state of siege. Later in this year (1793), he was sent by the Convention on that mission to Bordeaux, which was hardly less flagrantly cruel than his conduct in September. The object of this mission was to extirpate the surviving fragment of the Girondists, who had fled from their sentence of execution, and sought refuge in that country. In all the newspapers of the time, Tallien is described, during this proconsulship, as the worthy rival of Lebon and Carrier for his butcheries. He fixed himself at first not at Bordeaux, but at a small town, some 30 miles distant, where having collected about him a set of savages, thirsting for plunder, he converted them into a committee, a court of justice, with judges and jurymen, and soldiery to execute his decrees. The proscriptions issued from this office are almost incredible. For several months Tallien and his colleague Isabeau, decimated the ill-starred Bordalese with their sentences of death, and when their ruthless tyranny had broken the spirit of the inhabitants, they made a triumphal entrance into the devoted city, in imitation of the ancient Romans. The youthful proconsul, then in his 25th year, fixed his abode in the great square of Bordeaux, where the guillotine had been erected, and was seen every day at the windows of his house, watching and applauding the executions. The government being distressed for money, he took advantage of the terror of the citizens to exact enormous sums from the merchants and shopkeepers, sending all who murmured or complained to the scaffold. The bankers, the fundholders, the rich farmers, the wine-growers were oppressed with the same excessive extortions. Famine came at length to heighten the public misery, but instead of seeing in this new calamity the natural result of his misgovernment, Tallien denounced the wretched inhabitants as monopolisers, and the enemies of the state. But in the midst of his proscriptions, a sudden change was seen, when least expected. Among the prisoners, awaiting their fate, was a young Spanish lady of great beauty, afterwards celebrated as Madame de Fontenay, who, having obtained an audience with Tallien, not only received a full pardon, but became his mistress, and soon acquired sufficient influence over his mind to procure the release of many prisoners. Surprised by this relaxation in his conduct, the agents of his recent cruelties suspected his motives, and denounced him and his mistress to the Convention for trafficking in the sale of releases and exemptions. In consequence of these reports, Tallien was recalled from Bordeaux in April 1794, and Madame de Fontenay was sent to prison at the same time. He met with a frigid reception from his colleagues. Danton, Camille Desmoulins and many of the leaders of his party had been sacrificed a few weeks before; his power was broken, he felt himself at the mercy of Robespierre, then in the height of his power. Thus reduced and embarrassed he played the sycophant to Robespierre, resuming at the same time his former airs of ultra-republicanism. He thus managed to regain some of his credit, and was appointed first secretary, then president of the Convention. Robespierre however suspected him, and causing his steps to be closely tracked by spies, discovered his connections, and gradually detected his policy, which was to unite the fragments of the several factions, and revolt against the thralldom imposed by their common enemy.

On the 12th of June 1794, Robespierre dealt the first blow by denouncing Tallien in the Convention as one who had insulted the truest patriots by stigmatising them as spies, and when the accused attempted an explanation, he loaded him with threats and opprobrious insults. He attacked him likewise in the hall of the Jacobins, and had his name struck off the list of members. Robespierre seemed to be fully master of the emergency, but Tallien, at the suggestion of Fouché or some other confederate, conceived the idea of alarming the Convention, by pretending that the approaching proscription was not aimed at a party, but at the Convention itself. It was this subtle insinuation which disturbed the security of Robespierre, and prepared the success of the 9th Thermidor. The friends of Hebert, the surviving Dantonists, the ultra-republicans in the committees, felt that they were marked out for destruction, and resolving to try their united strength against the dictator, held secret meetings, in order to organise their plan of resistance. Robespierre, preparing for the conflict, summoned his younger brother and Saint-Just, who were absent with the armies, to join him in the capital. At length the 9th Thermidor (July 27, 1794) came, Tallien denounced Robespierre as a public enemy, the coalition was successful, and as already has been related in the article ROBESPIERRE, the dictator and his party were crushed.

Immediately after the 9th Thermidor, Tallien was created a member of the committee of Public Safety, and re-elected to the Jacobin club. In the reaction which followed Tallien used the influence he had acquired on the side of mercy, and it is said to have been owing to him that the prisons were thrown open in every part of France, that the Revolutionary Tribunal was dissolved, and that the ferocious commissioners Carrier, Lebon and others were brought to trial. But these state trials gave some of the prisoners fair opportunities to remind him of the massacres of September and his atrocities at Bordeaux. On one occasion Cambon, the republican financier, accused him in the National Convention, of having signed money orders to the amount of 1,500,000 francs, in favour of the September assassins. These taunts and accusations, and the constant attacks made upon him by the newspaper press, once more brought his name into discredit; and

notwithstanding the partial revival of his popularity on the 2nd and 3rd Prairial (May 1795), and the services he rendered in La Vendée, as commissioner to the army commanded by Hoche, he could not regain his former influence. The execution of the royalist prisoners, captured in the affair of Quiberon, once more darkened his name.

On the 13th Vendémiaire, October 4, 1795, he displayed a degree of courage which attracted the favourable notice of Bonaparte; and it was to his conduct on this occasion that he owed his employment in the expedition to Egypt in 1798, which continued until the year 1801, when he was dismissed, and sent back to France, by General Menou, then commander-in-chief. On his return to France Madame de Fontenay, whom he had married in 1794, separated from him, and the first consul did not encourage his visits. He afterwards languished in great distress for several years. The consulship at Alicante was procured for him by Fouché in 1809, but the return of the Bourbons, in 1814, deprived him of this last resource. Not having taken office under Napoleon, during the Hundred Days, he was suffered to remain in Paris, though one of the Regicides; until he died in extreme poverty on the 16th of November 1820.

TALLIS, THOMAS, who is considered the patriarch of English cathedral music, was born at about the same period as the famous Italian ecclesiastical composer Palestrina, whose birth took place in the year 1529.

It has been stated, but most probably erroneously, that Tallis was organist to Henry VIII. and his successors. He undoubtedly was a gentleman of the chapel to Edward VI. and Mary; and under Elizabeth the place of organist was added to his other office. He seems to have devoted himself wholly to the duties of the church, for his name does not appear to anything in a secular form. His entire Service, including prayers, responses, litany, and nearly all of a musical kind comprised in our liturgy, and in use in our cathedrals, appears in Dr. Boyce's Collection, together with an anthem which has long been in high repute with the admirers of severe counterpoint. But for the smaller parts of his Service he was indebted to Peter Marbeck, organist of Windsor, who certainly is entitled to the credit of having added those solemn notes to the suffrages and responses which, under the name of Tallis, are still retained in our choirs, and listened to with reverential pleasure. [MARBECK.]

In 1575 Tallis published, in conjunction with his pupil, Bird (or Byrde), 'Cantiones Sacre,' master-pieces of their kind; and these are rendered the more remarkable from having been protected for twenty-one years by a patent from Queen Elizabeth, the first of the kind that ever was granted. One of these, 'O sacrum convivium,' was adapted by Dean Aldrich to the words 'I call and cry,' and is the above-mentioned anthem, which still continues to be frequently performed in most of our cathedrals. Two more of his anthems are printed in Dr. Arnold's Collection.

Tallis died in 1585, and was buried in the parish church of Greenwich, in the chancel of which Strype, in his continuation of Stow's 'Survey,' tells us he saw a brass plate, on which was engraved, in old English letter, an epitaph, in four stanzas of four lines each, giving a brief history of this renowned composer. The plate was carried away, when the church was repaired somewhat over a century ago. The verses are to be found in Hawkins, Burney, and most other publications relating to English church music.

TALMA, FRANÇOIS JOSEPH, an eminent French tragedian, was born in Paris, January 15th 1763. His father, who was a dentist, went to England shortly after the birth of his son, and practised his profession for some years in London. At nine years of age young Talma returned to France, and was placed in a school at Chaillot, which was kept by Monsieur Lamarguère, a great admirer of the drama, who delighted to discover and encourage a similar taste in any of his pupils. A year after Talma had joined the school he was intrusted with a part in an old tragedy, called 'Simois, Fils de Tamerlane,' which Monsieur Lamarguère had selected for performance by his scholars; and so deeply did the future tragedian enter into the feeling of the character, that he burst into tears at the recital of the sorrows of the hero, whose brother he represented. At the age of twelve he wrote a little drama, in the composition of which he further developed his knowledge of the stage. He again visited London, and returned a second time to Paris at the latter end of the year 1781, when he commenced the study of logic in the Collège Mazarin. In 1783 he made a *coup d'essai* at the Théâtre de Doyen, in the character of Seide, in the tragedy of 'Mahomet.' A council of friends, appointed by himself, to judge of the performance, pronounced it a failure: "He had not *le feu sacré*." Talma deferred to this unfavourable opinion, and quietly resumed the study of his father's profession; but a few years afterwards the same friends were called upon to reverse their judgment and confess their mistake. On the 21st of November 1787, he made his début at the Théâtre Français, and in 1789 created a great sensation by his performance of Charles IX. At the commencement of the French Revolution he nearly fell a prey to a severe nervous disorder. On his recovery and the retirement of Larive, Talma became the principal tragic actor. He reformed the costume of the stage, and first played the part of Titus in a Roman toga. During the reign of Napoleon he enjoyed the emperor's friendship; and was no less honoured or esteemed by Louis XVIII. In 1825 he published some 'Reflections' on his favourite art; and on the 11th of

June 1826 appeared on the stage for the last time in the part of Charles VI. During his last illness the audiences of the Théâtre Français every evening called for an official account of the state of his health previously to the commencement of the performances. He died on the 19th of October following, and was buried in the cemetery of Père la Chaise, in the presence of an immense crowd. MM. Arnault, Jouy, and Lafour pronounced orations over his grave. The Théâtre Français remained closed for three evenings, and the Opéra Comique and Odéon were also closed on the day of his funeral. The actors of the Brussels Theatre (of which company he was an associate) were mourning for him for forty days, and a variety of honours were paid to his memory at the principal theatres throughout France and the Netherlands. Talma is said to have created seventy-one characters, amongst the most popular of which were those of Orestes, Edipus, Nero, Manlius, Caesar, Cinna, Augustus, Coriolanus, Hector, Macbeth, Hamlet, Othello, Leicester, Sylla, Regulus, Danville (in 'L'Ecole des Vieillards'), Leonidas, Charles VI., and Henry VIII. He has been accused, remarks one of his biographers, of having spoken the verse of tragedy as though it were prose; but this avoidance of the jingle of rhyme was one of the greatest improvements which he introduced upon the French stage. In person he was about the middle height, square-built, and with a most expressive and noble countenance. His voice was exceedingly fine and powerful, his attitudes dignified and graceful. In private life he was distinguished for his manly frankness, his kind disposition, and unaffected manners. He spoke English perfectly, and was a great admirer of England and her institutions. He was the friend and guest of John Kemble, and was present in Covent Garden Theatre when that great actor took his leave of the stage.

TAMBURINI, PIETRO, born at Brescia in 1737, studied in his native town, took holy orders, and was made professor of philosophy, and afterwards of theology, in the episcopal seminary of Brescia. After filling those chairs for twelve years, he was invited to Rome, where Clement XIV. (Ganganelli) made him director of the studies of the Irish college, in which situation he remained for six years. In 1778 he was recalled to Lombardy by the Empress Maria Theresa, and appointed professor of theology in the University of Pavia, and at the same time director of the studies of the German Hungarian college in that city, and also censor of the press. In 1795 he was made Professor Emeritus, with a pension. In 1797, when the French invaded Lombardy, Tamburini was obliged by the new government to resume active duties at Pavia, as professor of moral philosophy and of 'jus naturæ,' an arduous task in those times of confusion of ideas and of barefaced licentiousness. Tamburini boldly fulfilled his duties, and effected some good by proclaiming wholesome principles from his chair. Shortly afterwards his chair was suppressed, but he was appointed rector of the lyceum of his native town, Brescia. When Bonaparte assumed the government in France and North Italy, Tamburini was sent again to Pavia as professor of moral philosophy and of 'jus naturæ et gentium,' in which chair he continued for eighteen years, till some years after the Restoration, when the Emperor Francis made him again Professor Emeritus and præsul of the faculty of law and politics in the University of Pavia. Tamburini was also a knight of the order of the Iron Crown. He died at Pavia, in March 1827, at ninety years of age, a few days after the death of his brother professor Volta. His remains were buried with the greatest honours, being followed to the grave by the whole of the professors and above 600 students, with marks of sincere respect and deep regret.

The work for which Tamburini is mostly known is 'Idea della Santa Sede,' published anonymously at Pavia in 1784. An extract from the author's preface will convey some idea of the nature of this work:—"It very often happens that to the most common and hacknied expressions a vague and indeterminate meaning is attributed. A word was originally fixed upon to signify a certain thing. The idea of it was perhaps clear and precise in its origin; but as in the course of time the ideas of men change, the word is still retained, though people attach to it different meanings. Hence obscurity and confusion and interminable disputes arise, and still the sound of the disputed word is kept up, without conveying any distinct idea of what it means. Numberless examples might be quoted of such an occurrence. For instance, in our own times everybody speaks of the Holy See, the Apostolic See, the chair of St. Peter, the Roman Church, which are so many expressions signifying the same thing, and which in ancient times expressed a simple and clear idea, but which now convey to the minds of people the most vague and indeterminate notions. Things the most disparate are identified; people confound one subject with another, the see with the incumbent, the chair with the court of Rome, the court with the church; and from this medley arises a confusion of ideas through which every decree that proceeds from Rome becomes invested with the most respectable authority of the chair of St. Peter, of the Apostolic See, of the Church of Rome—a confusion followed by the most pernicious consequences not only to local churches, but also to the universal church, and to the Apostolic See itself. In order to support certain decretals which emanated from Rome, some short-sighted theologians have attributed to the Roman See new prerogatives unknown to the earlier ages of the church, and they have had recourse to a supposed infallibility. . . . . Other men have contested these prerogatives, and in the warmth of the controversy the real claims of

the Holy See have been overlooked and forgotten. . . . One party has maintained that, on the plea of infallibility, every decision emanating from Rome ought to be received with blind obedience, whilst the other party has imagined that by overthrowing the privilege of infallibility every authority ascribed to it can be boldly denied. . . . Both these extremes proceed from the want of just and exact notions on the nature, the character, and the properties of the Holy See. The present work is intended to establish these notions. A little French book fell into my hands, entitled 'Dissertation Canonique et Historique sur l'Autorité du Saint Siège, et les Décrets qu'on lui attribue.' In the first part the author has well explained the idea of the Holy See and of the Congregations sitting at Rome; and in the second part he has maintained the primacy of that see. I have adopted the most important principles of this little work, compressing or enlarging its various parts, and fitting the whole to the wants of our times and country. I have explained also the essential rights annexed to the primacy of the Roman see, and have given some general rules in order to calculate the value and merit of the Roman decretals, and to make our own conduct practically harmonise with the obedience which we owe to the authority of the see of Rome."

At the appearance of Tamburini's work it was stigmatised as Jansenistical, although the author has not gone perhaps so far as some of the French Jansenists, or as Bishop Ricci and his synod of Pistoia. The reasoning is closely argumentative, and supported by numerous references. Several refutations of it were published at Rome and other towns of Italy. The other works of Tamburini are—1. 'Introduzione allo Studio della Filosofia Morale,' Milan, 1797; 2. 'Lezioni di Filosofia Morale e di Naturale e Sociale Diritto,' 4 vols., Pavia, 1806-12; 3. 'Elementa Juris Naturæ,' Milan, 1815; 4. 'Cenni sulla Perfettibilità dell' Umana Famiglia,' Milan, 1823; in which the author refutes the exaggerated notions of indefinite perfectibility and universal happiness in human societies. The philosophy of Tamburini is of the Eclectic kind.

#### TAMERLANE. [TIMUR.]

TANCRED, son of Eudes, a Norman baron, and of Emma, sister of Robert Wiskard, duke of Apulia, according to some (Gautier d'Arc, 'Histoire des Conquêtes des Normands en Italie, en Sicile, &c.), and nephew of Bohemund, son of Wiskard, and prince of Tarentum according to others (Giannone and the authorities he quotes), was serving with Bohemund under Roger, duke of Apulia, son and successor of Wiskard, at the siege of Amalfi, A.D. 1096, when the report of the great crusade which was preparing for the East determined Bohemund, who was not on good terms with Duke Roger, to join the Crusaders. Tancred followed him with a vast number of men from Apulia and Calabria. The exploits, true or fabulous, of Tancred, in Syria and Palestine, have been immortalised by Tasso in his poem of 'La Gerusalemme.'

TANCRED, of Hauteville in Normandy, was a feudal baron who lived in the latter part of the 10th and beginning of the 11th century. After doing military service for some years under Richard the Good, duke of Normandy, he retired to his hereditary mansion, where he lived poor, and reared up a numerous family of twelve sons and three daughters. All his sons were remarkable for their comeliness, their great strength, and their courage. The eldest, Serlon, followed William the Bastard in his conquest of England, and the others went successively to seek their fortune in Apulia, where Rainulf, another Norman adventurer, had already obtained the countship of Aversa from Sergius, duke of Naples. William, one of Tancred's sons, called 'Fier à bras,' or strong of arm, became count of Apulia, and after his death, his brother Robert, called Wiskard, or 'the wise,' became duke of Apulia and Calabria, and the founder of the Norman dynasty of Sicily. Their father Tancred died at a very great age at Hauteville. Traces of the château of Tancred, according to the old popular tradition, were still seen a few years since in a pretty valley near Hauteville, four miles north of the town of Marigny, in the arrondissement of Coutances, department of La Manche.

TANCRED, king of Sicily, was an illegitimate son of Roger, the eldest son of King Roger. On the death of his cousin William II., in 1189, the Sicilian parliament being convoked by the chancellor of the kingdom, proclaimed Tancred, then Count of Lecce, his successor. He had already acquired a great reputation for courage, generosity, and love of learning, and these qualities gained him warm partisans, at a time when Henry VI. of Germany was urging his claim to the throne of Sicily, founded on his having married Constance, the aunt of William II., who during the life of that monarch had been declared his heir apparent on failure of male issue. Henry, now emperor of Germany, in 1191 invaded Apulia and took Salerno, but being obliged to return to Germany he left the empress Constance behind him. Shortly after his departure the people of Salerno rose, made Constance prisoner, and delivered her over to Tancred, who generously restored her to her husband. The same year he drove the German troops out of Apulia. Tancred died at Palermo in 1194, leaving a son William, a minor, to succeed him, under the guardianship of his mother, queen Sybilla. Henry VI. having again entered Apulia with a large force, and being supported by the turbulent barons, overran

the country as far as Rhegium, crossed the strait, and took Messina, Syracuse, and Catania. He then marched to Palermo, and queen Sybilla and her son William having retired to a castle, the city opened its gates to Henry, who was acknowledged king and solemnly crowned. Henry having seized the persons of queen Sybilla and her son William, confined them first in a monastery, and had the child barbarously mutilated and deprived of sight. The boy expired in prison shortly after, 1195. Henry also put to a cruel death their principal adherents. Thus ended the Norman dynasty, which had reigned with glory over Sicily for more than a century.

TANNAHILL, ROBERT, born at Paisley, in Scotland, on the 3rd of June 1774, was the son of poor parents, by whom he was brought up to the occupation of a weaver, which he pursued in his native town and at Glasgow throughout the short period of his life. The earliest predilection of Tannahill was for poetry, and his taste was formed by the constant study of Allan Ramsay, Fergusson, and Burns. He failed to attain the spirit of these masters of Scottish song; but his pieces generally excel theirs in grace and sweetness. 'Jessy, the Flower of Dumbland,' is his best-known effort. The 'Song of the Battle of Vittoria' has the merit of redeeming from the degradation of worthless words one of the finest airs of Scottish minstrelsy, and restoring it from a whistled jig to the solemn tone of a triumphal song.

His songs were commonly inspired by the immediate occasion, and were the unlaboured fruit of his imagination or feelings. Besides the charm of harmony and of a perfect mastery of his language, which is almost exclusively Saxon, they derive not a little of their effect from the vein of desponding melancholy which runs through them. This melancholy was in some degree constitutional in Tannahill, but it was aggravated by the neglect of the world, and a hopelessness of ever raising himself above circumstances so unfavourable to genius as those in which fortune had thrown him. A kindred spirit, 'the Ettrick Shepherd,' made a long pilgrimage to visit him at Paisley. After a night spent in the most delightful interchange of feeling, James Hogg took his departure. "Farewell, we shall never meet again," were the words emphatically pronounced on this occasion by Tannahill, and their meaning was shortly afterwards explained. He committed suicide by drowning himself, in his thirty-sixth year. His remains are interred at Paisley.

Tannahill's songs were published in Paisley, in his lifetime, in a small volume. They are in every modern collection of Scottish melodies, and are occasionally printed (under Tannahill's name) with selections from Burns. For his life, see Chambers's 'Scottish Biography.'

TANNER, THOMAS, was the eldest son of the Rev. Thomas Tanner, vicar of Market Lavington, Wiltshire, where he was born on the 25th of January 1674. In November 1689 he was entered a student of Queen's College, Oxford, but after having taken his degree of B.A. he removed in January 1694 to All Souls, and he was elected a Fellow of that society November 2nd, 1696. So early as 1693, when he was only nineteen, he had published proposals for printing all the works of the antiquary John Leland, from the original manuscripts; but this design, which was afterwards partially executed by Hearne, did not receive such encouragement as to induce him to proceed with it. The reputation he had very early acquired for his knowledge of English antiquities, may appear from the fact that Anthony à Wood, at his death in 1695, left his papers to Tanner's care. That same year Tanner published at London his first work, an octavo volume, entitled 'Notitia Monastica, or a Short Account of the Religious Houses in England and Wales.'

Having taken orders, he was soon after appointed by Dr. Moore, bishop of Norwich, one of his chaplains; and having in 1701 married Rose, the eldest daughter of that prelate, he received various preferments from his father-in-law: the chancellorship of Norwich about the time of his marriage; the office of commissary for the archdeaconry of Norfolk in 1703; that of commissary for the archdeaconry of Sudbury in 1707; and in 1713 a prebend in the cathedral of Ely, to which diocese Moore had been by this time removed. Meanwhile Tanner's wife had died, at the age of twenty-five, in 1706. In the same year he was presented by a friend to the rectory of Thorp, near Norwich, and he then married Frances, daughter of Jacob Preston, Esq., of London, whom however he lost in 1718. His next publication, a new edition of Wood's 'Athene Oxonienses,' enlarged by the addition of 500 new lives from Wood's manuscripts, appeared at London in 2 vols. folio, in 1721. In December that year, Tanner, who had taken his degree of D.D. in 1710, was appointed by Dr. Green, bishop of Norwich, to the archdeaconry of Norfolk; and in 1723 he resigned his prebend at Ely, and was appointed canon of Christ's Church, Oxford. He was consecrated to the bishopric of St. Asaph in January 1732, and in May 1733 he married Mrs. Elizabeth Scottow of Thorp, receiving with her a fortune of 15,000*l.*; but he did not long enjoy these accessions of wealth and honour, his death taking place at Oxford on the 14th of December 1735. By his second wife he left one son, Thomas, who died rector of Hadley and Monks' Ely in Suffolk, and prebend of Canterbury, in 1760. His widow married Robert Britiffe, Esq., M.P., and survived to 1771.

A new edition of the 'Notitia Monastica,' with large additions (in part by the editor), was published in a folio volume at London in 1744 by the bishop's brother, the Rev. John Tanner, vicar of Lowes-

toft, in Suffolk; and a third edition, considerably improved, by the Rev. James Nasmith, appeared at Cambridge, in the same form, in 1787. The greater part of this last impression having been consumed in a fire which happened in Mr. Nichols's printing-house on the night of Monday, the 8th of February 1808, the book is very scarce. But Tanner's literary reputation rests principally on his great biographical and bibliographical work, entitled '*Bibliotheca Britannico-Hibernica, sive de Scriptioribus qui in Anglia, Scotia, et Hibernia, et Saeculi xvii. initium floruerunt, literarum ordine, juxta familiarum nomina, dispositis, Commentarius*,' which had been the labour of his leisure for forty years, and which was published in folio at London in 1748, under the care of the Rev. Dr. David Wilkins. It is a work of extensive research and great general accuracy. Bishop Tanner had made large collections of charters, grants, deeds, and other instruments relating to the national antiquities, which he bequeathed to the Bodleian Library. Some letters from him are published in Dr. Bliss's collection of 'Letters written by Eminent Persons,' &c., 2 vols. 8vo, London, 1813.

TANSILLO, LUIGI, born of a noble family at Nola, in the kingdom of Naples, about the year 1510, wrote in his youth a licentious poem, entitled '*Il Vendemmiatore*,' or '*the Vintage*,' wherein he deals largely in the obscene jokes and scurrilities in which the peasantry of his country indulge during the vintage season, something after the manner of the ancient *Saturnalia*. This poem, which the author did not intend for the press, was published by some friend through an abuse of confidence. In order to make amends, Tansillo wrote a pious poem, entitled '*Le Lagrime di San Pietro*,' of which a part only was published before his death. A more complete edition of it was published in 1606. Malherbe made a translation, or rather wrote an imitation of it, entitled '*Les Larmes de St. Pierre, imitées du Tansille, au Roi Henry III.*,' 1587. Tansillo resided chiefly at Naples, at the court of the Spanish viceroy Don Pedro de Toledo and his son Don Garcia. He accompanied the viceroy in an expedition against the Barbary power. He died about 1584. He wrote also a georgical poem, entitled '*Il Podere*,' and another didactic poem, entitled '*La Balia*,' besides sonnets, canzoni, and other lyric poems, in which he has displayed great poetical powers. He has been compared by some with Petrarcha. A complete edition of Tansillo's works was published at Venice in 1738, in 4to. (Tiraboschi, *Storia della Letteratura Italiana*; Corniani, *Secoli della Letteratura Italiana*.)

TANSKA, KLEMENTYNA. [HOFFMANOWA.]

TARIK. [RODERIC.]

TARLTON, RICHARD, a comic actor of great celebrity in the reign of Queen Elizabeth, was born in the hundred of Conover, in Shropshire. The date of his birth is not known. He died in 1588, and was buried (September 3) at St. Leonard's, Shoreditch, London.

Tarlton was especially distinguished for his performance of the clowns of the old English drama, in which he is spoken of as having been unrivalled, and seems besides to have been one of those clowns who spoke 'more than was set down for them.' he was famous for his extempore wit, which indeed must have been an important addition to the dull and vulgar speeches generally assigned to the clowns before Shakspeare's time—he interlarded with his wit the lean and hungry prose. Dr. Cave, '*De Politica*,' Oxford, 4to, 1588, says, (we translate Cave's Latin), "We English have our Tarlton, in whose voice and countenance dwells every kind of comic expression, and whose eccentric brain is filled with humorous and witty conceptions."

Stow mentions that Tarlton was one of the twelve actors whom Queen Elizabeth, in 1583, constituted grooms of the chamber at Barn Elms: he seems indeed to have been one of her especial favourites; for Fuller says, that "when Queen Elizabeth was serious (I dare not say sullen), and out of good humour, he could undumpish her at his pleasure. Her highest favourites would, in some cases, go to Tarlton before they would go to the queen, and he was their usher to prepare their advantageous access to her."

One of Tarlton's last performances was in '*The Famous Victories of Henry V.*;' this was in 1588, at the Bull in Bishopsgate Street, to which theatre he seems to have been generally attached. Of this play, which is a much earlier one than Shakspeare's '*Henry V.*,' a full account is given in the introductory notice to '*Henry VI., Part I. and II.*,' in Knight's '*Pictorial Shakspeare*.' It is one of the '*Six Old Plays*,' printed by Nichols in 1779. Tarlton is known to have written at least one play, '*The Seven Deadly Sins*,' which, though never printed, and now lost, was much admired. Gabriel Hervey, in his '*Four Letters* and certain sonnets especially touching Robert Greene and other Parties by him abused,' 4to, 1792, speaks of a work written by Thomas Nashe, 'right formally conveyed according to the stile and tenour of Tarlton's president, his famous playe of '*The Seven Deadly Sinnes*,' which he designates as a 'most deadly but most lively playe.'"

There is a portrait of Tarlton, in his clown's dress, with his pipe and tabor, in the Harl. manuscript 3385; and a similar portrait of him (probably the one is a copy of the other) in the title page of a pamphlet called '*Tarlton's Jestes*,' 4to, 1611. A copy of the former portrait is given in Knight's '*Shakspeare*,' at the end of '*Twelfth Night*.' The peculiar flatness of his nose is said to have been occasioned by an injury which that feature received in parting some dogs and bears.

(Baker's *Biographia Dramatica*, by Reed and Jones.)

TARQUINIUS. According to the early Roman history the family of the Tarquinii gave two kings and one consul to Rome. Its origin was traced to the town of Tarquinii in Etruria, and thence to Greece. Modern investigations however have shown that the Tarquinii did not come from Etruria, but must originally have belonged to Latium, and that from the earliest times there existed at Rome a gens Tarquinia. (Niebuhr, '*Hist. of Rome*,' i. p. 373, &c.) We subjoin a list of those members of the house of the Tarquins who play a prominent part in the early history of Rome.

LUCIUS TARQUINIUS PRISCUS. The old story concerning his birth and his arrival in Rome ran thus:—During the tyranny of Cypselus at Corinth, Demaratus, a wealthy merchant who belonged to the noble family of the Bacchiads, was obliged by the tyrant to quit his native city. He sailed to Etruria, which he had often visited before on his mercantile voyages, and took up his residence at Tarquinii. Here he married a woman of noble rank, who bore him two sons, Lucumo and Aruns. (Dionys., iii. 46; Liv., i. 34; Polyb., vi. 2.) As an aspiring foreigner could never hope to satisfy his ambition in Etruria, Lucumo, after the death of his father and brother, resolved to emigrate with his wife Tanaquil and a numerous band of friends to Rome, where several strangers had already obtained the highest honours. He was confirmed in his expectations by a miraculous occurrence which happened just when he was approaching the city, and by the interpretation of it by his wife, who was well skilled in augury. At Rome Lucumo was favourably received by King Ancus Marcius, and lands were assigned to him. To omit nothing on his part which might characterise him as a complete Roman, he adopted the name of Lucius Tarquinus, to which subsequently the name Priscus was added to distinguish him from other members of his house. His wealth and prudence induced King Ancus to allow Tarquin to take part in all the affairs of state, and in his will he made him the guardian of his children, who were yet under age. [ANCUS MARCIUS.] Tarquin himself aspired to become king of Rome. Accordingly, on the death of Ancus, he sent the young princes out hunting, and during their absence he held the comitia for electing a successor to Ancus, and succeeded in persuading the people to elect him, to the exclusion of the sons of Ancus, B.C. 616.

This is the common story of the descent of the fifth king of Rome, of the manner in which he came to Rome, and was raised to the throne. How much there may be historical in the tradition cannot be ascertained. Thus much however appears certain, that the arrival of Demaratus in Etruria cannot have been contemporaneous with the tyranny of Cypselus, and that, as stated above, Tarquinus was not a foreigner, but belonged to a Latin gens Tarquinia. (Nieb., i. 373, &c.)

L. Tarquinus Priscus distinguished himself during his reign no less in war than in the peaceful administration of the state. His first war was against the Latins, from whom he took great spoil. With equal success he carried on war with the Sabines, whom he defeated in two great battles, and from whom he took the town of Collatia with its territory. After this he again made war on the Latins, and after he had subdued them and made himself master of many of their towns, he concluded a peace with them. During the intervals between these wars he introduced various improvements into the constitution of the state, which were intended to organise the body of the plebeians, and perhaps to place them on an equality with the patricians. But he could only partially carry his schemes into effect, as he was thwarted by the augur Attus Navius, who probably acted at the instigation of the patricians. After his first Latin war Tarquin built the Circus Maximus for the exhibition of the public spectacles, and is said to have been the founder of the Roman or great games (*Ludi Magni* or *Romani*). He also assigned the ground round the forum to private individuals, that they might there build porticoes and places for transacting business; and lastly, he is said to have formed the plan of inclosing the city by a stone wall, which he was prevented from accomplishing by the outbreak of the Sabine war. After the second war against the Latins, he recurred to his plan, and is said to have made actual preparations for building the wall; but the completion of it was reserved for his successor, Servius Tullius. The greatest work at Rome which owes its origin to Tarquin, and which has survived all the vicissitudes of the city, are the gigantic sewers (*cloacae*) in the lower districts of Rome.

The sons of Ancus Marcius, who had been deprived of the throne by their guardian Tarquin, never forgot the injury, and when they discovered that it was his and Tanaquil's intention to secure the succession to Servius Tullius, they formed the design of murdering Tarquin. [SERVIUS TULLIUS.] For this purpose they hired two sturdy shepherds, who went to the king's palace, and there conducted themselves as if they were engaged in a violent quarrel. At last the king himself appeared to settle their dispute; but while he was listening to one of them, the other split the king's head with an axe. Thus died L. Tarquinus Priscus, after a reign of thirty-eight years, in B.C. 578. The queen kept his death secret until the succession was secured to Servius Tullius. The assassins were seized, and the sons of Ancus fled to Suessa Pometia. (Liv., i. 34-42; Dionysius, iii. 46-73.) Tarquinus Priscus left two sons, Lucius and Aruns Tarquinus.

During the reign of this king Rome appears as a powerful state in comparison with what it is said to have been before him. According to the historians this greatness was not the result of his reign, but is

supposed to have existed before it, and to have enabled him to do what he did, so that this increase of the power and dominion of Rome must have taken place previous to his reign, although we do not know how it was effected. Some traditions mentioned (Tacitus, 'Annal,' iv. 65) that under Tarquinius Priscus an Etruscan of the name of Cales Vibenna came with a colony to Rome and settled on the Caelian Hill, which derived its name from him.

LUCIUS TARQUINIUS SUPERBUS, the seventh and last king of Rome, was the son of Tarquinius Priscus, and brother of Aruns. Tullia, a daughter of Servius Tullius, was married to the gentle Aruns, and her sister to L. Tarquinius. In concert with Lucius, Tullia murdered her own husband Aruns and her sister, and then married L. Tarquinius. Lucius placed himself at the head of a conspiracy and murdered his own father-in-law, the aged Servius Tullius. Tarquinius, who received the surname of the Haughty or the Tyrant (Superbus), succeeded his father-in-law as king of Rome B.C. 584, without either being elected by the people or confirmed by the senate.

There is no doubt that the hatred of the very name of king which prevailed at Rome during the republic has greatly contributed to exaggerate the cruelty and tyranny of the last king, and thus to corrupt his history. But notwithstanding all this, it is clear that Tarquin by his talents, both as a general and a statesman, quickly raised Rome to a degree of power which it had never possessed before. The first act attributed to him after his accession is the death of all the senators who had supported the reforms of Servius Tullius, and in order to render his own person safe, he formed an armed body-guard, which always accompanied him. He in fact undid all that Servius had done: he took on himself the administration of justice, put persons to death or sent them into exile according to his own pleasure, and kept the whole internal and external administration in his own hands, without either consulting the people or the senate. In order that the senate might sink into insignificance, he never filled up the vacancies which so frequently occurred through his executions, banishments, or through the natural death of senators. To secure himself still more, he formed a close connection with the Latins, to one of whom, Octavius Mamilius of Tusculum, he gave his own daughter in marriage. The influence which he thus gained among the Latins was most visible in their assemblies on the Alban Mount by the temple of Jupiter Latiaris, in which Rome also had a vote. Tarquinius, by cunning and fraud, or, according to others, by force of arms, subdued the towns of Latium and placed Rome at the head of the league (Livy, i. 50, &c.; Dionysius, iv. 45, &c.; Cicero, 'De Re Publ.' ii. 24), which was now also joined by the Hernicans and the Volscian towns of Ecetra and Antium. The wealthy town of Suessa Pometia was besieged and taken, perhaps because it had refused to join the league. The Latin town of Gabii experienced a similar fate. Sextus, the son of Tarquin, went thither under the pretext of being a deserter, and contrived to put himself at the head of the Gabian army. After having put to death or sent into exile the most distinguished citizens of Gabii by the advice of his father, he treacherously surrendered the town to him. The whole account of the war with Gabii bears the character of a fable, and resembles in many respects other fabulous stories of early Grecian history. The treaty which was formed with Gabii after its surrender was engraved on a wooden shield, and preserved in the temple of Jupiter Fidius to the time of Dionysius of Halicarnassus. Tarquin founded in the conquered territory of the Volscians the two colonies of Signia and Circeii, by which he extended and strengthened the power of Rome.

Tarquin is said to have been fond of splendour and magnificence. He built the capitol, with the threefold temple of Jupiter, Juno, and Minerva, and adorned it with brazen statues of the gods and of the early kings. (Livy, i. 53; Dionysius, iv. 59; Pliny, 'Hist. Nat.' xxxiii. 13.) Here also he deposited the oracular books which he had purchased from a Sibyl. After the establishment of the colonies of Signia and Circeii, a fearful omen was seen, which seemed to bode ruin to his family; and in order to understand its import he sent his two sons, Titus and Aruns, accompanied by his nephew, L. Junius Brutus, to Delphi. To the question as to which of the three ambassadors was to reign at Rome, the Pythia answered: he who should first kiss his mother. Brutus, who had always assumed the appearance of an idiot, understood the oracle, and on landing in Italy, fell down and kissed the earth, the mother of all. Tarquin's coffers were now exhausted by the great works that he had undertaken, and he was tempted to make himself master of Ardea, a wealthy town of the Rutuli. As however he did not succeed in his first attack, he laid siege to the town. While this was going on, a dispute arose between the sons of Tarquin and their cousin, C. Tarquinius Collatinus, respecting the virtue of their wives. This led to the violation of the chaste Lucretia, the wife of Collatinus, who lived at Collatia, by Sextus, the son of Tarquin. As the highest pride of a Roman woman at this time was her virtue, Lucretia sent for her husband, father, and Brutus, and killed herself in their presence, after having cursed the family of the king, and implored her friends to avenge the injury which she had suffered. Brutus immediately marched with an armed force from Collatia to Rome, and roused the people to avenge the indignity and throw off the yoke of the tyrant. The citizens were easily persuaded; they deprived the king, who was yet in the camp of Ardea, of his imperium, and banished him with his wife and children

from Rome, B.C. 510. After these occurrences Tarquin hastened to Rome, but finding the gates of the city shut upon him, and learning that he was declared an exile, he retired to Cære, whither he was followed by his son Aruns. His other son Sextus sought a refuge at Gabii, but the citizens, remembering his former treachery, put him to death. The simple fact of the banishment of King Tarquin, which was commemorated at Rome every year by a festival called 'The King's Flight' (Regifugium or Fugalia), is beyond all doubt historical; but what is described as its immediate cause, and its accompanying circumstances, may be poetical inventions.

Tarquin however did not give up the hope of recovering what he had lost. He first sent ambassadors to Rome to demand the surrender of his moveable property. During their stay in the city the ambassadors formed a conspiracy, in which young patricians chiefly are said to have joined them. The conspirators were discovered and put to death, and the moveable property of the royal family was given up to the people, in order to render reconciliation impossible. The king is said to have found favour and protection with the inhabitants of Cære and Tarquinii, and with the Veientes, and to have led the united forces of these people against the Romans, who however defeated their enemies near the forest of Ardia. Brutus fell in this battle in single combat with Aruns. Tarquin now sought and found assistance at Clusium, which was then governed by the mighty Lar Porsena. [PORSENA.] During the war of this chieftain with Rome Tarquin is entirely lost sight of in the narrative of the historians; but after its conclusion we find him supported by the Latins, and waging a fresh war against the Romans under the Latin dictator Octavius Mamilius of Tusculum. The battle near lake Regillus (B.C. 496), in which the king lost his only surviving son, decided the whole contest. The account of the detail of this battle is as fabulous as any part of the early history of Rome, and formed, as Niebuhr supposes, the concluding part of the 'Lay of the Tarquins.' The aged king, now deprived of all his hopes, retired to Cumæ, which was then governed by the tyrant Aristodemus, where he died the year following, B.C. 495.

(Livy, ii. 19, &c.; Dionysius, vi. 2, &c.; Niebuhr, 'Hist. of Rome,' i. p. 555, &c.)

LUCIUS TARQUINIUS COLLATINUS, the son of Egerius, and the husband of Lucretia. After the banishment of the king he was elected consul together with L. Junius Brutus. But the people beginning to suspect that he might perhaps be tempted to follow the example of his kinsman, and endanger the freedom of the young republic, he was compelled to abdicate, and to submit to the sentence of exile, which was now pronounced upon the whole family of the Tarquini. (Livy, i. 57, 60; ii. 2.)

TARRENTE'NUS PATERNUS, a Roman jurist, was Præfectus Prætorio under Commodus, by whom he was put to death. (Lampridius, 'Commod.' 4.) He wrote four books 'De Re Militari,' from which there are two excerpts in the Digest. He is mentioned by Vegetius ('De Re Militari,' i. 8.)

TARTAGLIA, NICHOLAS, a learned Italian mathematician, who was born at Brescia about the beginning of the 16th century. When he was six years of age his father, who followed the humble occupation of a messenger or carrier, died, leaving him in indigent circumstances, and without education. Even his family name is unknown, and that which he bore (designating one who stammers) was given him in derision by his young companions in consequence of an impediment in his speech arising from a wound which he received on his lips from a soldier, when the French army under Gaston de Foix relieved Brescia in 1512.

No account has been transmitted of the means by which Tartaglia obtained a knowledge of the rudiments of science, and it is probable that he owed but little to a preceptor. His own exertions, aided only by a mind endowed with the power of readily comprehending the processes of mathematical investigation, enabled him at length to attain the highest rank among the geometers of his time. Having passed several years as a teacher at Verona and Vicenza, he was appointed professor of mathematics at Brescia, and in 1534 he removed to Venice, where he held the like post till his death, which took place in 1557.

Tartaglia wrote on military engineering and on natural philosophy, but it is on his talents as an algebraist that his fame principally rests. In that age it was the custom for mathematicians to send difficult propositions to each other for solution, as trials of skill; and in the work entitled 'Quesiti ed Inventioni Diverse,' which Tartaglia published in 1546, there are contained some interesting accounts of the circumstances connected with the algebraic questions which he had received and answered. Among these are his investigations relating to equations of the third degree; and the solutions of two cases, in which both the second and third powers of the unknown quantity are involved, are shown to have been discovered in 1530, on the occasion of a question proposed by a person who kept a school at Brescia: Tartaglia states also that, in the year 1535, he found out the solutions of two equations, in which the first and third powers of the unknown quantity enter without the second, while preparing himself for a public contest with Antonia Maria Fiore, who then resided at Venice, and who had challenged him to a competition, in which each was to solve as many as he could of thirty questions to be proposed by the other. It is added that Tartaglia, in two hours, answered all those

of his opponent without receiving one solution from the latter in return.

In 1539, Cardan, who had been informed of the discoveries of Tartaglia, applied to the latter for the solution of certain questions which he proposed, in the hope of obtaining from him a knowledge of the processes which he employed in obtaining the roots of equations of the kind just mentioned. The application was made at first through a bookseller, and afterwards by letter; but Tartaglia, who, by the possession of his secret, enjoyed great advantages over the other mathematicians of the time in resolving the questions which were proposed to him, declined making any communication by which his method might become publicly known. Though disappointed in these attempts, Cardan soon afterwards succeeded, by a promise of introducing him to an Italian nobleman, who had the reputation of being a great patron of learned men, in inducing Tartaglia to make a visit to himself at Milan: the latter, while there, yielded to the entreaties of his host, and having exacted a promise of inviolable secrecy, gave him a key to the rule which he had discovered. Cardan immediately found himself embarrassed with what is called the irreducible case, in

which the expression  $\frac{1}{4}Q^2 - \frac{1}{27}P^3$ , entering into the value of the unknown quantity under the sign of the square root, is negative, and he applied to Tartaglia on the subject: the latter however declined giving a direct answer to his enquiry, being himself unable to conquer the difficulty; in fact the solution of the equation in this case is even now usually obtained by the aid of trigonometrical functions.

In the work of Tartaglia above mentioned there is an account given of a dialogue which took place in 1541 between himself and a Mr. Richard Wentworth, who then resided at Venice, and to whom it appears that Tartaglia had given lessons in mathematics. On being pressed by that gentleman to give him the rules for the solution of equations containing the second and third powers of the unknown quantity, the Italian mathematician declined doing so, on the plea that he was about to compose a work on arithmetic and algebra, in which the rules, he said, were to appear.

In 1545 Cardan published his work entitled 'Ars Magna,' and in direct violation of his solemn promise, gave in it the rule for the solution of the cubic equation containing the first and third powers of the unknown quantity. He does not assert that he is the discoverer of the rule, but observes that it was first found out about thirty years previously by Scipio Ferreus, of Bologna; and adds that it had since that time been independently discovered by Tartaglia. The publication of this work produced, as might be expected, the most animated remonstrances from the man who thus felt himself seriously injured and aggrieved: Tartaglia however revenged himself in no other way than by sending challenges to Cardan and his disciple Lewis Ferrari, to hold with him a disputation on mathematical subjects, by which the public might be judges of their several merits. The discussion actually took place in 1549, in the church of Santa Maria, in Milan, between Tartaglia and Ferrari; but during the sitting, on the former pointing out an error which had been committed by Cardan in the solution of a problem, the people, who appear to have taken the side of their townsman, excited a tumult, and the assembly broke up without coming to a decision. Tartaglia has received no more justice from posterity than he experienced from his contemporaries, and the formula for the value of the unknown quantity in such equations is still designated Cardan's rule. It must be admitted however that Cardan was the first who published its demonstration.

The works of Tartaglia, all of which were published at Venice, are—'Nuova Scienza; cioè Invenzione nuovamente trovata, utile per ciascuno speculativo Matematico Bombardiero,' &c., 1537: this is a treatise on the theory and practice of gunnery, and it was translated into English in 1588. 'Euclide, diligentemente rassettato,' &c., 1543: this is said to be the first Italian translation of Euclid. 'Archimedes Opera emendata,' &c., 1543. 'Quesiti ed Invenzioni Diverse,' 1550: this is the work above mentioned, and it is dedicated to Henry VIII. of England: it contains the answers to questions which had been proposed to Tartaglia concerning mechanics and hydrostatics; and to one of the books there is a supplement concerning the art of fortifying places. 'La Travagliata Invenzione, ossia, Regola per sollevare ogni affondata Nave,' &c., 1551; 'Ragionamenti sopra la Travagliata Invenzione,' 1551; 'General Trattato de' Numeri e Misure,' 1556-1560; 'Trattato di Aritmetica,' 1556; 'Descrizione dell' Artificioza Macchina fatta per cavare il Galeone,' 1560; 'Archimedis de Insidentibus Aquæ Libri duo,' 1565; 'Jordani Opusculum de Ponderositate,' 1565. A collection of his principal works was published in 1606.

TARTINI, GIUSEPPE, a name celebrated in the annals of music, was born at Pisano, on the coast of Istria, in 1692, and was educated at the university of Padua, for the profession of jurisprudence; but his love of music triumphed over his graver pursuit, and after some struggles, and several adventures of rather a romantic kind,—among which the fighting of many duels, the marrying a cardinal's niece against her uncle's and his father's consent, and his consequent flight to a monastery, where, to avoid the effects of his eminency's resentment, he remained during two years secreted, may be mentioned,—he became a professed violinist, and the founder of a school which in

after-times boasted of a Nardini, a Pugnani, a Viotti, and a Baillot among its disciples.

Tartini was also a composer, and his productions are much extolled by a very competent judge, M. Baillot, an eminent French violinist and good critic: but he is more generally known by his writings on the art, among which his 'Trattato di Musica seconda la vera Scienza dell' Armonia' (1754), a strictly scientific work, is still read, and was freely and ably translated and explained in 1771, by Edward Stillingfleet, under the title of 'Principles and Powers of Harmony,' who cleared it of many of the obscurities which D'Alembert justly complained of, and by his additions and illustrations rendered it entertaining as well as instructive. This treatise is partly founded on the author's theory of a Third Sound, that is the third sound heard when two sounds are given on musical instruments which admit of the tones being held out and strengthened at pleasure, as violins, oboes, horns, &c., a subject which has long engaged the attention of all writers on acoustics, and on which most of Tartini's work is built. This discovery of the 'Grave Harmonics,' as these third sounds are called, was made so nearly at the same time by Tartini and Romieu, that both seem to have an undoubted claim to be considered as discoverers. M. Romieu was a member of the Royal Society of Sciences of Montpellier. The memoir which he read before the society is entitled 'A New Discovery of Grave Harmonic Sounds, which are very sensibly produced from the union of Wind Instruments.' (Stillingfleet.)

Tartini died at Padua in 1770. To the 'Dictionnaire des Musiciens' we are indebted for what relates to his early life: which work also furnished M. Prony with materials for an interesting memoir in the 'Biographie Universelle.'

TARVER, JOHN CHARLES, was born of English parents at Dieppe, Normandy, March 27th 1790. At the breaking out of the war in 1793, his family, in common with all other English residents at Dieppe, were thrown into prison. At that time the little boy was staying at the country-house of a friend of his mother (M. Féral, de la Carperie Ingénieur en chef des ponts et chaussées du Département de la Seine Inférieure), and when his family, through the interest of friends, had the means of escape given them, he was left behind in France until an opportunity should offer to send him to England. This never occurred. But M. Féral, faithful to his trust, brought the child up as his own son, educated him partly himself and partly at the government school at Pont-aud-Mer, and at the age of fifteen took him into his own employment in the several works he was superintending under the government. In the year 1808 M. Féral got the youth an appointment in the Administration de la Marine, in which service he remained, first as secretary to the admiral of the fleet at Toulon, and afterwards in different ports, as Leghorn, La Spezia, Genoa, and Brest, till at the cessation of the war in 1814 he was enabled to renew his intercourse with his family. In March 1815 he obtained a short leave of absence, and hastened to England, where he found his mother, brother, and sister living. He returned to Paris at the expiration of his leave in April, where he found that Bonaparte had escaped from Elba, and had put himself at the head of his army, and that the king, Louis XVIII. had fled. Such being the uncertain state of affairs, and his own desire to return to his family being very strong, Mr. Tarver gave up his situation and in less than a week rejoined his mother. He soon sought and obtained employment as a French master; first at the grammar-school at Macclesfield in Cheshire where he remained three years. In 1818 he went to live at Windsor, and in 1826 he was appointed French master to Eton school, which situation he held till his death April 15th 1851, aged sixty-one.

Besides having written several elementary works, now used at Eton and some other public schools, he published while at Macclesfield a 'Dictionary of French Verbs, showing their government and peculiarities.' During his residence at Windsor he wrote his translation of the 'Inferno' of Dante in French prose, with a volume of notes; and subsequently 'Lectures on French History,' 'Paris, Ancient and Modern,' and some minor works. He also revised the grammars of Wanostrucht and Levizac, and Nugent's 'Pocket French and English Dictionary.' For the last ten years of his life he was engaged on his 'Phraseological French and English Dictionary,' an original work of immense labour, and which has given to its author a high place amongst those who have most distinguished themselves in philological studies.

TASMAN, ABEL JANSSEN, one of the greatest navigators of the 17th century, whose fame has even yet scarcely equalled his merits, owing to his countrymen, the Dutch, having neglected to make known the important services which he rendered to geography. In the service of the Dutch East India Company he gave such proof of his enterprise and ability as to induce Anthony Van Diemen, the most distinguished governor-general who had presided over the affairs of that company, to commission him, in 1642, to proceed on a voyage, the object of which was to ascertain the extent of the Australian continent, on the western coast of which discoveries had been made by previous Dutch navigators.

On the 14th August 1642, Tasman sailed from Batavia in command of two vessels, the Heemskirk and the Zeehaan, directing his course first towards the Isle of France, where he put in for provisions and water. From the Isle of France he set sail on the 3rd October, and proceeded south to about 41° S. lat., afterwards to the south-east, to

about 50° S. lat., and then due east. Having passed 127° E. long., he sailed to the north and east, and on the 24th November discovered, at 10 miles distance, a land to which he gave the name Van Diemen. He did not remain here long, nor did he meet with any of the natives, but he continued on his voyage, sailing to the south-east, and doubled what he conceived to be the southern extremity of the Australian continent, or New Holland, but what in fact was the southern extremity of the island of Tasmania, or Van Diemen's Land. He made an unsuccessful attempt to anchor in a bay, to which he gave the name of the Bay of Tempest—Storm Bay—on the south-eastern coast of Van Diemen's Land; and then ran to the north, where he found secure anchorage in another bay, to which he gave the name of Frederick Hendrik Bay, 42° 52' S. lat., 147° 57' E. long. On the shore he erected a standard, to which he attached the colours of the Dutch East India Company, and on the 5th set sail again. Unfavourable winds prevented his surveying, as he had intended, the north coast, and he therefore bore to the east, proposing to visit the Solomon's Islands, of which some account had been given by previous navigators. But on the 13th, being in about 42° 10' S. lat. and 170° E. long., he found himself in view of a high mountainous country, which he named Staaten Land—land of estates—now known as New Zealand. Tasman supposed this land to be part of the continent of Australia. He sailed along the coast toward the north-east, and on the 17th anchored at the entrance of what he concluded to be a great bay. The natives from the shore approached in their canoes, but still remained at a distance, and refused to come on board either of Tasman's vessels, although every amicable demonstration was exhibited by the crews. Gathering confidence however, they afterwards came in large numbers, and a quarrel ensuing between them and the Dutch, three sailors were murdered. The bay in which this happened received the name of Mordenaars' Bay, or Murderers' Bay (40° 40' S. lat., 173° E. long.). Tasman did not revenge the death of his men, but, availing himself of a favourable wind, set sail. Being followed however by two and twenty canoes with natives armed, he fired among them, killed one or two natives, and drove the rest on shore. He did not make any progress owing to the variability of the weather, and was obliged to anchor again in a bay to the east of Massacre or Murderers' Bay which yet preserves his name (about 41° S. lat., 173° 30' E. long.). When enabled to resume the voyage, he continued his course along the coast, bearing northwards, until, on the 4th January 1643, he found himself in a situation in which the violence of the current bearing to the west, and the swelling of the waves, which bore to the north-west, led him to conclude that the sea in that part afforded a free passage. To the west he perceived a group of small islands which he named the Three Kings (in about 34° 3' S. lat., 172° 5' E. long.). Those islands were inhabited, but the violence of the waves prevented all intercourse with the natives. Tasman now resolved to sail to the east, and afterwards to the north as far as 17° S. lat., and then to the west towards the isles of Cocos (15° 50' S. lat., 174° 10' W. long.), and of Hoorn (14° S. lat., 178° 23' W. long.), with a view of obtaining some fresh provisions at one of these islands. On the 6th January he saw an island to the south at three miles distance, but no name is given to it. On the 8th, being, as he represents, in 32° S. lat., and 174° E. long., the force of the waves which rolled from the south-east suggested to him that he ought not to look for land in that direction; he therefore changed his course to the north, and on the 19th discovered an island which he called Pylstaart (22° 22' S. lat., 176° W. long.). On the following day he saw two other islands, and on the 21st approached the more northern, which he named Amsterdam, the native name being Tonga Taboo (21° 30' S. lat., 175° 20' W. long.); the other Middelburg, the native name being Eoa, the Ea-oo-wee of Cook (21° 24' S. lat., 175° W. long.). The islanders brought various fruits in their canoes, and Tasman has described them as uniting courage with mildness. While here he discovered some other isles, before one of which he anchored, naming it Rotterdam, the native name being Ana Moka or Annamooka, 20° 15' S. lat., 174° 31' W. long. Captain Cook, when he visited these islands about a hundred and fifty years afterwards, found the tradition of Tasman's visit preserved among the natives.

On the 1st of February Tasman discovered the islands of Prince William, but his provisions being nearly exhausted, he could not stay to visit them. For several days subsequently the sky was so cloudy as to prevent his ascertaining the situation of his vessel, and when fine weather partially returned, he judged it best to sail towards 5° S. lat., and then to bear towards New Guinea, apprehending the return of unfavourable weather, in which he might be cast upon an unknown coast. By the 22nd of March he was in 5° 2' S. lat., and having the advantage of clear weather and the east trade-winds, he soon came in sight of a cluster of islands which had been visited by two navigators, Schouten and Le Maire, and by them named Ontong Java. On the 29th he sailed past the Green Islands (4° 53' S. lat., 154° 50' E. long.), and on the 30th the Isle of St. John (3° 50' S. lat., 153° 50' E. long.). This island, he says, appeared to be well cultivated, to abound in flesh, fowl, fish, and fruit, and to have a numerous population. Schouten having before sustained some injury from the natives, Tasman did not attempt to land. On the 1st of April he was in sight of what he supposed to be New Guinea, but in fact of New Britain, and shortly after he doubled the cape to which Spanish navigators had

before given the name of Cabo Santa Maria—Cape St. George of Dampier—(5° S. lat., 152° 15' E. long.). The crew were suddenly awoken on the night of the 12th by what resembled the shock of an earthquake; the situation of the vessel at the time, as Tasman states, being 3° 45' S. lat. They sounded, supposing that the ship had struck, but could find no bottom. Several shocks, each less violent, succeeded. On the 20th they were near to Brandende Yland, or 'Burning Island,' which had been mentioned before by Schouten. On the 27th they were in sight of another island, which he calls Jama, a little to the east of Moa (8° 21' S. lat., 127° 45' E. long.), where they obtained cocoa-nuts and other fruits. Tasman has described the inhabitants as absolutely black, and speaking a copious language, in which the frequent repetition of the letter 'r' is noticed. He anchored on the following day at the Isle of Moa, where he was detained for eight days by unfavourable weather. The Dutch carried on an interchange of knives for cocoa-nuts and Indian figs with the natives. On the 12th of May he coasted the island to which Schouten had before given his name (50° S. lat., 136° 20' E. long.), and which is described as fertile and populous: the natives gave proof of their commerce with different Spanish vessels by the production of various articles which they had received in barter. Having now fulfilled his instructions, Tasman directed his course back to Batavia, where he arrived on the 15th of June. A map of his discoveries was sent to the Stadt House at Amsterdam.

The success of this voyage induced Van Diemen to commit to Tasman the command of a second expedition, the objects of which are set forth in the instructions given by the governor-general on the occasion. These instructions are printed in the introduction to Flinders' Voyages. After quitting Point Turc, or False Cape, situated in 8° S. lat., on the south coast of New Guinea, he was to continue eastward along the coast to 9° S. lat., carefully crossing the cove at that place, looking about the high islands or Speults River with the yachts for a harbour, despatching the tender De Braak for two or three days into the cove, in order to discover whether within the great inlet there might not be found an entrance to the South Sea. The great inlet or cove where the passage was to be sought is the north-west part of Torres Straits. It is evident that a suspicion was entertained in 1644 of such a strait, but that the Dutch were ignorant of its having been passed. The 'high islands' are those which lie in 10° S. lat., on the west side of the straits. Speults River appears to be the opening between the Prince of Wales Island and Cape York, through which Cook afterwards passed, and named Endeavour Strait. (Flinders' 'Voyage,' Introduction.) From this cove he was to coast along the west coast of New Guinea (Carpentaria) to the farthest discoveries in 17° S. lat., following the coast farther, as it might run westward or southward. It was feared that he would meet in those parts with the south-east trade-winds, from which it would be difficult to keep the coast on board, if he stretched to the south-east; but notwithstanding he was by all means to endeavour to proceed, that it might be ascertained whether the land was divided from the great known South Continent or not. These instructions were signed on the 29th of January 1644, by the governor-general, and two vessels, the Zeehaan and the Braak, were placed at Tasman's disposal. But of the results of this second voyage nothing is known with certainty; nothing was ever published. "It seems to have been the general opinion," says Flinders, "that Tasman sailed round the Gulf of Carpentaria, and then westward along Arnhem and the northern coast of Van Diemen's Land; and the form of those coasts in Thévenot's charts of 1663, and in those of most succeeding geographers, even up to the end of the 18th century, is supposed to have resulted from this voyage. This opinion is strengthened by finding the names of Tasman, and of the governor-general, and of two of the council, who signed his instructions, applied to places at the head of the gulf; as is also that of Maria, the daughter of the governor, to whom Tasman is said to have been attached. In the notes also of Burgomaster Witsen, concerning the inhabitants of New Guinea and Hollandia Nova, as extracted by Mr. Dalrymple ('Collection of Voyages'), Tasman is mentioned as among those from whom his information was drawn." Of the private life of Tasman nothing is known, neither when nor where he was born or died.

An account of Tasman's first voyage is given in the 'Collection de Thévenot,' partie iv.; in Harris's 'Navigantium atque Itinerantium Bibliotheca,' fol. 1744; at the end of the 'Voyages de Correa,' tome ii., Paris; in 'Terra Australis Cognita, or Voyages to the Terra Australis during the Sixteenth, Seventeenth, and Eighteenth Centuries,' by Callander, Edin., 1766. From these sources, and from the 'Biographie Universelle,' tome 45, the substance of this article has been collected. Tasman is not even named in Chalmers, nor in many other universal biographies in the English language.

TASSIE, JAMES, was born of humble parentage, in or about 1735, in the neighbourhood of Glasgow, and was brought up as a country stone-mason. Going to Glasgow on a fair-day to enjoy himself with his companions, he visited the collections of paintings exhibited by the brothers Foulis, who were then endeavouring to establish an academy for the fine arts in that city. [FOULIS.] Feeling a strong desire to become a painter, Tassie removed to Glasgow, and studied drawing in Foulis's academy, but continued to practise his business. Though poor, he was frugal, industrious, and persevering; and,

hoping at least to become a statuary, if not a painter, he, in 1766, went to Dublin, where he was employed for some time as a sculptor and modeller. There he became acquainted with Dr. Quin, who was making experiments in the beautiful art of imitating engraved gems by means of coloured glass, or pastes, and who engaged him as his confidential assistant. Having succeeded in effecting great improvements in the art by their joint labours, Tassie was encouraged by his patron to remove to London, and to follow it as a profession. He accordingly reached London in 1766; and although owing to his diffidence and modesty, he had to struggle with many difficulties, he gradually emerged from obscurity, obtained a comfortable competence, and established such a reputation, that the principal cabinets of Europe were thrown open to him. Among his earliest patrons in the metropolis were the Society of Arts, who, in 1767, awarded him the sum of ten guineas for imitations of ancient onyx. In 1775 Tassie, who then resided in Compton Street, Soho, published a catalogue of the ancient and modern gems in his collection, of which he sold pastes or sulphur impressions at very moderate prices. The collection then amounted to more than three thousand articles; but it was subsequently much extended, and in 1791 appeared a new catalogue, containing fifteen thousand eight hundred articles, and forming two quarto volumes. This work, which is not confined to a dry description of the gems, but contains much useful information on that department of ancient art, was compiled by Mr. R. E. Raspe, who prefixed to the catalogue an introduction on the utility of such a collection of works of art, and on the history of engraving upon hard stones, and the imitation of gems by artificial pastes. The work contains also a frontispiece and fifty-seven plates of gems, etched by David Allan. From Raspe's introduction it appears that the demand for Tassie's pastes was encouraged, in the first instance, by the jewellers, who introduced them into fashion by setting them in rings, seals, bracelets, and other trinkets. He was very careful of his reputation, and would not issue imperfect impressions; but the celebrity of his casts induced other and less skilful modellers to sell their works under his name. About 1787 or 1788 Tassie received an order from the empress of Russia for a complete set of his gems, which he executed in the most satisfactory manner, in a beautiful white enamel composition, so hard as to strike fire with steel, and of such a texture as to take a fine polish, and to show every touch of the artist with the greatest accuracy. Wherever it was possible to do so, he coloured these in exact imitation of the originals; and in other cases such colours were used as might display the work to advantage. Tassie's business was continued by his nephew, William, on his premises in Leicester Square; and he added to the collection a series of casts of coins from the museum of the late Dr. William Hunter, of which he made a set by order of the Emperor Alexander, to add to the gems executed for the empress by his uncle, who died in 1799. Besides the branch of art for which he is principally celebrated, Tassie displayed considerable talent in modelling small portraits in wax, from which he frequently made pastes. He was much respected in private life for his piety, simplicity, modesty, and benevolence.

TASSO, BERNARDO, born at Bergamo in 1493, lost his father when a boy, and was brought up under the care of his uncle Luigi Tasso, bishop of Recanati, who was living at Bergamo. The bishop being murdered by robbers in 1520, Tasso left his native town, and lived for several years at Padua and Venice, and other towns of north Italy, where he displayed his talent for poetical composition. In 1525 he engaged himself as secretary to Guido Rangone, who was general of the Papal troops in north Italy. In 1529 he went to the court of Ferrara, where he remained a short time. A volume of Italian verses which he published at Venice in 1531 made him known to Ferrante Sanseverino, prince of Salerno, one of the principal Neapolitan barons, who kept a princely court after the feudal fashion of the times. The prince invited him to come to Naples, granted him a handsome allowance, with the liberty of withdrawing himself from time to time from his court to apply to his poetical studies in rural retirement. Tasso accompanied the prince of Salerno in the expedition which Charles V. undertook against Tunis, in 1534. He was afterwards sent to Spain, in 1537, on a political mission, and on his return he spent some time at Venice, where he became acquainted with the celebrated Tullia d'Aragona, the illegitimate daughter of a cardinal of the royal house of Aragon, who was herself a poetess, and led a very free life. Bernardo Tasso wrote verses in her praise. Having at last disentangled himself from this connection, he returned to Naples, where he soon after married a young lady of Sorrento called Porzia de Rossi, by whom he had a son, Torquato. In 1547 an insurrection broke out at Naples against the Spanish viceroy Don Pedro de Toledo, who, in concert with Pope Paul III., wished to establish the Inquisition in Naples after the fashion of Spain. The people elected a sort of council composed of nobles and citizens under the name of "Union for the service of God, the emperor, and the city," to administer temporarily the affairs of the country. This body chose the Prince of Sanseverino and the Prince of Sangro as its deputies to proceed to Germany and lay their grievances before Charles V. Bernardo Tasso, against the opinion of others, advised the prince to accept this mission. Sanseverino found the emperor highly incensed against the Neapolitans, and fearing for himself he went to France and entered the service of Henry II., for which he was declared

a rebel by Charles V., and his property was confiscated. Bernardo Tasso followed his patron to France, where, after a time, he found himself in great pecuniary distress. He then returned to Italy, and went to the court of Guidobaldo, duke of Urbino, from whence he passed to that of the Duke Gonzaga of Mantua, who made him governor of Ostiglia, in which place he died in 1569.

Bernardo Tasso wrote a romantic poem in ottava-rima, entitled 'Amadigi,' the subject of which is taken from a Spanish romance. [AMADIS DE GAULAI.] The plot or plots of Tasso's poems are deficient in interest, but the style is good, and the poet excels in his descriptions and comparisons, but he indulges at times in licentious strains. After writing his poem, he detached one of the episodes and swelled it into a separate poem, entitled 'Floridante,' which was published after his death by his son. He also wrote five books of 'rime,' eclogues, hymns, odes, sonnets, and other lyrics, some of which are admired for their imagery and smoothness of versification. He introduced in the Italian language that species of poetry which is called 'pescatoria' and 'marinaresca,' being descriptive of the habits and occupations of fishermen and mariners. His letters have been published in three volumes.

TASSO, TORQUATO, son of Bernardo, was born at Sorrento, in 1544. At the age of ten he was sent for by his father, then an exile, and after some time spent with him in several towns of north Italy, he went to the University of Padua to study law, for which however he had little inclination. At the age of eighteen he composed his first poem 'Rinaldo,' in twelve cantos. The subject is romantic, and is taken from the old chivalric legends concerning Charlemagne and his wars with the Moors. Bernardo was at first angry with his son for neglecting his more serious studies, but at last he relented, and gave his consent to the publication of the poem, which Torquato dedicated to the Cardinal Luigi d'Este, brother of Alfonso II., duke of Ferrara. In 1566 the cardinal took him into his service as a gentleman attendant, and introduced him to his brother the duke, and to his two unmarried sisters, Lucrezia and Eleonora. He was well received by all, and admitted into their familiar society. Tasso was young and amorous; he had been for some time passionately in love with Laura Peperara, a lady of Mantua, to whom he addressed many sonnets and other verses after the manner of Petrarch, styling her his Laura. This lady, with whom he had probably become acquainted during a visit which he paid to his father at Mantua in 1564, came some years after to Ferrara as a lady of honour of the duchess, and was married to Count Turchi of Ferrara. But in the mean time Tasso appears to have been struck with the personal attractions and mental accomplishments of the Princess Eleonora, the duke's sister, and already in 1566 there is a sonnet by him beginning 'Nel tuo petto real da voci sparte,' which is evidently addressed to a princess of a sovereign house. From that time he continued to write amatory verses evidently addressed to the same person, whom he styles his 'donna,' or mistress. In some of them he mentions the name of Eleonora, but as there were several ladies of that name at different times at the court of Ferrara, this has given rise to various surmises about the person meant. At last Tasso avowed in several ways his love for the princess, though, from the existing usages of society, it was impossible that he could ever have obtained her hand. Most of the sonnets and other lyrics, which are evidently intended for this object of his second love, are conceived in a respectful and somewhat melancholy strain, as if the writer felt the hopelessness of his passion. The disparity of rank was in those times an insurmountable obstacle to any legitimate result of such an attachment, and the house of Este was one of the proudest in Italy. Like Petrarch, Tasso seems to have obtained friendship only in return for his love. But there are some of Tasso's compositions written between 1567 and 1570, in which he assumes the tone of a favoured lover. Such are the two sonnets "Donna di me doppia vittoria aveste" and "Prima colla beltà voi mi vinceste," the dialogue between love and a lover, beginning "Tu ch' i più chiusi affetti," and the madrigal which begins "Soavissimo bacio." From the context, although no name is mentioned, they all evidently allude to the same object as the other amatory verses addressed to his 'donna.' There are also some autograph lines of Tasso discovered by Mai among the Falconieri manuscripts, and published by Betti at Rome ('Giornale Arcadico,' October 1827), in which Eleonora is mentioned by name:

"Quando sarà che d'Eleonora mia  
Possa godermi in libertate amore?  
Ah, pietoso il destin tanto mi dia!  
Addio cetra, addio lauri, addio rossore."

It would appear that these verses, having been abstracted from Tasso's papers by some enemy, and shown to Duke Alfonso, first roused his suspicions.

Professor Rosini, in his able essay upon the 'Love of Tasso and the Causes of his Imprisonment,' Pisa, 1832, proves, in opposition to the assertion of Serassi and others, that Eleonora d'Este was the object of the above compositions, as well as of all the others addressed to his 'donna.' It is the four compositions last alluded to that constitute the real guilt of Tasso: they boast in prurient language of favours received, which, according to the best circumstantial evidence, were never granted, and which, if even granted, ought not to have been mentioned. And Tasso himself must have felt this, for when he set

out for France at the beginning of 1571, to accompany Cardinal Luigi d'Este on a mission to Charles IX., he left his manuscripts in charge of his friend Rondinelli, with directions to publish them in case he should die abroad, "except those which he had written to oblige some friend, and which must be buried with him."

This was a subterfuge to conceal the object of the above-mentioned compositions, and to make them appear as if written at the request of others, which in itself would have been no very creditable employment for a man of genius. However, before the end of the year 1571, Tasso took his leave of the cardinal in France. It would appear that while in that country, where he was introduced at the court of King Charles IX., and became acquainted with the French poet Ronsard, Tasso applied himself to study the points of controversy then debated between the Roman Catholic and the Reformed churches, and that his investigations of those delicate matters displeased the cardinal, who spoke to him strongly on the subject. But Tasso had other and secret reasons for wishing to return to Italy. Having returned to Ferrara, he entered the service of Duke Alfonso himself, by whom he was most graciously treated. "The duke extolled his poetical talent; he often listened to the recital of his verses (Tasso was then engaged about his 'Gerusalemme,' which he intended to dedicate to the duke); he admitted him to his own table, and to his own familiar society; and he refused him no favour that he chose to ask." (Serassi, 'Vita del Tasso'; Rosini, 'Saggio sugli Amori di Tasso.') Such was the conduct of Duke Alfonso towards the poet, until he discovered, years after, his guilty compositions. Whilst Tasso was thus a favoured guest, rather than a dependant of Duke Alfonso, he wrote his pastoral drama, the 'Aminta,' in which he portrays with exquisite skill the pangs and the delirium of love deemed hopeless for a long season, but in the end required. The drama was performed at the court of Duke Alfonso, and its fame soon spread about Italy. Lucrezia, Eleonora's sister, who had married Francesco Maria, duke of Urbino, wishing to hear the 'Aminta,' invited Tasso to her court, where he remained several months. This was in 1573. While Tasso was absent from Ferrara, envy was busy at work against him to lower his credit with Duke Alfonso. At the same time Guarino the poet, who was also at the court of Ferrara, strove to ingratiate himself with the Princess Eleonora, and this excited the jealousy of Tasso. It appears that Tasso had been in the habit of writing to the princess, and sending her some of his poetical compositions; but now he wrote none for several months. At last he wrote her a letter, dated September 1573, which was first published by his biographer Serassi, in which, after apologising for his long silence, he sends her a sonnet, "which," he says, "is not like those fine ones which I suppose your grace is now wont to hear very often," alluding to those of his rival Guarino. And he goes on to say, that his sonnet is poor both in the conception and the style, as the author is poor of luck. This last expression cannot be understood as referring to his circumstances, for he was still in favour with both the courts of Ferrara and Urbino, and was receiving at the same time presents from the Duchess Lucrezia of Urbino. But still he sends to the Princess Eleonora the sonnet, "hoping that, whether good or bad, it will produce the effect that he wishes." This sonnet, which begins "Sdegnò, debil guerrier, campion audace," is that of a desponding lover who asks for mercy. Tasso concludes his letter with the usual subterfuge, that "the sonnet is not written on his own account, but at the request of a poor lover, who having been for a time angry with his mistress, is now no longer able to stand out, and surrenders himself and asks for mercy." This and other passages of his amorous verses, referred to by Professor Rosini in the above-quoted essay, prove that the Princess Eleonora had been long aware of Tasso's passion, and felt flattered by it, but probably looked upon it as a poetical feeling, for which she gave him her friendship. He himself acknowledges this in several places; and yet he had already written, in the recess of his study, the guilty compositions which have been mentioned above.

Towards the end of 1573 Tasso returned to Ferrara, where he applied himself to finish his great epic poem 'La Gerusalemme.' The touching episode of Olindo and Sofronia, in the second canto, was meant to portray his own situation with regard to the Princess Eleonora; and in a sonnet which he wrote to that lady he evidently speaks of the character of Sofronia as meant to represent herself.

Parts of the 'Gerusalemme' began to circulate about in manuscript, and the author was assailed by numerous pedantic critics. He thought that the duke and his sister Eleonora did not take up his defence with sufficient zeal; and this slight sank deep into the poet's heart. Towards the end of 1576 a false friend, who was in the secret of his love for the princess, disclosed some particulars of it to others. Tasso having heard of this, and meeting him in the court of the ducal palace, required him to deny what he had said; and upon the other's refusal, gave him a blow in the face. This led to a duel: the treacherous friend came escorted by his relatives, who also drew their swords against the poet; but Tasso, who was a good swordsman, succeeded in parrying their blows, and came away in triumph. Nothing particular happened after this until June of the following year, 1577, when Tasso, on the evening of the 17th of June, being in the apartments of the Duchess of Urbino, in Duke Alfonso's palace at Ferrara, fell into a violent passion at some impertinence, real or supposed, of a domestic, and forgot himself so far as to throw a knife after him. He

was immediately arrested by order of Duke Alfonso, and confined to a room which looked on the court of the palace. It appears that between these two incidents his own servants had been tampered with in order to give up his concealed papers. Tasso got information of this, and looked out for a trusty servant from Urbino, and wrote on the subject to Guido Baldo, marquis del Monte, and his letter is quoted by his biographer Serassi. He had also felt for some time scruples about matters of faith: he mentions in his discourse to Scipione Gonzaga, that he had doubts concerning many points of religion. He had even applied to the inquisitor of Bologna, who had granted him absolution; but still he thought himself under the censures of the Church. All these things added to the anguish of his mind. From the place of his imprisonment Tasso wrote a submissive letter to the duke, begging his pardon; and the duke appearing to forgive him, released him after a few days, and took him with him to his country-seat of Bel Riguardo about the end of June. What happened there between the duke and Tasso is not ascertained; but from some expressions of the poet it appears that he was there closely and sternly examined by the duke, who had probably by this time in his possession Tasso's papers, "in order to get from him an acknowledgment of what, if avowed, would incense him against him." (Tasso's Sonnet, beginning "Alma grande d'Alcide," addressed to the deceased duke Hercules, father of Alfonso.) On the 11th of July the duke sent Tasso back to Ferrara under an escort, and shut him up in the convent of St. Francis, his secretary having written to the monks that he was mad, and must be treated as a madman.

Tasso's love adventures, his real or pretended madness, and the causes of his long imprisonment, made much noise about Italy at the time; and they have been so much discussed and commented upon since, that they have acquired an historical importance, especially as they serve to illustrate the manners of the times. Duke Alfonso has been much abused, and, we think, without discrimination, for his treatment of the poet. There is a mystery about the whole story resembling that which hangs over Ovid's banishment. Professor Rosini has collected with the greatest patience and care the discordant opinions, as well as the evidence resulting from Tasso's own writings, published and unpublished, and from those of his contemporaries; and the conclusion which he arrives at by the help of sound criticism is, that the duke, having in his hands the loose compositions of Tasso already mentioned, which, joined to his other compositions addressed to the same person, and his other strange sayings and doings, furnished full evidence that his sister Eleonora was the person alluded to in them, was naturally enough incensed against the poet, and thought that the only reparation that he could make to her injured honour was to make it be supposed that Tasso was mad. This gives the clue to his subsequent treatment of the poet. He must also have been confident that his sister was guiltless, otherwise, as Rosini observes, he would have taken a different sort of vengeance, according to the manners of the age. From the convent of St. Francis, Tasso wrote to the duke, saying, "that the clemency of his highness had forgiven him his faults, and that thenceforth if he spoke to anyone, he should acknowledge to all that which he clearly knew, that he was under a sanitary treatment." He adds, that he had resolved, when the treatment was over, to turn monk; and in a postscript he says, that he earnestly wishes that the duke may know all the truth, that he may not think him more mad than he is. In a long letter which he afterwards wrote to the Duke of Urbino, he says, that "in order to please Duke Alfonso, he thought it no disgrace to imitate the example of Brutus and Solon." Both those personages, according to Livy and Plutarch, feigned madness. Receiving no answer from either Duke Alfonso or the Duke of Urbino, Tasso, about the 20th of July, ran away from the convent, quitted Ferrara, and made his way alone and mostly on foot to Naples, and thence to Sorrento, where his sister was married. Having by kind treatment recovered his health and his spirits, he went to Rome, where he applied through some agent of the duke to be allowed to return to Ferrara. Duke Alfonso wrote in reply, that he was willing to receive Tasso again into his service, if he would allow himself to be treated by the physicians; but that if he continued his subterfuges, and to talk as he had done before, he would immediately turn him out of his territories, and never allow him to return. Tasso, upon this, returned to Ferrara in the spring of 1578, with the Cavaliere Gualengo. He was civilly but coldly received by the duke, who gave him to understand that he ought now to try to compose himself and to lead a quiet life, and to avoid all excitement. He attempted to get an interview with the Princess Eleonora and the Duchess of Urbino, but was prevented.

Tasso, tired of this manner of life, having lost the favour which he used to enjoy at court, ran away again from Ferrara in the summer of 1578, wandered to Mantua, Padua, and Venice, and then went to Urbino, where he wrote to the Duke of Urbino, who appears to have been then on bad terms with his own wife and with the court of Ferrara, entreating him to make the truth known, and to contradict the reports maliciously "circulated of his madness," saying that he had submitted to it in obedience to Duke Alfonso's wishes, but that he could not consent any longer to lead an animal life, far from literature and from the Muses. He wrote in similar terms to his friend Scipione Gonzaga at Rome, to his own sister at Sorrento, and to the Arciprete Lamberti, to whom he sent a sonnet, beginning "Falso è il rumor che

suona." In October 1578, he left Urbino, and went to Piedmont under an assumed name; but he was soon known, and his fame as a poet secured him a flattering reception from Charles Emmanuel, prince of Piedmont, who offered to take him into his service upon the same terms as the Duke of Ferrara. But poor Tasso had still his eyes and his heart fixed upon Ferrara, and in spite of the advice of his friends at Turin, and, among others, of the Marquis Filippo d'Este, Alfonso's relative, he determined to go to Ferrara. He was encouraged to do so by letters from the Cardinal Albano, who it appears had been commissioned by the duke to induce him to return, promising him a kind reception. He arrived at Ferrara on the 21st of February 1579, on the eve of the arrival of Margarita Gonzaga, the new bride of Duke Alfonso. The court was busy about the preparations to receive the duchess. The duke refused to see Tasso, the princesses also denied themselves, his old apartments in the palace were closed to him, and the courtier and court attendants treated him with rudeness and contempt. Tasso now became furious, and he uttered impetuous words against the duke and the whole house of Este, which being reported to Alfonso, he gave orders to arrest him and confine him in the hospital of St. Anna as a declared madman.

Tasso remained a prisoner in the hospital full seven years, till July 1586. From some obscure passages of his own letters he appears to have been treated very harshly at first by the attendants of the hospital. He wrote to the duke, and to the princesses, but in vain. At last he grew more calm, and was treated with greater leniency. The wretched hole which is shown at Ferrara as having been his prison is no longer believed by competent judges to be the identical place of his confinement. (Valéry, 'Voyages Littéraires en Italie,' book vii., ch. 14.) Political party-feeling in our age has contributed to exaggerate the hardships of Tasso's confinement, as religious party-feeling has exaggerated the sufferings of Galileo in a similar condition. There was hardship no doubt in both instances, and the hardship in Tasso's case was aggravated by the state of his own sore and unsettled mind. When Cardinal Scipione Gonzaga visited Tasso at St. Anna, in the spring of 1580, he was lodged in a large and commodious apartment, where he could write and correct his compositions. In November of the same year he was visited by Montaigne, who speaks of him as a man whose reason was overcome by the vivacity of his imagination. In July 1581, the Lady Marfisa d'Este obtained leave of Alfonso to take Tasso with her for a few days to her country-house, where he had a philosophical discussion with her and her two ladies of honour, Tarquinia Molza, a learned woman, and Ginevra Marzia, upon the nature of love. From the recollection of this conversation, Tasso afterwards composed his dialogue, which he entitled 'La Molza, ovvero dell' Amore.' In September 1582 Tasso received at St. Anna the visit of Aldo the younger, who brought him copies of some of the finest editions which had come out of his press, and they spent two days together in speaking of their respective studies. Tasso in the meantime was busy writing, or correcting his various poetical compositions which were printed at Venice, but very inaccurately, to his great annoyance. He wrote in his confinement several philosophical discourses or treatises, such as 'Il Gonzaga, ossia del Piacere Onesto,' 'Il Padre di Famiglia,' the discourse 'Della Virtù Eroica e della Carità,' the dialogue 'Della Nobiltà,' and others. In his discourse to Gonzaga he says that it was wished that he should become insane, and that the cause, or at least one of the causes, of this persecution was some lascivious verses of his.

In 1583 Tasso grew seriously ill, he complained of his head, of his digestion, of singing in his ears, and other symptoms of a like nature. He consulted his friend Mercuriale, a physician of Padua, but Tasso was not a very docile patient; he wished for none but pleasant medicaments, and he would not submit to a total abstinence from wine. One of his vagaries was that he had a familiar spirit who appeared to him to comfort him. In 1584 he was allowed to be out at large during the Carnival season, and he wrote a curious dialogue on that circumstance entitled 'Il Gianluca, o della Maschere.' He enjoyed the society of Tarquinia Molza, of Count Girolamo Pepoli, and other noblemen and ladies of the court of Ferrara. He wrote about that time the dialogues, 'Il Beltramo, ovvero della Cortesia,' 'Il Malpiglio, ovvero della Corte,' 'Il Ghirlinsone, ovvero dell' Epitaffio,' 'La Cavalletta, ovvero della Poesia Toscana,' and 'Il Rangone, ovvero della Pace,' which last, addressed to Bianca Capello, grand-duchess of Tuscany, is dated from his apartments of St. Anna, 'Dalle sue stanze in St. Anna.' He was now tolerably composed and reconciled, and could hardly be called a prisoner. In one of his autograph letters, written to the Marquis Buoncompagni, in April, 1585, and which is in the library of Ferrara, there is a passage copied by Valéry, in which he says "the duke does not keep me in prison, but in the hospital of St. Anna, where priests and monks can visit me at their pleasure, and no one prevents them from doing me good." In several of his unpublished letters he gives directions about some articles for his wardrobe or his table, and shows a refined taste in both. But in that same year, 1585, a fresh source of vexations opened upon him. His great epic poem, 'La Gerusalemme Liberata,' had been published complete at Parma in 1581, and afterwards at Mantua in 1584. A host of critics fell upon it, and by their strictures strove to obscure all the merits of the poem. At the head of them stood Salviati, of the Crusca Academy. Tasso's language, his poetical

style, his imagery, the plot of his poem, his episodes, everything was made a subject of censure. Tasso, already weakened by mental and bodily suffering, felt these attacks bitterly. He however took up his pen and wrote in a measured and dignified tone a defence of his poem. He was at the same time writing letters to all his friends to obtain his final liberty from the duke. He wrote to the city of Bergamo, to the duke of Mantua, to the grand-duke of Tuscany, to the pope, to the emperor, who all employed their good offices on his behalf with Duke Alfonso, who hesitated a long time before he consented to his release. At last Vincenzo Gonzaga, son of the Duke of Mantua, obtained, in July 1586, permission for Tasso to accompany him to Mantua. His reception at that court was like a triumph. In order to make some return for the kindness which he experienced from the house of Gonzaga, he completed his tragedy of 'Torrismondo,' which he dedicated to his liberator Vincenzo, on his accession to the ducal throne of Mantua in 1587. The subject of the 'Torrismondo' is a supposed Scandinavian legend. Some of the descriptions have been admired. After some time spent at Mantua and in his paternal town of Bergamo, Tasso, depressed by a settled melancholy, took leave of Duke Vincenzo, and repaired to Rome in the latter part of 1587, and thence to Naples in the following year. The poet appeared delighted with the beauties of his native country. At Naples he began a lawsuit to recover his paternal property, which had been seized when his father Bernardo became an exile. The Neapolitan courts of law have been at all times proverbially known for their dilatoriness, and justice was wretchedly administered under the Spanish viceregal administration. Tasso made little progress in his suit. But he found a sincere friend in the Marquis Gio. Batista Manso, who took him in the autumn to his estate of Bisaccio, where they spent the time sporting, listening to the rustic improvisatori, and conversing in the evening upon various topics, especially about Tasso's pretended familiar. It was at the request of Manso's mother that Tasso undertook his 'Sette Giornate del Mondo Creato,' which is a poetical paraphrase of the narrative of the creation of the world in the first two chapters of Genesis. In 1589, Tasso, always restless, repaired to Rome; but finding himself in great pecuniary distress, he accepted an invitation of the grand-duke Ferdinand de' Medici to go to Florence in the spring of 1590, where he was received with great honour by the court and other persons of distinction, as if to make amends for the annoyance given to him by Salviati and his compeers.

Towards the end of the same year however he went to Rome, and in 1591 he returned to Naples, and then applied himself to re-write his epic poem, under the title of 'Gerusalemme Conquistata,' in order to satisfy the critics. However the first version of his poem is in the hands of all, whilst few ever read his 'Gerusalemme Conquistata.' Tasso intended to end his days at Naples; but in 1592, Cardinal Aldobrandini having been made pope by the name of Clement VIII., his nephew, Cinzio Aldobrandini, afterwards cardinal, who was well acquainted with Tasso, invited him in the most pressing manner to Rome, where he came about the middle of that year. He was stopped several days at Mola di Gaeta, the road being blocked up by the bands of the famous robber chief Marco Sciarra, who was scouring the country with perfect impunity. Sciarra, who was a man of birth and education, having heard that Tasso was detained at Mola, sent him a message to entreat him to proceed on his journey, assuring him of perfect safety from his men, and offering him an escort, which however Tasso declined; upon which Sciarra withdrew his men from the mountains of Itri, so as to leave the passage open for Tasso. Having arrived safely at Rome, he completed his 'Gerusalemme Conquistata,' which he dedicated to Cardinal Cinzio Aldobrandini. In the summer of 1594 he returned to Naples, and lodged first in the Benedictine monastery of San Severino, and afterwards went to a country-seat of his friend Manso. Meantime Cardinal Cinzio, out of affection and gratitude towards Tasso, prevailed on Pope Clement to grant the poet the honour of being solemnly crowned with the laurel-crown in the Capitol, as Petrarch and others had been. This being agreed upon, Cardinal Cinzio hastened to announce the news to Tasso, urging him to repair to Rome as soon as possible. Tasso did not seem at all elated; he observed to Manso that he thought it more glorious to deserve honours than to receive them. He however assented, and took an affectionate leave of his kind friend Manso, with a foreboding that it would be the last. He spent the Christmas festivities at the monastery of Monte Casino, and arrived at Rome in the beginning of 1595. He was met outside the gates by many gentlemen and attendants of the Papal court, by whom he was led in a kind of triumph to the Vatican palace, where he was introduced to the pope, who told him that he had "awarded him the laurel-crown, in order that it might be as much honoured by him, as in former times it had served to honour others." Tasso was lodged in the Papal palace, and treated with the greatest regard. While the day of the coronation was anxiously expected, Cardinal Cinzio fell ill; and Lent coming on, the pageant was postponed, and then Tasso himself fell seriously ill. He felt from the first a conviction that this illness would be his last; and wishing to compose himself in retirement for his last moments, he expressed a wish to be taken to the monastery of St. Onofrio, on Mount Janiculum. Having been carried thither in one of Cardinal Cinzio's carriages, he said to the prior and his monks who came to receive him

at the gate, "I am come to die amongst you." He was led into a comfortable apartment, where he devoted his remaining days entirely to religious practices, and seemed totally weaned from worldly feelings and cares. When the pope's physician announced to him his approaching death, he embraced him, thanking him for the happy tidings. To Cardinal Cinzio, who came to take leave of him, he expressed his gratitude for all his kindness; and as the cardinal and those present could not refrain from tears, he said to them, "You think that you are leaving me, but I shall go before you." He expired on the 25th of April 1595, after fifteen days' illness, being fifty-one years of age. He was buried, according to his desire, in the church of St. Onofrio, with a plain slab over his tomb, upon which the monks engraved the simple inscription, "Torquati Tassi ossa hic jac-nt."

The lasting fame of Tasso as a great poet rests upon his '*Gerusalemme Liberata*,' or '*Il Goffredo*,' as it is sometimes called, one of the few great epic poems of which the world can boast. The action is complete: it relates the events of the great crusade, and ends with the ostensible object of that expedition, the deliverance of Jerusalem from the hands of the Moslems. The beauties, as well as the faults of the composition, have been the theme of many disquisitions. The poem has a peculiarity that distinguishes it from most other epics: it is essentially a Christian poem; and breathes throughout the feelings, the faith, and the hopes of a Christian. Tasso, as he says in his invocation, had drawn his inspiration from a sacred source, and has thus afforded a refutation to those who pretend that the Christian religion is not so favourable to poetical imagery as the splendid fictions of mythology. A melancholy tinge pervades the poem; but it is a melancholy lighted up by cheering and constant hope. With the single exception of the episode of the gardens of Armida, the language of the '*Gerusalemme*' is eminently chaste, and the morality of its sentiments is pure and elevated. Among its beauties of details we will only instance the episode of Olindo and Sofronia, in the 2nd canto; the council of the demons, in the 4th; the flight of Erminia, and her meeting with the old shepherd on the banks of the Jordan, in the 7th; the introduction of the Turk Solymán into the besieged city, in the 10th; the death of Clorinda, in the 12th; and the last fight of Argante with Tancred, in the 19th canto.

The other poems of Tasso have been mentioned in the course of this article. His lyrical compositions are very numerous, and many of them exquisite both in language and sentiment. Besides those which are upon amorous subjects, some refer to contemporary events, or are in praise of contemporary princes; others are upon religious subjects; and others refer to his own misfortunes.

Tasso's prose works consist of dialogues and dissertations, some of which have been already noticed; of a treatise upon epic poetry, dedicated to Cardinal Pietro Aldobrandini; discourses upon the poetical art, dedicated to Scipione Gonzaga; and of numerous letters, some of which remained unpublished till some thirty years back '*Lettere Inedite*,' Pisa, 1827. Professor Rosini has edited a new edition of all the works of Tasso, begun at Pisa in 1820.

Tasso's '*Gerusalemme Liberata*' has been translated into most European languages. There are English translations by Fairfax, Hoole, Broadhead, Hunt, and Wiffen. It has also been paraphrased into several Italian dialects, Milanese, Neapolitan, Calabrian, &c. The Life of Tasso has been written by Manso, Serassi, and others, and has been commented upon by Tiraboschi, Muratori, Zeno, Maffei, and other Italian philologists.

TASSONI, ALESSANDRO, born of a noble family at Modena, in 1565, was educated first in his native town, and afterwards at Bologna and Ferrara, where he studied the law. In 1597 he went to Rome, when he entered the service of Cardinal Ascanio Colonna, whom he accompanied to Spain in the year 1600. In 1603 the cardinal, having been made viceroy of Aragon, sent Tassoni to Rome to take charge of the administration of his property in Italy. During his stay in Spain Tassoni had opportunities of observing the internal state of that kingdom, which, after alarming all Europe in the preceding century by its ambition and the extent of its conquests, was now fast sinking into decay under the weak reign of Philip III. At Rome he wrote his '*Considerazioni sopra il Petrarca*,' published in 1609, in which he commented very severely upon numerous faults, real or supposed, which he pointed out in the writings of that generally admired poet. Endowed with an inquisitive but somewhat captious mind, Tassoni aimed in his writings at opposing received opinions, and he employed sarcasm and ridicule for the purpose. Aromatari of Assisi took up the defence of Petrarch in his '*Risposte*' to Tassoni's considerations, and this led to a controversy in the usual bitter style of Italian literary polemics. In 1612 Tassoni published his '*Pensieri Diversi*' in ten books, being a collection of remarks on various subjects of science and literature which he had been in the habit for years of entering in his memorandum-book. Among other subjects he attacked the Physics of Aristotle, although he does not seem to have had himself very correct notions of physical phenomena. This work led to another controversy between Tassoni and several of his contemporaries. Meantime the Cardinal Colonna had died, and Tassoni, being now without employment, applied to Charles Emmanuel I., duke of Savoy, who promised him the post of secretary to his son, the cardinal of Savoy. But partly through court intrigues, and partly on account of Tassoni's

known aversion to the court of Spain, with which the Duke of Saxony wished to be on good terms, he was kept waiting for years before he could take possession of his office at the court of the cardinal, who was then residing at Rome. Certain compositions entitled '*Filippiche*,' in which the court of Spain was severely handled, as well as another pamphlet entitled '*Esequie della Monarchia di Spagna*,' which appeared during that period, were generally attributed to Tassoni. Tiraboschi thinks that the first two of the '*Filippiche*' are Tassoni's, but that the other five are by another pen. Copies of this work are very scarce. In 1623 Tassoni left the cardinal of Savoy in disgust, and retired to a country-house in the suburb of Transtevere, where he employed himself in study and rural occupations.

In 1626 Cardinal Ludovisi, nephew of Pope Gregory XV., took Tassoni into his service, and gave him apartments in his own palace, with a handsome stipend. After the cardinal's death, in 1632, Tassoni repaired to Modena, when he was made councillor to his sovereign Duke Francis I. of Este, for the remainder of his life. He died at Modena in 1635.

Besides the works already mentioned, Tassoni made an abridgment in Italian of the '*Annals*' of Baronius, and some '*Annotazioni*,' or corrections and additions to the Italian vocabulary of La Crusca. But the work for which he is best known is his mock-heroic poem, '*La Secchia Rapita*,' or the '*Rape of a Bucket*.' He is considered as having first introduced this kind of composition in the Italian language, as he had finished, though not published in print, his poem years before his contemporary Bracciolini published, in 1618, his '*Scherzo degli Dei*,' in which he turns into ridicule the gods of the ancient mythology. Tassoni's poem was published in the printed form in 1622, but manuscript copies had been in circulation long before. The subject is taken from the annals of his country under the year 1249, when a war having broken out between the two neighbouring cities of Modena and Bologna, the Modenese carried off in triumph a wooden bucket from within one of the gates of Bologna, which bucket is still seen suspended by a chain in the cathedral of Modena. The '*Secchia Rapita*' has been generally admired by Italian as well as foreign critics. Voltaire speaks of it disparagingly, although he has borrowed from it (Valéry, '*Voyages Littéraires*'), but Perrault and other French critics have done Tassoni full justice. The humour of the poem is peculiarly Italian, and the admixture of the serious and heroic with the burlesque is happily combined. Some of the descriptive passages are exquisitely soft and true to nature, such as the song in canto viii. which begins: "Dormiva Endimion tra l'erbe e i fiori," and the beautiful episode in canto x. of the voyage of Venus from the mouth of the Arno to Naples for the purpose of engaging Manfred, son of Frederic II., to assist the Ghibelines of North Italy. The '*Secchia Rapita*' has gone through numerous editions: that of Barotti, Modena, 1744, is most splendid. Gironi has collected various judgments and comments upon this poem in his biography of Tassoni. Muratori has also written the Life of Tassoni.

TATE, NAHUM, was born in Dublin in 1652. His father was Dr. Faithful Tate, a clergyman in Ireland. He was educated at Trinity College, Dublin, whence he removed to London. On the death of Shadwell in 1690, the interest of Tate's friends procured him the situation of poet-laureate, which he held till his death. He seems to have been an improvident man, and somewhat addicted to intemperance. In the latter part of his life he resided in the precincts of the Mint, in Southwark, where he died, August 12, 1715. The Mint was then considered a privileged place, where debtors were not liable to arrest. This supposed privilege however was put down by statute 9 Geo. 1.

Tate wrote '*Memorials for the Learned*, collected out of eminent Authors in History,' 8vo. 1686; '*Characters of Virtue and Vice* described and attempted in Verse, from a Treatise of Joseph Hall, Bishop of Exon,' London, 1691; '*Miscellaneous Sacra, or Poems on Divine and Moral Subjects*,' 8vo, London, 1698; '*Panacea, a Poem on Tea*,' London, 1700; besides Birth-Day Odes and an Elegy on the death of Queen Mary. He was also the author of about ten dramatic pieces, tragedy, comedy, and opera, including an alteration of Shakspeare's '*Learn*,' which kept the stage many years, but has for some time been superseded by the original.

Tate is chiefly known now by his metrical version of the Psalms, which he executed in conjunction with Dr. Nicholas Brady [BRADY], and which is now commonly annexed to the Book of Common Prayer of the Church of England. This version, though of little merit, was an improvement on the former version by Sternhold and Hopkins, which it soon supplanted. [STERNHOLD.] The first publication was an '*Essay of a New Version of the Psalms of David*, consisting of the first Twenty, by N. Brady and N. Tate,' 8vo, London, 1695; this was followed by '*A New Version of the Psalms of David, fitted to the Tunes used in the Churches*, by N. Tate and N. Brady,' London, 1698, with a '*Supplement of Church Hymns*,' 8vo, London, 1700.

TATIANUS, of Assyria, was a pupil of Justin Martyr, after whose death he wrote an apology for Christianity, under the title of '*A Discourse to the Heathen*' (*Λόγος πρὸς Ἑλληνας*). In this work he gives some account of his own life. He was brought up in heathenism, the different forms of which became known to him by his many travels: and all those forms appeared to him unsatisfactory. He then turned his attention to the Old Testament, on which he thought he

saw the impress of truth. Arriving at Rome, where he practised as a rhetorician, he met with Justin Martyr, by whom he was converted to Christianity.

After the death of Justin he embraced some heretical opinions, the germs of which may be seen in his 'Discourse to the Heathen.' The chief of his heresies were the Marcionite doctrines of the two principles of good and evil, and of the evil of matter, and the Valentinian doctrine concerning Aëons. His followers were however chiefly remarkable for the practical application they made of their Marcionite opinions by lives of the strictest asceticism. They lived in celibacy, refused all luxuries, and abstained from the use of wine even at the Lord's Supper. Hence they were called Encratites (*ἐγκρατῖται*), Apotactites (*ἀποτάκτικοι*), and Hydroparastatæ (*ὕδραπαρστάται*). But it must be observed that these terms were often applied to all ascetics. The Tatianists were Encratites, but all called Encratites were not Tatianists. The date of Tatian's heresy is placed by Eusebius in the year A.D. 172.

Of his lost works the chief were a treatise on 'Perfection after the Pattern of the Saviour' (*περὶ τοῦ κατὰ τὸν σωτῆρα κατατισμοῦ*), and a 'Harmony of the Four Gospels' (*εὐαγγέλιον διὰ τεσσάρων*). The latter work is particularly noticed by Theodoret, who found 200 copies of it in the Syrian churches, which he took away from the people on account of the heresies contained in the book. For this reason, chiefly, Neander supposes that the Harmony of Tatian was not simply compiled from the narratives of the four Evangelists, but contained also many things out of the Apocryphal Gospels. Some writers, among whom is Lardner, think that Tatian's 'Harmony' is still extant in an Arabic manuscript in the Vatican Library. His 'Apology' is usually printed in the works of Justin Martyr. There are separate editions of it by Gesner, folio, Zürich, 1546; and by Worth, 8vo, Oxon., 1700. (Eusebius, *Hist. Ecc.*, iv. 29; Hieronymus, *De Vir. Illust.*, c. 29; Clemens Alexand., *Strom.*, iii. 12; Lardner's *Credibility*, pt. ii., c. xiii., &c.; xxxvi., sec. 2; Neander's *Gesch. der Christ. Relig. und Kirche*, i., p. 762. and p. 1131.)

#### TATIUS, ACHILLES. [ACHILLES TATIUS.]

TAUBMANN, FRIEDRICH, was born at Wunsees, near Baireuth, on the 16th of May, 1565, where his father was a shoemaker. His father died very early, and his mother married a tailor, who wished to bring up his step-son Friedrich to his own business; but as the boy showed little inclination, he was sent in 1577, to school at Culmbach, where he was obliged to gain his livelihood by singing and begging. In 1582 he went to the gymnasium of Heilbronn, where his Latin verses and the wit displayed in them were so much admired, that he was crowned by Paul Melissus as poet-laureate. Ten years later he went to the University of Wittenberg, where he distinguished himself, and, in 1595, was appointed professor of poetry and eloquence, to which afterwards the honour of court-poet was added. He died at Wittenberg, on the 24th of March 1613.

Taubmann was conscientious in the discharge of his official duties, and he was a witty and humorous man. During his lifetime he had the reputation of being the greatest wit of the age, and persons of the highest rank sought his society. From all that can be learned about him, it is clear that he did not, like many others in similar positions, forget his own dignity as a man: he never acted as a buffoon or a flatterer, but always manifested a straightforward and upright character. In his time philology was sinking very rapidly in Saxony, all attention being absorbed by theological controversies and sophistries, and Taubmann was one of the very few who, both in earnest and in jest, impressed upon his contemporaries the necessity of resuming a thorough study of the ancient languages as the only means of raising theological studies to their proper position. This he did more especially in his work '*Dissertatio de Lingua Latina*,' the last edition of which appeared at Wittenberg, 1614. With the same view he exerted himself in his lectures, and in his editions of Plautus (4to, Wittenberg, 1621) and of Virgil (4to, Wittenberg, 1618), in which he made his countrymen acquainted with the labours of foreign scholars. His poetical works, though very popular in his time, have no great merit. They appeared in several collections, under the titles of '*Columbæ Poetica*,' '*Melodessia*,' '*Schediasmata Poetica*,' and others. After Taubmann's death, the name of Taubmanniana was applied to all kinds of witty sayings and anecdotes.

(Erasmii Schmidii *Oratio in Taubmanni Memoriam*, 8vo, Wittenberg, 1613; *Taubmanniana oder Fr. Taubmann's Leben, Anekdoten witzige Einfälle und Sittensprüche*, von Simon von Cyrene, 8vo, Leipzig, 1797; Fr. Brandt. *Leben und Tod Frid. Taubmanni*, 8vo, Copenhagen, 1675; the best work however is by Ebert, *Leben und Verdienste Fr. Taubmanns*, 8vo, Eisenberg, 1814.)

TAULER, or THAULER, JOHANN, the most celebrated German divine of the 14th century. He was born in 1294, as some writers say, at Cologne, but according to others at Strasbourg. Respecting his life very little is known. He entered the order of the Dominicans at an early age, and was held in the highest esteem on account of his knowledge of philosophy and mystic theology, as well as for his pious and unblemished conduct, although he fearlessly attacked the vices and follies of his fellow-monks. The latter part of his life he spent in the convent of the Dominicans at Strasbourg, where he died on the 16th of June 1361, as is attested by his tombstone, which still exists in that city.

Tauler was a man of extraordinary piety and devotion, a zealous teacher, and a great promoter of mystic theology in Germany, which must regard him not only as the founder of that school of divinity, but at the same time as one of the greatest men that have ever sprung from it. His sermons, as well as his other religious and ascetic works show a glowing imagination and deep feeling: they are less addressed to the understanding than to the heart. But although this leaning and his love of mysticism frequently led him to religious sentimentality and absurdities, yet he never sinks down to the level of some modern mystic divines. Tauler was deeply read in scholastic philosophy, and although in his sermons he endeavours to steer clear of it, yet they are not quite free from sophistic subtleties, and there are passages which must have puzzled more than enlightened his audience. In his love of truth, and the earnestness with which he devoted himself to the instruction of the people, he was a worthy predecessor of Luther. Tauler's influence upon the German language and literature has acquired for him as distinguished a place in the history of German literature as that which he occupies among divines. In his time German prose scarcely existed, and the standard of sermon-writing was very low. The creation of a prose literature belongs almost exclusively to him: his style seldom aims at oratorical beauty, his sentences are short and abrupt, but always full of meaning. His language, which is the dialect of the Upper Rhine, is as pure as can be expected. It appears that Tauler did not himself write his sermons, but they were taken down as they were preached, by many of his hearers. We must therefore suppose that in the editions which were published shortly after his death, the form has been somewhat altered by the editors. The first edition of his sermons appeared at Leipzig, 4to, 1498, under the following title: '*Sermon des grossgelarten in gnaden erleuchteten Doctoris Johannis Tauleri prediger ordens, weisende auff den nehesten waren wegk, yn geiste czu wandern durch uberschwebenden syn, unvoracht von geistes ynnige vorwandelt i deutsch manchen menschen zu selikeit*.' This edition was followed by another at Augsburg, folio, 1508, and a more complete one at Basel, fol., 1521. A translation of these sermons into the dialect of Lower Germany was published at Halberstadt, fol., 1523, and another into High German by P. J. Spener, at Nurnberg, 4to, 1688. A new edition in modern High German was published at Frankfurt-on-the-Main, in 3 vols. 8vo, 1825, &c. The most interesting among his other religious works is that on the imitation of the life of Christ, '*Nachfolgung des armen Lebens Christi*,' which was first printed at Frankfurt in 1621. The most recent edition is that by Schlosser, Frankf., 1833. A collection of all the treatises of Tauler was commenced in 1823, at Luzern, by N. Casseder, but only two volumes have appeared.

Most of the works of Tauler were translated into Latin by Laurentius Surius, fol., Cologne, 1548; this collection has been reprinted at Macerata and Paris. There are also one Italian and three Dutch translations: the best of the Dutch translations is that in folio, Antwerp, 1685.

A list of the works of Tauler, together with the whole literature on the subject, is given in Jörden's *Lexicon Deutscher Dichter und Prosaisten*, vol. v., p. 1-9.

#### TAURELLIUS, L. [TORELLI.]

TAUSAN, TAUSSEN, or TAGESEN, JOHN, the first Danish theologian who made his countrymen acquainted with the principles of the Lutheran reformation. He was born in 1494 at Birkinde, a village in the island of Fünen. After he had received his early education in the convent of Antworskow, he wished to continue his studies at some university, and the abbot of the convent fixed upon Cologne. Here he became accidentally acquainted with some of the earliest works of Luther, which excited in him such a desire to study under the reformer, that he defied the opposition of his superiors, and went to Wittenberg. After having spent some time here he went to Rostock, where he took his degree of M.A., and thence proceeded to Copenhagen, to undertake the office of teacher in one of the public schools, 1521. This sphere of action however did not satisfy him: his wish was to proclaim the new doctrines, which he thought he could do more effectually if he withdrew to his former convent of Antworskow. Here he gained great reputation as a preacher, and at first endeavoured privately to make his brother monks acquainted with the reformed doctrines; but in 1524, on the occasion of the abbot being absent, Tausan delivered a sermon, which produced such an effect on his hearers, that most of the monks declared themselves ready to abandon their old belief. The excitement and disturbance arising from such proceedings led to Tausan being transferred to another convent at Wiborg, where however he persevered in his exertions, and again gained a considerable number of followers. King Frederic I. of Denmark, who was favourably disposed towards the doctrines of the German reformers, and wished to favour Tausan, sent him, in 1526, a letter of protection, gave him the title of court preacher, and assigned to him a church at Wiborg, where he might preach without molestation. The bishop of this place opposed him in everything; but his attempts were fruitless, as Tausan was supported by the sympathy of the people. The disputes between the two religious parties now became more vehement every day; and at last the king, in order to save Tausan, invited him, in 1529, to Copenhagen, where he was appointed preacher to the church of St. Nicolas. The reformation in Denmark, the seeds of which had thus been sown

made gradual and steady progress; and in order to settle the question permanently, the king issued a command that deputies of the Roman Catholics and Protestants should appear on the 8th of September 1530, before the assembly of the states, and explain their creeds and points of dispute. Tausan and the principal men of his party were present, and it was finally settled that the Protestants should preach and propagate their doctrines. The tranquillity thus restored was interrupted by the king's death in 1533, when the Roman Catholic party, and more especially the bishop of Roeskilde, again began to trouble Tausan, who was on the point of being driven out of his country. For a time he absented himself from Copenhagen; but Protestantism in the meanwhile made such progress, that the opposition to it in a short time either ceased or became very weak. In 1537 in which year John Bugenhagen was sent by Luther to Denmark to assist in arranging the ecclesiastical affairs of the country, Tausan was appointed preacher and lecturer on theology at Roeskilde; and four years later he was made bishop of Ripen, an office which he held until his death, on the 9th of November 1561.

Tausan wrote a considerable number of theological works in Danish: some of them are controversial, others exegetical, and a third class consists of translations of portions of the Scripture and of original hymns. His works, as well as the history of his life, show that he was a simple and straightforward man; but in talent he was far inferior to the great reformers who were his contemporaries.

(L. Holberg, *Dänemærkische Norwegische Staats- und Reichs-Historie*, p. 128, &c.; compare Jöcher, *Allgem. Gelehrten-Lexic.*, iv, p. 1030, &c.)

TAVERNIER, JEAN-BAPTISTE, BARON D'AUBONNE, the son of an Antwerp engraver who had settled at Paris and dealt in maps, was born in 1605. He was a traveller from his boyhood. The sight of the maps with which he was surrounded, and the conversation of the geographers who frequented his father's shop, inspired him with a passion for seeing foreign countries, which he soon contrived to gratify, it does not very clearly appear by what means or in what capacity.

Between 1620 and the close of 1630 he visited most of the countries of Europe: this may be considered as his apprenticeship to the profession of a traveller. Between 1630 and 1669 he made six journeys to the East: this was the portion of his life devoted to productive toil. The story of the remainder of his life, from 1670 to 1680, impresses us with the idea of an elastic and untired spirit, which, stimulated in part by his dilapidated fortune, but still more by an incapacity of repose, sunk in an attempt to re-enter that world of active exertion in which his place had been occupied by younger men. To appreciate Tavernier, it is necessary to examine his character as it displayed itself in each of these three periods.

He appears to have left his paternal home before he had completed his fifteenth year; for he tells us that after visiting England, Antwerp, Amsterdam, Frankfurt-on-the-Main, Augsburg, and Nürnberg, he was induced by what he heard at the last-mentioned place of the mustering of armies in Bohemia to repair to the theatre of war. About a day's journey from Nürnberg he met Colonel Brenner, son of the governor of Vienna, who took him into his service. Tavernier was present at the battle of Prague, 8th of November 1620. Some years later he followed his master to Vienna, and was presented by him to his uncle, the governor of Raab, at that time viceroy of Hungary, who received the young Frenchman into his family in the capacity of a page. With this nobleman Tavernier remained four years and a half, and ultimately obtained his dismissal with a view to entering the service of the Prince of Mantua. Something appears to have made him change this determination; for after a brief stay in Mantua he left it about Christmas 1629, and after making a short tour in Italy, and visiting his friends at Paris, returned to Germany. During the summer of 1629 he made an excursion into Poland, on his return from which he attached himself for a short time to the family of Colonel Butler, "who afterwards killed Wallenstein." Hearing a report that the son of the Emperor Ferdinand II. (afterwards emperor himself, with the title of Ferdinand III.) was to be crowned king of the Romans in Regensburg, Tavernier, who had been present at that prince's election as king of Hungary (1625) and his coronation as king of Bohemia (1627), wished to be present at this third solemnity also, and with this view threw up his appointment (whatever it was) in Butler's household.

Tavernier has nowhere explicitly stated what were his rank and occupations while he led this unsettled life. No expression escapes him to intimate that he at any time found himself at a loss for money. The appointment of page in the family of a nobleman holding the high office of viceroy of Hungary was generally the first step to the command of a troop. Yet there is a vagueness in the language of Tavernier while speaking of this part of his history, which leads us to suspect that his station was more of a menial character. His lively and enterprising disposition seems however to have made him a general favourite, and his power of expressing himself—not very elegantly, if we are to judge from his French, yet intelligibly—in several European languages, rendered him an eligible attendant. His position was most probably that of one of the ready-handed, quick-witted, not over-scrupulous attendants, with whom men of high rank in that age found it necessary to surround themselves. From hints dropped in different parts of his travels, it is highly probable that he had picked up some money in the wars; he had acquired some knowledge of the military

art; he knew something of watchmaking and jewellery; and, above all, he had learned to shift for himself. Beyond such a general acquaintance with maps and geography as he had picked up in his father's shop, he possessed no literary or scientific attainments; and his tastes and habits were those of the young rufflers of his age. A naturally frank and kindly though somewhat boisterous temper had done much to neutralise the worst impressions of the lax school in which he had been educated.

After such preliminary training, and with a character thus far developed, Tavernier commenced his travels in the east. He had already been turning his eyes in that direction, and making interest to be received into the suite of a new ambassador the emperor was about to despatch to the grand seignior, when the confidential agent of Richelieu, Father Joseph, who had known him at Paris, proposed that he should accompany two young French noblemen who were travelling to Palestine by the way of Constantinople. Tavernier closed with the offer, and in company with his employers reached that city during the winter of 1630-31. A recent biographer has stated that he began his first journey in 1636: the origin of the mistake is as apparent as that it is a mistake. Tavernier says, "after the ceremony of the coronation was finished," and Ferdinand III. was not crowned king of the Romans till December 1636. Tavernier gives no dates in the account of his first journey; but we know that he embarked at Marseille for his second in September 1638; and we also know that he arrived at Rome on his return from his first voyage on the day of Easter. He was detained eleven months at Constantinople, waiting for a caravan, and seven weeks by a severe attack of sickness at Aleppo; so, if we assume he set out from Regensburg in December 1636, we have only three months left for the overland journey from Regensburg to Dresden, Vienna, Constantinople, Erzeroum, Tabriz, Ispahan, Baghdad, Aleppo, and Scanderoon, and the voyage from Scanderoon to Rome. It is impossible that Tavernier's first journey could have been subsequent to Ferdinand's coronation as king of the Romans. But a strong effort was made by that prince's father to have him crowned at the close of the diet held at Regensburg in 1630; and Tavernier, writing from memory forty years later, may have imagined that the festivities he witnessed at that time were in honour of a coronation which was expected to take place, but did not. Two passages in his *Travels* seem to place it beyond a doubt that the visit to Regensburg which led to his first journey took place in 1630. In his first volume (p. 689 of the Paris edition of 1766) the expression occurs, "in 1632 on the road from Ispahan to Bagdat." He only travelled that road once, and that was on his return from his first expedition into Persia. It would be unsafe to rely upon the evidence of a figure in a book not very correctly printed; but in the account of his first journey to Ispahan he mentions having seen at Tocat the vizir, who was executed a few days later, after being obliged to raise the siege of Baghdad. This can only refer to Khosrew Pasha, executed there about the end of April 1632.

This date being ascertained, the chronology of the ensuing forty years of Tavernier's life may be gleaned from his travels with tolerable accuracy. He began his first journey to the east from Regensburg in December 1630, penetrated by way of Constantinople and Tabriz to Ispahan, and returned by Baghdad and Aleppo to Europe early in the summer of 1633. From this date till the commencement of his second voyage his history would be a complete blank had he not told in a parenthesis that he was appointed comptroller in the household of the Duc d'Orléans, who gave him leave of absence during his journeys to the east. On the 13th of September 1638 he embarked at Marseille in a Dutch vessel, and, landing at Scanderoon, proceeded by way of Aleppo and the Great Desert west of the Euphrates to Basra. There he embarked in a vessel sailing to Ormuz, and, landing at Bushire, proceeded through Shiraz to Ispahan. After some stay in that capital, he travelled by Shiraz and Lars to Gombroon, where he embarked for Surat. He visited Agra on this occasion; but here again we are at a loss for dates to enable us to trace his routes. We only know that he passed through Burhampore on his return from Agra to Surat in 1641; that he visited Goa, and returned to Surat by land about the end of that year; and that he was at Ahmedabad, either going to or returning from Agra, in 1642. That he had revisited Ispahan in the interval is not improbable, since he says that "for six journeys which I have made between Paris and Ispahan, I have made twice as many from Ispahan to Agra and other parts of the Great Mogul's dominions." He was at Ispahan towards the close of the year 1642, and probably soon after returned to France. On his third voyage he took with him the brother already alluded to, and left Paris on the 6th of December 1643. This time, after visiting Ispahan as usual, he embarked at Gombroon for India. In January 1645 he left Surat on an excursion to the diamond-mines near Golconda. In January 1648 he made a voyage by sea to Goa; and in April of the same year he embarked at Mingvela for Batavia, whence he returned to Europe in the Dutch fleet in 1649. Tavernier's fourth journey occupied him from the 18th of June 1651, when he set out from Paris, till 1655. On this occasion he proceeded from Persia to Masulipatan in May 1652; he revisited the diamond-mines near Golconda in 1653; and in 1654 he travelled from Ormuz to Kerman, and after spending three months there took the route of Yezd to Ispahan, and returned to Europe by Smyrna. His fifth journey was begun in February 1656. He was at Agra in

1659, but we are at a loss for other dates in this journey. The sixth and last expedition that Tavernier made to the east was begun in November 1663 and was terminated in 1669. The most important novelty of this journey was his tour through the province of Bengal as far as Dacca, which occupied him from November 1665 till July or August 1666. He was at Ispahan in July 1667, and on his return to Europe visited Constantinople for the second time.

The very unsatisfactory arrangement adopted in the narrative of Tavernier's journeys has rendered it advisable to extract from it the preceding incomplete chronology of them. His first publication was an account of the interior of the seraglio at Constantinople, 'Nouvelle Relation de l'Intérieur du Serail,' published at Paris, in a thin 4to volume, in 1675. This was followed by an account of his travels, 'Six Voyages en Turquie, en Perse, et aux Indes,' also at Paris, in two quarto volumes, in 1676. A third volume was added in 1679, containing an account of Japan and the origin of the persecution of the Christians in these islands; an account of the proceedings of the deputies from the king and the French company of the Indies both in Persia and India; observations on the commerce of the East Indies; account of the kingdom of Tunquin; account of the conduct of the Dutch in Asia.

In preparing the account of the seraglio and the two first volumes of his Travels, Tavernier employed Chappuzeau, a dull and unintelligent writer: the memoirs contained in the third volume were prepared by Lachapelle, secretary to the president Lamoignon. The account of the seraglio, and the contents of the third volume of the travels, are partly memoirs compiled from the information of others, and partly more full expositions of topics touched upon in his narrative. It is to the first two volumes of Tavernier's travels that we must look for such information of the countries he visited, the time he spent in them, and the adventures he encountered, as is necessary to enable us to determine what he witnessed himself, what he learned from the report of others, how far his informants were worthy of belief, and how far he was qualified to understand their communications. But the arrangement of these two volumes is the very worst that could be conceived for supplying satisfactory information upon these heads. The first volume professes to give an account of the various routes by which the Parisian traveller can reach Constantinople, Ispahan, and the Persian Gulf. It is arranged as a *routeur*; the result of all Tavernier's observations upon each line of road is given at once, and it is only from incidental remarks that we learn when and in what direction he travelled it. His remarks upon the customs, government, and commerce of the different countries are thrown into intercalary chapters. A similar arrangement is adopted in his second volume, which contains the fruits of his observations in the south of India, in the region between Surat and Delhi, in Bengal, and in the Dutch possessions in the Eastern Archipelago. The work is neither a systematic account of the geography and statistics of the countries in which Tavernier travelled, nor is it a personal narrative of the traveller. It is an ill-digested and unsatisfactory attempt to combine both.

Yet are the four volumes we have mentioned full of available matter, both for the historian and the geographer. The former will find in it the fruits of the forty years' experience and observation of a European merchant in Turkey, Persia, India, and the Indian Archipelago, in the 17th century. Tavernier did not possess either the intellect or the education of Thévenot and Bernier, but his opportunities of observation were more varied and protracted. He was a part of that commercial enterprise and rivalry of which they were only spectators. He is himself a specimen of the kind of adventurers who at that time managed the commerce of Europe with the East. His unconscious revelations of his own character may be relied upon, and the naiveté with which they are made encourages us to believe what he tells us of others. His statements have not passed unchallenged: they wounded the national pride of the Dutch too sorely to be left without a reply, and the partisan feelings of the Protestant literati of Europe induced them to embrace the cause of Holland, in opposition to the protégé of Louis XIV. Even the Roman Catholic literati took little interest in a writer who frankly confessed that he saw nothing interesting or valuable in the plain of Troy or the ruins of Persepolis. And yet notwithstanding the violent attacks of the Dutch and Calvinist writers, the silence of others, and even of himself (for Tavernier did not engage in a controversy), not one material assertion he made has been disproved. Unfriendly criticism has been confined to the remark that many of his statements regarding the Dutch are trivial, and betray a littleness of mind: this may be, but they are not the less characteristic for that reason. Tavernier's accounts of the principal objects of Oriental commerce in his day, of the leading markets and routes of trade, of the money of the different countries, and the state of the exchanges, are more full and intelligible than those we find in any other cotemporary writer. His success in trade affords a guarantee of the correctness of the opinions he states. We have collated his routes, whenever this was possible, with those of recent travellers, and have found them in general so accurate, that they may be relied upon for the purposes of comparative geography, and in one or two instances as affording information regarding tracts which have not been visited since his time. Tavernier's notices of the route from Casvin to India by Candahar, and of the

provinces to the north of Erivan, leave a favourable impression of his talent for extracting information from the native authorities. He has been accused of plagiarism, principally because of the striking coincidence between his account of the Guebres of Kerman, published in 1676, and that which Louis Moreri published in 1671 from the papers of Father Gabriel de Chinon. It deserves to be noticed that Moreri's publication is lucidly arranged and neatly expressed, while the account contained in Tavernier's travels is confused and miserable in point of diction. Had it been taken from Moreri, it is scarcely possible that the latter could have been so wretchedly composed. Add to this that the information found in the papers of Father Gabriel is not said to have been the fruit of personal observation: that Tavernier resided three months among the Guebres at Kirman, and had frequent dealings with them in India and elsewhere; that he and Father Gabriel repeatedly met in Persia; and it must be allowed that the priest is quite as likely to have derived his information from the merchant as otherwise. In judging of the statements made by Tavernier, the school in which he was trained, and his personal character as it appears from his own story, must always be kept in view. He had no knowledge of or taste for science and literature, for art, or antiquarian research. He acted upon impulse, and his instincts were love of travelling, and desire to acquire money for the sake of spending it in feasting and personal display. A diamond was a more interesting object to him than the mysterious remains of Tchellimmar. He had no very nice or refined sense of honour, but he was frank and veracious, and little inclined to deck himself with stolen feathers of literature; possibly because he could not appreciate their value.

In this review we have been obliged to anticipate that part of the history of the third period of Tavernier's life, which relates to what may be called his literary labours. We are thus enabled to abridge the sequel of our narrative. On Tavernier's return from his sixth journey he was presented with *lettres de noblesse*, by Louis XIV., and purchased about the same time the barony of Aubonne in the Pais de Vaud. When his travels were published, they were, as has been intimated above, fiercely attacked; in particular, most virulently by Jurieu, in his 'Esprit de M. Arnauld' (December 1684); more temperately and with a greater parade of evidence by Henrick van Quellenburgh, in 'Vindiciæ Batavicae' (Amsterdam 1684). Tavernier made no reply. Bayle has given a characteristic account of his conduct relative to the publication of Jurieu, which was rather a libel than a criticism. "He made a noise in the taverns and streets, he threatened and even named the day and hour when he would apply to the Walloon consistory of Rotterdam to demand execution of the canonical laws against the minister who had dishonoured him: but his threatenings came to nothing, he retired very peaceably, and never commenced any prosecution at all." The misconduct of a nephew, to whom he had intrusted the management of his affairs in the Levant, obliged him to sell, some time previous to 1688, his hotel in Paris and his estate of Aubonne. He retired first into Switzerland, and subsequently to Berlin, where he was nominated by the elector of Brandenburg director of a projected East India Company. From the time of his first journey he had regretted being prevented from carrying into execution a design which he then entertained of returning from Persia through the Russian dominions. His new appointment afforded him an excuse and opportunity for making that journey, and he set out to travel to the East Indies across Russia in 1688. He was taken ill at Moscow, and died there in the month of July 1689.

\*TAYLER, FREDERICK, was born near Elstree, Hertfordshire, in 1804. Having early acquired notice in the art-circles of the metropolis by his sketches and drawings, especially of animals, he was elected first an associate and in 1835 a member of the old Society of Painters in Water-Colours. In the gallery of that society his pictures soon secured him a considerable measure of popularity; and amid all the fluctuations of taste and fashion in art during the past quarter of a century he has maintained his place in the general estimation as one of the most original and brilliant of English water-colour painters. At first, Mr. Tayler painted a good deal in conjunction with George Barrett, he furnishing the figures to that painter's landscapes, as Sidney Cooper has occasionally furnished the figures to the landscapes of Lee, and Andsell to those of Creswick; but since Mr. Barrett's death Mr. Tayler has painted alone. His pictures have been very largely drawn from the Scotch Highlands, embracing Highland peasants and sportsmen, ponies, dogs, and deer, in various scenes, occupations, and circumstances; and few painters have shown themselves more familiar with the Scotch mountains, moors, and lakes, or more at home in the 'bothies.' Another favourite class of subjects consists of hunting and hawking parties in the costume of the latter half of the 17th and the first half of the 18th century, which his knowledge of horses and dogs, and his tact in costume enabled him to paint with great spirit and facility: a series of lithographic copies of his sketches has made his skill in these classes of subjects widely known. One of Mr. Tayler's

largest and most important pictures is 'The Highland Larder—Weighing the Stag,' which has been excellently engraved in mezzotint by Mr. C. Lewis. The 'Festival of the Popinjay,' 'Morning of the 12th of August—Unkennelling the Hounds,' 'The Vicar of Wakefield's Family going to Church,' &c., are among the best known of his larger compositions. Mr. Taylor has also drawn a good many illustrations for books.

TAYLOR, BROOK. Referring to the Arts and Sciences Division of our work for an account of TAYLOR'S THEOREM, and of the methods of algebraical development which are the consequences of it, we here confine our attention to such points in the history of Taylor himself and that of his theorem, as can be recovered from the neglect into which they have fallen, at least in this country.

Nothing is said of Brook Taylor in the 'Biographia Britannica,' or Martiu's 'Biographia Philosophica;' and Hutton, &c., give nothing but the date of his birth and death, entrance into college and the Royal Society. The 'Biographie Universelle' was the first work which gave any detail of his life, and this is due to the following circumstance:—In 1790, some members of the French Academy, struck with the scantiness of the existing information relative to so celebrated a man, requested Mr. W. Seward to make some inquiry on the subject in England. This gentleman applied to Sir William Young, Brook Taylor's grandson, who accordingly drew up an account of his ancestor from family materials, and printed and circulated it privately. This account, which was not published, was entitled 'Contemplatio Philosophica, a posthumous work of the late Brook Taylor, LL.D., F.R.S., some time secretary of the Royal Society. To which is prefixed a Life of the author, by his grandson, Sir William Young, Bart., F.R.S., A.S.S., with an appendix, containing sundry original papers, &c., London, printed by W. Bulmer and Co., Shakspeare Printing-office, 1793.' The account given by Prony in the 'Biographie Universelle' (1826) is, we are almost sure, one drawn up at the time from Sir W. Young's manuscript account as forwarded to Paris; with parenthetical sentences inserted just before publication. It is from this work that the following account is taken, as to the facts of his private life:—

Brook Taylor was born at Edmonton, August 18, 1685, and was the son of John Taylor, of Bifrons House in Kent, by Olivia, daughter of Sir Nicholas Tempest, of Durham, Baronet. John Taylor was the son of Nathaniel, who, to use a phrase of his own diary, "tugged and wrestled with the Lord in prayer," and was member (elected by Cromwell's summons) for the county of Bedford in the (Barebonite) parliament of 1653. Brook Taylor's father was the most despotic of parents: his son was educated at home, where, besides enough of the usual learning to enable him to begin residence at St. John's Cambridge in 1701, he became excellent both in music and painting. "His numerous family were generally proficient in music, but the domestic hero of the art was the subject of this memoir. In a large family picture he is represented, at the age of thirteen, sitting in the centre of his brothers and sisters, the two elder of whom crown him with laurel bearing the insignia of harmony." The paintings of the future writer on perspective are represented as not needing the allowance always made for amateurs, but as capable of bearing the closest scrutiny of artists. At Cambridge he applied himself to mathematics, and acquired early the notice of Keil, Machin, and others. His first writing was on the centre of oscillation, in 1708, as appears by a letter to Keil, (afterwards given in 'Phil. Trans.,' 1713, No. 337). In 1709 he took the degree of LL.B., in 1714 that of LL.D.: in 1712 he was elected to the Royal Society. As yet he had published nothing: his letters to Machin (preserved in his family), from 1709 to 1712, treat of various subjects; and, in particular, contain a solution of Kepler's problem. We may here conveniently put together a complete list of his works.

In the 'Philosophical Transactions,' 1712 (No. 336), On the ascent of water between two glass planes; 1713 (No. 337), On the centre of oscillation; also on the motion of a vibrating string: in the same year, a paper on Music, not printed. 1713 (No. 344), Account of experiment made with Hawksbee on the law of attraction of the magnet. 1717 (No. 352), Method of Approximation to the roots of equations; (No. 253), Appendix to Montmort on infinite series; (No. 354), Solution of a problem proposed by Leibnitz. 1719 (No. 360), Reply to the accusations of John Bernoulli. 1721 (No. 367), Propositions on the parabolic motion of projectiles; (No. 368), Experiments on magnetism. 1723 (No. 376), On the expansion of the thermometer. Besides these, the separate publications are:—

1715. Methodus incrementorum directa et inversa. Londini.—1715. Linear perspective, or a new method of representing justly all manner of objects as they appear to the eye in all situations. London.—1719. New principles of Linear perspective, or the art of designing on a plane the representations of all sorts of objects in a more general and simple method than has been done before. London. A different work from the former: its second edition (called the third, by an obvious mistake) bears 'revised and corrected by John Colson, London, 1749.' Joshua Kirby's well-known work, though called Brook Taylor's perspective, is not an edition of Taylor, but a new work founded on his methods.

In January 1714, he was chosen secretary of the Royal Society. In 1716, he visited his friends Montmort and Conti at Paris. He had

just had a warm correspondence with the former on the Newtonian doctrine, and on the tenets of Malebranche. His posthumous work, or rather tract, the 'Contemplatio Philosophica,' seems to contain his latest thoughts on the opinions of Malebranche and Leibnitz. In France he formed the acquaintance of Bishop Bossuet and Lord and Lady Bolingbroke, with all of whom Sir W. Young has printed some of the correspondence. He returned to England in February 1717; but his health was now impaired, and, throwing up the secretaryship in October 1718, he retired to Aix-la-Chapelle. On returning to England early in 1719, he seems to have abandoned the mathematics almost entirely; among his papers of this period are essays on Jewish Sacrifices, and on the lawfulness of eating blood. At the end of 1720 he went to visit Lord Bolingbroke at La Source, near Orleans, and returned to England in 1721. After the middle of this year he wrote nothing for publication, nor could his grandson find anything of a mathematical character among his papers, with the exception of reference to a treatise on logarithms, which it seems he placed in the hands of his friend Lord Paisley (afterwards Abercorn) to prepare for the press, but which was never printed.

At the end of 1721 he married a young lady of small fortune, a circumstance which occasioned a rupture with his father. Some months after his marriage, and when there appeared hope of issue, his wife was informed that the birth of a son would probably accomplish a reconciliation between her husband and his father. On this she fixed her mind with such earnestness, that on finding herself in due time actually delivered of a son, she "literally died of joy:" the infant also perished. This melancholy event led to the reconciliation the hope of which had caused it, but not till the autumn of 1723. Dr. Taylor returned to his father's house, and in 1725, with his father's consent, married the daughter of a neighbouring proprietor. In 1729 he succeeded to the family estate by the death of his father, and in the following year his wife died in giving birth to a daughter, afterwards the mother of the writer of the memoir from which we cite. This blow was fatal; Lord Bolingbroke, now settled again in England, endeavoured to divert the thoughts of his friend by inducing him to pass some time in his house, but in about a year after the stroke, Dr. Taylor died of decline (in London, we suppose), December 29, 1731, and was buried in the churchyard of Saint Anne's, Soho. The family estate of Bifrons is still in the possession of the descendants of his brother Herbert.

We shall dismiss other points with brief notice, and as well known, in order to come to the history of the theorem: such are the celebrity of Taylor's solution of the problem of vibrating chords, the questions he proposed to the foreign mathematicians in the war of problems, his answer to those of Leibnitz, the accusation of plagiarism made against him by John Bernoulli, and his reply. With reference to the celebrated works on perspective, the first was mathematical, the second intended for artists who hardly knew anything of geometry. Bernoulli charged Taylor with having taken his method from another, and Prony states that it is in fact the one given by Guido Ubaldi, though he thinks Taylor could not have seen that method. The work referred to is 'Guidi Ubaldi Perspectivæ Libri Sex,' Pisauri, 1600, at which we have looked in consequence. Nothing is more easy than assertion about old books: if Prony had really looked attentively at the works of Ubaldi and of Taylor together, he would have seen that whereas Ubaldi's work—the very title page of which announces by a diagram that its distinctive feature is the use of vanishing points all at the height of the eye—only introduced the use of vanishing points as to lines which are horizontal (the picture being vertical), Taylor introduced the method of vanishing points for all lines whatsoever, and made them of universal application. We cannot think that he had never seen Ubaldi's work: a man of learning, an artist from early youth, was not likely to be ignorant of so celebrated a production. He must have seen, and generalised, the method given by Ubaldi. If indeed any one between the two is asserted to have a claim, that claim, when proposed, must be discussed: but a general charge of plagiarism from John Bernoulli is literally no more than a record of the fact that the party accused and John Bernoulli had had a quarrel, while what relates to Ubaldi is only so far true in that Ubaldi used the particular and Taylor the general method. It is not credible that Ubaldi was ignorant of the general proposition, or if he were so, Stevinus (whose 'Scigraphia' was published in 1608) was not; ('Scigraphia,' prop. iii.) but Stevinus did not use any vanishing points, except those of lines parallel to the ground, nor Ubaldi neither: while Taylor did use them, which is the distinctive feature of his system. Again, it is a strong presumption in favour of Taylor's originality in this point, that works published abroad shortly after his time do not contain it. For example, the 'Kurzgefasste Einleitung zur Perspectiv,' von J. C. Bischoff, 1741, a quarter of a century after the time of Taylor's publication, contains no use of vanishing points except at the height of the eye.

The 'Methodus Incrementorum' is the first treatise in which what is at this day called the calculus of finite differences is proposed for consideration. Besides what are now the most common theorems in this subject, there are various purely fluxional or infinitesimal theories, such as the change of the independent variable integrations, J. Bernoulli's series, &c., and various applications to interpolation, the vibrating chord, the catenary, dome, &c., centre of oscillation and per-

lence. 'Hymns for Infant Minds,' and 'Original Poems,' written by them jointly, met indeed with an amount of success rarely accorded to such works: of the Hymns a thirty-fifth edition was published in 1844, and several editions of both the works have been published since. Jane Taylor wrote besides the above, 'Display, a tale,' 'Essays in Rhyme,' and 'Contributions of QQ,' books which have maintained their favour with the public to the present time. Jane Taylor (born in 1783) died in April 1824. Ann (who married the late Rev. Joseph Gilbert, of Nottingham, author of a 'Treatise on the Atonement,' and some other theological works) is still living.

ISAAC TAYLOR, son of the above named Isaac Taylor of Ongar, was born at Lavenham in August 1787. His education was directed by his father, specially with a view to art as a profession, but his own inclination led him to the severer walks of literature. He did not receive a collegiate education, but he was well instructed in the learned languages; and one of his earliest publications was a translation of Herodotus. His course of life has been that of a studious literary man, and—as resident in the country (Stanford Rivers, Essex), and as the father of a family trained chiefly at home—it has not been an eventful course. His works have however made his name known among persons of reflective and studious habits, and won him warm friends and admirers. The books by which he is best known as a writer are the following; they have appeared at intervals in the course of nearly forty years:—'Elements of Thought,' 8vo, 1824; 'History of the Transmission of Ancient Books to Modern Times,' 8vo, 1827, 'The Process of Historical Proof,' 8vo, 1828—two works which were directed to the strengthening of the historical evidences of Christianity. 'The Natural History of Enthusiasm,' the 'Natural History of Fanaticism,' and 'Spiritual Despotism,' a kind of trilogy in which certain phases of the interior development of Christianity were investigated with great acuteness of analysis and the results set forth with striking originality of manner—these, and especially the 'Natural History of Enthusiasm' (which was published in the first instance anonymously), have been perhaps the most popular of all Mr. Taylor's writings. They were followed by another remarkable work, 'The Physical Theory of Another Life,'—the last of these directly psychological productions, and one at least as powerful as either of the others. To this succeeded some works of a less speculative and more didactic order—'Home Education,' 'Saturday Evening' a series of essays, and four lectures, entitled 'Spiritual Christianity,' books, which on account of their grave beauty and thoughtful, yet cheerful religious tone, found a welcome reception in quiet family circles. When the doctrines commonly known as Puseyite were being most energetically propounded in the 'Oxford Tracts,' Mr. Taylor, whose private reading for a long course of years had rendered him familiar with the Greek and Latin fathers, felt that, as "our modern church histories scarcely lift a corner of the veil that hides us from the recesses of the ancient church" the tractarians were in danger of misleading the unlearned by their zealous appeals to the practices and the authority of the early church, and that it was a seasonable duty therefore to "thoroughly inform the Christian community at large concerning the spiritual and the moral condition of the church during that morning hour of its existence." The work in which he sought to accomplish this task, 'Ancient Christianity,' appeared in parts, the first in April 1839, the 8th and last in December 1843, forming 2 vols. 8vo. It excited as might have been expected much angry criticism, but its position was never shaken, and its learning and argumentative power are now generally acknowledged even by the author's opponents. Mr. Taylor has since written historical surveys of two of the most remarkable movements in the Romish and Protestant churches, in the form of biographies of their originators—'Loyola and Jesuitism,' and 'Wesley and Methodism,' and an examination of the principles involved in recent developments of intellectual scepticism, 'The Restoration of Belief,' published like some of his earlier works, at first anonymously, but avowed in a subsequent edition. Besides these his more elaborate works, Mr. Taylor has written many essays in reviews, &c.

TAYLOR, JEREMY, was born at Cambridge in 1613, where he was baptised on the 15th of August in that year. His ancestors had been wealthy and respectable, one of whom, Dr. Rowland Taylor, is mentioned in Fox's 'Book of Martyrs' as bringing upon himself the persecution of the popish party in the reign of Mary, not only by the popularity of his character and talents, but also by his wealth. [TAYLOR, ROWLAND.] Taylor's father was a barber, a calling generally united in those days with surgery. At an early age Taylor was sent to Perse's grammar-school in Cambridge, and in his fourteenth year he was entered at Caius College as a sizar, an order of students who, Bishop Heber informs us, were then what the 'servitors' still continue to be in some colleges in Oxford, and what the 'lay brethren' are in the convents of the Romish Church. A little more than twenty years of age, having taken the degree of Master of Arts, and been admitted to holy orders, he attracted the notice of Laud, then archbishop of Canterbury, before whom he was invited to preach at Lambeth. Laud appreciated his eloquence and his talents, which he encouraged in the most judicious manner by having him settled at Oxford, where he was admitted to the degree of Master of Arts, and by the powerful interposition of the archbishop, in 1636, nominated to a fellowship. Taylor does not appear to have remained long or uninterruptedly at

Oxford. In 1637-38 he was presented by Juxon, bishop of London, to the rectory of Uppingham in Rutlandshire. About this time an acquaintance which, in common with Laud, he maintained with a learned Franciscan friar, Francis à Sancta Clara, exposed him to the suspicion of a concealed attachment to the Roman Church—a suspicion to which the character of his mind, which tended to asceticism in religion, and to an extravagant veneration for antiquity, and which cherished a love of the gorgeous and imposing in the ceremonial of worship, gave some plausibility. At a later period in life however Taylor solemnly denied that there had ever been any solid ground for questioning the sincerity of his Protestantism.

In the civil wars he followed the fortunes of Charles, whose chaplain he was, and in 1642, when the king was at Oxford, he published there his 'Episcopacy asserted against the Acephali and Aerians New and Old,' in which he sought to maintain a cause that had then however unfortunately passed from the controversy of the pen to that of arms. Charles rewarded Taylor in the only way which it remained in his power to do, by commanding his admission to the degree of Doctor of Divinity. This honour was diminished by the indiscriminate manner in which it was conferred upon many other loyalists at the same time, so as to provoke an expression of dissatisfaction from the heads of the university; and its advantages were overbalanced by the loss which Taylor encountered in the same year, in the sequestration of his rectory of Uppingham by the parliament. In 1647, when the crisis of the civil war impended, he published his discourse, 'The Liberty of Prophesying.' After the defeat of the royalists Taylor was frequently imprisoned, but only for short periods. During the first years of the Protectorate he supported himself by keeping a school, in Wales, in company with Nicholson, bishop of Gloucester, and Wyatt, afterwards prebendary of Lincoln, by his occasional writings, and by whatever contribution the friendship of the Earl of Carbery, on whose estate he exercised his ministry, might afford to him. In the year 1658 he was encouraged by Lord Conway to settle in Ireland, where he divided his residence between Lisburn and Portmore, and he officiated in the ministry at both these places. The provision which he received was however so inadequate to his wants, that he was obliged to remain under obligations to his friend John Evelyn, who generously allowed him a yearly pension. In the obscurity of Portmore Taylor did not escape the unhappy persecutions of that period. He was charged by an informer with having used the sign of the cross in baptism, and dragged before the Irish privy council, from a distance, and in the middle of a severe winter, to be examined. A fever was the consequence of his arrest, which probably induced the council to act leniently towards him.

In 1660 he travelled to London to prepare for publication his 'Ductor Dubitantiū,' when he attached his signature to the declaration of the royalists, dated April 24th, in which they expressed the moderation of their views, and their confidence in the wisdom and justice of Monk. Taylor was thus favourably brought under the notice of Charles II., whose restoration took place this year, and to whom he dedicated the 'Ductor Dubitantiū.' The king nominated him under the privy seal to the bishopric of Down and Connor, to which he was consecrated in January 1661: in the following month he was made a member of the Irish privy council; and in the next, in addition to his original diocese, he was intrusted with the administration of the small adjacent one of Dromore, on account, in the words of the writ, "of his virtue, his wisdom, and industry." In the course of the same year he was elected vice-chancellor of the University of Dublin. Bishop Heber has deemed it necessary to account for Taylor's not having received an English bishopric. Besides his eminent abilities, and his faithful adherence to the cause of the church and the king, he had married the natural daughter of Charles I., who was his second wife, and then living. This last circumstance however, if pleaded with the king in favour of preferment for Taylor, as Bishop Heber thinks, may have contributed to determine the scene of his promotion: "Charles may not have been unwilling to remove to a distance a person whose piety might have led him to reprove many parts of his conduct, and who would have a plausible pretence for speaking more freely than the rest of the dignified clergy."

The new station which Taylor was called upon to fill had peculiar and great difficulties connected with it. In the revolution through which religion had passed, livings had been conferred on men whose feelings were at variance with episcopacy, and they had to be conciliated to a willing obedience, or, as time proved, to submit to the severest test of principle in the sacrifice of their emoluments. In Ireland there were additional circumstances to contend with. The Episcopal or Protestant Church was unpopular; the preachers were almost exclusively English; the ritual was English, and to the mass of the natives unintelligible; there was no translation of the Scriptures, and yet attendance at the established churches was compulsory. Bishop Taylor laboured with much zeal and energy for the establishment of the Protestant religion; but with little effect. He was attacked by fever on the 3rd of August 1667, at Lisburn, and died in ten days, in the fifty-fifth year of his age, and the seventh of his episcopacy. The children of his first wife died before him; by his second, who survived him, he left three daughters.

The writings of Jeremy Taylor may be brought under four descriptions: practical, theological, casuistic, and devotional. The first comprises his 'Life of Christ,' which he published in 1653; 'Con-

templations on the State of Man,' a posthumous work; 'Holy Living and Holy Dying,' 1651; and his Sermons, which appeared at various periods. A work entitled 'Christian Consolation' has been referred to him, and published in the collected edition of his writings by Bishop Heber in 1820-22; but it has since been published in the name of Bishop Hackett, who appears to have been its true author. The second comprises his 'Episcopacy asserted against the Acephali and Aerians New and Old,' 1642; 'An Apology for Authorized and Set Forms of Liturgy,' 1644; his 'Discourse of the Liberty of Prophecy, with its just limits and temper; showing the unreasonableness of prescribing to other men's faith, and the iniquity of persecuting differing opinions,' 1647; the 'Unum Necessarium; or the Doctrine and Practice of Repentance,' 1665; 'Deus Justificatus, or a Vindication of the Glory of the Divine Attributes in the question of Original Sin, against the Presbyterian way of understanding it,' 1656; 'The Real Presence and Spiritual of Christ in the Blessed Sacrament, proved against the Doctrine of Transubstantiation,' 1654; 'A Dissuasive from Popery,' 1664. The third includes his 'Discourse of the Nature, Offices, and Measures of Friendship, with Rules of Conducting it,' 1657; and the 'Ductor Dubitanti, or Rule of Conscience in all Her general Measures,' 1660. The fourth comprises his 'Clerus Domini, or a Discourse of the Divine Institution, Necessity, Sacredness, and Separation of the office Ministerial, together with the Nature and Manner of its Power and Operation,' 1651; 'The Golden Grove, or a Manual of Daily Prayers and Litanies, fitted to the Days of the Week,' 1654; 'The Psalter of David, with Titles or Collects, according to the Matter of each Psalm,' 1644; 'A Collection of Offices or Forms of Prayer in cases ordinary and extraordinary; taken out of the Scriptures, and the Ancient Liturgies of several Churches, especially the Greek,' 1658; 'Devotions for Various Occasions;' and 'The Worthy Communicant, or a Discourse of the Nature, Effects, and Blessings consequent to the worthy receiving of the Lord's Supper, and of all the Duties required in order to a worthy preparation; together with the Cases of Conscience occurring in the duty of him that ministers and of him that communicates,' 1660.

Mr. Hallam ranks the Sermons of Bishop Taylor "far above any that had preceded them in the Church of England. An imagination essentially poetical, and sparing none of the decorations which by critical rules are deemed almost peculiar to verse; a warm tone of piety, sweetness, and charity; an accumulation of circumstantial accessories whenever he reasons, or persuades, or describes; an erudition pouring itself forth in quotation till his sermons become in some places almost a garland of flowers from all other writers, and especially from those of classical antiquity, never before so redundantly scattered from the pulpit, distinguish Taylor from his contemporaries by their degree, as they do from most of his successors by their kind. His sermons on the Marriage Ring, on the House of Feasting, on the Apples of Sodom, may be named without disparagement to others, which perhaps ought to stand in equal place. But they are not without considerable faults, some of which have just been hinted. The eloquence of Taylor is great, but it is not eloquence of the highest class; it is far too Asiatic, too much in the style of Chrysostom and other declaimers of the 4th century, by the study of whom he had probably vitiated his taste; his learning is ill-placed, and his arguments often much so; not to mention that he has the common defect of alleging nugatory proofs; his vehemence loses its effect by the circuitry of his pleonastic language; his sentences are of endless length, and hence not only altogether unmusical, but not always reducible to grammar. But he is still the greatest ornament of the English pulpit up to the middle of the 17th century; and we have no reason to believe, or rather much reason to disbelieve, that he has any competitor in other languages." (Hallam's 'Introduction to the Literature of Europe,' vol. iii., c. ii.)

He has been accused of having copied a work of a similar character by Ludolphus de Saxonia, a Roman Catholic writer, in his 'Life of Christ;' but Bishop Heber, who had examined both works, asserts that there is scarcely any resemblance between them, and none which authorises the imputation of plagiarism.

'The Liberty of Prophecy' (that is, of interpretation) is the most popular in the second division of Taylor's writings. A very good sketch of it will be found in the third volume of Hallam's 'Introduction to the Literature of Europe,' and a more detailed one in the first volume of Heber's edition of Taylor's works. But the discourse itself is not long, and will well repay the reading. It considerably diminishes the admiration with which we are disposed to connect this production of Taylor with the man, his order, and the times, when we take into account the motives which he afterwards assigned for its publication. "In the dedication to Lord Hatton of the collective edition of his controversial writings after the Restoration, he declares that when a persecution did arise against the Church of England, he intended to make a reservation for his brethren and himself, by pleading for a liberty to our consciences to persevere in that profession, which was warranted by all the laws of God and our superiors." (Hallam, 'Introduction to the Literature of Europe,' vol. iii., p. 116.) Bishop Heber has vindicated Taylor from the charge of tergiversation, founded not upon the above testimony which Taylor himself furnishes, but upon the character of his proceedings when episcopacy was restored. If we must allow in reference to his Sermon preached before the

Irish privy council, that the obedience which he there insists upon is only, as Bishop Heber suggests, that obedience to the laws of ecclesiastical superiors which is paid by the members (clergy) of their own communion; and that it is in fact no more than the privilege (which every Christian society exerts and must exert for its own preservation) to have the offices of its ministry supplied by such men as conform to the regulation imposed by the body at large on those to whom its powers are delegated; we ought to add that this distinction is left in much ambiguity; that principles are maintained with a much more general signification than this explanation allows; and, in one word, upon ninety-nine out of a hundred readers the sermon before the Irish privy council would produce impressions totally inconsistent with those derived from the 'Discourse on the Liberty of Prophecy.' After expressing his sorrow at seeing the horrid mischiefs which come from rebellion and disobedience, and his hopes of better things, the Bishop of Down and Connor proceeds in his sermon before the Privy Council to say that he sees no objection "against his hopes but that which ought least of all in this case to be pretended: men pretend conscience against obedience, expressly against St. Paul's doctrine teaching us to obey for conscience sake; but to disobey for conscience in a thing indifferent is never to be found in the books of our religion. It is very hard when the prince is forced to say to his rebellious subjects, as God did to his stubborn people, 'Quid faciam tibi?' 'I have tried all the ways I can to bring thee home, and what shall I now do unto thee?' The subject should rather say, 'Quid me vis facere?' 'What wilt thou have me to do?' This question is the best end of disputations. 'Corruptitur atque dissolvitur imperantis officium, si quis ad id quod facere jussus est, non obsequio debito, sed consilio non considerato, respondeat,' said one in A. Gellius: When a subject is commanded to obey, and he disputes, and says, 'Nay, but the other is better,' he is like a servant that gives his master necessary counsel when he requires of him a necessary obedience. 'Utilius parere edicto quam efferre consilium;' 'he had better obey than give counsel;' by how much it is better to be profitable than to be witty, to be full of goodness rather than full of talk and argument." Farther on, in the same sermon, he distinguishes between a "tender conscience," which is such in reference to age or ignorance, or of "new beginners," and that which is the "tenderness of a boil; that is soreness indeed, rather than tenderness, is of the diseased, the abused, and the mispersuaded." The first is to be dealt tenderly with. "But for that tenderness of conscience which is the disease and soreness of a conscience, it must be cured by anodynes and soft usages, unless they prove ineffective, and that the lancet may be necessary."

Mr. Hallam refers to the 'Ductor Dubitanti' as the most extensive and learned work on casuistry which has appeared in the English language. "As its title shows, it treats of subjective morality, or the guidance of the conscience. But this cannot be much discussed without establishing some principle of objective right and wrong, some standard by which the conscience is to be ruled. 'The whole measure and rule of conscience,' according to Taylor, 'is the law of God, or God's will signified to us by nature or revelation; and by the several manners and times and parts of its communication it hath obtained several names: the law of nature, the consent of nations, right reason, the Decalogue, the sermon of Christ, the canons of the Apostles, the laws ecclesiastical and civil of princes and governors, expressed by proverbs and other instances and manners of public honesty. . . . These being the full measures of right and wrong, of lawful and unlawful, will be the rule of conscience and the subject of the present book.' The heterogeneous combination of things so different in nature and authority, as if they were all expressions of the law of God, does not augur well for the distinctness of Taylor's moral philosophy, and would be disadvantageously compared with the Ecclesiastical Polity of Hooker. Nor are we deceived in the anticipations we might draw. With many of Taylor's excellences, his vast fertility, and his frequent acuteness, the 'Ductor Dubitanti' exhibits his characteristic defects: the waste of quotations is even greater than in his other writings, and his own exuberance of mind degenerates into an intolerable prolixity. His solution of moral difficulties is often unsatisfactory; after an accumulation of argument and authorities we have the disappointment to perceive that the knot is neither untied nor cut; there seems a want of close investigation of principles, a frequent confusion and obscurity, which Taylor's two chief faults—excessive display of erudition and redundancy of language—conspire to produce. . . . Taylor seems inclined to side with those who resolve all right and wrong into the positive will of God. The law of nature he defines to be 'the universal law of the world or of mankind, to which we are inclined by nature, invited by consent, prompted by reason, but which is bound upon us only by the command of God.' Though in the strict meaning of the word law, this may be truly said, it was surely required, considering the large sense which that word has obtained as coincident with moral right, that a fuller explanation should be given than Taylor has even intimated, lest the goodness of the Deity should seem something arbitrary and precarious. And, though in maintaining against most of the scholastic metaphysicians that God can dispense with the precepts of the Decalogue, he may be substantially right, yet his reasons seem by no means the clearest and most satisfactory that might be assigned. It may be added, that in his prolix rules concerning what he calls a probable conscience, he

comes very near to the much-decried theories of the Jesuits. There was indeed a vein of subtlety in Taylor's understanding which was not always without influence on his candour." ('Introduction to the Literature of Europe,' chap. iv., vol. iv.)

Bishop Heber has also remarked on some of Taylor's positions to the same effect; instancing his admission that private evil may be done by public men and for the public necessity; his justification on moral grounds of the supposed fraud of the children of Israel in borrowing jewels of the Egyptians without any intention of restoring them. "In the first chapter of the third book, which treats of human laws and their obligations, a case occurs in illustration of Rule iv., that 'a law founded on a false presumption does not bind the conscience,' in which the Romish canonists seem to have given a more just decision than Taylor: Biretti, a Venetian gentleman, pretends a desire to marry Julia Medici, the daughter of a neighbour, with a purpose to seduce and desert her. A contract is made; but before its execution he gains his end, and leaving her, marries another. The canonists declare the former contract, followed by congress, to be a marriage, and that he is bound to return to Julia. 'No,' says Taylor, 'if he did not lie with her, *affectu maritali*, he was extremely impious and unjust; but he made no marriage, for without mutual consent marriages are not made.'" To these illustrations, adduced by Heber, may be added another, referred to elsewhere (Rule xi. 484): he maintains the right of using arguments and authorities in controversy which we do not believe to be valid; a rule of which he appears to have taken advantage, for "in the 'Defence of Episcopacy,' published in 1642, he maintains the authenticity of the first fifty of the apostolic canons, all of which, in the 'Liberty of Prophecy,' a very few years afterwards, he indiscriminately rejects." (Hallam.)

On devotional subjects the character of Taylor's mind fitted him to write with most success. In these we find his most glowing language, his aptest illustrations; and "whether he describes the duties, or dangers, or hopes of man, or the mercy, power, and justice of the Most High; whether he exhorts or instructs his brethren, or offers up his supplications in their behalf to the common Father of all, his conceptions and his expressions belong to the loftiest and most sacred description of poetry, of which they only want what they cannot be said to need, the name and the metrical arrangement." (Heber, 'Life and Works of Jeremy Taylor,' 15 vols., 1820-22.)

TAYLOR, JOHN, best known by the title, which he seems to have given to himself, of THE WATER-POET ('The King's Majesty's Water-Poet'), was born in the city of Gloucester in the year 1580. His education was limited; for he himself informs us that he was 'gravelled' in his 'Accidence,' and could get no farther. He came to London, and was bound apprentice to a waterman—an occupation from which he derived his title of 'Water-Poet,' and which afforded him the means of subsistence during a great part of his life. He had however for fifteen or sixteen years some situation in the Tower of London; and he afterwards kept a public-house in Phoenix-alley, Long Acre. Being an enthusiastic royalist, when Charles I. was beheaded he hung up the sign of the Mourning Crown, which however he was compelled to take down; and he then supplied its place by a portrait of himself, with the following couplet under it:—

"There's many a king's head hang'd up for a sign,  
And many a saint's head too: then why not mine!"

Taylor was not satisfied with the distinction which his literary productions procured for him; he was fond of fixing public attention by other extraordinary performances. He once undertook to sail from London to Rochester in a boat made of paper; but the water found its way into his boat before he reached his destination, and he had some difficulty to get safe ashore. A journey which he performed by land is described in one of his tracts, entitled 'The Pennyless Pilgrimage, or the Moneyless Perambulation of John Taylor, alias the King's Majesty's Water-Poet; how he travelled on foot from London to Edinburgh in Scotland, not carrying any money to or fro, neither begging, borrowing, or asking meat, drink, or lodging.' He left 'the Bell Inn that's extra Aldersgate' on the 14th of July 1618. He was attended by a servant with a horse, and they had a small stock of provisions and provender, which more than once relieved them when the occasional inhospitality which they met with had reduced them to the extremity of hunger. His course was through St. Albans, Stony Stratford, Coventry, Lichfield, Newcastle-under-Lyne, Manchester, Preston, Lancaster, Penrith, Carlisle, Edinburgh, Dunfermline, Stirling, Perth; and being then in the Highlands, he had an opportunity of seeing, at 'the Brae o'Mar,' one of those great deer-hunts which were then frequent in that part of Scotland, and of which he gives in his pamphlet an entertaining and picturesque description. The whole journey till his return to London occupied about three months. But a sort of voyage which he afterwards performed was apparently not less difficult. He published, as usual, an account of it himself—'John Taylor's last Voyage and Adventure,' performed from the 20th of July last, 1641, to the 10th of September following; in which time he passed with a sculler's boat from the city of London to the cities and townes of Oxford, Gloucester, Shrewsbury, Bristol, Bath, Monmouth, and Hereford.' From this title it might be supposed that he went all the way by water, a feat which, seeing the courses of the rivers, and the want of canals in those days, was an obvious impossibility; but

the fact is, that when a river ceased to be navigable, or ran in a wrong direction, he shipped his boat and himself in a wain or waggon, and voyaged overland till he came to another river which suited his purpose: still a great part of the voyage was performed by water, and thus, to use his own words, "in lesse than twenty days' labour, 1200 miles were passed to and fro, in most hard, difficult, and many dangerous passages."

Taylor died in 1654, in his seventy-fifth year, and was buried in the churchyard of Covent Garden, London.

His publications, which amount to upwards of eighty, are some in prose, some in verse, and many both in prose and verse. As literary productions they are of little or no value—the verse mere doggerel, and the prose such as might be expected from a writer not without observation, but of no great power of mind, and almost entirely uneducated. Still they are by no means without their value. Nearly all of them being short occasional productions arising out of the circumstances in which he was placed, they afford many curious descriptions, as well as interesting glimpses of the opinions and manners and general state of society of the times in which he lived. Sir Egerton Brydges, in his 'Censura Litteraria,' has given a full list of Taylor's writings, and a tolerably copious one is also given in Watt's 'Bibliotheca Britannica.'

(Baker's *Biographia Dramatica*, by Reed and Jones, in which work he has obtained a place in consequence of having written a pageant, 'Triumphs of Fame and Honour,' 4to, 1634.)

TAYLOR, JOHN, LL.D., was born about the year 1703, at Shrewsbury, where his father, according to some writers, was a poor shoemaker, or, according to others, a barber. He received his early education at the grammar-school of his native place, and afterwards went to Cambridge, where he entered St. John's College, of which he became a fellow in 1730. The great reputation which he soon acquired as one of the best Greek scholars in the university, procured him the office of librarian of the university library, which he however afterwards exchanged for that of registrar of the university. His first work of importance was his edition of the Greek orator Lysias, under the title 'Lysias Orationes et fragmenta, Græce et Latine: ad fidem codicum MSS. recensuit, notis criticis, interpretatione, ceteroque apparatu necessario donavit Joannes Taylor,' London 4to, 1739. The year after he edited at Cambridge an octavo edition of the same orator for the use of students, with short notes and a useful index of the language. The study of the Attic orators led him to the study of the Attic law, of which he probably possessed a better knowledge than any man of his age. He was also fond of the study of the Roman and English law, and he resolved to devote himself to the legal profession. In 1741 he was admitted an advocate in Doctor's Commons, and the year after he took his degree of doctor of laws. On this occasion he published a Latin dissertation, 'Commentarius ad Legem Decemviralem de Inope Debitoris in partes dissecando,' which is a very unsatisfactory explanation of this difficult subject. Soon after this he published an edition of two Greek orations, 'Orationes duæ, una Demosthenis contra Midiam, altera Lycurgi contra Leocratem, Græcè et Latine,' with notes and emendations, Cambridge, 8vo, 1743, and in the same year he published the 'Marmor Sandvicense, cum Commentario et Notis,' Cambridge, 4to, 1743. This volume also contains a useful dissertation on this celebrated inscription, which had been brought from Athens to London by Lord Sandwich in 1739. In 1744 Dr. Taylor was made chancellor of Lincoln; and some years later he took holy orders, though without abandoning the study of the law and of the ancient writers. He was now successively made archdeacon of Buckingham and rector of Lawford in Essex, to which, in 1757, was added the lucrative place of canon residentiary of St. Paul's. In 1755 he published at London, in 4to, his 'Elements of Civil Law,' a second edition of which appeared in 1769. Dr. Taylor undertook this work at the suggestion of Lord Carteret, who had intrusted him with the education of his grandsons, whom he wished to be instructed in the principles and history of the civil law. The work displays great learning and knowledge of the subject, but it is not well adapted for the use of beginners; an abridgment of it appeared in 1773, in London, under the title 'A Summary of the Roman Law.' During the last period of his life, Dr. Taylor had made extensive preparations for a new edition of the Greek orators. One volume (which is the third) appeared in 1748 at Cambridge, but his death on the 4th of April 1756, prevented the author himself from completing the work, though all the materials were ready for press. The second volume appeared after his death, in 1757. The work bears the title, 'Demosthenis, Æschinis, Dinarchi, et Demadii Orationes: Græcè et Latine, cum notis edidit J. Taylor.' The notes, which were published at a later time, are incorporated in Reiske's 'Apparatus Criticus' to Demosthenes. In a critical point of view the edition of Taylor is not of any great worth, and its chief value consists in his notes in illustration of the history of the orations and the Attic law. Dr. Taylor is said to have been a most amiable and disinterested man: he had considerable taste for poetry, and some specimens of his muse are printed in the 'Gentleman's Magazine,' and in Nichols's 'Select Collection of Poems.'

(Aikin and Johnston, *General Biography*, vol. ix. p. 337, &c.; Reiske, *Prefatio ad Demosthenem*, p. 42, &c.)

TAYLOR, SIR ROBERT, born in 1714, was the son of a London

stone-mason, who was more prosperous than prudent, for he affected a style of living very unusual at that period among persons engaged in business: he kept his carriage, and also his country-house in Essex. Towards his son, on the contrary, he appears to have been far from liberal, as he bestowed on him only a common school education, and then placed him under Sir Henry Cheere, a sculptor, whose chief work of note is the statue of Col. Codrington, in the library of All Souls, Oxford. On quitting Cheere, he was furnished by his father with just sufficient money to proceed to Rome, where he was obliged to live with the utmost frugality. His studies in Italy were however of no long continuance, for he was soon summoned home by the intelligence of his father being dangerously ill; upon which he hurried back to England with as much expedition as the state of the Continent would then permit, and was obliged to disguise himself as a Franciscan friar. On reaching home, he found that his father was dead, and that he had left nothing. Thus thrown entirely upon his own resources and ability, all that remained for him was to set up business as a statuary, and he first brought himself into notice by Cornwall's monument. His principal other works in sculpture are Guest's monument, near the north door of Westminster Abbey, the figure of Britannia at the Bank of England, and the bas-relief in the pediment of the Mansion-house, London. After this he abandoned sculpture for architecture, and one of his earliest productions in his new profession was the mansion erected by him for Mr. Gower, near the South Sea House. In 1756-58 he was employed in the alterations of old London Bridge in conjunction with Dance, and thenceforth upon a number of buildings both public and private; but very few among them display much architectural taste, and least of all any of that richness in decoration and detail which might have been expected from one who had been brought up and had practised as a sculptor. The wings added by him to the Bank of England (afterwards swept away by his successor Soane) were at the time termed 'magnificent,' but then it could only be by comparison with the older building by Sampson, to which they were attached. This design itself was only borrowed from one of Bramante's, and was upon so small a scale as to look insignificant in such a situation. The 'Stone Buildings' at Lincoln's Inn are such a mere architectural blank, that the columns, instead of diminishing the poverty of its character, serve only to render it the more apparent. There is however some architectural character displayed in that which is called the 'Six Clerks' Office,' situated between the other building and Chancery Lane. The villa which he built for Sir Charles Asgill at Richmond is at least unexceptionable in taste, though it does not deserve the admiration it has obtained. Among his other works, Lord Grimstone's seat at Gorbamby is one of the best. If not great, he was eminently successful, in his profession, and obtained several lucrative appointments and surveyorships to the Admiralty, Foundling Hospital, Greenwich Hospital, and the Bank of England, for which he was well qualified, being a man of most business-like habits, and of most extraordinary diligence and assiduity. He was rarely in bed after four in the morning; was most abstemious in his diet, and drank no wine. Whether in consequence of taking warning from his father's example or not, he seems in almost all respects to have been the very reverse of him in his mode of living; and it is scarcely surprising that his economy, together with the appointments which he held, should have enabled him to realise a fortune of 180,000*l.*, though, as he himself used to say, he began the world with hardly eighteen pence. He died at his own house in Spring Gardens, September 27, 1788, and was buried in St. Martin's church. He gave the whole of his property to his only son, Michael Angelo Taylor, M.P., with the exception of a sum to the University of Oxford, to accumulate for a certain term of years and then to be applied to found an institute for the study of modern languages. This bequest having been incorporated with a similar one by Dr. Randolph for a picture and statue gallery, a building was begun in 1841, under the name of the 'Taylor and Randolph Institute,' from the designs of C. R. Cockerell, professor of architecture at the Royal Academy [COCKERELL, C. R.]; the buildings which form a handsome addition to the architectural features of Oxford are generally known as the Taylor Buildings. Taylor was knighted when sheriff of London in 1783.

TAYLOR, ROWLAND, LL.D., was a clergyman eminent for his learning and piety, who was burnt at the stake in the reign of Queen Mary. He is said by Bishop Heber to have been an ancestor of Jeremy Taylor. He was chaplain to Archbishop Cranmer, by whom he was appointed rector of Hadleigh, in Suffolk, where he went to reside.

Dr. Taylor was summoned, in the year 1553, to appear in London before Gardiner, bishop of Winchester, who was then lord chancellor, for resisting the performance of mass in his church at Hadleigh. He was strongly persuaded to escape, but refused, and presented himself before Gardiner, by whom, after a long conference, in which he defended his cause with unshrinking firmness, he was committed to the King's Bench prison. There he remained till the 22nd of January 1555, when he and other prisoners were cited before Gardiner, and the bishops of London, Norwich, Salisbury, and Durham, who were joint commissioners with the chancellor. The chief offence of which Dr. Taylor was now accused was his marriage; but he defended the right of priests to marry with so much learning, that no sentence of divorce was pronounced, though he was deprived of his benefice. At the end

of January the prisoners were again brought before the commissioners, by whom they were sentenced to death. Dr. Taylor was committed to the Poultry Compter, where, on the 4th of February, he was visited by Bonner, bishop of London, who went there for the purpose of making him put on the dress of a Roman Catholic priest. Dr. Taylor resisted with his usual courage, and the dress was put upon him by force: he treated the whole proceeding with the utmost contempt, as a piece of mummery, and Bonner would have struck him with his crozier if he had not been restrained by his chaplain. On the following day the procession set forth which was to conduct him to the place of execution. In the course of the journey much persuasion was used by the sheriff and others to induce him to recant, but without making the smallest impression upon him. The procession passed through Hadleigh, where he was consoled and cheered by the blessings and prayers of his parishioners. The execution took place on the 8th of February, 1555, on Aldham Common, near Hadleigh. A stone, with the following inscription, perhaps still remains to mark the spot:—'1555. Dr. Taylor in defending that was gode at this plas left his blode.'

Bishop Heber, in his 'Life of Bishop Jeremy Taylor,' says, "There is nothing indeed more beautiful in the whole beautiful Book of Martyrs than the account which Fox has given of Rowland Taylor, whether in the discharge of his duty as a parish priest or in the more arduous moments when he was called upon to bear his cross in the cause of religion. His warmth of heart, his simplicity of manners, the total absence of the false stimulants of enthusiasm or pride, and the abundant overflow of better and holier feelings, are delineated, no less than his courage in death and the buoyant cheerfulness with which he encountered it, with a spirit only inferior to the eloquence and dignity of the 'Phædon.'"

TAYLOR, SILAS, otherwise called Domville, or D'Omville, by Antony Wood, was the son of Sylvanus Taylor, one of the commissioners during the civil wars for ejecting those of the clergy called 'scandalous and insufficient ministers.' Silas Taylor was born at Harley near Much-Wenlock, in Shropshire, July 16, 1624, and after being educated at Shrewsbury and Westminster schools, became a commoner of New Inn Hall at Oxford in 1641. He was taken thence by his father to join the parliamentary army, in which he had a captain's commission. After the war he was appointed by the interest of his father sequestrator of the royalists in Herefordshire, in discharge of which office he conducted himself with so much moderation as to conciliate the king's party. Part of the bishop's palace at Hereford fell to his share in the general spoliation, and he acquired considerable wealth, all of which he was compelled to restore at the Restoration.

On that event he was treated by the royalists with great lenity, and appointed commissary of ammunition, &c. at Dunkirk, and about 1665 made keeper of the king's stores and storehouses for shipping at Harwich. He died November 4, 1678, and was buried at Harwich. Taylor was much interested in the antiquities of his country, and was enabled in the confusion of the civil wars to ransack the libraries of Hereford and Worcester cathedrals, and in the course of these researches is said to have discovered the original charter in which King Edgar asserts his claim to the sovereignty of the seas, which is printed in Selden's 'Mare Clausum,' lib. ii. He left materials for a history of Herefordshire, which afterwards came into the hands of Sir Ed. Harley of Brampton Bryan in that county. To this collection belong Nos. 4046, 4174, 6726, 6766, 6856, and 6863 of the Harleian manuscripts, containing part of a general history with notes and special topographical information under the several parishes, extracts from 'Domesday,' Leland, &c. From these papers Mr. William Brome, a subsequent collector for the same county, is said to have borrowed largely. (Gough, 'Catalogue of Topographical Works,—Herefordshire.') In the Sloane manuscripts is a paper of Taylor's on the making of cider. (Ayscough's 'Catalogue,—Taylor'.)

His published works are, 'The History of Gavelkind—with some observations and remarks upon many special occurrences of British and English history. To this is added a short history of William the Conqueror, written in Latin by an anonymous author in the time of Henry I.,' London, 4to, 1663. A History of Harwich was published from his papers by Samuel Dale, in 1730, and another edition, or the same with another title-page, London, 1732.

Wood ('Athen. Oxon.') states, that Taylor wrote many pamphlets before the Restoration, but without his name; that he was a good classical scholar and mathematician, and possessed of much general information; that he was an excellent musician, and that he composed several anthems, and edited 'Court Ayres,' &c., 8vo, 1655, printed by John Playford.

TAYLOR, THOMAS, was born in London on the 15th of May 1758: his parents were respectable in their calling, but not wealthy. At a very early age he was sent to St. Paul's School, and after remaining there about three years he was placed under the care of a relation who held a situation in the dockyard at Sheerness, with whom he resided several years. During this time he applied himself assiduously to the study of mathematics, and also obtained some knowledge of chemistry: he next became a pupil to the Rev. Mr. Worthington, a dissenting minister who possessed considerable classical acquirements, ultimately intending to complete his studies at Aberdeen with a view to the ministry. But a premature marriage and pecuniary difficulties

compelled him to relinquish his plan, and to accept a junior clerkship in Messrs. Lubbock's banking-house. While in this employment he devoted his spare hours to the study of Plato and Aristotle and their commentators. At this time, and to the end of his life, Mr. Taylor always devoted at least six hours of every day to study, and when not engaged in business they were generally the first six. Poverty, and the difficulties attending it, were no obstacles to him, and he always hoped to emerge from the obscurity they placed him in. He first attracted public notice by an attempt to discover the secret of the perpetual lamp, upon which he gave a lecture and exhibited his experiments at the Freemason's Tavern. Though it was a failure, it was marked by some ingenuity and great and curious research; it made him some valuable acquaintances, who encouraged him in another undertaking, which was to deliver a course of lectures on the Platonic philosophy. Introducing himself by such means, he was enabled to procure pupils, to whom he taught the languages and mathematics, having also been appointed to the office of assistant-secretary to the Society for the Encouragement of Arts, Manufactures, and Commerce, which he held for several years: he of course gave up and was glad to be emancipated from the less interesting labours of the banking-house. It was in this situation that he made a more extensive acquaintance among learned and scientific men of all professions, and among men of various ranks who are promoters of arts and sciences, than usually falls to the lot of an obscure individual: but he made something more than mere acquaintance; he acquired many friends who were able and willing to assist him in all his undertakings, and with whose help he finally accomplished all that he had in view, which was to translate the works of all the untranslated ancient Greek philosophers. It was an arduous task for one man, and apparently a hopeless one, seeing that Sydenham, with the advantage of a more regular education, being a graduate of Oxford, and a known and acknowledged scholar, had not only failed in his desire to impart knowledge to his less learned countrymen by means of translations, but had been suffered to perish in the attempt for want of patronage, "to the sorrow and shame (as his biographer says) of every friend of literature:" yet Sydenham was a good man, highly respected, and had many friends, or believed he had: he must have been a recluse, for the circumstances of his death seem to have caused surprise. Mr. Taylor was fond of society, and always in it: there was no appearance of abstraction about him; and a stranger would not have suspected him of being studious: he was always ready to join in conversation with any one who happened to be near him, and upon any subject; there were few subjects upon which he had not read, and he could always amuse or instruct if required. "Being gifted with a very extraordinary memory, he not only retained the immense store of knowledge he had amassed, but he could bring it all into use at his will:" he was deeply read in things that many like to hear of, though they are no longer studied, sorcery, witchcraft, alchemy, &c., and his fund of anecdote was quite inexhaustible: all this, joined to simple and unobtrusive manners, and irreproachable conduct, made him not only an agreeable companion to many, but to some he became almost a necessary one. Men whose occupations had prevented their reading, though they were desirous of knowledge, were particularly delighted with the company of Mr. Taylor, and such were his great supporters. It was by making friends chiefly that Mr. Taylor, who was as poor as Sydenham, contrived to print works that must have cost more than 10,000*l.*, that were not of the most saleable description, and that upon the whole produced no pecuniary profit. The Duke of Norfolk printed Plato, and from some unaccountable whim locked up nearly the whole edition in his house, where it remained till long after his decease, but he was attached to Mr. Taylor, and frequently made him his companion at Arundel. Mr. Meredith, a wealthy tradesman retired from business, was a man possessed of sound mental faculties, with no aversion to exercise them. Having read Plato he wished also to read Aristotle in an English translation, and Mr. Taylor was ready to help him to it upon no other condition than his undertaking to print it, which he did; and though he made a losing speculation of it, by printing too few copies, he was so well satisfied with Mr. Taylor's exertions, that he not only assisted him in bringing out some of his minor publications, but settled a pension of 100*l.* a year upon him, which he enjoyed till his death: such munificence and friendship in a man who had earned his money, and knew the value of it, is truly honourable. Mr. Meredith, though not versed in the ancient languages, obtained a great knowledge of ancient literature; he was a man who thought for himself, and came to just conclusions upon most subjects. Among Mr. Taylor's minor works some will be found dedicated to persons who printed them upon similar terms, and in a few cases gave him the benefit of the whole edition. He never exacted payment for his labour, except in one or two cases with the booksellers, and then he had little enough. But with such means he got over all his difficulties, and he had some, for he was twice married, and had several children; his income altogether was about 200*l.* a year. There are some persons who are not at all pleased with Mr. Taylor's attempt to revive certain ancient opinions; they neither wished to see some of the works he has translated, nor his remarks upon them in English; but they are the very persons who brought the writers into notice by constantly referring to them, and speaking of them in terms that are neither liberal nor entirely merited. These writers were the sup-

porters of ancient opinions and establishments, the failure of most of which is now complete and past recovery; there can therefore be little to object to in their writings, and there is much that is good and worth preserving. For these reasons they found translators in every civilised country but England. It seems then that our professed scholars have not done their duty to the public: if they had given us good translations with their own annotations, the labours of Mr. Taylor would not have been called for, and any remarks he might have made elsewhere would have had little weight, and have been overlooked. There are important works yet untranslated, and there are many translations which are disgraceful to the literary character of our country: it would be well then that our scholars should look to these matters, and see that things which must and will be done are well done.

Mr. Taylor during the last forty years of his life, resided in a small house at Walworth, leading a life of perfect uniformity, and dividing his time between his labours and his attentions to his friends and family. He died on the 1st of November 1825, of a very painful disease in the bladder, which he bore with extraordinary fortitude and without complaining. He was an Academician by profession and a Stoic in practice; a sincere friend and a delightful companion. His works and translations are:—1, 'The Elements of a New Method of Reasoning in Geometry,' 4to, 1780, a juvenile performance lost or suppressed; 2, A Paraphrase of part of Ocellus in the 'European Magazine,' 1782; a translation of the whole work in 8vo, 1831; 3, 'The Hymns of Orpheus,' 12mo, 1787; second edition, 1824, augmented; 4, 'Plotinus on the Beautiful,' 12mo, 1787; 5, 'A Dissertation on the Eleusinian and Bacchic Mysteries,' 8vo, no date; 6, 'The Rights of Brutes,' 12mo, 1792, in ridicule of Paine's 'Rights of Man'; 7, 'Salust on the Gods and the World,' 8vo, 1793; 8, 'The Phædrus of Plato,' 4to, 1792; 9, 'The Cratylus, Phædon, Parmenides, and Timæus,' 8vo, 1793; 10, 'Proclus on Euclid,' 2 vols. 4to, 1792; 11, 'Two Orations of the Emperor Julian to the Sovereign Sun and to the Mother of the Gods,' 8vo, 1793; 12, 'Pausanias' Description of Greece,' 3 vols. 8vo, 1794: for this translation, made in such haste that Mr. Taylor nearly lost the use of his right hand from continued exertion, he received 18*l.* The work was in such demand that it sold for a high price, and a second edition was printed in 1824 without consulting the translator, who heard of it accidentally when it was too late to correct it; a slight compensation was made to him, and he added some notes: this is an illustration of the remarks already made; a work like this should not have been left to a necessitous writer. 13, Five books of Plotinus, 'On Felicity; upon the Nature and Origin of Evil; on Providence; on Nature, Contemplation, and the One; on the Descent of the Soul,' 8vo, 1794; 14, 'Cupid and Psyche,' from Apuleius, 8vo, 1795; 15, 'Metaphysics of Aristotle,' 4to, 1801; 16, Hederic's 'Greek Lexicon,' edited, 4to, 1803; 17, 'The Dissertations of Maximus Tyrinus,' 2 vols. 12mo, 1804; 18, 'An Answer to Dr. Gillies' Supplement to his New Analysis of the Works of Aristotle,' 8vo, 1804; 19, 'The Works of Plato,' 5 vols. 4to, 1804, including reprints of the parts previously translated, and many commentaries taken from manuscripts, some of which have since been printed in the original language; 20, 'The Pythagoric Sentences of Demophilus;' these are printed with Mr. Bridgeman's translations, 8vo, 1804; 21, 'Miscellanies in Prose and Verse,' 12mo, 1805, 2nd ed. 1820; 22, 'Collectanea,' 8vo, 1806; 23, 'The Emperor Julian's Arguments taken from Cyril, with Extracts from his other Works relative to the Christians,' 8vo, 1809; 24, 'The Works of Aristotle,' 9 vols. 4to, 1812, with copious extracts from the ancient commentators, to which are added a dissertation on the philosophy of Aristotle, and a treatise on the elements of the true arithmetic of infinites, both of which had appeared in a separate form; 25, 'The Six Books of Proclus on the Theology of Plato,' 2 vols. 4to, 1816; 26, 'Theoretic Arithmetic,' 8vo, 1816, containing what had been written on this subject by Theon of Smyrna, Nicomachus, Iamblicus, and Boethius, with remarks on amicable and other numbers, and a specimen of the manner in which the Pythagoreans philosophised about numbers; 27, 'Select Works of Plotinus,' 8vo, 1817; 28, 'Life of Pythagoras by Iamblicus,' 8vo, 1818; 29, 'Iamblicus on the Mysteries of the Egyptians, Chaldeans, and Assyrians,' 8vo 1821; 30, 'The Commentaries of Proclus on the Timæus of Plato,' 2 vols. 4to, 1820; 31, 'Political Pythagoric Fragments and Ethical Fragments of Hierocles,' 8vo, 1822; 32, 'The Metamorphoses and Philosophical Works of Apuleius,' 8vo, 1822, translated gratuitously at the request of a friend, but purchased by a publisher for 100*l.*: Mr. Taylor had a few copies for his benefit; 33, 'Select Works of Porphyry,' 8vo, 1823 (some essays are added); 35, 'All the Fragments that remain of the Lost Writings of Proclus,' 8vo, 1825; 36, 'Arguments of Celsus relative to the Christians, taken from Origen, with Extracts from other Writers,' 12mo, 1830; 37, 'Proclus on Providence and Evil,' 8vo, 1833; 38, 'Plotinus on Suicide, with Extracts from Olympiodorus, and two books on Truly Existing Being, &c., with Notes from Porphyry and Proclus,' 8vo, 1834. Besides these, there are many papers written by Mr. Taylor in the 'Classical Journal' and other periodicals, amongst which may be specified a complete and valuable collection of the Chaldean oracles, republished by Mr. Cory.

\* TAYLOR, TOM, was born in 1817, at Sunderland. He was brought up at the Grange school of that town,—one of those institutions in which a classical education is not confined to the sons of the rich,

He afterwards passed two sessions at the University of Glasgow, where his talents and acquirements were duly recognised, and he received three gold medals. In 1837 he proceeded to Trinity College, Cambridge, of which he was ultimately elected a Fellow, having taken his degree as a Junior Optime, and in the first class of the classical tripos. His reputation subsequently gained him the chair of English language and literature at the University College, London. In 1845 he was called to the bar, as a member of the Inner-Temple, and he went the Northern Circuit. During his residence in London, after leaving Cambridge, he became known as a popular writer, and especially in that remarkable publication, 'Punch,' for succeeding in which the necessary qualifications of acute observation and condensed humour,—a knowledge of real life and a good-natured power of seizing "folly as it flies"—are not widely distributed. As a dramatic writer Mr. Taylor has displayed the same qualities in many an amusing piece, of which, if the basis be not original the superstructure has nothing incongruous. He has also very ably put together the instructive memorials of the unfortunate Haydon, in which he has told the story of his enthusiasm and his weakness with a delicate tact. In 1850 Mr. Taylor was appointed to the Assistant-Secretaryship of the Board of Health; and the Board being reconstructed in 1854, he became the Secretary. In this position he has practically refuted the vulgar notion that a man of genius cannot be a good man of business; that poetry and political economy are incompatible. He has laboured in his official duties with as much earnestness as in his most cherished pursuits; and his administrative capacity will naturally carry him forward to higher offices than the responsible one which he has so ably filled.

TAYLOR, WILLIAM, was born at Norwich, in the year 1765. He was the only child of an eminent merchant of that city. He first studied under a Swiss refugee, and afterwards became a pupil of Mr. Rochemont Barbauld, the Unitarian minister, at Palgrave, a tutor chiefly selected on account of his religious opinions, which were those of Mr. Taylor and his family. To Mrs. Barbauld, better known as Miss Aikin, Taylor was indebted for much assistance in his early studies; aided by her assiduous care, he soon acquired a correct knowledge of the principles of English composition, and, in after life, he gratefully acknowledged his obligations to this celebrated woman, whom he styled "the mother of his mind." On leaving the house of Mr. Barbauld, at the age of fourteen, he was placed in his counting-house at Norwich by his father, who was desirous that he should succeed him in his large and prosperous business. Shortly afterwards he was sent on the Continent, under the care of one of the partners of the firm, for the purpose of perfecting himself in the French and Italian languages, which were of importance to the proper conducting of his father's business. Before leaving England, he had already evinced considerable facility in acquiring a knowledge of languages; and he had been but a short time abroad when his letters to his parents, in English, French, and Italian, at the early age of fifteen, gave the promise of that eminence as a writer to which he afterwards rose. On his return to his native city, he was encouraged in the prosecution of his studies by the fond admiration of his parents and friends; and for the two years he remained there, he appears to have given the tone to its literary circles. A second tour to the Continent was resolved upon; and he proceeded to Germany with the view of acquiring a familiar acquaintance with its language and literature. A residence of a year with a clergyman at Paderborn was sufficient for this purpose. Under the influence of his preceptor he imbibed a taste not only for the literature of Germany, but for the philosophy of that country: a taste which ever afterwards characterised his writings. On his second return to Norwich, at the age of eighteen, his parents perceived that their son had an imagination too lively, and a taste too decided for literary pursuits, to allow him to devote himself to the mercantile profession. The affluent circumstances of the father, added to the gratification which he enjoyed of seeing his son arrive at so early an age to a high distinction in letters, induced him to forego the strict accomplishment of his favourite project, and to put no restrictions to the youth's inclinations. The time of young Taylor was now chiefly occupied in making various contributions to the periodicals, and to translations from the best German writers.

When the French revolution had convulsed the Continent of Europe, it extended its influence over no small proportion of the English nation; of this influence the mind of Taylor was adapted to feel the force, and he soon became ambitious to add to his other distinctions that of being a prominent political character. The quiet of study was now exchanged for the noisy meetings of political debaters. Taylor allowed himself to be enrolled as secretary of a democratic club established at Norwich. His political activity however, so far from interfering with his desire to obtain literary distinction, served as a stimulus to bring his writings before the public, and thus to extend his reputation beyond the narrow sphere of his native place.

A poetical translation of the 'Lenore' of Bürger was the first publication by which he became generally known. This translation, which preceded that of Spencer, still maintains a high reputation for spirit and accuracy. It contains some variations from the original; that of the most importance being the liberty he has taken to transfer the scene of the poem, which in Bürger is towards the end of the Seven Years' War, to the time of the Crusades; in this he has been

followed by Sir Walter Scott, to whom the public is also indebted for a translation of 'Lenore.' This work was soon after followed by several other poetical translations from the same author. Specimens of the other German poets, by him, also appeared in various magazines and periodicals. These he afterwards collected together, with explanatory observations, and published in 1830, in three large volumes, under the title, 'Survey of German Poetry.' The peculiar metre to which he has adapted many of these translations, and a peculiar style of expression, have exposed him to some severe criticisms.

In the year 1798 he became acquainted with Southey, whose political opinions in early life were similar to his own; an interesting collection of their correspondence will be found in the biography of Taylor, referred to at the end of this article. In one of them he describes his first interview with Sir James Mackintosh and Dr. Parr; and vividly, though not perhaps impartially, delineates their manner and peculiarities (vol. i. p. 295).

Severe losses, consequent upon the war of the French Revolution, induced Mr. Taylor to retire from the management of his father's business; a circumstance which enabled him to devote a greater portion of his time to his favourite studies. Magazines and Reviews still continued to be the principal vehicles by which his writings came before the public. As a reviewer, he was remarkable for his close attention and extensive information on the subject he reviewed. Though not profound as a classical or an Oriental scholar, he in a great measure supplied his deficiency in that respect by his intimate acquaintance with the German translations of the classics, and the commentaries upon them. The style however of his prose writings was so peculiar, that it was disrelished by many of his readers; and it became a source of constant altercation between him and the editors of the works to which he contributed. "Were I reviewing my own reviews," he writes to Southey, "I should say this man's style has an ambitious singularity, which, like chewing ginseng, displeases at first, and attaches at last. In his pursuit of the 'curiosa felicitas' he often sacrifices felicity to curiosity of expression. With much philological knowledge, and much familiarity among the European classics of all sorts, his innovations are mostly defensible, and his allusions mostly pertinent; yet they have both an unusuality which startles, and which, if ultimately approved, provokes at least an anterior discussion that is unpleasant." A pleasing feature in the reviews of Taylor is the enthusiasm with which he entered into his subject, but which led him occasionally to hazard assertions which, on cooler reflection, he often disavowed. Thus it is stated that in one of his papers on the prose of Milton, he expresses the conviction that it is superior to his poetry.

In 1802, on his return from a visit to Paris, Mr. Taylor accepted the management of a weekly local paper, 'The Norwich Iris,' after having used his endeavours to induce Southey to undertake it. This paper became the organ of the party to whose political opinions he was attached; its success however was not equal to his anticipations, and it was given up after two years. He then applied himself anew to his reviewing labours, the changes which had taken place in his family circumstances affording him an additional motive for literary exertion. The Monthly Review, under the editorship of Dr. Griffiths, was the work in which the greatest number of his contributions appeared. In 1806 he gave to the public his version of Lessing's 'Nathan the Wise,' which was severely criticised in the Edinburgh Review. A succession of pecuniary losses which soon after occurred, rendered the position of Mr. Taylor's family, if not one of privation, at least of diminished comfort. His adversity however was cheered by the kindly sympathies of his numerous friends, and by several unexpected offers of assistance, which, though not accepted, were sensibly felt and gratefully responded to. At the same time increase of years and premature infirmities diminished his energies, and his later productions have not added to his fame. Among his last works was a collection of short essays on English Synonyms, which, though incomplete and frequently fanciful, are calculated to assist the philological student, and to lay the foundation of a more complete undertaking. The last years of his life were embittered by the loss of the aged parents, to whom he had proved himself a devoted and affectionate son, and by the decay of his mental powers. He died in the month of March 1836; his remains were deposited beside those of his parents, in the cemetery of the Octagon Chapel at Norwich.

Mr. Taylor's chief claim to literary celebrity consists in his valuable translations from the German; it was through him that the English first became acquainted with the modern literature of Germany. If his talents as a poet were unequal to the task of producing such a translation as the Wallenstein of Coleridge, to him at least must be assigned the merit of having been the first in the field, and perhaps to have laboured in it more assiduously than any other English writer.

(*Memoir of the Life and Writings of the late William Taylor, of Norwich, &c.*, by T. W. Robberds, F.G.S., of Norwich, 2 vols. 8vo, London, 1843; *Quarterly Review*, vol. lxxiii. p. 27-68.)

TAYLOR, GENERAL ZACHARY, late President of the United States of North America, was born Sept. 24, 1784, in Orange County, Virginia. He was the third son of Col. Richard Taylor, who had distinguished himself in the war of the Revolution, and who in 1785 removed with his family to Kentucky, where the settlers were then very few. Col. Taylor obtained from President Jefferson, May 3, 1803, a commission

for his son Zachary as first lieutenant in the 7th regiment of the United States Infantry. In 1810 Zachary Taylor married. On the breaking out of the war in 1812, having then become Captain Taylor, he was placed in command of Fort Harrison, a stockade on the river Wabash, for his defence of which against the attacks of the hostile Indians he received the brevet rank of major. He distinguished himself on several other occasions during the war, but when it terminated he was reduced from his brevet rank of major to his previous rank of captain, a step backward which he refused to consent to, and resigned his commission. He was however in the course of the year reinstated in his rank of major by President Madison. In 1816 he was placed in command of the post at Green Bay, on Lake Michigan, and on the 20th of April 1819 received his commission as lieutenant-colonel. In 1832 he received his commission as colonel from President Jackson, and in that year served under General Scott in the Black Hawk war. He subsequently held the command of Fort Crawford at Prairie du Chien, where he remained till 1836, when the Seminole war in Florida called for his services. The manner in which he there performed his harassing duties acquired for him great reputation among his countrymen, and the battle of Okeechobee, fought Dec. 25, 1837, gained him the rank of brigadier-general by brevet. In 1838 he was appointed to the command of all the troops in Florida, where he remained till 1840, when the command of the south-western division of the army was assigned to him.

In 1845, on the annexation of Texas, General Taylor was ordered to place his troops in a suitable position for defending that country against a threatened invasion from Mexico, and in August he concentrated his troops at Corpus Christi. There he remained till March 11, 1846, when he broke up his cantonments, and moved westward with a small army of occupation of about 4000 regular troops. He reached the Rio Colorado on the 20th of March, crossed it without opposition, and on the 29th of March arrived at the Rio Grande, opposite Matamoras. On the 8th of May he gained the victory of Palo Alto, and on the 9th of May that of Resaca de la Palma. On the 21st, 22nd, and 23rd of September he attacked and captured the city of Monterey, which was strongly fortified, and defended by a superior force. On the 22nd and 23rd of February he gained the victory of Buena Vista, in which the Mexican army of 20,000 men under General Santa Anna was defeated with very great loss by the American army of about 6000 men. This victory led to negotiations for peace, and the treaty was ratified in February 1848. Meantime General Taylor had returned to his residence at Baton Rouge in Louisiana, where he had purchased an estate, and on the 1st of June 1848 the Whig Convention in Philadelphia put him in nomination for the presidency. On the 7th of November 1848 he was elected President of the United States of America, and on the 4th of March 1849 he was inaugurated, and entered upon his term of office. He died July 9, 1850, at Washington, and was forthwith succeeded as President by Millard Fillmore, the Vice-President. [FILLMORE, MILLARD.] He left a widow, one son, and two daughters.

TEBALDEO (or TIBALDEO), ANTONIO, was born at Ferrara about 1463. He studied medicine, but afterwards devoted himself chiefly to literature and poetical composition, both Italian and Latin. The first edition of his Italian poems appeared at Modena in 1498, by his cousin Jacopo Tebaldeo, apparently unknown to the author, who was vexed at it because he thought that his compositions required some final touches: "Sonetti, Capitoli, e Rime, chiamate Opere d'Amore," 4to, Modena, 1498, afterwards reprinted several times at Milan, Venice, and other places. In 1519 appeared at Milan another small poem of Tebaldeo, with the title, "Stanze nuove ad un Vecchio che non amando in gioventù fu costretto ad amare in vecchiezza." A selection from his pastoral poems was inserted in the collection entitled "Poesie Pastorali e Rusticali, raccolte ed illustrate con note dal Dottore Giulio Ferrario," Milan, 1808. Bembo and Giraldi, contemporaries of Tebaldeo, speak of his Italian poems with praise, but they regret that they were too hastily published. Tebaldeo afterwards applied himself to Latin poetry, in which he acquired great reputation. He was for a time at the court of Mantua, and afterwards settled at Rome, where he became a favourite of Leo X., who speaks very highly of him in some of his epistles, and is said to have made him very liberal presents. After Leo's death Tebaldeo fell into distress, and was obliged to borrow money of Bembo and others. He died at Rome in 1537. A few of his Latin epigrams and other small poems are in several collections.

TEGNÉR, ESAIAS, universally acknowledged by the Swedes as the greatest poet of Sweden, was born on the 13th of November 1732, at Kyrkerud in Wermland. His father, also named Esaias, the son of a peasant, Lucas Esaias, of Tegnaby in the diocese of Wexio, had a turn for learning, became a student at the University of Lund, took orders, and was the first of the family to assume the dignity of a surname. He took that of Tegnér from his birthplace of Tegnaby, a village which is part of the estates of the diocese of Wexio. As a parish-priest he was highly respected for diligence and piety. His wife, whose maiden name was Seidelius, was noted for her force of character and her talents, which she sometimes exercised in writing verses. The poet grew up till his tenth year at Millesvik, on the Lake Wener, where his father had been appointed pastor, and which it may be noticed is in a remarkably ugly part of the country. It is in particular destitute of trees. "King Olof, the tree-feller, a name well

known in Swedish history, took his pleasure there," it has been remarked, "with axe and fire, and the trees have not grown again for a thousand years." In February 1792, when Esaias was in his tenth year, his father died, leaving a widow and six children, four sons and two daughters, in whose circumstances this event produced a great change. The four sons were all remarkable in their way. Lars Gustaf, the eldest, was of a mild and earnest character, strongly tinged with mysticism; Elof, the second, was full of wit and acuteness; the third, Johannes, was silly from childhood, but had such powers of memory that when he was desired to attend to what was going on in church, he could on his return repeat every word he had heard in it, without being able to draw any distinction between the lessons, the banns of marriage, and the sermon. Esaias, the youngest, was of a remarkably flexible character, and at different times of his life exhibited a striking resemblance to each of his brothers in their prominent characteristics.

At the time of his father's death, the two elder brothers, who were intended for the church, were already students at Lund; the expenses of their education quite absorbed the resources of the family when deprived of a head, and the widow was grateful to a friend of her husband, Jakob Branting, a Kronofogde, or sort of tax-collector, for offering to take the youngest off her hands and make use of him to assist him in his business. Esaias soon made himself a most useful assistant, and was to the end of his life remarkable for his quickness with figures. He found among Branting's books, "Björners Kampadater," a folio volume of the 17th century, containing a number of Icelandic sagas, with, in the same page, the Swedish translation; and almost his first attempt at composition seems to have been a poem called 'Atle,' founded on one of these sagas. The poem of 'Frithiof,' the great achievement of his riper years, was founded on another. His only recorded attempt at poetry previous to 'Atle' seems to have been, when a child at Millesvik, an epitaph on a goose, a worthy companion to Dr. Johnson's famous epitaph on a duck. Branting, who noticed his young assistant's love of books and aptitude for learning, was smitten with the thought that he was degrading him out of his proper sphere; and one starry night, when, as he was driving home with him from a tax-collecting expedition, he turned the conversation on the heavenly bodies, and the boy, then aged thirteen, who had just been reading Bastholm's 'Philosophy for the Unlearned,' discoursed with fluency of things which Branting had never heard of, this feeling became too strong to be kept under. Lars Gustaf, the elder brother, was then acting as private tutor in the family of Captain Löwenhjelm, an officer with nine children. Branting wrote off to the captain in March 1796, to say that he felt it a sin to keep such a boy as Esaias from study, and to propose that he should be admitted to share, with the captain's boys, the instructions of his elder brother. Löwenhjelm at once consented, and the whole course of the young poet's life was changed. "I now began," he says in an autobiographical notice, written in after-life, "to study Latin; the method adopted was the old and sound and, in my opinion, the only right one, which may indeed seem tedious and tiresome, but in the end, by the greater certainty it gives, spares time instead of wasting it." He stated that he began French and English at the same time—French in Telemachus and English in Ossian's poems; but his memory deceived him: a letter written by him in 1793, which was afterwards found, showed that at the age of ten he was already studying Latin and French at Millesvik. Ossian's poems delighted him to such a degree that he learned English without any assistance. A door is still shown at Malwa, the residence of Captain Löwenhjelm, which bears the marks of the iron rod with which Tegnér used to thrust at it, when enthusiastically shouting out in English one of his favourite passages from Ossian—"The spear of Connell is keen!" In the next year the services of Lars were transferred to the family of Christopher Myrman, an iron-master at Råmen, near Filipstad, who made some of the best iron in Sweden, and was a man of learning as well as a man of business. Lars made a stipulation that his brother should accompany him, and they both soon became almost members of the family. Myrman had eight sons and four daughters: Lars was tutor of the four eldest sons; Esaias became at the age of fifteen tutor of three of the others, and the lover of one of the daughters, whom he married some years later.

At Råmen they found an excellent library in the classical languages, and a good collection of Swedish, French, and English books, but not a single German book; it was at the period before the introduction of German literature into Sweden. Of Shakspeare however there was only 'Hamlet,' "which, strange to say," remarks Tegnér, "interested me very little. It requires however a riper age than I had then reached." He threw himself with vehemence on Homer. According to his own recollections afterwards, he in seven months after commencing the study of Greek, had read the 'Iliad' three times through and the 'Odyssey' twice, besides going through Virgil, Horace, and Ovid in Latin. "It seemed to those around him," says Böttiger, in his biography, "as if he had been born with the foreign languages in his brain, and it only needed a gentle shake to wake the slumberers into life." He made himself at the same time a proficient in chess and skittles. Often when the girl came to light his fire in the morning she found him still with his clothes on continuing the studies he had pursued all night. In 1799, when he went with his three pupils to the University of Lund, he passed such an examination

to matriculate that it was said it would have sufficed for a degree. His want of means became however at this time so pressing, though he was supported by contributions from Branting and Myrman, that he resolved to relinquish a learned career; but a life of Anacreon which he wrote in classical Latin, led Professor Norberg to advise him and, apparently, to assist him to continue the struggle. For some time he studied eighteen or twenty hours a day; he made proficiency in mathematics, as well as in other studies, but unfortunately at the same time that he became remarkable for learning, he became remarkable for the awkwardness, reserve, and rusticity of his manners. A post as under librarian, and afterwards that of assistant-teacher of æsthetics, increased his income, and finally, in 1806, he was enabled to marry, and Anna Myrman became his partner for life. Then a change took place, which was extraordinary, strange, and sudden. Immediately after his marriage he became all at once as fond of company as he had been averse to it, lively, open, and full of spirits to an extreme, which seems on many occasions to have led him to objectionable levity. The wit of the Greek professor at Lund was often censured as passing the bounds of decorum. This professorship was conferred on him almost as a right when, in 1812, a separate professorship of Greek was first established at Lund. Together with the professorship he received the living of Stäffe, which obliged him to take holy orders, and for the next twelve years of his life he passed his time happily in the duties of his professorship, and in the cultivation of poetry, which he had commenced some time before, but which he prosecuted during this time with such success that he was finally hailed by common consent the first poet of Sweden living or dead.

His first public appearance in verse which attracted any attention, was on a melancholy occasion—the loss of his brother Lars Gustaf, who died in 1802. His elegy on that event was inserted in the 'Transactions' of the literary society of Gottenburg, from whom it received some sort of prize. It was in 1808 however when there was an alarm of invasion that he suddenly burst forth as a poet of the first order, by his 'War-Song of the Scanian Land-Defenders,' or 'Local Militia.' "This warlike dithyrambic," says Böttiger, "sounded like a tocsin in every patriotic ear. Tones at once so grand and beautiful had never before been heard from the Swedish lyre. The electric lines ran like wildfire through the kingdom, bearing testimony that the North now owned a Tyrtæus fully equal to him who sang in Sparta." In 1811 another patriotic poem entitled 'Svea,' won the prize of the Swedish Academy; it was a spirited outburst of indignation at the degeneracy of the modern Swedes, compared with their ancestors, whose swords weighed so heavily in the balance of Europe. Tegnér, who visited Stockholm to receive the prize, became acquainted with many of its literary men, at a time of transition when the Phosphorists, headed by Palmblad [PALMBLAD], the introducers of German literature into their country, were contending against the old French school of classicity and elegance, whose chief literary representative was Leopold. Tegnér, who was thought by his youth and his genius, naturally to belong to the anti-classical party, excited some surprise by his undertaking the defence of Leopold, which he afterwards followed up by dedicating to him his poem of 'Axel.' His consecration as a priest in 1812 gave occasion to a poem on that subject, which was afterwards surpassed by a poem of the same kind, his 'Nattvardsbarnen,' or children of the Lord's Supper, a sort of religious idyl, in 1820. In the same year, 1820, some cantos of his 'Frithiofs Saga,' a romantic tale of ancient Scandinavia, appeared in the 'Iduna,' a periodical published by the Gothic Society, of which Geijer [GEIJER] was the leading member, with whom Tegnér had become personally acquainted in the country before either of them emerged into fame. His reputation was enhanced in 1821 by the publication of 'Axel,' a brief poetic romance, still thought by many the finest of his poems. It attained its culminating point in 1825, by the completion of 'Frithiofs Saga,' which became at once the most popular poem that has ever appeared in Sweden. From the period of the publication of 'Axel,' if not before, the name of Tegnér was recognised as that of the undisputed head of Swedish poetry.

This period of Tegnér's life was brought to a close by an unexpected, and at least at the outset, an unwelcome event. In 1824 he received the intelligence that the clergy of the diocese of Wexio had presented his name to the king as one of the three whom they nominated for the vacant bishopric, and that the king had been pleased to select him for that office. As a clergyman he had not been remarkable for gravity of demeanour, and the general impression was that an excellent Greek professor and an unequalled poet would now be turned into a very indifferent bishop. These expectations were disappointed. From the time of his appointment Tegnér's life took a different course. He ceased to appear as a poet, and gave himself up to the business of his diocese, and in particular to the management of its revenues, in which his early experience with Branting was said to be found of use. Almost the only unepiscopal episode we hear of for some years is on that memorable day in 1829 when he presented the poetical crown to Oehlenschläger [OEHLenschläGER]. He gave himself up to theological studies, and was found in his study "walled up with fathers of the church and biblical commentators." Thirty-one new churches were built in his diocese during his episcopate. At the diets which he attended he was distinguished for his conservative principles and his opposition to what he called "Radicalism," at the time when his old

friend Geijer who had at one time been tending the same way, suddenly broke with the conservative party, on account of its propensity to carry reaction too far. His old liveliness was still to be found in his private letters. In the Diet of 1834 financial affairs were the chief subject; he complained to a friend of his being bilious and unwell, so unwell, he said, that he was as little able to comprehend financial affairs as a member of the Bank committee. "As for biliousness," he added, "it is unnecessary to carry that with one to the Diet, it can easily be got there, and in fact belongs to the order of the day." Tegnér was still looked upon with such favour by his order, that in 1839 he was one of the three candidates proposed for the archbishopric of Upsal. Next year, alas! he was the inmate of a lunatic asylum. "God preserve my understanding," he had written shortly before in a letter to one of his friends; "there runs a vein of madness in my family. With me it has hitherto broken out in poetry, which is a milder kind of madness, but who can give me the assurance, that it will always take that way?" A seclusion of some months in an institution for the insane at Schleswig enabled him to return in 1841 to his family, and partially to his duties, and he was even able to preach so lately as June 1845, but after that he sunk gradually. He was confined chiefly to his house and his room. He lay on the sofa, in cheerful spirits, and passed his time in reading. "About him," says Böttiger, "was generally seen a pile of books of different sorts and sizes, from the old Greek folio to the last fashionable novel, but some volumes of Ariosto and Walter Scott were never wanting." After a stroke of paralysis and still weakened health, he died without pain on the 2nd of November 1846, shortly before midnight and during a beautiful appearance of the northern lights. His wife survived him, and he left six children, one of whom, a daughter, is married to Professor Böttiger of Upsal. Böttiger is himself a poet, and one of his best-known pieces is a description of a little incident which occurred to him in the Bay of Naples, where having been interested by witnessing the emotions which a stranger evinced over a book he was reading, and afterwards finding the book lying where the stranger had left it, he took it up and found it was 'Frithiofs Saga.' Tegnér's father, as we have seen, he had lost in 1792; his mother survived till 1836, when she died at the age of ninety. In 1822, when the king of Sweden, Bernadotte, was returning from a visit to Norway, he heard that Tegnér's mother lived in a village he was passing through, expressed a desire for an interview, and told her that she had given birth to a son of whom she and Sweden might be proud. The mother of such a son however had passed most of her life in anxiously tending on another son, the poor idiot Johannes, who at last in an unguarded moment walked into a river and was drowned.

The works of Tegnér were collected and published in six volumes by his son-in-law Professor Böttiger (Stockholm, 1847-48). Nearly three of the volumes are occupied by his smaller poems, two by prose works, chiefly speeches, and extracts from letters, and a volume and a half by the larger poems, on which the reputation of Tegnér is chiefly founded, and by a biography of the poet, from which we have taken most of our details. The smaller poems are many of them occasional verses on subjects of slight importance, but some are vigorous and interesting. One of his earliest is on 'Pitt and Nelson,' both of whom are objects of strong condemnation, Nelson being called 'the Tamerlane of the Sea;' another, remarkably well written, is a dialogue between England and France, vituperating each other, in which England has decidedly the worst of the fray. The sympathies of Tegnér seem to have been extremely limited, his contempt for Germans and Germany is repeatedly expressed, and it would be difficult to find in his writings praise of any country but his own, which, except on a tour for health to Carlsbad in 1833, was the only one he had ever seen, or apparently ever wished to see. In one of his letters he even declares his aversion to Stockholm as that hateful object a "large small town." His speeches are in great reputation both in Sweden and Germany for their lucidity and eloquence. They were chiefly delivered at anniversaries of grammar-schools and on similar occasions, and are of much the same character as those delivered in England and America at mechanics institutes, &c., and bearing on the same class of subjects—the benefits of education, the utility of particular studies, &c. Of the larger poems, 'Frithiof,' 'Axel,' and the 'Children of the Lord's Supper,' the English reader has an opportunity of forming almost as good a judgment as the Swedish. No foreign poet has been so fortunate as Tegnér in his English translators. Of 'Frithiof' there are at least five versions, more in number than we have of any other foreign poem of this century, and several of them are good. The first, by the Rev. William Strong, published in 1833, is undoubtedly the worst, but is still the work of a man of learning, and of an enthusiast for his original; an anonymous one, by several hands, which appeared in Paris in 1835; is apparently in part by Frye, who deserves more notice than he has met with; a third, by R. G. Latham, in 1838, though not equal to Latham's 'Axel,' is a fair representation of the original; a fourth, by G. Stephens, now Professor of English at the University of Copenhagen, was issued at Stockholm in 1841, and accompanied by a letter from Tegnér to say that he thought it the best English translation of himself he had seen; a fifth, by Oscar Baker, in 1841, possesses considerable merit. It is possible that the English reader, on the perusal of some of these, may

arrive at the opinion that the 'Frithiofs Saga' has been considerably overrated. The same conviction has been arrived at by several English readers, among others the writer of this article, on the perusal of the original. The poem of 'Frithiof' has no deep pathos, no vivid eloquence. Its general character is that of neatness and prettiness rather than anything superior. It sinks often into tameness, and never rises to sublimity. The story, which follows too closely the original saga, is that of a young Northern warrior who is enamoured of the sister of two young kings, who is denied her hand by her brothers, who, in his indignant proceedings thereupon, accidentally burns the sacred grove of Balder, leaves the country on a warlike expedition, on his return finds his beloved married to an old king, who generously puts an end to his existence when he discovers he is in the lovers' way, and finally obtains the hand of the lady after having humbly expiated the sacrilege against Balder of which he has been guilty. This story is told in four-and-twenty cantos, of which some are as short as ballads, and each one is in a different measure, one in blank verse, another in hexameters, &c. That an epic poem would be improved by a variety of metre, was a proposition laid down long ago by Dr. Watts, if not before him; but this mechanical variety of four-and-twenty different metres, not one repeated, has somewhat of a childish appearance. Tegnér's poem of 'Axel' is in what may be called the Byronic metre, and in tone and structure strongly reminds the reader of Byron's 'Mazeppa,' on which it was doubtless modelled. The story is slight and commonplace—a maiden who follows her lover to the wars in male attire, and whose death in combat drives her lover distracted—but the spirit with which it is told atones for every deficiency. Those who are fond of 'Mazeppa' are sure to like this poem, either in the original, or its excellent English translation by R. G. Latham. There are two others, one by Oscar Baker, who has also translated 'Svea,' and another in 'Blackwood's Magazine.' The 'Children of the Lord's Supper' has been admirably translated by Professor Longfellow, who has also rendered various passages from 'Frithiof' and 'Axel.'

TEIGNMOUTH, JOHN SHORE, LORD, was the eldest son of Thomas Shore, Esq., sometime of Melton in Suffolk. The family was originally of Derbyshire, Lord Teignmouth's great-grandfather having been a Sir John Shore, M.D., of Derby, who was knighted in 1667. Lord Teignmouth was born, it is believed, in Devonshire, on the 8th of October 1751; his father died in 1759, his mother in 1783, and his only brother, the Rev. Thomas William Shore, who was vicar of Sandal in Yorkshire, and of Otterton in Devonshire, in 1822.

Mr. Shore went to Bengal in 1769 as a cadet in the Company's civil service, and was first stationed at Moorsheadabad as an assistant under the council of revenue. In 1773 his knowledge of that language procured him the appointment of Persian translator and secretary to the Provincial Council of Moorsheadabad; and this was followed the next year by a seat at the Calcutta revenue board, which he retained till the dissolution of the board in 1781, when he was appointed second member of the general committee of revenue, established by the new charter granted that year. While holding this situation, Mr. Shore lived in terms of intimacy with Warren Hastings, the governor-general; and when Hastings came home in 1785 he accompanied his friend to England. During this visit to his native country he married Charlotte, only daughter of James Cornish, Esq., a medical practitioner at Teignmouth; and a few weeks after, in April 1786, he set out again for Calcutta, having been appointed one of the members of the Supreme Council under the new governor-general, Lord Cornwallis. To his activity and ascendancy in the council is mainly attributed the adoption of Cornwallis's great measure, the new settlement, in 1789, of landed property in the presidency of Bengal, by which the zemindars, hitherto only the revenue agents or tax-gatherers of the government, were made the hereditary proprietors of the estates which they farmed, and the ryots, or peasantry, who had till now a right of occupation so long as they paid their assessments, were declared the tenants of the zemindars, and made removable at the will of their landlords. The new judicial system which was introduced towards the close of Lord Cornwallis's government in 1793 also owed its establishment in a principal degree to Shore, who had been made a baronet the preceding year. On the retirement of Cornwallis, in August 1793, Sir John Shore was appointed to succeed him as governor-general; and he held that high office till the close of the year 1797, when he resigned it to the Earl of Mornington, and was created an Irish peer by the title of Baron Teignmouth.

Upon the death of Sir William Jones, in April 1794, Sir John Shore was elected president of the Asiatic Society, and, taking his seat in that capacity on the 22nd of May, he delivered a discourse on the merits of the late president, which is printed in the fourth volume of the Society's 'Transactions.' After his return home, Lord Teignmouth published, in 1804, a quarto volume entitled 'Memoirs of the Life, Writings, and Correspondence of Sir William Jones;' and in 1807 he produced an edition, in 13 vols. 8vo, of Jones's Works, with this Life prefixed. Upon his leaving India, Lord Teignmouth had been succeeded as president of the Asiatic Society by Sir Robert Chambers, in a discourse by whom, delivered at a meeting of the society on the 18th of January 1798, and printed in the sixth volume of their 'Transactions,' there is a sketch of the character and career of his predecessor. In 1804, on the formation of the British and Foreign Bible Society,

Lord Teignmouth was elected its first president, and this situation he retained till his death, though for some years before that event he was obliged to devolve its active duties upon his successor, Lord Bexley. In the prosperity of the society he at all times took the liveliest interest.

On the 4th of April 1807 Lord Teignmouth was appointed one of the commissioners for the affairs of India, or, in other words, a member of the Board of Control; and on the 8th of the same month he was sworn of the Privy Council. He retained his seat at the Board of Control for some years, and his death took place on the 14th of February 1834.

Besides the publications already mentioned, Lord Teignmouth is the author of 'A Letter to the Reverend Christopher Wordsworth, D.D., on the subject of the Bible Society,' 8vo, London, 1810; and 'Considerations on communicating to the Inhabitants of India the Knowledge of Christianity,' 8vo, London, 1811.

TEISSIER, ANTOINE, was born at Montpellier, on the 28th of January 1632. His family, which was originally of Nîmes, was Protestant; and his father was receiver-general of the province of Languedoc, but he was deprived of that appointment, and also of whatever else he possessed, a few months after the birth of his son, for having joined the revolt of Henri, duc de Montmorenci, or at least given up to him the public money which was in his hands. Montmorenci was taken prisoner at the affair of Castelnaudari, on the 1st of September 1632; his insurrection was suppressed, and on the 30th of October he was beheaded. After the ruin of his family it was determined that Antoine Teissier should be educated for the ministry of the Protestant Church, and with that view he studied theology for some time at the Protestant seminaries of Nîmes, Montauban, and Saumur. But in the end he made up his mind to adopt the profession of the law, induced, it is said, by the weak state of his health; and after having gone through the usual course of study at Bourges, and taken his Doctor's degree, he commenced practice as an advocate before the district court called the Presidial, at Nîmes. His bodily strength however proved to be no more sufficient for the bar than it had been thought to be for the pulpit; and after some time he gave up his profession, and took to literature as a means of subsistence. On the revocation of the Edict of Nantes, in 1685, Teissier took refuge in Switzerland, having, according to the 'Biographie Universelle,' although in extreme distress, declined very tempting proposals which were made through the chancellor D'Aguesseau to induce him to remain in France. But it would no doubt be made a condition that he should abjure Protestantism. He supported himself chiefly at first by publishing a French newspaper at Berne; then by giving a course of public law (*droit public*) at Zürich, and the works he sent to the press from time to time also brought him something. At length, in 1692, he was invited by Frederic III., elector of Brandenburg (afterwards King Frederic I. of Prussia) to come to Berlin, and there he resided till his death, on the 7th of September 1715. Immediately on his arrival he had been nominated a councillor of state, and appointed to the office of historiographer; and part of his time was also occupied for some years in superintending or directing the education of the hereditary prince, afterwards Frederic William I. A complete list of Teissier's numerous publications is given in the 'Biographie Universelle.' The most celebrated among them is his 'Eloges des Hommes Savans, tirés de l'Histoire de M. de Thou,' first published at Lyon and at Geneva, in a 12mo volume, in 1683; then at Utrecht, in 2 vols., in 1696; and again at Leyden, in 4 vols., in 1715. In the two latter editions the text of De Thou is accompanied by numerous annotations, which display much curious research. Teissier was an accurate inquirer; but there is no artistic quality or vital power in any of his books, and all of them, even including his 'Eloges,' may be said to be now superseded and nearly forgotten. One of the most creditable is a catalogue, in Latin, of the authors who have written catalogues, indexes, &c., in two parts, 4to, Geneva, 1685 and 1705; some others relate to parts of the history of Prussia; and a great many are translations, which have the character of being generally faithful enough, but of little elegance or spirit, from St. Clement, St. Chrysostom, Calvin, Sleidan, and other Greek and Latin writers, the latter mostly, if not exclusively, moderns.

TELEMACHUS (Τηλέμαχος), the son of Odysseus (Ulysses) and Penelope. When his father joined the Greeks in their expedition against Troy, Telemachus was very young, but during his father's absence he grew up to manhood. When the gods had decreed that Odysseus should return home from the island of Ogygia, Athena (Minerva), assuming the appearance of Mentès, king of the Taphians, appeared to Telemachus, and advised him to get rid of the suitors of his mother; but if Penelope should wish to marry again, to send her to her father's house, that she might celebrate her nuptials there. She also advised him to sail to Pylos and Sparta, to see whether he could learn anything concerning his father, who, as she said, was probably still living in some island where he was forcibly detained; but if he should be dead, she enjoined Telemachus to raise a monument to his memory, and to rid himself of the suitors of his mother either by stratagem or by force. Telemachus obeyed the commands of the goddess, and visited Nestor at Pylos and Menelaus at Sparta. Both of them received him hospitably, and Menelaus communicated to him the prophecy of Proteus about his father. In the meantime Odysseus

arrived in Ithaca, and lodged with Eumæus, the swineherd, in the disguise of a beggar. In this condition he was found by Telemachus, who, by the advice of Athena, had also returned to Ithaca. The father made himself known to his son, and the two devised a plan for getting rid of the suitors. They went to the town, and Odysseus was admitted as a beggar to a feast of Telemachus and the suitors. When the suitors began to insult the poor man, a fight ensued, in which Odysseus and Telemachus killed the suitors. Telemachus then accompanied his father to the aged Laertius. Thus far the story is described in the *Odyssey*. Later writers mention other incidents connected with the story of Telemachus, especially relating to his marriage, which however is told in different ways. According to one tradition, he married Circe or her daughter Cassiphone, and he had a daughter Roma, whom he gave in marriage to Æneas. Servius (*ad Æneid.*, x. 167) calls him the founder of the town of Clusium in Etruria.

In modern times the name of Telemachus has acquired celebrity from the moral romance of Fénelon, which is based upon the story in the *Odyssey*.

**TELEMANN, GEORG PHILIPP**, a name of no mean rank in musical history, was the son of the minister of the Lutheran Church at Magdeburg, and there had his birth, in 1681. Though educated with other views, his predilection for music was too strong to be combated, and it became his profession. He successively held many appointments in Germany, the chief of which was that of composer to the Lyric theatre at Hamburg, for which he produced no less than thirty-five operas. But these were only a small part of his labours: he is said to have exceeded the prolific Alessandro Scarlatti in the number of his works for the church and the chamber; and, in 1740, his overtures on the model of Lulli amounted, Doctor Burney tells us, to six hundred! Of this almost incredible number of compositions however only two or three fugues are now known, at least in England, and these only to a very few organists of patient and deep research. Telemann was a fellow student of Handel, and attained considerable longevity, having died in 1767, at the age of eighty-six. He was twice married, and by each wife had ten children; and it is remarkable that not one of them manifested the slightest inclination for the art to which their father owed his fortune and repute.

**TELFORD, THOMAS**. In the life of this eminent man, as has been observed in a brief notice of the fathers of that science of which he was so distinguished an ornament, in the preface to the 'Transactions' of the Institution of Civil Engineers, "another striking instance is added to those on record of men who have, by the force of natural talent, unaided save by uprightness and persevering industry, raised themselves from the low estate in which they were born, to take their stand among the master-spirits of their age." Telford's father was a shepherd in the pastoral district of Eskdale in Dumfriesshire, where, in the parish of Westerkirk, his only son was born on the 9th of August 1757. His father dying while he was yet an infant, the care of Telford's early years devolved upon his mother, Janet Jackson, for whom he cherished an affectionate regard until her death in 1794; he having been in the habit, according to Mr. Rickman, of writing letters to her in 'printed' characters, that she might be able to read them without assistance. He received the rudiments of education in the parish school of Westerkirk; and while engaged during the summer season as a shepherd-boy in assisting his uncle, he made diligent use of his leisure in studying the books furnished by his village friends. At the age of fourteen he was apprenticed to a stone-mason in the neighbouring town of Langholm; and for several years he was employed, chiefly in his native district, in the various operations usually performed by a country mason in a district where there is little occasion for the higher departments of his art. The construction of plain bridges, of farm buildings, and of simple village churches and mansees, afforded however good opportunities for obtaining practical knowledge. Telford himself has expressed his sense of the value of this humble training, observing, that although convenience and usefulness only are studied in such erections, yet peculiar advantages are offered to the young practitioner; for, to adopt his own words, "as there is not sufficient employment to produce a division of labour in building, he is under the necessity of making himself acquainted with every detail in procuring, preparing, and employing every kind of material, whether it be the produce of the forest, the quarry, or the forge; and this necessity, although unfavourable to the dexterity of the individual workman who earns his livelihood by expertness in one operation, is of singular advantage to the future architect or engineer, whose professional excellence must rest on the adaptation of materials and a confirmed habit of discrimination and judicious superintendence." Chambers states that during this period of his life Telford was remarkable for the neatness with which he cut letters upon gravestones. In 1780, being then about twenty-three, and considering himself master of his art, he visited Edinburgh, apparently with a view to obtaining employment. The splendid improvements then in progress in that city enlarged his field of observation, and enabled him to contemplate architecture as applied to the object of magnificence as well as utility; and he seems at this time to have devoted much attention both to architecture and drawing. After remaining there about two years, he removed to London, where he obtained employment upon the quadrangle of Somerset House, then erecting by Sir William Chambers—an engagement in which, according to his own account, he obtained much practical information.

About 1784 he was engaged to superintend the erection of a house for the resident commissioner in Portsmouth dockyard, from the design of Mr. S. Wyatt. Telford's good character and promising talent had secured for him the friendship of two families resident in his native district—the Pasleys and the Johnstones; and to their influence his early employment on important works is in some measure to be attributed. He was engaged upon various buildings at the Portsmouth dockyard for three years, during which time he became well acquainted with the construction of graving-docks, wharf-walls, and similar engineering works; and in 1787, having completed his engagements there, he was invited by Sir William Pulteney (a member of the Johnstone family) to take the superintendence of some alterations at Shrewsbury Castle. He therefore removed to Shrewsbury, where he was also employed to erect a new jail, which was completed in 1793, and was subsequently appointed county surveyor, in which office (retained by him until death) he had to furnish plans for, and oversee the construction of, bridges and similar works. The first bridge which he designed and built was that over the Severn at Montford, about four miles west from Shrewsbury, consisting of three elliptical stone arches, one of fifty-eight, and the others of fifty-five feet span. His next was the iron bridge over the Severn at Buildwas, consisting of a very flat iron arch of a hundred and thirty feet span, constructed upon very superior principles to that erected a few years previously at Coalbrook Dale: Telford's object was rather to introduce the trussing principle of a timber construction than that of a stone arch. This bridge was built in the years 1795 and 1796. Forty smaller bridges were erected in Shropshire under Telford's direction.

The Ellesmere Canal, a series of navigations intended to unite the Severn, the Dee, and the Mersey, and extending altogether to a length of about one hundred and three miles, was the first great work upon which Telford was engaged—his satisfactory execution of the county works intrusted to him having led its projectors to select him as their engineer; and from this engagement, which commenced about 1793 (in which year the act of parliament was obtained for the scheme), his attention was directed almost solely to civil engineering. The uneven character of the country occasioned many serious difficulties in the construction of this canal, and rendered necessary the execution of some works of astonishing magnitude, especially in crossing the valleys of the Ceriog, or Chirk, and of the Dee. In the former the canal crosses the river at an elevation of seventy feet by an aqueduct-bridge of ten arches, each of which is of forty feet span, in the construction of which some important deviations were made from the previous practice of engineers. It had been usual in such structures to form the bed for the canal of puddled clay confined in masonry, a practice which involved great expense, and some danger in time of frost, from the expansion of the moist puddle. The great elevation of the Chirk aqueduct would have increased the difficulty, but Telford abandoned the puddling system, and formed the bed of the canal of flanged cast-iron plates resting upon walls built on the piers, and constructed the sides of masonry. This work was executed between 1796 and 1801, at a cost of 20,898*l*. The aqueduct-bridge over the valley of the Dee, called the Pont-y-Cysylte, is still more remarkable: it consists simply of a trough of cast-iron plates, securely flanged together, and supported by eighteen piers or pillars of masonry, the elevation of which is a hundred and twenty-one feet above low-water. These piers are solid to the height of seventy feet, above which they are hollow, with interior walls. The water-way in the cast-iron trough is eleven feet ten inches wide, of which four feet eight inches is covered by the towing-path, supported upon cast-iron pillars, so as to allow the water free play beneath it. The length of the aqueduct is about one thousand feet, and the height of the canal one hundred and twenty-seven feet above the Dee; and at one end of the aqueduct-bridge is a great embankment, fifteen hundred feet long, rising in parts to a height of seventy-five feet above the natural surface. These gigantic works were executed between 1795 and 1805, at a cost of 47,018*l*. In the locks of this canal Telford introduced cast-iron framing in lieu of timber; and in one instance, where the lock was formed in a quicksand, he made every part of that material.

The Caledonian Canal is another of Telford's principal works. In 1773 the commissioners of the forfeited estates in Scotland had engaged Watt to report on the practicability of a ship-canal along the valley of Glen More in Inverness, to be formed by connecting the lakes which form a series of navigable waters extending a great part of the distance; but although the report was favourable, it was not acted upon, and the scheme was deferred for some years by the restoration, in 1784, of the forfeited estates, through which the line would pass. In 1801 however Telford was deputed by government to make a survey of the coasts and of the interior of Scotland, and to report generally upon desirable public works for the improvement of the country. In consequence of his reports Commissions were formed to carry out the proposed canal, and other improvements classed under the general title of Highland Roads and Bridges; and the services of Telford were engaged by both boards. The Caledonian Canal was opened throughout in 1823. Its construction was delayed by many untoward circumstances; and unfortunately its utility has not hitherto answered the expectations of its projectors. It forms however a noble monument of the skill of the engineer. The locks are stated by Telford to be the largest ever constructed at that time,

being forty feet wide, and from one hundred and seventy to one hundred and eighty feet long; and one of them at Clachnacarry, near Inverness, was made under circumstances of especial difficulty, the earth being a soft mud, into which an iron rod might easily be thrust to a depth of fifty-five feet. The means adopted for conquering this difficulty are fully detailed in the engineer's own narrative.

Of other canals constructed wholly or partially under Telford's superintendence it is sufficient to mention the Glasgow, Paisley, and Ardrossan (which was never completed to the length originally intended); the Macclesfield; the Birmingham and Liverpool Junction; the Gloucester and Berkeley (completed under his direction); the Birmingham, which was completely remodelled and adapted to the conduct of a very extensive traffic, by him; and the Weaver navigation, in Cheshire. He also constructed a new tunnel, 2926 yards long, 16 feet high, and 14 feet wide, at Harecastle, on the Trent and Mersey Canal, the original tunnel of Brindley having been found too small; and he executed many important works connected with the drainage of the fen country, especially of Bedford Level. On the Continent likewise he superintended the construction of the Gotha Canal, in Sweden, a navigation of about one hundred and twenty English miles, of which fifty-five are artificial canal. This navigation rises one hundred and sixty-two feet from the Lake Wenern, at one extremity, to the summit level, and falls three hundred and seven feet to the Baltic, at the other: the rise and fall are effected by fifty-six locks. The canal is forty-two feet wide at the bottom, and ten feet deep. Telford visited Sweden in 1808 to make the surveys and preliminary arrangements, and again in 1813, taking with him, under the sanction of the British government, several experienced workmen to instruct the natives in the works then in progress. Upon the completion of the canal a Swedish order of knighthood and other honours were conferred upon Telford.

The works executed by Telford under the Commissioners of Highland Roads and Bridges are of great importance. His survey was delivered to the Lords of the Treasury in 1802, and in the following year the Commission was appointed. Of the works committed to their superintendence Telford observes that "the whole of Scotland, from its southern boundary, near Carlisle, to the northern extremity of Caithness, and from Aberdeenshire on the east to the Argyshire islands on the west, has been intersected by roads; its largest rivers, and even inferior streams, crossed by bridges; and all this in the space of twenty-five years, under the same board, and (with some few exceptions) by the same individual Commissioners;" and all this was done under the direction of Telford alone. The practical operations under this Commission embraced about a thousand miles of new road, with twelve hundred bridges, in a mountainous and stormy region, of which five only, when Telford wrote his narrative, had required to be renewed. It should be explained that the operations of the Commission were not confined to the objects defined in its title, but embraced also the Glasgow and Carlisle road; the Lanarkshire roads; the improvement of several harbours, of which the principal are those of Peterhead, Banff, Fraserburgh, Portrose, Cullen, and Kirkwall; and the erection of several Highland churches and mansees under a parliamentary grant of 1823. Nor were these Highland churches and mansees the only buildings in which Telford acted as an architect; he had, many years previously, erected a church at Bridgenorth, from his own design.

In the improvements of the great road from London to Holyhead, under another parliamentary Commission, appointed in 1815, Telford had a further opportunity of carrying into effect his system of road-making. This road, and the works connected with it, is probably the most perfect specimen of Telford's skill as an engineer, and appears to have been regarded by him with much satisfaction. The Menai suspension-bridge, especially, is a noble example of his boldness in designing and practical skill in executing a work of novel and difficult character.

Among the other works of Telford are many bridges of considerable size, in which he adopted the important principle of making the spandrels hollow, and supporting the roadway upon slabs laid upon longitudinal walls, instead of filling up the haunches with a mass of loose rubbish, which may press very injuriously upon the arch, and often proves of serious inconvenience when the masonry of the bridge needs any repair. He employed this mode of construction in a large arch, of 112 feet span, erected over the Dee, near Kircudbright, in 1805 and 1806, and in many subsequent bridges. In his 'Life' will be found particulars of the ingenious alteration of Glasgow old bridge, by the addition of a projecting footpath of cast iron on each side, so as to leave the whole width of the stone structure for carriages; and of the new bridge designed by him for crossing the Clyde at Glasgow, and commenced in 1833; of the light and elegant Dean bridge, at Edinburgh; Path-head bridge, of five arches of 50 feet span, over a ravine about eleven miles south of Edinburgh; Morpeth bridge; Tewkesbury bridge, erected between 1823 and 1826, with a light iron arch of 170 feet span, and only 17 feet rise; the Over bridge at Gloucester, and many others. The last-mentioned bridge has an arch of peculiar form, previously employed by Perronet in the Neuilly bridge. The general body of the arch is an elliptical curve of 150 feet span and 35 feet rise, but the external arch stones at the sides of the bridge form segmental curves of the same span, but of only 13

feet rise: the two arches are coincident at the crown, and are connected by a vaulted form on the haunches of the bridge. "This complex form," observes Telford, "converts each side of the vault of the arch into the shape of the entrance of a pipe, to suit the contracted passage of a fluid; thus lessening the flat surface opposed to the current of the river whenever the tide or upland flood rises above the springing of the middle of the ellipse, that being at four feet above low-water; a precaution rendered necessary in this instance owing to the liability of the bridge to very trying floods."

Telford executed some important harbour-works at Aberdeen and Dundee; but his most striking performance of this class is the St. Katherine Docks, London. Owing to the very limited space which could be obtained, it was necessary to construct these docks of irregular forms, and to adopt unusual arrangements respecting the warehouses; and these arrangements, combined with the admirable machinery employed, reduced the time requisite for unloading a vessel in an astonishing degree. He constructed two docks, communicating with the river by a tide-lock 180 feet long and 45 feet wide, with three pair of gates, so that either one very large or two smaller vessels may pass the lock at one time; and steam-engines are provided, capable of filling the locks in a few minutes by pumping water from the middle of the river, so that vessels are enabled to pass in and out of the docks with great rapidity so long as there is a sufficient depth of water to receive them outside the lock. The cast-iron turn-bridge over this lock is an excellent specimen of that kind of machinery, being easily worked by two persons at each end, although it supports a carriage-way 24 feet wide. These docks were constructed much more quickly than is usual for works of such magnitude, and more quickly than the engineer could fully approve, although he admitted the urgency of the case as a justification of a course against which he could not but enter his protest. One of the latest engagements of Telford was the survey of Dover harbour, undertaken, in January 1834, at the request of the Duke of Wellington, as warden of the Cinque Ports, with a view to the adoption of measures to check the accumulation of shingle at the entrance.

In addition to the works which he executed himself, Telford was frequently applied to for his judgment upon important schemes, and in this way he made many reports to parliament. For many years he was employed to report upon all public works of engineering character for which loans were required of the Exchequer Loan Commissioners. Among his reports are several of considerable interest, especially upon proposed canals between London and Birmingham, and between the English and Bristol Channels, and on the supply of water to the metropolis, one of the last objects to which he devoted his attention. For some years before his death he had gradually declined as much as possible forming new engagements, and had made preparations for the publication of such a selection from his papers as might leave on record an authentic account of the important works in which for more than half a century he had been engaged. Having made arrangements with his executors for the completion of his work in case he should not live to finish it, he set about it with ardour, and had many of the plates completed, the manuscript in a very forward state, and arrangements made respecting the paper, type, &c. before his death. The book was not published until 1838, chiefly owing to the illness and death of Mr. Turrell, the engraver, and the difficulty of getting the plates completed. It forms a thick 4to volume, entitled 'Life of Thomas Telford, civil engineer, written by himself; containing a descriptive Narrative of his Professional Labours;' and it contains a preface and supplement, by the editor, Mr. Rickman, and a very copious appendix of illustrative reports and other documents. The plates, eighty-three in number, constitute a companion volume, in large folio, to which is prefixed a fine portrait of Telford, engraved by W. Raddon, from a picture by S. Lane. From this work the materials of the preceding notice of his principal works are chiefly derived; and from the supplementary notice, by Mr. Rickman, and some other sources, are collected the following additional biographical particulars.

Before leaving his native district, Telford acquired some distinction as a poet. He wrote in the homely style of Ramsay and Fergusson, and contributed small pieces to Ruddiman's 'Weekly Magazine,' under the signature of 'Eskdale Tam.' He wrote a short poem, entitled 'Eskdale,' descriptive of the scenes of his early years, which was originally published in a provincial miscellany, subsequently reprinted at Shrewsbury, at the request of his friends, and afterwards inserted in the appendix to his life. Another pleasing fragment of his composition is given at the end of the first volume of Dr. Currie's 'Life and Works of Burns,' published at Liverpool in 1800: it is an extract from a poetical epistle sent by Telford, when at Shrewsbury, to the Ayrshire poet, recommending him to take up other subjects of a serious nature, similar to the 'Cottar's Saturday Night.' He taught himself Latin, French, Italian, and German, so as to read them all with facility, and to converse readily in French: and he has left valuable contributions to engineering literature, in the articles Architecture, Bridge, Civil Architecture, and Inland Navigation, in Brewster's 'Edinburgh Encyclopædia,' in which work Mr. Rickman says he was a shareholder. He was well acquainted with algebra, but he held mathematical investigation in rather low estimation. In his early years he appears to have been tinctured with democratic opinions;

but after seeing the excesses of the French Revolution, he always studiously avoided conversing on political subjects. In all the relations of life he commanded respect and esteem; and he was particularly remarkable for his facility of access to the deserving, and especially for his ready communication of professional information to foreigners; a circumstance which, added to his connection with the Gottha canal and some other continental works, procured for him the highest respect on the continent of Europe. The Russian government frequently applied to him for advice respecting the construction of roads and canals; and the sixty-seventh plate in his atlas represents the details of a road designed by him from Warsaw to the Russian frontier. The emperor Alexander of Russia acknowledged his sense of his services on one occasion, in 1808, by sending him a diamond ring with a suitable inscription. Although he was not connected with the Institution of Civil Engineers at its formation, he accepted their invitation in 1820, and became their president; and from that time he was unremitting in his attention to the duties of the office, having become, by his partial retirement from business, a pretty regular resident in the metropolis. He ardently loved his profession, and was, observes Mr. Rickman, so energetic in any task before him, that all other motives became subordinate to it. He never married, and hardly had a fixed habitation until a late period of life. He was of athletic form, and reached the age of seventy without any serious illness; but in 1827 he was afflicted with a severe and painful disorder, after which he became subject to bilious attacks, under one of which he died, on the 2nd of September 1834, at his residence in Abingdon Street, Westminster, at the age of seventy-seven. He was buried in Westminster Abbey. The acquisition of property was always a secondary consideration with Telford; and in certain cases, especially of abortive speculations, he was ingenious in finding arguments for giving his assistance gratuitously. Even in increasing his charges as his reputation and experience increased the value of his services, he seems to have been actuated chiefly by a sense of what was due to others in his profession, whose remuneration was in some degree dependent upon his own. After his mother's death he had few family connections to provide for, and he had a great objection to raising any individual above his station in life, which is stated by his biographer as his reason for not leaving his property to relations. His will, printed in the appendix to his 'Life,' provides for the payment of handsome legacies to many personal friends; of 2000*l.* to provide annual premiums to be given by the Institution of Civil Engineers; and of 1000*l.* each in trust to the ministers of Westerkirk and Langholm, for the purchase of books for the parish libraries. His scientific books, prints, drawings, &c. are bequeathed to the Institution of Civil Engineers. Telford became a Fellow of the Royal Society of Edinburgh in 1803, and of that of England in 1827.

(*Life*, edited by Rickman; Chambers, *Scottish Biographical Dictionary*; *Annual Biography*, vol. xix.)

TELL, WILLIAM, a simple countryman of the village of Bürglen near Altorf in Switzerland, who lived towards the end of the 13th and during the first half of the 14th century. His early life is unknown, and his name would probably never have been heard of in history, if the tyranny of the Austrians had not called him from his obscurity. At the beginning of the 14th century, when Albert I. of Austria was endeavouring to suppress the spirit of freedom and independence in the three Waldstädte, Uri, Schwyz, and Unterwalden, and was using every means to add them to his family estates, he sent bailiffs (Landvögte) into these cantons, who perpetrated the most flagrant acts of tyranny, and treated the people like a conquered nation. The principal men of the three Waldstädte, in 1307, formed a league, which was headed by Walter Fürst, Arnold von Melchthal, and Werner Stauffacher. William Tell, who had married a daughter of Walter Fürst, also belonged to the league, though without taking any prominent part in it. The object of these men was gradually and secretly to increase their numbers, and to seize on any favourable opportunity for delivering their country from its oppressors, and if possible without bloodshed. While the confederates were daily gaining new strength, Hermann Gessler of Brunegg, one of the bailiffs of Albert I., who had taken up his residence in the canton of Uri, after various other vexatious acts, caused the dual hat of Austria to be raised on a pole in the market-place of Altorf, and commanded that every one who passed the pole should uncover his head as a token of respect for the house of Austria. William Tell with his little boy happened one day to pass the pole without paying any regard to the orders of the bailiff; and he was immediately seized and taken before Gessler. Tell had the reputation of being an excellent bowman, and Gessler devised a mode of punishment which should put his skill to a severe test. He ordered Tell's boy to be placed at a considerable distance from his father, and an apple to be fixed on his head. A crossbow and arrow were handed to Tell, who, without being observed, contrived to get two arrows, and he was ordered to shoot the apple from his own child's head. The tyrant added, that if he missed the apple, he should die. Tell succeeded in hitting the apple. Gessler had expected that Tell would kill or hurt his child, and in his disappointment he tried to find out some pretext for punishing the presumptuous peasant: he asked him why he had taken a second arrow? Tell boldly replied: "It was intended for thee, if the first had hit my child." The bailiff, delighted with this opportunity of satisfying his vengeance,

ordered Tell to be bound and to be conveyed in a boat across the lake of Waldstäden to the castle at Küsnacht, the residence of Gessler, who himself accompanied the prisoner. When the boat was on the lake, a storm arose, which became so violent, that the rowers were unable to manage the boat, and proposed to Gessler to unfetter Tell and allow him to assist them, as he was known to be an experienced boatman and well acquainted with every part of the lake. Tell was freed from his fetters, and taking the rudder in his hand, he steered the boat towards a part of the rocky shore, where a flat shelf jutted out into the lake. When he was near this spot, he seized his bow, jumped upon the projecting rock, and with his foot pushed the boat back into the waters. The storm however was abating, and Gessler and his men were safely landed. Tell knew the road by which the bailiff had to pass to Küsnacht, and lay in wait for him in a narrow defile. When Gessler came, Tell shot him through the heart. This happened towards the end of the year 1307. The event was followed by a series of wars between the Swiss and the Austrians, which did not terminate till the year 1499.

The conduct of Tell was highly disapproved of by his friends, as they wished to avoid bloodshed, and were not yet prepared to carry their plans into execution. After this adventure Tell sinks again into his former obscurity, though he is said to have taken part in the battle of Morgarten, and to have perished, in 1350, in the river Schächen during a great flood.

But the truth of the story of Tell, notwithstanding its being commemorated down to this day by chapels and other public monuments, has been doubted by several modern historians; while others, and among them Johann von Müller, regard it as a genuine history. The doubts about its truth have arisen from the fact that a similar story is told in the Wilkina Saga, and by Saxo Grammaticus, of a Danish king Harold and one Toko. The same story is also told of one William Tell and a count of Seedorf who had extensive possessions in Uri, but must have lived early in the 12th century. Another singular circumstance is that in the documents relating to the ancient Swiss confederacies, and published by Kopp at Luzern in 1835 (*'Urkunden zur Geschichte der eidgenössischen Bünde'*) there is no mention of a Gessler among the bailiffs who resided in the castle of Küsnacht. For these and other reasons, Grimm and Ideler (*'Die Sage vom Schusse des Tell,'* Berlin, 1826) consider the whole story of Tell as fabulous. There are however facts which seem to confirm the historical truth of at least the groundwork of the story. It was not many years after the death of Tell that it became customary for annual processions to visit the spot where Tell had escaped from the boat, and in 1388 the canton of Uri built the celebrated chapel of Tell near the same spot, and it is stated that among the visitors of that year there were one hundred and fourteen who had known Tell himself. His adventure is moreover told to the same effect by all the chroniclers who wrote at or soon after the alleged time of the occurrence.

TELLER, WILHELM ABRAHAM, son of Romanus Teller, minister of St. Thomas's church at Leipzig, was born in that city, on the 9th of January 1734. So early as at the age of twenty-two he attracted the attention of the theological world by a Latin translation of Kennicott on the Hebrew Text; and after being for a year or two preacher at the Nicolai church, very unexpectedly received the appointment of professor of theology at Helmstädt, from the Duke of Brunswick, in 1761. On entering upon his new office, he published as an inaugural disputation his '*Topice Scripturæ*,' which was considered by Superintendent Bahrle as heterodox in its opinions, that it was with difficulty he could be prevailed upon not to protest against Teller's appointment. Not deterred by this circumstance from expressing his own convictions, Teller published not long afterwards his '*Lehrbuch des Christlichen Glaubens*,' a production that caused no little noise at the time, exciting violent disapprobation in some quarters, and obtaining him friends in others. Just before this work appeared he had been invited to accept the professorship of theology at Halle, then vacant by the death of Baumgarten, and had declined it out of regard towards his patron the duke. But the persecution he continued to experience from those to whom his opinions had rendered him obnoxious made his residence at Helmstädt so disagreeable, that it was without the least reluctance he exchanged it, about three years afterwards, 1767, for Berlin, with the appointment of Oberconsistorial-Rath and Dean of Cologne. While it removed him from their immediate attacks, the distinction thus conferred upon him also in some measure awed his opponents; and at the same time he himself was brought into intercourse with some of the most learned and distinguished characters belonging to the reign of Frederick the Great. He was so far however from neglecting his professional duties or relaxing his zeal, that he continued to apply to his theological studies with the same ardour as before, and was instrumental in promoting many beneficial plans connected with church matters and education in public schools. The vast number of sermons and various theological writings published by him, attest not only his industry but his earnestness in the cause of religion, although his rejection of the dogmas ingrafted upon Scripture afforded his enemies and those who lay greater stress upon speculative points than upon religious conduct and feeling an opportunity to decry him as very dangerous, heterodox, and unsound. "Equally remote from all mysticism on the one hand,

and from dry metaphysical philosophising on the other, Teller," says Küttner, "addresses himself both to the reason and the heart, and while he touches the latter, carries conviction to the former." Others have also spoken of him in very high terms, not only as a writer and teacher of religion, but as a man—one no less estimable in private life than in his public capacity, and as exemplifying in himself that conduct which he sought to enforce upon others.

Besides his German writings, Teller published not a few theological and critical dissertations in Latin, and continued to employ his pen almost up to the time of his death; for though he was greatly worn out in body, his faculties continued active to the last. He died at Berlin, December 8, 1804.

TELLEZ, BALTHERAR, a native of Lisbon, was born, according to the statement of M. Weiss, in the 'Biographie Universelle,' in the year 1595. Moreri states that he joined the Society of Jesus in the year 1610. In the eulogistic letter of Dom Francisco Manoel, prefixed to Tellez's 'History of Ethiopia,' he is said (at least this seems to be the writer's meaning, which his affected style renders rather obscure) to have studied ten years and taught forty; to have paid attention to literature during the whole ten years of his career as student, but devoted two of them more especially to philosophy, and four of them to theology. He lectured upon belles lettres for twenty years, teaching in succession the most advanced literary classes in the Society's colleges at Braga, Evora, Lisbon, and Coimbra. He lectured two years on philosophy, but Manoel does not mention in what seminary. Lastly Tellez was eight years professor of theology in the college of St. Antonio at Lisbon. At a later period he was appointed master of the house of the professed Jesuits in Lisbon, and ultimately provincial of the order in Portugal. He died on the 19th of April 1675. The published works of Tellez are: 1, A compendium of philosophy, entitled 'Summa Universæ Philosophiæ, cum Quæstionibus quæ inter Philosophos agitantur,' published at Lisbon, in folio, in 1642; at Paris, in two quarto volumes, in 1644; and at Lisbon, in four octavo volumes, in 1652: 2, 'Chronica da Companhia de Jesus da Provincia da Portugal,' in two volumes, the first published in 1645, the second in 1648, both at Lisbon: 3, 'Historia geral de Ethiopia alta,' in one folio volume, at Coimbra, in 1660. He is also said to have left in manuscript a history of the Society's labours in the East. The historical works of Tellez are of more value than his philosophical treatise. The 'History of the Jesuits in Portugal' is a valuable contribution to the history of that accomplished and energetic order. The 'History of Ethiopia,' or, more properly, the history of the Jesuit Missions in Ethiopia, is indispensable to any one who wishes to study the history or comparative geography of Abyssinia. The first book contains an outline of the geography of Abyssinia, of its political divisions, government, and statistics, as they existed from the time that the Jesuit missionaries first entered the kingdom till their expulsion under Facillidas. The remaining five books are chiefly occupied with the narrative of missionary enterprise, but contain important contributions to geography, the general accuracy of which has, on the whole, been confirmed by the testimony of later travellers. In the preface Tellez gives an account of the authorities from whom he has compiled his book, Manoel d'Almeyda, Afonso Mendes, Jeronymo Lobo, and Pero Pays; and he has availed himself of their information both with taste and judgment.

TELLEZ, GABRIEL, better known under the name of TIRSO DE MOLINA, after Lope de Vega and Calderon the most prolific and the best dramatist of Spain, was born at Madrid probably about 1585. He was educated at Alcalá, and entered the church as early as 1613. In 1620 he became a monk in the convent of Nuestra Señora de la Merced, in which fraternity he filled the offices of chronicler, and inspector of Old Castile. In 1645 he was elected prior of the convent of Soria, where he died in 1648. In his dramatic career, which he pursued under his assumed name, he was a friend and follower of De Vega. In his 'Cigarrales de Toledo,' a collection of novels and comedies published in 1621, he states that he had then composed about three hundred comedies. Of these there remain to us only fifty-eight, together with some interludes and autos sacramentales; namely fifty-one comedies, and twelve interludes, in the rare collection of his 'Comedias,' published at Madrid in five volumes, in 1627, three in the 'Cigarrales,' and fourteen printed singly. His 'Autos' appeared under his real name, and were published at Madrid in 1635, as 'Deleitar aprovechando.' The name of Tirso de Molina was prefixed to his comedies, because, it is supposed, he deemed the production of them somewhat inconsistent with his clerical profession; for it is stated the disappearance of so many of his dramas is owing to their having been destroyed by order of the Inquisition on account of their indecacy. He is also the author of 'Un acto de contricion en verso,' printed at Madrid in 1635; and 'Genealogia des Condes de Sástago,' printed at Madrid in 1640. Though Tellez is an avowed adopter of De Vega's rules for the construction of the national drama, and a conscientious follower of his directions, he is not a servile imitator. While adhering to the national peculiarities, he has an individuality of his own, and a genial originality that can be compared properly with none. The prevailing merit of his dramas consists less in the artistical construction of his plots, or the development and unity of the whole, than in the variety and grace of the situations, the freshness and vividness of the characterisation, the well-blended

harmony of his images, the brilliance of his wit, and the poetry of his diction. His comedies in particular are fascinating from their pleasantries, which often assumes the form of a gentle irony; his 'graciosos,' or clowns, belong to the most humorous, the most delicate, and the most varied representations of the species, and his female characters are drawn with a masterly and energetic hand. The lyrical portions, which he is fond of introducing, are marked by a graceful naïveté. Considering his country and his profession, the boldness with which he attacks the follies and vices of the higher ranks, even ridiculing the ecclesiastical body, is not a little remarkable; but it is done with such good-humour that even the chastised could not be angry. The variety of his power is also remarkable. His epigrams are clever and well pointed: one on the waterless Manzanares, in which he compares it to the long summer vacation of the universities, is still quoted by Spaniards. In his dramas he is not less great in painting earnest and serious characters, as in his 'Prudencia en la mujer,' which ranks with the best works of the Spanish stage, in 'La mujer que manda en casa,' and in the 'Escarmientos para el cuerdo,' than in the deeply thoughtful and glowingly coloured mystic-ascetic drama 'El condenado por desconfiado,' which preceded Calderon's 'Devotion to the Cross,' and with which it may be favourably compared; or the sparkling epigrammatic 'Por el sóloano y el torno.' Many of his comedies are still favourites on the Spanish stage, among which are 'Gil de las calzas verdes,' which has been translated into German by Dohrn; 'La villana de la sagra;' 'No hay peor sordo que el que no quiere oír;' and 'El vergonzoso en palacio.' His Don Juan ('El burlador de Sevilla, ó el convidado de piedra') was imitated by Molière, and has since attained a world-wide celebrity. A selection of his comedies, published in Madrid, in 12 vols., between 1839 and 1842, edited by Don Juan Eugenio Hartzenbush, in the 'Teatro escogido,' was reprinted in one volume in 1850, and contains thirty-six of his dramatic pieces.

TEMANZA, TOMMASO, an architect who is better known by his writings relative to his art than by the buildings which he executed, was the son of an architect, and the nephew of another architect (Giovanni Scalfarotti), and was born at Venice in 1705. Having finished his mathematical studies in the school of Padre Niccolo Comini and the eminent Marchese Poleni, he was appointed—although then only twenty-two—one of the assistants in the Commission of Engineers, and in 1742 became the chief of that body on the resignation of Bernardino Zendrini, a few years before the latter's death (1747). His share in the hydraulic commission caused him for awhile to be involved in literary disputes, he having offended the people of Padua by a publication entitled 'Dell'antico Corso de' Fiumi in Padova e suoi Contorni;' wherein he asserts that their ancestors had attempted to turn the course of the Brenta. As an architect he had not many opportunities afforded him, for the period of Venetian grandeur and enterprise in art had passed away. He was however employed to execute one of the very few public edifices of any kind erected at Venice in the last century, namely the church of La Maddelena, a structure of the Ionic order, and which, though it may be said to be comparatively pure, is also somewhat feeble and insipid in design. His other principal architectural works are—the façade of Santa Margherita, at Padua; the Rotunda at Piazzolo, built at the expense of the Contarini family; and the bridge over the Brenta at Dolo. It is as a writer that Temanza is chiefly known, more especially by his 'Vite de' più Eccellenti Architetti e Scultori Veneziani,' 4to, Ven., 1778; which is one of the most copious as well as best-written works of the kind, not on account of the number of lives it contains, it being in that respect scanty, but for the unusual extent at which they are given. In fact several of them, Palladio, Sansovino, &c., had previously been published separately. Besides this literary production—an important contribution to architectural biography—he published the 'Antichità di Rimini,' folio, 1741; and left behind him another work, 'Degli Archi e delle Volte, e delle Regole generali dell' Architettura Civile,' which was first edited in 1811. There are likewise a great many letters by him on architectural topics in Ticozzi's edition of Bottari's 'Raccolta di Lettere sulla Pittura,' &c.

Temanza died at Venice, June 14, 1789, and was buried in his own church of La Maddelena. There is a portrait of him in Gamba's 'Galleria d'Uomini Illustri,' to which work, and to Comolli's 'Bibliografia Storia Critica dell' Architettura Civile,' we are indebted for some of the particulars here given.

\*TEMMINCK, C. J., a celebrated Dutch naturalist, who has published several important works on the natural history of the vertebrate animals. He was Director of the Academy of Arts and Sciences at Haarlem, and of the Museum of Natural History of the Pays Bas. One of his most important works is his 'Monographies de Mammologie, ou Descriptions de quelques genres de Mammifères dont les espèces ont été observées dans les differens Musées de l'Europe.' This work, which was published in parts, has contributed greatly to the clearing up of the difficulties with regard to the species of animals existing in the museums of Europe. M. Temminck is perhaps better known for his works on ornithology than any other department of natural history. In 1807 he published a 'Catalogue systematique du Cabinet d'Ornithologie,' embracing a short description of birds hitherto not known. In 1815 he published his 'Manuel d'Ornithologie,' and subsequently an 'Atlas des Oiseaux.' In the 'Linnæan Transactions,'

vol. xiii., is a paper by M. Temminck entitled 'Account of some New Species of Birds of the genera *Psittacus* and *Columba* in the Museum of the Linnean Society.' He has devoted great attention to the family of Pigeons, and in 1808 he published a work entitled '*Histoire naturelle Generale des Pigeons*.' He has also published numerous papers in the scientific journals and transactions of scientific societies.

TEMPESTA, or TEMPESTI, ANTONIO, a celebrated Italian battle and animal painter and engraver, was born at Florence in 1555. He became the scholar of John Strada or Stradanus, a Fleming, who was settled at Florence in the employ of the grand-duke, and who assisted him in the battles which he painted in the old ducal palace. Tempesta, after painting some years with Strada, whom he surpassed in many respects, visited Rome, and was employed by Gregory XIII., in the Vatican, where he painted, in small figures, in fresco, the Translocation of the Body of St. Gregory of Nazianzus, and some other subjects, which acquired him a great reputation among the artists and virtuosi of Rome, and procured him constant occupation from the Roman nobility. He executed several good works for the Cardinal Alessandro Farnese, at his villa at Caprarola, and some at Bassano for the Marquess Giustiniani. Tempesta resided chiefly at Rome, and died there in 1630, aged seventy-five. His reputation rests now almost entirely upon his etchings, although in his time he had a great name also as a painter. Lanzi terms him the first Italian who ever attained distinction in landscape and animal painting, and considers him at this period to have been unrivalled in his own style in Italy; he was however surpassed afterwards by Cerquozzi and Borgognone. Horses were his favourite subjects, and he excelled in battles, processions, cavalcades, hunts, and various field-sports. His designs, particularly his etchings, are remarkable for their spirit and boldness of conception, but they are at the same time coarse and heavy, and careless in their execution. He painted generally small figures; in large ones he was not successful, and he seldom attempted them; he however occasionally prepared large cartoons for tapestries, in the style of his master Strada. Tempesta's chief works in painting, besides those in the Vatican, already noticed, were a Slaughter of the Innocents, in the church of San Stefano Rotondo, at Rome; and two great cavalcades and state-processions, executed for the Cardinal Scipione Borghese, as friezes around the loggie of his palace on Monte Cavallo (afterwards Palazzo Bentivoglio), which, according to his biographer and contemporary Baglione, were alone sufficient to have ensured him a lasting reputation if he had never painted anything else. One represented a state procession of the Pope; the other, one of the Grand Turk. Tempesta has executed etchings of both these subjects. His invention was amazingly fertile; he has been equalled by few artists in the number of his designs. According to Gandellini, Tempesta etched 1519 plates, and about 500 have been engraved after him by other masters. He also engraved after other masters himself; he executed some battles and 40 plates of the Spanish story of 'The Seven Twin Sons of Tara,' after Otho Venius; Filibien, in his '*Entretiens sur les Vies des plus célèbres Peintres*,' has related the story at length, and has described the subject of each plate.

Tempesta's style of etching is peculiar and not agreeable; and although his designs are bold, and contain many grand parts, they are heavy, his style of design gross, his compositions generally confused, and his light and shade disposed without taste: his most valuable designs are his hunts and field-sports, and his studies of horses. Of his other pieces the following are among the best and the most celebrated:—

A set of 150 illustrations to the Old Testament, known as 'Tempesta's Bible;' 15 large figures of Christ, the Virgin, and the Apostles; a very large plate of the Victory of the Jews over the Amalekites, marked 'Hebræorum Victoria ab Amalechitis reportata,' the composition of which is spirited, but very confused; the Life of St. Antony, in 24 plates; 150 small plates from Ovid's '*Metamorphoses*;' 13 of the Labours of Hercules; and 7 of the Seven Wonders of the Ancient World. He etched many cavalcades and processions, and engraved also large plates from the following statues—they are however executed too much in his own style to be faithful representations of the originals:—Castor and Pollux, and the horses on Monte Cavallo, and the equestrian statue of Marcus Aurelius on the Capitol, at Rome; the equestrian statue of Cosmo I., by John of Bologna, at Florence; that of Henri IV. of France, at Paris, which was destroyed in 1792; and one of Henri II. of France. The last statue however never existed, for a figure of Louis XIII. was placed upon the horse which was originally designed for a statue of Henri II., who was killed at a tournament. Tempesta's print bears the following inscription: 'Effigies equi aenei operis Dan. Ricci, Volterrani, fieri jussit Reg. Maria ob memor. Reg. Henrici II. F. M. sui viri, qui obiit in tornamentis.'

A spirited design of the Battle of the Centaurs and the Lapithæ, by Tempesta, was cut in a large size in wood, by Jerome Parabole. As a man Tempesta appears, according to his contemporary Baglione, to have been highly accomplished in every respect, and to have been universally esteemed by his companions. There is a long list of the works of Tempesta in Heineken's '*Dictionnaire des Artistes*,' &c., and in the '*Peintre Graveur*' of Bartsch.

TEMPESTA, CAVALIERE, called also in Italy, PIETRO MULIER or DE MULIERIBUS. This artist, who is sometimes confounded with

Antonio Tempesta, was a native of Holland, although better known in Italy, and his real name was Peter Moly. Fiorillo says he was the son of a landscape-painter of the same name, and was born at Haarlem in 1637. He was called Tempesta through his skill in painting sea-storms and similar subjects, in which he was excellent, and in some respects rivalled Backhuysen: he was also nearly equally excellent as an animal-painter, especially of wild animals; and some have said that had he remained in his own country and pursued entirely such subjects he would have rivalled Rubens and Snyders in that department. There is yet another comparison to make respecting him: he at least rivalled the infamous Castagno in moral depravity. Pascoli, who has written an account of Tempesta in his '*Lives of the Painters*,' &c., says that his father was a merchant, and that he intended to bring up his son to his own business. Young Peter was however naturally so fond of drawing, that when a boy, instead of going to school, he used, unknown to his parents, to spend his time in sketching upon the sea-side, sometimes drawing the sea and shipping off the coast, and at others cattle grazing near the shore. He was eventually allowed to take his own course, but nature appears to have been his only or at least chief master. After painting with great success in various cities of the Netherlands, he became acquainted at Antwerp, in about his thirtieth year, with a monk of the barefooted Carmelites, who converted him from Calvinism, in which he had been brought up, to Popery, and Tempesta was thence strongly induced to make a journey to Rome. At Rome he found a valuable patron in the Duke Bracciano, and his success was beyond his expectations. He received so many orders for pictures that he was obliged to employ assistants, and the sister of one of these, his favourite, known as Tempestino, became his wife. He however never appears to have lived in great amity with her, but the fault is said to have been Tempesta's. The story of the deep tragedy which followed is told differently by Pascoli and the writer in the '*Museo Fiorentino*,' in which there is a Life of Tempesta, but there is no discrepancy in their statements of the main fact. Tempesta made up his mind to leave Rome, it is said, in order to get rid of his wife, and he requested permission of the Duke Bracciano to depart: the duke consented, but unwillingly, yet he presented Tempesta with a cross and a chain of gold, and knighted him before his departure. Tempesta left Rome, and promised to send for his wife as soon as he was settled; he went round by Venice and Milan, where he made a short stay, to Genoa. In Genoa he was as successful as he had been at Rome; but soon after his arrival he became enamoured of a beautiful Genoese lady, and being unable to obtain possession of her except by marriage, he resolved upon marrying her, and he got over the obstacle of already having one wife in the following infamous manner:—He despatched a hired assassin to Rome, with a letter to his wife, ordering her to accompany the bearer immediately to Genoa. His wife, who knew her husband's character, and disliked the messenger, delayed going; but on a second summons from her husband she complied, and commenced the fatal journey. The unfortunate woman was murdered by the ruffian, her companion, at Sarzana. The affair was not long a secret, and Tempesta, who must have already married the Genoese lady, according to Pascoli, was arrested upon suspicion, was tried, convicted, and condemned to death. The sentence was however not carried into execution: Tempesta obtained a respite, or, according to the other account, had sufficient interest to obtain a commutation of sentence from that of death to one of perpetual imprisonment.

Pascoli says he was set at liberty again, after remaining five years in prison, through the intercession of the Count di Melgar, governor of Milan; according to the other story, he obtained his liberty during the bombardment of Genoa by Louis XIV., when the prisons were thrown open, having suffered an imprisonment of sixteen years. He was however busily employed with his pencil during the whole time, and he found it difficult to satisfy the demand for his pictures. On recovering his liberty he went to Milan, and there established himself, where, through his unenviable notoriety, his success was even greater than it had been previously either at Rome or at Genoa. He was in the receipt of a great income, lived in splendid style, and even kept a private menagerie, containing many varieties of wild animals, solely for the purpose of painting from them. His conduct at this period of his life was still consistent with his previous immorality; for, though enjoying the greatest affluence, he not only deserted his second wife, but left her destitute, according to Pascoli; yet how such conduct could be suffered by the laws is difficult to understand, and we are tempted to believe that here, as elsewhere, the narrative has been strongly coloured. He had several mistresses, and he acquired the cognomen of Mulier or de Mulieribus by his profligate habits: Peter Mulier is the name by which he is best known in Italy. As he grew old his powers of painting forsook him, and his means accordingly gradually diminished; and as he was too improvident to make any provision for his old age, his affairs became embarrassed at the end of his life. He died of a fever in 1701, aged sixty-four, in a state of poverty when compared with his former affluence. His pictures are numerous in the collections of the north of Italy: those which he painted during his imprisonment are generally accounted his best.

TEMPLE, SIR WILLIAM, an eminent statesman, diplomatist, and writer, was born at Blackfriars, in London, in the year 1628, and was the eldest son of Sir John Temple, who was Master of the Rolls

in Ireland, and author of a History of the Irish Rebellion, which began in 1641. He was educated first by his uncle, Dr. Henry Hammond, a learned divine and zealous royalist; and was afterwards, on his uncle being turned out of his living by the parliament, sent to a school at Bishop-Stortford, and, at the age of seventeen, to Emmanuel College, Cambridge, where the celebrated Cudworth was his tutor. He is said by his sister, Lady Giffard, who wrote a memoir of him, to have passed a gay idle life at Cambridge, and after having been there about two years he went away without a degree. He then went abroad, and having spent two years in France, and visited Holland, Flanders, and Germany, he returned to England, skilled in the French and Spanish languages. As he was about to start on his travels he met, in the Isle of Wight, the young lady to whom, after many delays and difficulties, arising out of want of fortune and the opposition of the friends of both, he was eventually united. She was the daughter of Sir Peter Osborne, a devoted adherent of Charles I., and a great sufferer by his devotion. Letters of hers which are preserved show her to have been a very superior woman: she remained faithful to Temple through a long engagement, amid many and great discouragements, and at last, after the death of her father, and after six years' waiting, they were married in 1654. It appears that among many offers which she rejected for Temple was one from Henry Cromwell.

Temple was trained to no profession, though his father was poor, independently of his appointment as Master of the Rolls in Ireland, and when deprived of this for some years during the civil wars, was exceedingly hampered in his finances. Sir John Temple was restored to this appointment in 1653, the year before his son's marriage; and his son, after his marriage, resided with him in Ireland. Under his father's roof in Dublin, or in a country-seat in the county of Carlow, Temple passed five years, which were divided between literary pursuits and country business, and which were marked by the birth and death of five children. In 1660 Temple was chosen, without solicitation or even previous knowledge, member of the Irish convention of that year for the county of Carlow.

After the Restoration he was re-elected for the same county in the first regular parliament that was called: he had his father for his colleague, and a younger brother was member for the city of Carlow. He appears to have been a very active and useful member of parliament. In July 1661 he was one of the commissioners sent to wait on the king and urge several measures affecting the interests of Ireland. On the prorogation of the parliament in 1663 Temple went to reside in England. He carried an introduction from the Duke of Ormond to Lord Arlington, secretary of state, who conceived a great fondness for him, and procured him to be appointed, in 1665, on a secret mission to the Bishop of Münster. The object of this mission was to watch over an invasion by the Bishop of Münster of the United Provinces, towards which England, then at war with the Dutch, had guaranteed a subsidy; and though the bishop, who had made the first advances to England, went off from his engagement, and, in fear of France, concluded a separate treaty with the Dutch, Temple was not in any way to blame for this failure of the object of his mission. Indeed his employer was so satisfied with the way in which he had acquitted himself in his first diplomatic employment, that he was appointed in the same year, through Lord Arlington's influence, resident at the vice-regal court of Spain at Brussels.

Temple's residence at Brussels for two years presents no feature of peculiar interest. It was his business at first to watch over the neutrality of Spain in the Dutch war, and assist in cultivating a good understanding between Spain and England, with a view to a treaty which was then being negotiated at Madrid, but which never came to pass, and subsequently to bring about peace with the United Provinces and with France. This last object was accomplished in July 1667, by the treaty of Breda, which however Temple had no part in negotiating, and the mode of bringing about which he had not altogether approved of. In 1666 Temple's services had been rewarded, without any solicitation on his part, by a baronetcy.

In the close of the year 1667 Temple received orders from Arlington to repair to the Hague, to negotiate a treaty against France, and for the protection of the Spanish Netherlands from that power; and by his energy, judgment, and address the celebrated Triple Alliance was concluded on the 23rd of January 1668. England, Holland, and Sweden bound themselves by this alliance to bring about peace between France and Spain, and to prevent France from entering the Low Countries. Temple had thus achieved an object which he had had at heart, even before the treaty of Breda, so favourable to French views, a blow to the ambition of Louis XIV. The successful conclusion of this treaty established Temple's diplomatic fame, and was of the first importance to England and Europe.

Temple was next appointed ambassador at Aix, where the negotiations for peace between France and Spain, in pursuance of the Triple Alliance, were to be carried on. On the conclusion of the peace of Aix he was appointed ambassador at the Hague. Here he continued, carrying out the policy of the Triple Alliance, till September 1670, when a complete change having been silently worked in the councils of Charles II., and the celebrated secret treaty having been made with France, Temple was ordered home, found himself on his arrival in England no longer in the confidence of Arlington, and in the summer of 1671 was dismissed from his post. There was a rumour that

Temple's dismissal had been made a condition by the French government. (Temple's 'Works,' ii. 179.) He now retired to Sheen, and meditated never again returning to public life, saying that "he had been long enough in courts and public business to know a great deal of the world and of himself, and to find that they were not made for one another."

During this retirement Temple devoted himself to gardening, the improvement of his house at Sheen, and literature, and published several of the works on which his reputation as a writer rests; among them, the 'Observations upon the United Provinces,' published in 1672. Temple was summoned however from his literary retirement in the summer of 1674, to conclude the second Dutch war, and he obeyed the summons. He was on the point of starting for the Hague, as envoy and plenipotentiary for this purpose, when the Spanish ambassador in London received full power to negotiate there, and in three days the treaty of Westminster was concluded. Temple was now offered the embassy to Spain, which, at his father's wish, he refused. He was very soon after appointed again to the Hague, as ambassador extraordinary, and the next year ambassador to the congress at Nimeguen. The peace of Nimeguen, concluded in the beginning of 1679, ill carried out the views which Temple assiduously laboured to establish; and he was glad to avail himself of a point of form for the purpose of withholding his signature to the treaty.

Temple now returned to England to receive an offer of the post of secretary of state, which he refused. He was much consulted by the king, who had just lost the services of Lord Danby; and in the ministerial difficulties which followed upon Danby's impeachment and commitment, Temple submitted to the king a plan of a council, which the king adopted; not always following Temple's opinions however as to the persons of whom it should be composed, and, above all, in defiance of his advice, placing Lord Shaftesbury at the head of it. This council was not long-lived, but it did not die until after its author had been removed from it. [CHARLES II.]

Thus ended Temple's political career. The remainder of his life was passed in the country, and divided between learning and rural pursuits. He now composed his 'Memoirs.' He died on the 27th of January 1699. No particulars of his death have been transmitted to us.

After the Revolution of 1688, Sir William Temple refused office from William III., who was very anxious for his counsel and for the authority of his name. But his son, with his permission, accepted the place of secretary at war, and within a week after committed suicide.

Neither as statesman nor as author does Sir William Temple occupy a foremost place; but in both characters he is more than respectable. The following is a happy description, by Sir James Mackintosh, of his character as a diplomatist and statesman:—"He was a most admirable person. He seems to be the model of a negotiator, uniting politeness and address to honesty. His merit as a domestic politician is also very great: in an age of extremes he was attached to liberty, and yet averse from endangering the public quiet. Perhaps diplomatic habits had smoothed away his turbulence too much for such a government as England." ('Life of Mackintosh,' ii. 199.) Dr. Johnson, speaking of Sir William Temple as a writer, has said that "he was the first writer who gave cadence to English prose."

There are two or three biographies of Temple; one by Abel Boyer, published about fourteen years after his death, and another by his sister, Lady Giffard, prefixed to the edition of his works published in 1731 in 2 vols. folio. A very laboured and somewhat diffuse life was published in 1836, in 2 vols. 8vo, by the late Mr. Peregrine Courtenay, and to this work all who wish for the fullest information as to Temple's life will resort. The best edition of Temple's works is that published in 1814 in 4 vols. 8vo.

\*TENERANI, PIETRO, CAVALIERE, an eminent Italian sculptor, was born towards the close of the last century. He began his studies under Canova at Rome, but owes more perhaps to the instruction and example of Thorwaldsen, in whose atelier he worked for some time, and upon whose departure he succeeded to the highest place among the sculptors of Rome. His first work was a marble statue of 'Psyche with the box of Pandora,' executed in 1819, and now in the Lenzi palace at Florence. Since then a vast number of Venuses, Cupids, Paches, and other deities and personages from Greek and Roman mythology have proceeded from his chisel, and they have always been admired for their grace and beauty. Of many of these he has been required to produce more than one repetition. But he has also executed numerous religious works. Such are his 'Christ on the Cross,' his large relieve of the 'Descent from the Cross' in the Torlonia Chapel; his 'Martyrdom of Eudorus,' &c. His monumental statues are also numerous, and several are of colossal size; they are to be found in the cities of the New World as well as in many of the European capitals. Among them are the statues of Leuchtenberg and Von Orloff at St. Petersburg; the bronze colossal statue of Ferdinand II. of Naples, at Messina, cast at Munich in 1845; of Ferdinand III., at Pisa; of Bolivar for Columbia; and of Count Rossi, who was killed at Rome in 1848. Other celebrated statues by him are those of St. John the Evangelist in the Church of St. Francesco di Paolo at Naples, of St. Ligorius in the Vatican, of St. Paul, St. Benedict, &c.; and he has executed numerous busts. Tenerani has received commissions from the princes and nobility of almost every country in Europe. Many of his works are in

the palaces and mansions of this country, including his 'Flora,' executed for her Majesty, and 'Cupid extracting a Thorn from the foot of Venus,' in the possession of the Duke of Devonshire at Chatsworth, and of which the Emperor of Russia has a duplicate. Tenerani is professor of sculpture in the Academy of St. Luke, Rome, a member of the French Institute, and of the Academies of Berlin and Munich, &c.; and he was in 1842 made a Knight of the order of St. Michael by King Ludwig of Bavaria. His son Giambattista Tenerani is also a sculptor of merit.

TENIERS, DAVID (the Elder) was born at Antwerp in 1582. He had the good fortune to study painting under Rubens, who highly esteemed him for his promising genius. Besides the benefit of the instruction of that great master, he had the advantage of learning his manner of preparing his grounds and managing his materials. It is said that he began by painting pictures on a large scale: but having gone to Rome with the intention of improving himself in the higher branches of the art, he there contracted an intimate friendship with his countryman Adam Elsheimer, whose exquisitely-finished cabinet pictures were greatly esteemed, and he studied with him several years, painting only small pictures. It was here that he acquired the neatness of pencilling for which his works are esteemed, and which, with the knowledge of colour acquired under Rubens, gives to his works so great a charm.

Returning to his native country after ten years' absence, he devoted himself with the greatest ardour to the practice of his art, and chose the familiar scenes of ordinary Flemish life, such as merry-makings, weddings, the interior and exterior of public-houses, rural games, chemists' laboratories, and grotesque subjects, such as the Temptation of St. Anthony and the like. These subjects he treated with the utmost truth and fidelity to nature. His colouring, his touch, his design, the pleasing distribution of light and shade, the skilful composition of his groups, procured him great reputation and constant employment: every lover of the art was eager to possess some of his works. He may in fact be considered as the inventor of a new manner, which was followed and carried to a still higher degree of perfection by his son. He died at Antwerp in the year 1649, at the age of sixty-seven.

TENIERS, DAVID (the Younger) was born at Antwerp in 1610, and received his first and principal instruction from his father. Some authors have affirmed that he left his father to become a disciple of Adrian Brouwer, who however was only two years older than himself, and that he had the advantage of the precepts of Rubens. Others have pretended that he was likewise a pupil of Elsheimer, who died when Teniers was only ten years old. He adopted, as we have observed, the subjects and style of his father; but, with a more fertile imagination, he produced compositions much more varied and ingenious; his colouring is more vivid, rich, and transparent, and the facility of his execution is enchanting. He studied nature in her varied forms with the most critical attention. He possessed, in perfection, what we have heard one of the brightest ornaments of the British school call "the art, or rather the gift, of seeing." Hence the truth and nature of his pictures, which look almost like reflections in a convex mirror. His pencil is free and delicate; the touching of his trees light and firm; his skies are admirably clear and brilliant, though not much varied. The expression of his figures, in every varying mood, of mirth or gravity, good or ill humour, is strongly marked, striking, and natural; he represented them however precisely as he saw them before him, but was perhaps inferior in delineation of character to Jan Steen or Wilkie.

It is remarkable that at the commencement of his career very little regard was shown to his merit, so that he was often obliged to go in person to Brussels to dispose of his pictures. But he was not long neglected. The Archduke Leopold having seen some of his pictures, immediately distinguished him by his patronage, appointed him his principal painter and gentleman of his bedchamber, presented him with a chain of gold to which his portrait was affixed, and gave him the direction of his gallery of paintings, which contained works of the most eminent masters of the Italian and Flemish schools. Teniers, who possessed an extraordinary talent in imitating the works of other artists, made copies of this gallery, in which the touch, the colouring, and the manner of the several painters, however different from each other, were reproduced with such a deceptive fidelity, that he acquired the name of the Proteus of painting. Some writers have objected that his figures are too short and clumsy, and that there is too much sameness in their countenances and habits: but it must be remembered that he designed every object as he saw it; and the charm which his art has thrown on scenes flat and insipid in their forms, even subjects low, barren, and commonplace, justly excites the admiration of all lovers of the art, and the extraordinary prices which are given for his works in every part of Europe are an incontestable proof of the universal admiration and esteem in which they are held. This circumstance is the more deserving of attention, as his works, far from being scarce, are extremely numerous: his extraordinary facility of execution and the great age to which he attained enabled him to produce such a number of pictures, that he was used to say in joke that to hold all his paintings (though they were of such small dimensions) it would be necessary to build a gallery two leagues in length. It is said that his thinly-painted pictures were often begun and completed at a single sitting. It is worthy of remark that while of all the Flemish

painters his works are the most popular, he was habitually conversant with the higher classes of society. The suavity of his manners and his irreproachable conduct secured him the esteem of all his countrymen. Besides the Archduke Leopold, he was honoured with the favour and protection of Christina, queen of Sweden, the king of Spain, Don John of Austria, who became his pupil, the Prince of Orange, the bishop of Ghent, and other eminent personages. He often assisted the landscape-painters of his time by inserting figures into their pictures, and many works of Artois, Van Uden, Braughel, and others derive additional value from this circumstance. The galleries and collections in England contain a great number of his finest works. The National Gallery (1857) contains four paintings by him; 'A Music Party,' 'Boors Regaling,' 'The Misers' (or Money Changers); and 'Players at Trio-trac.' He died at Brussels in the year 1694, at the advanced age of eighty-four years.

TENISON, THOMAS, an eminent English divine, who was advanced by his own deserved reputation for piety, charity, learning, and liberality, to the highest station in the English church. He was born in 1636, at Cottenham in Cambridgeshire, was the son of a clergyman, and was educated in the grammar-school at Norwich, from whence he passed to Corpus Christi College, Cambridge, where he was admitted in 1653, and took his bachelor's degree in 1657. The university was then in the state to which it had been brought by the parliamentary commissioners, and the turn of mind of Tenison not according with what at that time was expected from persons undertaking the ministry, he for a time turned to the study of medicine; but about 1659 he was privately ordained in the episcopal method then proscribed by the government of the time. The ordination was performed at Richmond in Surrey by Dr. Dappa, the expelled bishop of Salisbury. The restoration of the king, and with it of the episcopal church, soon following, he was made minister of St. Andrew's Church in Cambridge, in which situation he gained much credit by his attention to his parishioners during the time of the plague, in 1665. He had other preferment in the country, as the church of St. Peter Mancroft in Norwich, and the rectory of Holywell in Huntingdonshire. This brings down his history to the year 1680, when, being then doctor in divinity, he was placed on a more conspicuous stage, being presented by King Charles II. to the living of St. Martin's in the Fields.

In this public situation he acted with great prudence, and with a liberality which emulated the munificence of the clergy of earlier times, giving more than 300*l.* to the poor of his parish in the time of the distress occasioned by the hard frost of 1683, and endowing a free-school, and building and furnishing a library. In 1685 he discharged with singular discretion the difficult duty of attending the Duke of Monmouth previous to his execution. In his politics he was a Whig, and a favourer of the Revolution, and was accordingly early marked out by King William for advancement in the church. In 1689 he was made archdeacon of London, and in 1691 bishop of Lincoln. This large diocese, which had been too much neglected, he brought into order. In 1694, on the death of Dr. Tillotson, he was made archbishop of Canterbury, in which high dignity he remained for twenty years. He died on the 14th of December 1715, and was interred in the parish church of Lambeth.

A large account of his life was published soon after his death, without the name of any author in the title-page, but evidently written by a person possessed of good information, and who was fully sensible to his merits. He speaks of him thus:—"And as he was an exact pattern of that exemplary piety, charity, steadfastness, and good conduct requisite in a governor of the church, so perhaps since the primitive age of Christianity and the time of the Apostles there has been no man whose learning and abilities have better qualified him to discharge and defend a trust of that high importance." The library which he founded in the parish of St. Martin's, though it has been greatly neglected, still exists; and he may be regarded as the founder of the library in the cathedral church of St. Paul, having presented two hundred and fifty pounds to make up four hundred and fifty, which the dean and residentiaries gave for the libraries of two clergymen bought by them in 1707. His will contains many munificent bequests for charitable and religious objects.

Archbishop Tenison has left no writings behind him which can be said to make part of the general literature of the country, or to establish for him a literary reputation. Yet he published several treatises, mostly connected with the religious and political controversies of his age.

\*TENNENT, SIR JAMES EMEKSON, KNT., LL.D., is the son of William Emerson, Esq., a merchant of Belfast, by his wife, a daughter of William Arbuthnot, Esq., of Rockville, county Down. He was born at Belfast on the 7th of April 1804, and after being educated at Trinity College, Dublin, he was called to the bar at Lincoln's Inn in 1831, but never practised. Previous to this time he had appeared as an author, his first work being a brief account of his Travels in Greece in 1825; his second, 'Letters from the Ægean,' in two volumes, 1829; and his third, 'A History of Modern Greece,' in two volumes in 1830. All these works were published under his name of Emerson. But, having married, in June 1831, Letitia, daughter and heiress of William Tennent, Esq., of Tempo House, county Fermanagh, a banker in Belfast, and his wife having succeeded to the property by the death of her father in the following year, Mr. Emerson assumed the additional

name of Tennent, by which he has been since known. In the same year, 1832, he was elected M.P. for Belfast, and again for the same place in 1835. He was rejected at the general election of 1837, but seated on petition; and again returned in 1841, but unseated on petition. He regained his seat in 1842, and held it till 1845. He sat for Lisburn in 1852. From September 1841 to July 1845 Mr. Emerson Tennent held the office of Secretary to the India Board; in July 1845, he accepted the appointment of Civil Secretary to the Colonial Government of Ceylon,—he was knighted prior to going out to Ceylon,—and he remained there till December 1850; after his return, and while member for Lisburn, he held from February till November 1852, the office of Secretary to the Poor-law Board; and since November 1852 he has been one of the joint Secretaries to the Board of Trade. While, thus since 1832 leading an active parliamentary, and since 1841 an active parliamentary and official life, Sir James Emerson Tennent has continued also to appear occasionally as an author. The following are his chief publications in addition to those mentioned above:—‘Belgium,’ in two volumes, 1841; ‘A Treatise on the Copyright of Designs for Printed Fabrics; with considerations on the necessity of its extension, and notices of the state of Calico-printing in Belgium, Germany, and the States of the Prussian Commercial League,’ 1841; ‘Christianity in Ceylon, with an historical sketch of the Brahmanical and Buddhist Superstitions,’ 1850; and ‘Wine; its Use and Taxation: an enquiry into the operation of the Wine Duties on Consumption and Revenue,’ 1855.

TENNANT, SMITHSON, a distinguished chemist, was born at Selby, in Yorkshire, November 30, 1761, and died February 22, 1815. He was the only child of the Rev. Calvert Tennant, of whom little is known except that he had been a Fellow of St. John's College, Cambridge, and was a friend of Dr. Rutherford, Regius Professor of Divinity in that university. While very young he gave many proofs of a particular turn for chemistry and natural philosophy, and after quitting school he was very desirous of completing his chemical studies under the immediate instruction of Dr. Priestley, who was then enjoying a high reputation for the extent and variety of his discoveries in pneumatic chemistry, but this was found impracticable in consequence of the previous engagements of Dr. Priestley. In 1781 he went to Edinburgh with the intention of studying medicine. Of his companions, occupations, or studies while in Scotland, little is known, except that he received instruction from Dr. Black; he did not however continue long a member in that university, for in October 1782 he was admitted a member of Christ's College, Cambridge, where he then began to reside.

In the summer of 1784 he travelled into Denmark and Sweden, with the intention, partly of examining the mines of the latter country, but chiefly with the view of becoming personally acquainted with Scheele, for whom he had conceived a high degree of admiration, especially on account of the simplicity of the apparatus which he employed in his chemical researches. In a year or two afterwards he went to Paris, where he became acquainted with some of the eminent chemists; thence he went to Holland and the Netherlands, after having recovered from a serious illness with which he was seized during his residence in the French capital.

In January 1785, he was elected a Fellow of the Royal Society, and in 1786 he left Christ's College and removed to Emmanuel College; in 1788 he took his degree as bachelor of physic, and soon after quitted Cambridge and came to reside in London. In 1796 he took a doctor's degree at Cambridge, but as his fortune was independent, he relinquished all idea of practice as a physician. In 1813 he was elected Professor of Chemistry at Cambridge, having in the previous year delivered, with great success, a few lectures on the principles of mineralogy to some of his friends.

In the month of September 1814, Mr. Tennant went for the last time to France, and on his return home on the 20th of February 1815, he arrived at Boulogne with Baron Bulow, in order to embark there. They embarked on the 22nd, but were forced back by the wind, and meant to embark again in the evening: in the meantime they took horses and went to see Bonaparte's pillar, about a league off, and going off the road on their return to look at a small fort, of which the drawbridge wanted a bolt, they were both thrown, with their horses, into the ditch. Baron Bulow was merely stunned, but Mr. Tennant's skull was so severely fractured, that he died within an hour after, February 22, 1815.

The following character of Mr. Tennant is chiefly copied, with some variations, from the ‘Annals of Philosophy,’ vol. vi., and the writer of this brief notice, having well known the subject of it, is able to testify to the accuracy of the statements in all the more important particulars. Mr. Tennant was tall and slender in his person, with a thin face and light complexion. His appearance, notwithstanding some singularity of manners, and great negligence of dress, was on the whole striking and agreeable. The general cast of his features was expressive, and bore strong marks of intelligence; and several persons have been struck with a general resemblance in his countenance to the well-known portraits of Locke. Of his intellectual character, the distinguishing and fundamental principle was good sense; a prompt and intuitive perception of truth, both upon those questions in which certainty is attainable and those which must be determined by the nicer results of moral evidence. In quick penetration, united with soundness and accuracy of judgment, he was perhaps without an

equal. He saw immediately and with great distinctness where the strength of an argument lay, and upon what points the decision was ultimately to depend; and he was remarkable for the faculty of stating the merits of an obscure and complicated question very shortly, and with great simplicity and precision. The calmness and temper, as well as the singular perspicuity, which he displayed on such occasions, were alike admirable; and seldom failed to convince the unprejudiced, and to disconcert or silence his opponents.

The ‘Philosophical Transactions’ contain eight papers by Mr. Tennant:—1, ‘On the Decomposition of Fixed Air,’ 1791; 2, ‘On the Nature of the Diamond,’ 1797; 3, ‘On the Action of Nitre upon Gold and Platina;’ 4, ‘On the different Sorts of Lime used in Agriculture,’ 1799; 5, ‘On the Composition of Emery,’ 1802; 6, ‘On two Metals found in the Black Powder of the solution of Platina,’ 1804; 7, ‘On an easier Mode of procuring Potassium than that which is now adopted;’ 8, ‘On the Mode of producing a Double Distillation by the same Heat.’ In the first volume of the ‘Transactions’ of the Geological Society, 1811, he published the analysis of ‘A Volcanic Substance containing the Boracic Acid.’

In his experiments on the diamond, he proved it to be pure carbon, by heating it in a gold tube with nitre; the diamond was converted into carbonic acid by combining with the oxygen of the decomposed nitric acid, and this united with the potash of the nitre; by the evolution of the carbonic acid, the quantity of carbon, in a given weight of diamond, was estimated. In his paper on ‘Limestones,’ he showed that the presence of carbonate of magnesia in them rendered them prejudicial when calcined and applied as a manure. In the paper on ‘Emery,’ he proved that this substance is merely a variety of corundum, or sapphire. The two metals which he found in native platina were osmium and iridium. With respect to these memoirs it may be observed that they all bear the impress of originality, and that the operations which they include and describe are of the greatest possible simplicity, and stated in the plainest language.

TENNANT, WILLIAM, was born in 1785 at the little fishing-town of Easter Anstruther, in the county of Fife, Scotland, and was educated in the town-school, where he had for a fellow-student the afterwards celebrated Dr. Chalmers. In 1799 he was sent to the University of St. Andrews, and acquired some knowledge of and a taste for the classical languages from the instruction and lectures of Dr. Hill and Dr. Hunter, but circumstances prevented his continuance for more than two sessions. At an early period of life he had lost the use of his feet, and could only move by the assistance of crutches. He was thus precluded from most active employments, and in 1801 he became clerk to his brother, who carried on the business of a corn-factor at Glasgow, whence he subsequently removed to Anstruther. Whilst in this situation he most zealously prosecuted his studies. He made himself acquainted with the best classics in verse and prose; with Aristotle, Camoens, and Wieland, in modern languages; and with Hebrew; nearly all of which was accomplished by his own unaided efforts. While residing in his father's house at Anstruther, and painfully aware of approaching commercial embarrassments, he wrote, and published anonymously in 1812, in his own little town his chief poem, ‘Anster Fair.’ It is a humorous fairy tale, adopting Maggie Lauder for its heroine, describing the scenery, the customs, and characters to be found and observed at Anstruther Fair and in the neighbouring towns and villages, written with a slight sprinkling of the Scottish dialect, in the ottava rima, which had fallen into disuse, though soon afterwards adopted by Lord Byron, whose example was quickly followed by others. The poem made but little way with the public at first, indeed it was hardly made known; but it attracted the attention and praise of A. F. Tytler, Lord Woodhouselee, and in 1814 a highly favourable review of it appeared in the ‘Edinburgh Review’ from the pen of Mr. Jeffrey. In his own narrow circle however it had made an impression in his favour, and probably assisted in procuring him the appointment in the autumn of 1813 of parish schoolmaster of Dunino, a rural upland district between Anstruther and St. Andrews, of which the income was about 40*l.* a year. While residing here, with the assistance of books from the library of the neighbouring university, he made himself master of the Arabic, Syriac, and Persian languages. In 1816 he was removed to a school at Lasswade, a pleasant village near Edinburgh, with a larger salary, affording him also an opportunity of becoming known to the most eminent literary men of that capital. He continued to prosecute his studies, and in 1819 was elected teacher of the classical and oriental languages in the institution founded under the will of Mr. M'Nab for promoting education at Dollar in Clackmannanshire. Here he continued till the beginning of 1835, when he succeeded the Rev. Archibald Baird in the professorship of Oriental languages at St. Mary's College, St. Andrews. At St. Andrews, where the university session extends from early in November to the end of May, he henceforward passed his winters, while the summers were spent at a little villa called Devon Grove, near Dollar. His leisure was employed in compiling grammars of the Syriac and Chaldean languages, published in 1840. His other works were—‘The Thane of Fife,’ 1822; ‘Cardinal Beaton,’ a tragedy, 1823, and ‘John Balliol,’ a drama, 1825, both pieces, though not ranking high as dramas, displaying much poetical power, with considerable originality; ‘The Dinging Down of the Cathedral’ [of St. Andrews], a descriptive poem in the Scottish dialect; ‘Hebrew Dramas, founded on Bible History,’

1845; and a 'Life of Allan Ramsay, with Remarks on his Writings,' prefixed to an edition of the 'Gentle Shepherd,' not published till 1852 at New York. Another little production deserves to be mentioned, as showing the cheerfulness with which he bore the calamity of his lameness. 'The Anster Concert,' a small pamphlet of 12 pages, published at Cupar in Jan. 1811, purports to be by W. Crookleg, and preceded by some months the publication of his 'Anster Fair.' It is in the Scottish dialect, with mottoes on the title-page in Hebrew, Greek, Latin, and English, and pleasantly alludes to the peculiarities of the inhabitants of Anstruther, as well as to his own condition. He also wrote some miscellaneous poems, including translations from the Persian, Greek, and German, of more than average merit. He died on the 15th of February 1848, at his house near Dollar.

TENNEMANN, WILHELM GOTTLIEB, was born at Brembach, near Erfurt, on Dec. 7, 1761. His father was pastor of Brembach, and undertook his early education, but sickness and an unsuitable method of instruction prevented his profiting much by it. In 1778 he was placed in the public school, and in 1779 in the university, of Erfurt. It was intended that he should study theology, but an early inclination for metaphysical philosophy withdrew him from that pursuit. In 1781 he removed to the university of Jena, where he at first opposed the doctrines of the philosophy of Kant, but was afterwards converted, and became a supporter of its critical principles. In 1788 he passed his examination as a teacher; in 1791 he published a work on the 'Lehren und Meinungen der Sokratischen über die Unsterblichkeit der Seele' (Doctrines and Opinions of the Socratics on the Immortality of the Soul); and in 1792-94, in four volumes, the 'System der Platonischen Philosophie.' In 1798 he was made professor extraordinary of philosophy at Jena, whence he was called in 1804 to be professor at the university of Marburg. In 1816 the office of librarian was added to that of professor, and he held both offices till his death on Sept. 30, 1819. His other works were—translations of Hume, 'On the Human Understanding' (Untersuchung über den menschlichen Verstand), published in 1793; of Locke, 'Essay concerning the Human Understanding' (Versuch über den menschlichen Verstand), in 1795-1797; and Degerando's 'Comparative History of the Systems of Philosophy' (Vergleichende Geschichte der Systeme der Philosophie) in 1806. His principal work however, on which his reputation chiefly rests, is his 'Geschichte der Philosophie,' of which the first volume was published in 1798, and the eleventh, leaving the work incomplete, in 1809: this work has gone through several editions. He also issued in 1812, 'Grundriss der Geschichte der Philosophie,' which is an abstract of his larger work. It has also gone through several editions, has been translated into English by Mr. A. Johnson under the title of a 'Manual of Philosophy,' revised, enlarged, and continued by J. R. Morell, in Bohn's 'Philological Library' in 1852; Victor Cousin gave a French translation of it in 1839; and it has been rendered into modern Greek.

\*TENNYSON, ALFRED, English poet, is one of the sons of the late Rev. Dr. George Clayton Tennyson, Rector of Somersby, a small parish in Lincolnshire, by Elizabeth, daughter of the Rev. Stephen Fytche, who still (1857) survives at an advanced age. The Rev. Dr. Tennyson was a man of energetic character, and remarkable for his great strength and stature. Of a family of eleven or twelve children, seven of whom were sons, Alfred was the third. He was born at Somersby in 1810. His elder brothers were Frederick and Charles, both of whom have published poems. The poet's paternal grandfather was George Tennyson, Esq., of Bayon's Manor and Usselby Hall, Lincolnshire, who had inherited large property from a maternal uncle named Clayton, and who had come into more by his marriage in 1775, with the daughter and ultimate heiress of John Turner, Esq., of Caistor, Lincolnshire. He died in July 1835 at the age of eighty-five. His eldest son, the poet's father, had pre-deceased him, and the bulk of his property became the possession of his second son, the poet's uncle, Charles Tennyson, better known as the Right Hon. Charles Tennyson D'Eyncourt, of Bayon's Manor and Usselby Hall, a privy councillor, late M.P. for Lambeth, F.R.S., &c. The addition of D'Eyncourt to the family name of Tennyson in the case of the poet's uncle was made by royal licence July 27, 1835, "in compliance with a condition attached to the enjoyment of certain manors and estates by a codicil to the will of his father; in order to commemorate his descent from the ancient and noble family of D'Eyncourt, Barons D'Eyncourt of Blankney, &c." Accordingly in the books of pedigrees of the landed gentry, those who are curious in such matters may still, by referring to the name of the uncle, trace the descent of the more illustrious nephew back to the D'Eyncourts of the Norman times, and may also see the quarterings of the Tennyson family, with a score of other Norman, Saxon, and modern English families; such as those of Clayton, Hildyard, Hilton, Lascelles, Tyson, Swyne, Kilham, De la Haye, De la See, Colles, Monceaux, Thwenge, Darell, Bruce, Arches, Fitzroger, Eustace, Nigell, Lizares, Lancaster, Plantagenet, Welby, Moulton, Lindsey, Friskney, Stynte, Leke, Towers, Staveley, Hilary, Marmion, Grey, Hareston, Bardolf, Warren, Swift, Wickesley, and Turner. (See Burke's 'Dictionary of the Landed Gentry,' where several pages are devoted to the pedigree of Mr. Tennyson D'Eyncourt.) All this may seem insignificant; but it is at least interesting to know that our great modern poet has a pedigree, even in the herald's sense, superior to that of many of the English nobility; and somehow, in reading over the preceding list of family-names, one seems to feel as if they all represented

elements that were necessary towards forming the genius of a Tennyson. From the very first, at all events, it was evident that the children of the Lincolnshire clergymen had inherited genius rare in kind and degree. In the rectory of Somersby, we have heard the writing of tales and verses was the amusement of all the children from the time that they could use a pen. The three eldest sons, in going to Cambridge carried this literary taste and talent with them. In 1828 Frederick Tennyson obtained the medal for a Greek poem recited at the commencement of that year; and in the following year, 1829, Alfred obtained the Chancellor's medal for an English poem in blank verse, consisting of about 250 lines and entitled 'Timbuctoo.' Both brothers, as well as the intermediate brother, Charles, were then undergraduates of Trinity College, and pupils, we believe, of the present master, Dr. Whewell, then one of the tutors of the college. The poem on 'Timbuctoo,' unlike most prize-poems, exhibits the promise of true poetical genius—of a kind, however, that would have to create an appreciation for itself, and might for a time fail to be widely recognised. In or about the same year, Alfred, in conjunction with his brother Charles, published privately a small volume of poems, which Coleridge is reported to have noticed with praise—though with praise more of Charles's contributions to it than of Alfred's. But since 1830 it has been mainly Alfred that has vindicated by his actual career the poetical genius of the family—Frederick having published nothing with his name till 1854, when he published a collection of poems entitled 'Days and Hours,' and Charles having given up literature for the Church, and having in 1835 become vicar of Grasby in his native county of Lincoln—about which time, in consequence of his succeeding, by his grandfather's death, to property which had come into the family through his grandmother, he assumed the name of Turner. In 1830, appeared 'Poems, chiefly Lyrical,' by Alfred Tennyson, published by Effingham Wilson, Cornhill. This first acknowledged volume of Tennyson's, which appeared while he was still an undergraduate of Trinity College, consisted of about 150 pages and contained 'Claribel,' 'Lilian,' 'Isabel,' 'Elegiacs,' 'The How and the Why,' 'Mariana,' 'Madeline,' 'The Merman,' 'The Mermaid,' 'Supposed Confessions of a second-rate sensitive mind not in unity with itself,' 'The Burial of Love,' 'The Owl,' 'Recollections of the Arabian Nights,' 'Ode to Memory,' 'Adeline,' 'A Character,' 'The Poet,' 'The Poet's Mind,' 'Nothing will Die,' 'All things will Die,' 'Hero to Leander,' 'The Mystic,' 'The Dying Swan,' 'A Dirge,' 'The Grasshopper,' 'Love, Pride, and Forgetfulness,' 'Lost Hope,' 'The Deserted House,' 'The Tears of Heaven,' 'Love and Sorrow,' 'To a Lady sleeping,' 'Love and Death,' 'The Ballad of Oriana,' 'English War-song,' 'National Song,' 'Dualisms,' 'The Sea-Fairies,' and various other short pieces with less definite titles. Of this volume, a recent critic has said—"It must always possess considerable interest for those who read and admire his mature productions; but, with few exceptions, the poems it contains owe their main attraction to the fact that they are the earliest efforts of one who has gained a position of which they afforded no certain promise. Many of them are exquisitely musical; great command of the resources of metre is manifest; and a richness of phraseology everywhere abounds. But substantial interest they certainly want." At all events the volume did not produce much impression on the public; and such criticism as there was, was depreciatory rather than favourable. In 1833, Tennyson, at the age of twenty-three, made his second stroke as an author in a new volume of 'Poems by Alfred Tennyson,' published by Moxon. In this volume several of the pieces in the former one were reprinted (not without alterations, however—it being a habit with Mr. Tennyson continually to retouch and improve, even after a piece has been in print); but it contained some striking new ones, including 'The Lady of Shalott,' 'Mariana in the South,' 'The Miller's Daughter,' 'Enone,' 'The Palace of Art,' 'The May Queen,' 'The Lotus Eaters,' and 'A Dream of Fair Women.' "Characterised as a whole," says the critic above quoted, "the volume of 1833, in comparison with the first volume, marks a surprising advance, both in conception and execution." From that time, accordingly, the circle of Tennyson's admirers gradually increased, and his name began to be known. The year 1842 was a new epoch in his literary career. In that year he published in two volumes 'Poems by Alfred Tennyson,' being that collected edition of his smaller pieces of which there have since been some nine or ten issues. These volumes contained, besides reprints of many of the pieces in its predecessors, a series of new pieces, including 'Lady Clara Vere de Vere,' 'Morte d'Arthur,' 'Dora,' 'St. Simeon Stylites,' 'The Talking Oak,' 'Ulysses,' 'Locksley Hall,' 'Godiva,' 'The Gardener's Daughter,' 'The Two Voices,' 'The Lord of Burleigh,' and 'The Vision of Sin.' "With the publication of this third series," says the critic quoted above, "Mr. Tennyson appears distinctly as the poet of his own age. His apprenticeship over; his mastery over the instruments of his art is complete, and he employs it in either presenting the life of his contemporaries, the thoughts, incidents, and emotions of the nineteenth century in England, or in treating legend and history with reference to the moral and intellectual sympathies now active among us." From that time also Tennyson's place in English poetry has been universally acknowledged. He has both extended and deepened his reputation however by the works which have followed. Of these, the first was his narrative poem, entitled 'The Princess; a medley,' with its exquisite interspersed

songs, published in 1847, and which has since passed through five or six editions. Then, in 1850, came the wonderful series of elegies, entitled 'In Memoriam,'—a tribute, gathered through years, to the memory of Arthur Hallam, the son of the historian, and a dear college friend and associate of the poet (he had competed with him for the prize poem on 'Timbuctoo,') who had died at Vienna on the 15th of September 1833, and whose remains are interred in the chancel of Clevedon church, Somersetshire. In no language, probably, is there such another series of Elegies—so deep, so metaphysical, so imaginative, so musical, and showing such impassioned and abnormal and solemnising affection for the dead. It was about the time of the publication of 'In Memoriam,' that Tennyson, on the death of Wordsworth, was named Poet Laureate—the small emoluments of which office he still enjoys, together with a separate pension of 200*l*. The laureate spoke out, but also the man, in his 'Ode on the Death of the Duke of Wellington,' published in 1852, and again, in an amended shape, in 1853. Finally, in 1855 was published 'Maud, and other Poems,'—a volume which did not meet with favour from the critics generally, though some saw a world of new beauty in it. It is understood that at present (1857) Mr. Tennyson has a new volume of poems ready for the press, but that its publication is delayed. Meantime a splendidly illustrated edition of the 'Poems' has just been published, with renderings of some of them by some of the most eminent artists of the day, and a medallion portrait of the poet's noble face and head. Mr. Tennyson is a man of powerful build and form, of dark complexion, and altogether of most impressive appearance. At a recent Oxford commemoration he was created D.C.L. Several years ago he married a Lincolnshire lady, and he has several children. He lives at present, and in the rather reclusive manner which has distinguished him during his whole life, in the Isle of Wight.

TENON, JACQUES-RÉNE, an eminent French surgeon, whose father also belonged to the medical profession, was born in 1724. He went to Paris in 1741, where his zeal and talents soon gained him the notice of Winslow, and also of Antoine and Bernhard de Jussieu. The first of these celebrated men initiated him in the study of anatomy; the two others developed in him a taste for botany and natural history. In spite of the prejudices and example of his contemporaries, Tenon understood that surgery, far from being separated from the other branches of medical science, and restricted to the mere performance of operations, is on the contrary most strictly united to them. Accordingly from this time he had a wider field opened to him for his professional labours; and he united to the study and treatment of surgical affections minute anatomical investigations and ingenious physiological experiments. In a short time he acquired a well-merited reputation; and though inferior to some other modern French surgeons in skill and genius for that particular department of science, yet few have surpassed him in the extent of his studies and the variety of his information. In 1744 Tenon was appointed an army surgeon of the first class, and served in the following year throughout the campaign in Flanders. On his return to Paris he obtained by competition (au concours) the situation of chief surgeon to the hospital of La Salpêtrière, and founded near it a celebrated establishment for inoculation, a practice which his labours contributed much to propagate. He afterwards became a member of the College and of the Royal Academy of Surgery, and succeeded Andouillé as professor of pathology. In 1757 he was received into the Academy of Sciences. Tenon belonged to the first Legislative Assembly, and there displayed the same zealous philanthropy which seemed to belong to all his actions. Upon the re-organisation of the learned societies he became a member of the Institute of the first class, and read in that assembly many interesting papers. He was also a member of the Legion of Honour and of several learned and scientific societies, and preserved to the end of his life the same love of labour and the same zeal for the advancement of science which had marked the early years of his career. He died at Paris, on the 15th of January 1816, at the advanced age of ninety-two. Few persons have written so many memoirs and monographs as Tenon; many of these have only been published in the annual analysis of the proceedings of the Institute: he is also said to have left behind him a great number of manuscripts. More than 30 of his works are mentioned in the 'Biographie Médicale,' of which the following are the most important:—'De Cataracta,' 4to, Paris, 1757; 'Mémoires sur l'Exfoliation des Os,' read before the Academy of Sciences in 1758, 1759, and 1760, and afterwards printed, together with some others, with the title 'Mémoires sur l'Anatomie, la Pathologie, et la Chirurgie,' 8vo, Paris, 1806; 'Mémoire sur les Hôpitaux de Paris,' 4to, Paris, 1788, a very able memoir, which has served as a model for many that have been since written on the same subject, in which are pointed out almost all the improvements that have been introduced into the French hospitals. His last work, which was published when he was ninety years old, is entitled 'Offrande aux Vieillards de quelques Moyens pour prolonger la Vie.'

TENTERDEN, CHARLES ABBOTT, LORD, born at Canterbury, on the 7th of October 1762, was the son of a barber, who has been described as "a tall, erect, primitive-looking man, with a large club pigtail, going about with the instruments of his business, and attended frequently by his son Charles, a youth as decent, grave, and primitive-looking as himself." He was entered in 1769 on the foundation of the king's school of the cathedral, under Dr. Osmund Beauvoir, who is

stated by Sir Egerton Brydges to have been an admirable classical scholar, of fine taste, and some genius. Sir Egerton, who for some years held the place next to Abbott in the class, speaks of him as remarkable even in his school-boy days for accuracy, steadiness, and equality of labour; as well acquainted with the rules of grammar, sure in any examination or task, and a tolerably correct writer of Latin verses and prose themes.

In the beginning of 1781 Abbott was elected scholar of Corpus Christi College, Oxford, with an allowance, including his exhibition, of 50*l*. a year. His mathematical acquirements are said by his friends to have been considerable. In 1784 he obtained the chancellor's medal for the best Latin verses on Lunardi's balloon, 'Globus Aerostaticus;' in 1786 his essay 'On the Use and Abuse of Satire' obtained the chancellor's medal for the English essay. This essay displays the turn for neat, lucid, and exhaustive arrangement, which was the most marked feature of his matured intellect, and also a good deal of that want of passion and imagination which, perhaps as much as any of his positive qualities, contributed to his judicial eminence. He was elected a fellow of his college, and appointed junior tutor to Mr. (afterwards Bishop) Burgess.

By the advice of Mr. Justice Buller, whose son was one of his private pupils, Abbott entered himself of the Inner Temple in 1788. He also, in compliance with the suggestion of the same experienced lawyer, attended some months the office of the London solicitors, Messrs. Sandys & Co. He afterwards became a pupil of Mr. (subsequently Baron) Wood, and, aided by his recommendation, began to practise as a special pleader with marked success. He was called to the bar in Trinity term 1795. He married, on the 13th of July 1795, Mary, eldest daughter of John Logier Lamotte, Esq., a gentleman of fortune in Kent. It is said that when the father hinted at the expediency of a marriage-settlement, Abbott said he had nothing but an excellent law-library, which the lawyers might tie up as tightly as they pleased.

Having selected the Oxford circuit, he speedily rose into great business. The jealousy of his young rivals gave rise to rumours of his being too courteous to attorneys: but by whatever means he may have obtained his position, he kept it by the preference which the leaders evinced for a junior who could often suggest a case in point, and was master of all the technicalities of pleading. To this he owed his appointment, by Sir Vicary Gibbs, when solicitor-general, to the office known among the members of the bar by the name of treasury-devil, the junior counsel to whose care the business of government is intrusted. In this character he took part in most of the numerous state-trials which occurred about the close of last century. As his character became established, he was appointed standing counsel to the Bank and other great mercantile communities. When the returns of the income-tax were called for, Mr. Abbott's account was looked upon as a curiosity, both for its minute accuracy and for the largeness of the sum-total of his fees during the past year—8026*l*. 5*s*.

In a sketch of Lord Tenterden, which appeared in the 69th volume of the 'Edinburgh Review,' Lord Brougham says of his career at the bar, "As a leader he very rarely, and by some extraordinary accident only, appeared, and this in a manner so little satisfactory to himself, that he peremptorily declined it whenever refusal was possible; and he seemed to have no notion of a leader's duty beyond exposing the pleadings and the law of the case to the jury, who could not comprehend them with all his explanation. His legal arguments, of which for many years the books are full, were extremely good, without reaching any very high pitch of excellence; they were quite clear, abundantly full of case law; betokening some dread of grappling with principle, and displaying none of the felicitous commentary that marked Mr. Holroyd's." In 1802 Mr. Abbott published his 'Treatise of the Law relative to Merchant-Ships and Seamen.' This work has gone through many editions; it exhausts the subject, is well arranged, and well written; its merits have been repeatedly acknowledged; it is one of the best English law treatises.

In 1803 Mr. Abbott was offered a seat on the bench, but declined from prudential motives, his professional income far exceeding the salary of a judge. As years grew upon him however, and his fortune increased, he began to long for the comparative repose of the bench. In February 1816, he was offered a seat as puisne judge in the Court of Common Pleas, and accepted it. In May of the same year, on the death of Mr. Justice Le Blanc, he yielded to the importunity of Lord Ellenborough, and was chosen to supply the vacancy in the Court of King's Bench, and was knighted about the same time. On the 4th of November 1818 Sir Charles Abbott succeeded Lord Ellenborough as chief-justice of that court.

It has been alleged that at the outset of his judicial career chief-justice Abbott was apt to lose himself among the minute details of the cases which were brought before him. It is allowed at the same time that during the last seven or eight years of his time he took broader and more comprehensive views of questions, and displayed great judicial capacity. He had learned to deal with facts, and his law was, as it always had been, safe, accurate, and ready. His statements and decisions were clothed in correct, succinct, and appropriate language. He was averse to over-curious subtleties; loved to overrule technical objections both in civil and criminal pleadings; and showed great anxiety to make his decisions accord with common sense and

substantial justice. Perhaps he shone most in the management of arguments which required a combination of scientific with legal knowledge: "to see him preside over a complicated patent case was a very great treat, whether to a lawyer or a man of science." A reasonable distinction, a reasonable interpretation of the law, were his favourite phrases. He was, as every learned and judicious lawyer must be, rather impatient of the check of a jury; and was not always able to keep his temper in command when arguing with the bar. His impartiality, as far as the parties were concerned, was unquestioned. "It was an edifying sight," says Lord Brougham, "to observe Lord Tenterden, whose temper had been visibly affected during the trial (for on the bench he had not always that entire command of it which we have described him as possessing at the bar), addressing himself to the points in the cause with the same perfect calmness and indifference with which a mathematician pursues an abstract truth; as if there were neither the parties nor the advocates in existence, and only bent on the discovery and the elucidation of truth." Chief Justice Abbott's anxiety to support the executive authority on all occasions was beyond a doubt excessive; but this appears to have been the consequence of temperament and very early associations: it shows itself even in his prize essay upon Satire.

Sir Charles Abbott was raised to the peerage in 1827, by the title of Baron Tenterden. He made a successful début as a speaker in the House of Lords in support of Miss Turner's divorce bill; he pertinaciously opposed the passing of the Corporation and Test Act Repeal Bill; and was the most impressive speaker against the Roman Catholic Relief Bill. His judicial labours rendered him for the next two years an unfrequent attendant in the House of Lords; but he recorded his protest against the Reform Bill. He took at the same time an active part in the business of legislation. Among his well-studied and carefully prepared acts are—9 Geo. IV., c. 14, for the alteration of the law as to the limitation of actions of account and upon the case; 9 Geo. IV., c. 15, to prevent a failure of justice by reason of variances between records and writings produced in evidence; 1 Will. IV., c. 21, Mandamus and Prohibition Acts; 1 Will. IV., c. 22, Interrogatories Act; 1 & 2 Will. IV., c. 58, Interpleader Act; 2 & 3 Will. IV., c. 39, Uniformity of Process Act; 2 & 3 Will. IV. c. 71, Prescription Acts; and (prepared under his sanction) 3 & 4 Will. IV., c. 27, for the limitation of actions and suits relating to real property, and for simplifying the remedies for trying the rights thereto.

As his political opinions were of the kind generally understood to predominate at Oxford, so his literary tastes retained the impress of his university education. When Sir James Scarlett, on the trial of Mr. Hunt for the publication of the 'Vision of Judgment,' alluded to the poetry of Lord Byron as familiar to the jury, Lord Tenterden could not repress the observation that, for himself, "he was bred in too severe a school of taste to admire the modern poets." His favourite recreations during the long vacation were the perusal of the classics, the study of botany, and the composition of Latin verses on flowers and plants. He founded and endowed, in the grammar-school of his native city, two annual prizes; the one for the best English essay, the other for the best Latin verse. In his relaxations, as in the discharge of his public duties, he displayed a mind narrow, it may be, and unimpassioned, but active, dexterous, and elegant.

His later years were overclouded with ill-health, and alarm occasioned by the aspect of public affairs. He continued however to discharge assiduously the duties of his high office. He presided for the two first days at the trial of the mayor of Bristol for misconduct during the riots in that city at the time of the Reform Bill, but on the third he was confined to bed by a violent attack of inflammation. The disease baffled the skill of his physicians, and he expired on the morning of Sunday November 4, 1832. Lady Tenterden died on the 19th of December following. He had two sons, one of whom succeeded him in the title, and two daughters.

TENTORI, CRISTOFORO, was born in 1745, in Spain, of a Venetian family. He studied first in his native country, and afterwards removed to Venice, where he spent the greater part of his life. He is known chiefly for his historical works concerning Venice. He published, in 1785, his first work, 'Storia Civile e Politica della Repubblica di Venezia, con una Descrizione Corografica e Topografica de' suoi Stati,' Venice, 12 vols. 8vo. This was the first condensed history of Venice, being a kind of abridgment of the many and voluminous historians of that republic, and especially of Sandi's 'Storia Civile e Politica,' with the important addition of a topographical and statistical description of all the dominions of Venice. Tentori's second work is a continuation and completion of the first, being an authentic narrative of the destruction of the republic of Venice by the French in 1797; 'Raccolta Cronologico-Ragionata di Documenti inediti che formano la Storia Diplomatica della Rivoluzione e Caduta della Repubblica di Venezia, corredata di Critiche Osservazioni,' 2 vols. 4to, 1799, published without the author's name from prudential motives. Tentori consulted the secret state archives when they were first opened to the public after the fall of the old government, and there he found full evidence of the iniquitous arts by which the catastrophe had been effected. He gives the text of the documents in order of time, and accompanies them with a brief narrative of the events. The perusal of this work is absolutely necessary to form a correct idea of those transactions, and to counteract the erroneous impression produced by

the accounts published in France and in Italy; among the rest by an anonymous contemporary work entitled 'Storia degli ultimi Otto Anni della Repubblica,' which was falsely attributed to Tentori himself.

Tentori wrote about the same time an elaborate investigation of the true character of the famous insurrection of Baiamonte Tiepolo and the two Querini in 1309, which had been ignorantly asserted by some modern Venetian writer to have been a movement in favour of popular liberty, whilst in reality it was a conspiracy of disappointed patricians against their own order, and for the purpose of supplanting their personal enemy, the Doge Gradenigo: 'Il vero Carattere politico di Baiamonte Tiepolo, dimostrato dall' unanime Consenso degli Storici Veneti ed Esteri,' Venice, 1798. The other works of Tentori are—'Della Legislazione Veneziana sulla Preservazione delle Lagune,' 8vo, Venice, 1792; 'Dialogo sulla vera Regolazione del Fiume Brenta, con una Appendice di Riflessioni sopra il medesimo, corredata di una Carta Idrografica,' Venice, 1790; 'Errata-corrige sulle Memorie Venete del Galliccioli,' 'Osservazioni sulle Memorie suddette,' Venice, 1797. Galliccioli was a contemporary compiler of Venetian history.

Tentori lived and died poor. He filled in the latter years of his life the office of preceptor in the patrician family of Tiepolo at Venice. As a native of Spain he was required by Napoleon's police in 1803 to swear fidelity to the intrusive king Joseph, which having refused to do, he was kept under arrest for a long time, and his papers were inspected by the gendarmes. He died in 1810 at the country residence of the Tiepolo family, at Carbonara.

TENZEL, or TENTZEL, WILHELM ERNEST, a German historian and antiquarian, was born in 1659, at Greussen in Thuringia, where his father was pastor. After the completion of his school education he went, at the age of eighteen, to the University of Wittenberg, where he chiefly devoted himself to the study of the ancient and Oriental languages in connection with history. In 1685 he was appointed teacher at the Gymnasium of Gotha, and was at the same time intrusted with the care of the collection of antiquities and coins belonging to the Duke of Saxe-Gotha. Several learned dissertations which he published shortly after this time attracted the attention of his learned countrymen, in consequence of which he became a very active contributor to the 'Acta Eruditorum,' and to the 'Observationes Hallenses.' Tenzel was the first German who conceived the idea of establishing a German journal for reviewing new books and for publishing interesting essays. This periodical was set on foot in 1689, under the title 'Monatliche Unterredungen einiger guten Freunde von allerhand Büchern und andern annehmlichen Geschichten.' The undertaking had great success, and was carried on till 1698. The whole was published in monthly parts, and consists of ten volumes. The extensive knowledge of history, especially of the history and antiquities of Germany, procured Tenzel, in 1696, the honourable post of historiographer to the house of Saxony of the Ernestine line. Before he commenced writing on the history of Saxony he travelled through the greater part of Germany, visiting several courts and examining various libraries to find materials. In 1702 the elector of Saxony (also king of Poland) conferred upon him the title of councillor, and made him historiographer of the electorate. In this capacity he took up his residence at Dresden, and was frequently obliged to appear at court. But the simple honesty and straightforwardness of the man made him a subject of ridicule among the ignorant and idle courtiers, and as soon as Tenzel became aware of it he resigned his office and retired to private life, devoting himself entirely to his historical and antiquarian studies. He died on the 24th of November 1707, in great poverty.

Besides the numerous essays in the periodical publications mentioned above, the following separate works of Tenzel deserve to be mentioned: 'De Ritu Lectionum Sacrarum,' Wittenberg, 4to, 1685; 'Exercitationes Selectae, in duas partes distributæ,' Leipzig, 4to, 1692; 'Epistola de Sceletio Elephantino Tonno nuper effosso,' Gotha and Jena, 12mo, 1699; 'Von dem Alter der Buchdruckerkunst,' Gotha, 12mo, 1700; this interesting work is translated into Latin and incorporated in Wolf's 'Monumenta Typographica,' ii. 644, &c. The principal work of Tenzel is his 'Saxonia Numismatica, sive Nummophylacium Numismatum Mnemonicon et Iconicon à Ducibus Saxonie cudi jussorum,' Frankfurt, 2 parts, 4to, 1705. He also continued the history of Gotha which had been commenced by Caspar Sagittarius, in two supplementary volumes. His history of the Reformation, 'Historischer Bericht vom Anfang und Fortgang der Reformation,' which was edited by E. S. Cyprian, in 2 vols. 4to, Leipzig, 1718, is a valuable work, which should still be consulted by the student of that important period.

TERBURGH, GERARD, an eminent painter of scenes of domestic life of the higher classes of society, was born at Zwoll, near Overysse, in 1608, and was instructed in the rudiments of art by his father, who is not much known as a painter, but appears to have passed some years at Rome. Some think that he perfected himself under another master at Haarlem; however this may be, he had acquired considerable reputation in the Netherlands as a painter of portraits of a small size before he resolved to travel for his improvement. He first visited Italy; but whatever advantage he may have derived from the works of the great Italian masters he never changed his style, and proceeding from Italy to France, practised with great success at Paris. From France he returned to Holland, where he was highly esteemed and

fully employed. He visited Münster during the sitting of the celebrated congress at which the treaty that terminated the Thirty Years' War was concluded. Here he painted his most celebrated picture, containing the portraits of the sixty-nine plenipotentiaries assembled on that important occasion. Count Pigoranda, the Spanish ambassador at Münster, induced him to visit Spain, where he painted the portraits of King Philip IV. and all the royal family, and of many of the most distinguished nobility. His performances gave such satisfaction to the Spanish king, that he conferred on him the honour of knighthood, and presented him with a gold chain and medal, a sword, and silver spurs. After finally returning to his own country he married, and was made burgomaster of the town of Deventer, where he lived in affluence, and died in 1681, at the age of seventy-three years.

The subjects which Terburgh generally painted were portraits, conversations, persons engaged at different games, performers on musical instruments, ladies at their toilets. He finished his pictures highly, with a light and delicate touch, and is remarkable for introducing white satin in the dress of some figure in all his compositions: he always took care to throw the principal light upon it, and seems never to have painted a picture without satin drapery. Dr. Waagen says of him, "Terburgh is the real founder of the art of painting conversation pieces, and at the same time the most eminent master in this style. In delicacy of execution he is inferior to none, and in a certain tender fusing of the colours he excels all others; but none can be compared with him in the enchanting harmony and silvery tone, and the observance of the aerial perspective. His figures, which are well drawn, have an uncommon ease of refinement, and are frequently very graceful." Many of his capital works are in England, in the collections of Sir Robert Peel, the Duke of Sutherland, Lord Ashburton, Mr. Hope, the Marquis of Bute, and her Majesty.

TERENTIA. [CICERO.]

TERENTIANUS MAURUS. [MAURUS TERENTIANUS.]

TERENTIUS, or more fully P. TERENTIUS AFER, was one of the two comic poets of Rome whose works have come down to us. The facts of his life were matter of dispute even among the Romans themselves. If we may rely upon the biography attributed by some to Donatus, by others to Suetonius, he was born at Carthage, and became the slave of a Roman senator named Terentius Lucanus who, pleased with his abilities and handsome person, first gave him a liberal education and afterwards his freedom at an early age. Some, on the other hand, stated that he originally fell into slavery as a prisoner of war. At Rome he lived on terms of intimacy with many men of family, more particularly the second Scipio Africanus and his friend Lælius, who were even said to have assisted in the composition of the six comedies which bear the name of Terence. There were even some who asserted that these two nobles merely borrowed the name of Terence for what was wholly their own. Before he had completed his thirty-fifth year he left Rome, either to avoid the odium which grew out of the suspicion that he had published the writings of others as his own, or to study the institutions and manners of the Greek nation, and thus qualify himself for fresh exertions in the field he had chosen. He never returned, but the accounts of his death were various. Some said that he embarked for Asia, and was never seen from the hour of his embarkation; others that he died on his way back from Greece, where he had translated one hundred and eight plays of Menander; while others again contended that having sent his translated plays in a separate ship, he received the news that this ship with his valued property was lost at sea, and died through grief, in the consulship of Cn. Cornelius Dolabella and M. Fulvius Nobilior, either at Stympthalus in Arcadia or at the Leucadian promontory. He was of moderate stature, slender figure, and dark complexion. He left a daughter, who married a Roman of equestrian rank, and a property of six jugers on the Appian road. But another authority reports that he died in the most abject poverty. Eusebius, or rather St. Jerome, places the death of Terence in the reign of Ptolemy Philometor, and this king died in the third year of the 158th Olympiad, or the close of B.C. 146.

The difficulties in the life of Terence are chiefly of a chronological character: the following table of ascertained dates bears upon it:—

- B.C. 218. Commencement of Second Punic War.
- B.C. 201. Peace granted to the Carthaginians.
- B.C. 185. Birth of Scipio Africanus the younger.
- B.C. 184. Death of Plautus.
- B.C. 169. Death of Ennius.
- B.C. 168. Death of Cæcilius (partly on the authority of St. Jerome.)
- B.C. 166. The 'Andria' acted at the Megalensian games.
- B.C. 165. The 'Hecyra' acted at the same games.
- B.C. 163. The 'Hautontimorumenos' acted at the same games.
- B.C. 161. The 'Eunuchos' acted at the same games, and the 'Phormio' at the Roman games.
- B.C. 160. Death of Æmilius Paulus. The 'Adelphæ,' acted at his funeral games, at the expense of his sons Fabius and Scipio.
- B.C. 159. Consulship of Cn. Cornelius Dolabella and M. Fulvius Nobilior.
- B.C. 149. Commencement of the Third Punic War.

Thus it appears that the whole period of Terence's life must have been included in the peace between the Second and Third Punic wars; so that if taken prisoner in war, that war could not have been one

between Rome and Carthage. Again there is a chronological difficulty in the story that the poet, when he offered his 'Andria' to the ædiles, was directed to obtain the approval of Cæcilius; that he accordingly went to the house of the latter, and was coldly bidden to seat himself on a stool and commence reading while the other dined; but that after a few verses Cæcilius was so charmed that he invited Terence to take his seat at the table and dine with him, after which he read through the remainder of the play and filled Cæcilius with admiration. Now the death of Cæcilius, though the date, as we have observed, is in some measure founded upon the testimony of St. Jerome, occurred two years before the 'Andria' was acted. The assertion that Scipio and Lælius assisted the poet is not altogether rendered impossible by the youth of the parties, although Scipio was but nineteen when the 'Andria' was acted, and Lælius was of about the same age as his friend; but the difficulty becomes greater when we find in the prologue of the 'Adelphæ,' that the nobles who were said to give him their aid are spoken of in terms scarcely applicable to men so young.

Be the parties charged to have lent their aid to the poet who they may, it is clear that the poet gives no denial to the accusation, either in the words just alluded to or in the prologue to the 'Hautontimorumenos.' Even Cicero ('Ad Atticum,' vii. 3) mentions the report that Lælius was the real author; and Cornelius Nepos, who by the way makes the three parties, Scipio, Lælius, and Terence, of the same age (æquales), tells us an anecdote which confirms the report. C. Lælius, says he, happening to pass the Matronalia (a festival on the 1st of March, when the husband for once in the year was bound to obey the lady) in his villa near Puteoli, was told that dinner was waiting, but still neglected the summons. At last, when he made his appearance, he excused himself by saying that he had been in a peculiar vein of composition, and quoted certain verses which occur in the 'Hautontimorumenos,' namely, those beginning "Satis pol proterve me Syri promissa huc induxerunt."

The fact of the poet being called Terentius is perfectly in harmony with the circumstance of his alleged master having that name, as it was the ordinary practice of the manumitted slave to take the nomen and prænomen of his late master. On the other hand, it is altogether an error on the part of Orosius to confound the poet with the Q. Terentius Culleo, who, in the garb of a manumitted slave, accompanied the triumphal procession of Scipio after his destruction of Carthage in the year B.C. 146. The name of Afer seems to confirm his Carthaginian birth, unless indeed that assertion be only an inference from the name itself.

Terence acknowledges in the titles to his plays his obligations to the Greek comedians Menander and Apollodorus; but he was not a mere translator, for one of the charges brought against him was that he drew the materials of a single play from two or more of the Greek plays. He was much and deservedly admired by his countrymen, even by Cæsar himself, notwithstanding the phrase in which he speaks of him as a "dwarfed Menander" (dimidiata Menander). From Plautus, with whom alone we can now make any satisfactory comparison, he differs most widely. Though Plautus excelled in powerful but ludicrous expressions, he was altogether deficient in the formation and development of a plot. Terence, on the other hand—though even he occasionally introduces the buffoonery of the 'miles gloriosus,' the 'parasitus,' and the 'currens servus,' to gratify the prejudices of his more unpolished hearers, who were better able to appreciate the merits of a boxer or a rope-dancer, still deserves our admiration for his efforts to place before his countrymen the comedy of manners. If he was not always successful, the failure was due to the rude minds of his spectators and the magnitude of a Roman theatre, and perhaps also to the use of masks, which, if always used, must have been a serious obstacle to the best efforts of the comic actor. The best edition of Terence is that of Bentley, Amsterdam, 1727. The modern imitations of Terence may be seen in Dunlop's 'Roman Literature.' George Colman has translated the comedies of Terence into English. There are French translations by Madame Dacier and Le Monnier.

TERENTIUS CLEMENS, a Roman jurist, whose period is uncertain, but he lived after Julianus, or was at least his contemporary, for he cites him. ('Dig.,' 24, tit. 6, s. 6.) He wrote twenty books 'Ad Legem Juliam et Papiam,' from which there are some excerpts in the Digest. He is not cited by any jurist in the Digest.

TERNAUX, GUILLAUME LOUIS, BARON, a celebrated French manufacturer, was born at Sedan in the Ardennes, on the 8th of October 1763. He was brought up by his father for business. When the revolution broke out he enthusiastically embraced the popular cause, but in 1790 he raised his voice against the Assignats in a paper, entitled 'Vœu d'un patriote sur les Assignats.' In 1793 he was obliged to leave France on account of his political views. He visited England and Belgium, and made good use of the opportunities afforded to make himself acquainted with the manufacturing industry of these countries. Under the Directory he returned to Paris, where he devoted himself to the development of the industry and commerce of France. Although he had spoken and written against Napoleon I., the latter sought to distinguish him. Although Napoleon's views occasioned him great loss, he yet maintained the credit of his firm, wherever he had establishments in Europe. After the restoration he devoted himself to the maintenance of the Bourbons on the

throne, as more consistent with the commercial and industrial welfare of France. During the hundred days he was obliged to remove to Belgium. After the second restoration he became a commander in the National Guard of Paris, and was consulted by the government on all industrial questions. During the year of panic in France (1816) he took an active part in recommending various substances as articles of food. He wrote also upon the preservation of corn in *silos* or subterranean caverns in preference to stacks or granaries, as the best means of preserving corn from the attacks of rats and other animals. He was sent as a deputy to the Chamber, for the department of the Seine in 1818, and also in 1823, and again in 1827. Not being a good speaker he wrote his speeches, and when printed they produced a great impression. These speeches were published and circulated extensively through France, and were mostly upon questions of finance and public works. In 1830 he was one of the 221 who signed the celebrated address, and took an active part in the revolution of that year. He died on the 2nd of April 1833. He was one of the first manufacturers in France to use spinning machines in the manufacture of cotton and cloth. He exerted himself to improve the breed of sheep. He also improved greatly the manufacture of the finer kinds of shawls, and was principally instrumental in the acclimatising of the Thibet sheep in France, from which the finer kinds of wool are produced. Louis XVIII. conferred on him the title of Baron in 1821. The modern industry of France owes much to the genius, exertions and enterprise of Baron Ternaux.

TERPANDER (Τερπάνδρος), the earliest and the most important historical personage in the history of Greek music and its connection with poetry, for he was both a musician and a poet. He was a native of Antissa, in the island of Lesbos, and his best period falls in the latter half of the seventh century before Christ. There are few events in his life that can be chronologically established. In B.C. 676, at the first celebration of the musical contests during the festival of the Carneia near Sparta, Terpander was crowned as victor. (Athenaeus, xiv., p. 635.) He afterwards gained four successive prizes in the musical contests at the Pythian games (Plutarch, 'De Musica,' 4); and these victories probably fall between the years B.C. 672 and 645, since in the latter of these years he was at Sparta, and there introduced his nomen (*vōnai*) for singing to the accompaniment of the cithara, and was engaged in reducing the music of the Greeks, such as it then was, to a regular system. ('Marmon. Parium, Epoch.' 34; Plutarch, 'De Mus.,' 9.) At this time his fame must have reached its height. His descendants, or at least the musicians in his school (*κισαρρδοί*), continued for more than a century to obtain the prize at the Carneia every year without interruption.

Numerous musical inventions are said to have been made by Terpander; many of them however may have been made by other persons, especially such as belonged to his school, and subsequently ascribed to the father and founder of the art. Of many of his inventions we are unable to form any clear idea. The most important among them however is the seven-stringed cithara (heptachord). Previous to his time songs, hymns, and rhapsodies had been accompanied with a cithara of only four strings (tetrachord), to which Terpander added three new strings, so as to make the cithara comprise a full octave, or, as the Greeks call it, a *dipason*. The heptachord soon came into general use, and remained the favourite instrument of the Greeks, especially the Dorians, notwithstanding the various alterations and improvements that were made. Another very important improvement which the ancients unanimously assign to Terpander, is the reduction of the ancient melodies to certain systems (*vōnai*) which continued unaltered for several centuries. These nomen appear to have been of a twofold character: he either invented them himself, or he merely fixed those which had been used before his time. This fixing of certain tunes and melodies he is said to have effected by marks or notes which he made over the verses of a poem. In this manner he marked the tunes of his own poems, as well as of portions of the Homeric rhapsodies. His own poetical compositions, which, with the exceptions of a few fragments, are now lost, consisted of hymns, proemia, and scolia.

(Müller, *History of the Literature of Ancient Greece*, i., p. 149, &c.; Bode, *Geschichte der Lyrische Dichtkunst der Hellenen*, ii., p. 363, &c.)

TERRASSON, JEAN, was born at Lyon in 1670: his father was Pierre Terrasson, one of a family of considerable eminence and activity in that city, and a man whose devout temper led him to make all his four sons (of whom Jean was the eldest) members of the Congregation of the Oratory. They were all at Paris in the house of that Society when their father died: the three younger remained members of the Congregation, but Jean (now a sub-deacon) whose disposition disinclined him to the life of an ecclesiastic, quitted the Society, not however without having acquired considerable acquaintance with theology. The simplicity of character which ever distinguished him rendered him the dupe of men, by whom his small patrimony was soon wasted; but he found a shelter in the house of a friend, M. Rémond, to whose son he became tutor. He subsequently (1714) undertook the education of the son of his cousin Mathieu Terrasson, a celebrated advocate in the parliament of Paris. He had become an associate of the Académie Royale des Sciences in 1707. In 1715 he made his first appearance as an author by taking part in the dispute then raging on the value of the Homeric Poems, and the comparative merits of the ancients and moderns. His work was entitled 'Disser-

tation Critique sur l'Iliade d'Homère,' 2 vols. 12mo, Paris: it met with a favourable reception from those who joined in or approved of the attacks then made on Homer, who was severely criticised. Next year Terrasson published an addition to his dissertation on Homer, in 12mo, in reply to André Dacier, by whom he had been attacked. In 1719 the financial system of Law enabled Terrasson to obtain a large fortune, and induced him to form an establishment and set up his carriage: but wealth was to him rather a source of embarrassment than of pleasure; and when he lost his fortune the next year in the financial change which took place, he contentedly observed that it would be more convenient to him to live on a little. In 1720 he published a small work in defence of Law's financial schemes, entitled 'Trois Lettres sur le Nouveau Système des Finances,' 56 pp. 4to, Paris, and another small work in defence of the French India Company. He saved some small part of his fortune from the general wreck; and this, with the income of a professorship, which he obtained next year (1721) in the Collège Royal, and a pension subsequently conferred by the crown, rendered his circumstances easy for the rest of his life. He became a member of the Académie Française in 1732.

In 1731 Terrasson published a romance in imitation of the 'Telemaque' of Fénelon. It was entitled 'Séthos,' 3 vols. 12mo, Paris, and professed to be a translation of a Greek manuscript. The scene is laid chiefly in Egypt. This work passed through several editions, but never became popular. An English translation was published in 1732. In the years 1737-44 he published the seven successive volumes in 12mo, of a translation of Diodorus Siculus. This translation has been reprinted once or twice, but is very inaccurate. This was his last work of any extent. His memory and his bodily strength gradually failed, and he died in 1750, aged eighty. He wrote also a treatise entitled 'De l'Infini Créé,' of which he allowed one or two transcripts to be taken during his life; but it was never published, nor was the original manuscript found among his papers at his decease. He left also a small work, published after his decease, entitled 'La Philosophie applicable à tous les Objets de l'Esprit et de la Raison' (Paris, 8vo, 1754).

TERTULLIANUS, QUINTUS SEPTIMIUS FLORENS, the earliest of the Latin ecclesiastical writers, lived in the latter part of the second century and the beginning of the third. The exact date of his birth is unknown; Tillemont supposes that it was in A.D. 160, and others have fixed it as early as 135. He was born, according to Jerome ('De Vir. Illust.,' 53), at Carthage, where his father was a centurion in the service of the proconsul of Africa. He embraced the profession of an advocate or rhetorician, in which he appears to have attained to some eminence. During this period of his life he was a heathen, as he himself informs us ('Apolog.,' 18; 'De Spectac.,' 19; 'De Resurrect. Carn.,' 19, 59; 'De Penitent.,' 1). He was converted to Christianity at Carthage in all probability, though an expression of Eusebius ('Hist. Ecc.,' ii. 2) has been thought to imply that his conversion took place at Rome. Immediately upon his conversion he was ordained a presbyter. About the end of the 2nd century (several writers suppose about the year 200), he became a Montanist. Jerome (*l.c.*) ascribes this change to his suffering from the envy and insults of the clergy of the Roman church, but a more adequate and more probable reason for it is found in the character of Tertullian himself. In his writings composed before his Montanism he shows many traces of that zeal and asceticism which formed the peculiar characteristic of the Montanists. It has been doubted whether he remained a Montanist to his death. Some have thought that he returned to the catholic church, and others suppose that he at last settled down into opinions intermediate between those of the Montanists and those of the orthodox. For neither of these suppositions is there any sufficient proof. There existed indeed at Carthage, in the 5th century, a sect called Tertullianists; but between them and Tertullian there appears to have been no historical connection. Whether he remained a Montanist or not, he continued to be held in the greatest respect by the African churches. It fact it is to his influence that we must trace the characteristics which distinguished those churches from other Christians, and which at length, through Augustine, gave a tone to the Christianity of the West. His influence was especially great upon Cyprian, in whose writings there is much which closely resembles some of Tertullian's, and of whom Jerome says that in asking for the works of Tertullian he was wont to say, 'Da magistrum' ('Give me my master').

The date of Tertullian's death is unknown, but we are told by Jerome that he lived to a great age. One of his works ('Ad Scapulam') was written as late as A.D. 216.

A large portion of his works have come down to us, and these may be divided into three classes: (1) apologetic, (2) practical, and (3) doctrinal or controversial. The same classification is sometimes stated differently, as follows: (1) writings against the heathen; (2) writings on the nature, morals, rites, &c. of the church; and (3) writings against heretics. It is important to distinguish, if possible, between the works which he wrote before he became a Montanist and those which he wrote afterwards. This distinction has been attempted by Neander and Bähr. On the other hand, a few writers have thought that all the works of Tertullian were composed after he adopted the opinions of Montanus. (J. G. Hoffmann, 'Diss. omnia Tertull. in Montanismo scripta videri,' Wittenberg, 1738.)

I. Of Tertullian's Apologetic Works the following appear to belong to the earlier part of his life, and to have been written in the reign of Septimius Severus. They are free from the peculiar tenets of Montanism:—(1.) 'Ad Martyres'; for the encouragement and vindication of those who suffered for being Christians. (2.) 'De Spectaculis'; written about A.D. 198, against the Roman games and festivals, and to dissuade Christians from being present at them. (3.) 'De Idololatria'; an exposure of the character and influence of idolatry, with an exhortation to Christians to avoid every approach to participation in it. (4.) 'Apologeticus adversus Gentes pro Christianis'; his principal work of this class, and one of the best of all his works, is a powerful refutation of the accusations made against the early Christians, and a warm remonstrance against the persecutions they suffered, addressed to the Roman magistrates. It was written in the year 198, and has been deservedly held in very high esteem both in ancient and modern times. (5.) 'Ad Nationes Libri II.' These two books, which were discovered in manuscript by James Gothofred, and printed by him at Geneva, 1625, 4to, form a kind of supplement to the 'Apologeticus.' The first contains much the same matter as that book, sometimes expanded, sometimes abridged, and sometimes newly arranged; the second takes up the general subject of heathen theology. The date of these books appears to be about A.D. 199, if they were written after the 'Apologeticus'; but some writers of high authority, as Neander and Münter, suppose that they were written before the latter work, in the year 198. (6.) The treatise 'De Testimonio Animæ' may be regarded as another supplement to the 'Apologeticus,' the 17th chapter of which contains in fact the same argument in a shorter form. Its object is to prove that there exists originally in the human mind, to a certain extent, a knowledge of the true God, and that this knowledge of God confirms the Christian doctrine of his character.

The remainder of Tertullian's apologetic works appear to have been written after he became a Montanist. They are: (7.) 'De Corona Militis'; a vindication of a Christian soldier, who refused to wear a crown which had been awarded to him, on the ground that it was a badge of heathenism, and who was imprisoned for his refusal. This work contains remarks on other questions relating to the duties of a Christian citizen under a heathen government. (8.) 'De Fuga in Persecutione'; a statement of the Montanist opinion that Christians, when persecuted, might neither attempt to save their lives by flight nor by money. Written about A.D. 202. (9.) 'Contra Gnosticos Scorpice'; an answer to the slurs thrown upon the martyrs in the persecution of Septimius Severus, by those 'scorpions' the Gnostics. (10.) 'Liber ad Scapulam'; a defence of the Christians, addressed to Scapula, the proconsul of Africa, who persecuted them.

II. *Practical Works*, relating to Christian morals and discipline. The following were written before he became a Montanist:—

(11.) 'De Patientia'; on Christian patience. (12.) 'De Oratione'; on prayer: one of Tertullian's earliest works. (13.) 'De Baptismo'; on baptism: a defence and explanation of the rite. (14.) 'De Pœnitentia'; on repentance: a manual for Catechumens and newly-baptised Christians. (15.) 'Libri Duo ad Uxorem'; exhorting his wife not to marry a second time, if he should die before her.

The two following works were, in Neander's opinion, most probably written after Tertullian became a Montanist: (16.) 'De Cultu Feminarum'; on female attire: consisting of two books, the first of which is sometimes denoted by a separate title, namely, 'De Habitu Muliebris.' (17.) 'De Virginibus Velandis'; on the veiling of virgins: in opposition to the custom then prevalent at Carthage, of virgins appearing in church with the face exposed.

The remaining works of this second class are undoubtedly Montanistic:—(18.) 'De Exhortatione Castitatis'; dissuading a friend from marrying a second time. To the same purport are (19.) 'De Monogamia'; and (20.) 'De Pudicitia.' (21.) 'De Jejunatis,' or 'De Jejunis'; recommending the severe practices of the Montanists, in preference to the milder doctrine of the orthodox respecting fasts. In this work, and others of his writings, he applies to the orthodox the term 'psychici' (ψυχικοί), *carnal*, which is used by Paul (1 Cor., ii. 14) in opposition to 'spiritual.' (22.) 'De Pallio,' composed in the year 208, is a treatise recommending the wearing of the Greek pallium in preference to the Roman toga. It contains much information respecting the form of these garments.

III. *Works on Christian Doctrine and Polemics.* The only one of this class which seems to have been written before his Montanism is (23.) 'De Præscriptione (or Præscriptionibus) Hæreticorum'; against heretics in general, and especially the Gnostics and Marcionites.

He continued his attacks upon the heretics, and especially the various sects of Gnostics, after he became a Montanist, in the following works:—(24.) 'Adversus Marcionem Libri V.' (25.) 'Adversus Valentinos'; which Semler supposes to be a close imitation of Irenæus, 'Contra Hæreses.' (26.) 'De Carne Christi,' and (27.) 'De Resurrectione Carnis,' are treatises on the resurrection, in opposition to the Gnostics. (28.) 'Adversus Hermogenem'; against the doctrine held by a Gnostic of that name, that matter is eternal, and that out of this eternal matter not only all sensible things, but also the souls of men are made, the latter being besides endowed with a divine principle of life (πνεῦμα). Against this doctrine concerning the soul Tertullian wrote another work, from which only some quotations have come down to us: 'De Censu Animæ.' Our loss is the less, as we have a

fuller treatise by Tertullian on the same subject, (29.) 'De Anima'; in which he discusses the theories of ancient philosophers concerning the soul, and opposes to them all the doctrines of Christianity, that it is spiritual, immortal, and received direct from God.

There is also a work by him on the doctrine of the Trinity.

(30.) 'Adversus Praxeas'; written about A.D. 204 or 205, against the doctrine of Praxeas, which was in fact essentially the same with that which afterwards became known as Sabellianism.

In the latter part of his life he wrote a work, (31.) 'Adversus Judæos,' in answer to the Jewish objections against Christianity.

The above list contains all the extant works of Tertullian, but he must have written many more, since Jerome informs us that many of his works had been lost even before his time. (Hieronym. 'De Vir. Illust.' c. 53.) Among his lost works, of which the titles are known, besides that 'De Censu Animæ,' already mentioned, are some which were especially designed to explain the opinions of the Montanists, namely, 'De Spe Fidelium,' one of the earliest works in which was put forth the doctrine now known as Millenarianism, of the personal reign of Christ on earth for a thousand years, and 'De Paradiso.' He also composed a defence of the 'ecstasies' of the Montanists in six books, to which was added a seventh against a certain Apollonius. His treatise 'De Aaronis Vestibus' appears to have been lost before Jerome's time. (See Hieronym., 'Epist.' lxi., near the end.) Two works which are erroneously ascribed to Tertullian are the 'Carmina Sibyllina,' and the 'Acta Perpetuæ et Felicitatis.'

Tertullian holds one of the first places, if not the very first, among the Latin fathers, for learning and intellectual power. Even those to whom his peculiar opinions were the least acceptable have eulogized him in the highest terms. Thus Jerome says ('Epist.' lxx., sec. 5), "What more learned, what more acute than Tertullian? whose apology and books against the heathen embrace all the learning of the age." Vincentius Lirinensis ('Commonitor,' c. 24) adjudges to him "by far the highest place among the Latin fathers," and attributes to him "the most extensive learning both in things divine and human, and a grasp of mind which comprehended all philosophy, all sects of philosophers, their authors and supporters, and every variety of historical and scientific knowledge." Erasmus calls him "by far the most learned of all the Latin theologians." ('Præfat. ad Hilar.') In short, the general judgment of the orthodox in ancient and modern times may be summed up in the words of Jerome: "His genius I praise, his heresy I condemn" (ejus ingenium laudo, hæresin damno). In fact, he appears from his writings to have become acquainted with all the learning then taught in the schools of the rhetoricians, while to this he added the results of careful observation, and then brought all his knowledge to the support of the opinions he embraced, first as a Catholic Christian and afterwards as a Montanist. Perhaps the most striking feature in his writings is his intimate acquaintance with all the ramifications of heathen theology and worship, and the powerful use he makes of this sort of learning in his controversies with the heretics.

His excellences and defects are strangely mingled. We trace the skill of the rhetorician in his forcible reasonings and his eloquent style, but he has also the rhetorician's faults in arguing often with more sophistry than truth, and in taking liberties with language till his meaning becomes obscure. His warm and zealous temper gives life and impressiveness to his writings; but its excess made him an enthusiast and ascetic, perhaps we ought in truth to say a fanatic. In his writings we may generally see a striving after words to express the warmth of his feelings and the depth of his convictions, and the result of this effort, combined with the rhetorical character of his style, is often to render his eloquence inflated and obscure. He indulges frequently in figures and hyperboles, and excels in satire and irony. His writings differ greatly both in argument and style. His polemical works are the clearest, but not the most elegant. His best works are his Apologies (4), and those on the Prescription of the Heretics (23), on Repentance (14), on Baptism (13), on Prayer (12), on Patience (11), and his address to Martyrs (1).

The best editions of Tertullian are those of Rhenanus, Rigaltius, and Semler. A full account of editions and illustrative works is given at the end of the excellent small edition of Tertullian by Leopold, in Gersdorff's 'Bibliotheca Patrum Ecclesiasticorum Latinorum Selecta,' 4 vols. 12mo, Leips., 1839-41, Tauchnitz.

It is doubtful whether the Tertullianus, or Tertyllianus, from two of whose works there are excerpts in the 'Digest,' is this Tertullianus. The subject is briefly discussed by Zimmermann ('Geschichte des Röm. Privatrechts'), with references to other remarks on this subject. Tertullian, in his theological works, shows that he was well acquainted with Roman law.

(The Church Histories of Mosheim, Neander, and Schröckh; Baehr, 'Christlich-Römische Theologie'; Neander, 'Antignosticus Geist des Tertullianus,' &c., 8vo, Berlin, 1825; Bishop Kaye, 'The Ecclesiastical History of the Second and Third Centuries,' illustrated from the Writings of Tertullian, 8vo, Camb., 1826; Münter, 'Primordia Ecclesiæ Africanæ,' 4to, Hafn., 1829. Other works on the Life and Writings of Tertullian are mentioned in the Appendix to Leopold's edition.)

TERWESTEN, AUGUSTYN, was born at the Hague in 1649. He became at about twenty years of age the pupil of N. Wieling and W. Doudyns; before this time he had maintained himself by working and

chasing for goldsmiths. In 1673 he went to Italy, where he studied chiefly in Venice and Rome, and visited France and England; and after an absence of six years returned in 1678 to the Hague, where he distinguished himself by his historical and mythological compositions, sacred and profane, but his favourite author was Ovid. He restored the Academy of the Hague, which had declined to a very inefficient state; and in 1690 he was invited by the Elector of Brandenburg, afterwards King of Prussia, to Berlin, and was appointed his court painter. He contributed chiefly to the establishment of the Academy of Berlin, of which he was made director. He died at Berlin in 1711. Terwestyn painted with remarkable rapidity and freedom; there are a few etchings by him.

TESI, MAURO ANTONIO, or, as he is sometimes called, after the name given him by his patron and admirer, Algarotti, Il Mauroino, was born at Montalbano, in the territory of Modena, January 15, 1730. Though in poor circumstances, his parents were so desirous of giving him a good education, that they removed for that purpose to Bologna, where he was admitted into the Scuole Pie. Manifesting a great taste for drawing, he was placed under Carlo Morettini, a heraldry painter. It is therefore not without reason that Algarotti calls him self-taught, for though he afterwards received some instruction from an engraver named Giovanni Fabbri, it could have contributed but little towards the excellence he displayed in that branch of art which he selected,—architectural design and painting. For this he was doubtless most of all indebted, after his own talent, to the instruction and assistance of Algarotti himself, who made him the companion of his journeys to various places, and treated him as a son. The attachment was reciprocal; and it was owing to his attentions to his patron during his last illness at Pisa, that he fell into ill health himself, and died two years afterwards at Bologna, July 18, 1766.

Algarotti has made frequent mention of TESI in his letters, where he has described many of his works at considerable length, and speaks both of them and him in terms that would seem quite exaggerated, if they were expressed by a less intelligent critic, or were his praises not confirmed by the opinions of others. The encomium paid to his memory in the inscription on his monument in the church of St. Petronio, Bologna,—“*Elegantiae veteris in pingendo ornatu, et architectura restitutori*,”—has not been considered more than is due to one who set an example of more refined and purer taste in architectural design and composition. His productions are highly esteemed, and though his pictures are few, he left a great number of drawings, and also a series of architectural plates engraved by himself.

TESSIN. There are three eminent Swedes of this name, father, son, and grandson. The first of them, Nicodemus the elder, or NICODEMUS VALENTINSON TESSIN, was born at Stralsund in 1619, and held the appointment of royal or crown architect, which was conferred upon him by Queen Christina in 1645, then vacant by the death of Simon de la Vallée. Very little more has been recorded of him, except that he visited Italy, that a patent of nobility was granted to him in 1674 by Charles XI, and that he filled the office of magistrate at Stockholm. Even the time of his death is not precisely stated, but it appears from collateral evidence to have been somewhere about 1688. As an architect one of his chief works is the palace of Drottningholm, begun by him for the Queen-Dowager Hedwig Eleonora (widow of Charles Gustavus), but completed by his son. He also erected the royal villa of Strömsholm, and the mausoleum of Charles Gustavus. In fame he has been surpassed by his more eminent son,

COUNT NICODEMUS TESSIN, who was born at Nyköping in 1654, and had for one of his baptismal sponsors the Queen Maria Eleonora, widow of Gustavus Adolphus. He was carefully educated by his father, expressly with a view to his future profession. As soon as he had completed his studies, first at Stockholm, afterwards at Upsala, he was sent at the age of eighteen to Italy, whither he accompanied the Marquis del Monte, a nobleman in the service of Christina of Sweden. He studied at Rome under Bernini, and acquired a taste for the fine arts generally. After four years thus spent, he visited Naples, Sicily, and Malta, and again returned to Rome, at which place he received from Sweden his appointment as future hof-architect in 1689. On his return he was allowed, by Charles XI, to prosecute his travels comfortably with his earnest wish for further improvement, and this time he visited England and France, in which latter country he remained three years. On finally settling in his native country, he received, in addition to his former appointment, that of city-architect to the magistracy of Stockholm. The destruction of the royal palace by fire in 1697 afforded him an opportunity for displaying his ability far more favourable than might else have offered itself; and of which he so well availed himself as to render the new edifice one of the noblest of its kind in Europe, though not what it would have been had his ideas been fully carried out. He had also numerous opportunities of exhibiting his taste on a magnificent scale; though they were only of a temporary nature—on occasions of splendid court pageants and festivals, in which his talent for architectural decoration was employed. One of them was at the solemnisation of the public entry and coronation of Ulrica Eleonora, the wife of Charles XI, who was herself an artist, and displayed considerable proficiency in portrait-painting. By the Queen-Dowager Hedwig Eleonora he was employed not only to complete Drottningholm, but to lay out the grounds and

gardens both there and at Ulriksdal. Besides the cathedral at Calmar, and Oxenstiern's monument, he executed or designed a great number of other buildings, including a project for rebuilding the palace at Copenhagen, which was partly carried into effect many years after his death, when it was curtailed, and by no means improved in other respects. Elevations of the original design were published by his son, under the title of ‘*Regiæ Hafniensis Facies*,’ &c. In addition to his professional occupations, the count (which title was conferred on him in 1714) was engaged in many offices that he held at court, and he took a considerable share in public and political affairs. At the time of his death (1728) he was Chancellor of the University of Lund. Count Nicodemus was twice married.

COUNT CHARLES GUSTAVUS TESSIN, the son of Count Nicodemus by his first marriage, was born at Stockholm in 1695. Though not without talent for architecture, which he had considerably improved by travelling, he did not exercise it professionally, except in completing the palace at Stockholm after his father's death. His claim to celebrity was of a very different kind; it was as a statesman and diplomatist that he chiefly distinguished himself. He was ambassador at the court of France from 1739 to 1742, and president of the chancery from 1747 to 1752. As tutor to the prince royal, afterwards Gustavus III., he wrote for his instruction a series of letters on political and moral topics, which were published, and of which there is a French translation. Count Gustavus was a zealous promoter of every scheme for the advancement of his country; he did much for the encouragement of arts and manufactures, and first established the Swedish Academy for Painting and Sculpture in 1735. Some years before his death he withdrew from public business and affairs, and lived in retirement on his estate at Åkerö in Sudermania, where he died in 1771; and by his death the family became extinct.

TESTELIN, or TETTELIN, LOUIS, was born at Paris in 1615, and was a pupil of Vouet. He was elected one of the original members of the French Academy, though he was only thirty-three years of age at its establishment in 1648. His presentation picture was an historical portrait of Louis XIV. In 1650 he was appointed one of the professors of the academy. Testelin's picture of the ‘*Resurrection of Tabitha by St. Paul*,’ painted in 1652, is considered one of the masterpieces of the French school of painting, and is compared with Le Sueur's celebrated picture of ‘*Paul Preaching*,’ and the ‘*Burning of the Books at Ephesus*;’ it is in the church of Notre Dame; there is a print of it by Bosse and Picard le Romain. There is another celebrated picture by Testelin in the church of Notre Dame, the ‘*Flagellation of St. Paul and Silas*,’ which was painted in 1655, the year of his death. ‘*St. Louis attending a Sick Man*,’ in the Hospital de la Charité, is likewise a distinguished work by Testelin. As he died at the early age of forty, his works are necessarily scarce. Le Brun and Testelin were warm friends. Testelin had great theoretical knowledge, and he and Le Brun frequently conversed on the principles of art. Testelin never was in Italy; but on one occasion the subject of their argument was the comparative merit of the Roman and Venetian schools, taking their abstract characteristics as their subject, Roman design, and Venetian colour and light and shade, Le Brun advocating the Roman and Testelin the Venetian. After arguing the whole night through, Le Brun rose, saying, “My friend, you have charmed me by your profound knowledge; the victory is yours; certainly no man is better instructed in the great maxims of his art.”

TETRICUS, CAIUS PESUVVIUS, a Roman senator, one of the numerous usurpers of the imperial purple in the 3rd century A.D., who are distinguished in Roman history by the name of the Thirty Tyrants. He was governor of Aquitania, and, after the death of several pretenders in Gaul, was made emperor there in 268 by Victorina, said to be his kinswoman, and the widow of Victorinus. He reigned for a few years not unprosperously; but after the accession of Aurelian, finding himself unable to control the turbulent and licentious soldiery who sustained his power, and becoming weary of their crimes, he invited the new emperor into Gaul, and resigned his usurped dominion in the following manner:—Dreading the resentment of his troops if he deserted them openly, he pretended to prepare for an engagement near Châlons in Champagne, and then betrayed his army into the hands of Aurelian. Gibbon places this event before the defeat of Zenobia; but Vopiscus (Aurelianus, ‘*Historia Augusta*’) says that it took place subsequently. The triumph of Aurelian, in 274, was ennobled by the presence of the queen of the East, and of Tetricus and his son, in the train of captives. The deposed emperor was treated by his conqueror with every mark of distinction during the remainder of his life, and was made corrector of Lucania according to Vopiscus and other writers, or of all Italy, if we follow Trebellius Pollio. His son Tetricus, who had been made Cæsar by Victorina, met with not less favour than his father at the hands of Aurelian, and was honoured with senatorial dignity. On the coins of Tetricus, which are extant in gold, silver, and copper, we find the reading IMP.C.C.PESV.TETRICVS.AVG, and also IMP.TETRICVS.AVG; with, on the reverse, IMP.C.C.LAVDIVS.AVG, which, as Eckhel (‘*Doct. Vet. Num.*’) remarks, would imply an alliance between him and Claudius Gothicus. Spon (‘*Miscell.*’ 274, Lugd., 1685) gives an inscription on a marble found at Rouen with the titles of Tetricus more at length: C.PESVIO. TETRICO. NOBILISSIMO. CAES.P.P.AVG.L.L. Coins struck in the name of the younger Tetricus yet remain.

TETZEL, JOHANN. [TETZEL, J.]

TEXEIRA, or TEXERA, JOSEPH, was born of a good family in Portugal, about the beginning of 1543. After distinguishing himself at the university, he entered the order of St. Dominic in 1565, and obtained general respect for his learning and virtue. He was prior of the convent of Santarem in 1578, when King Sebastian undertook his expedition into Africa.

In the troubles which ensued, Teixeira attached himself to the party of Don Antonio, and accompanied that prince to France in 1581, where he went to solicit assistance against Philip II. Teixeira published at Paris, in the beginning of 1582, a compendium of the history of Portugal. The work is very scarce (it is described as a thin quarto of 70 pages), and appears to have been published for the purpose of supporting Don Antonio's claim to the throne of Portugal. The author was taken prisoner by the Spaniards in the naval battle off Terceira on the 26th of July 1582, and carried to Lisbon, whence he contrived to make his escape and rejoin Don Antonio. Duard Nonius à Leone, a converted Jew, employed by Philip II. to refute the 'Compendium of Portuguese History,' asserts that Teixeira, while a prisoner at Lisbon, denied to him that he was the author.

The partisans of the League having obliged Don Antonio to quit Paris, Teixeira accompanied him as his confessor, first to Bretagne, and in 1586 to England. In 1588, having returned to France, he was introduced to Henri III. and the queen-mother: the former appointed him a court chaplain; the latter despatched him on a confidential mission to Lyon, then in the possession of the League, believing that a Dominican friar was unlikely to be suspected of being an agent of the court. Teixeira remained at Lyon from July 1588 to January 1589. During this interval he prepared for publication a reply to the attack upon his History by Nonius à Leone. This pamphlet, or some indirect expressions in conversation, having given umbrage to the Leaguers, he was obliged to fly; the papers left in his cell were seized, and the whole impression of his pamphlet (with the exception of one or two copies) destroyed. He rejoined Henri III. at Tours, and after the murder of that prince, in August 1589, was continued in his office of court-chaplain by Henri IV., to whose service he attached himself. After the entry of Henri into Paris, Don Antonio was enabled to return to that city, and Teixeira appears to have resumed his office of confessor. In March 1595 he published a new edition of the work which had been destroyed at Lyon; but his labour was in vain, for he was called, in the August following, to perform the last service of his church to the prince whose cause he had advocated with such fidelity.

In 1596 Teixeira was a witness of the public abjuration of Calvinism by the dowager-princess of Condé at Rouen. The Papal legate selected him to instruct and confirm the princess in her new faith; and from that time till his death he continued attached to the service of the house of Condé. This engagement left him pretty much the command of his own time, and he employed it principally in his favourite study of genealogy. A list of his published works will be found at the end of this article: here it is only necessary to remark that to the second edition of his 'Genealogy of the House of Condé,' published in 1598, he added an account of the public ceremonial of the princess's reconciliation with the Roman Catholic church.

In 1601 he published a narrative of the adventures of Don Sebastian, 'from his expedition into Africa in 1578, till the 6th of January of this present year 1601.' We have not been able to procure this work; but the following passage from Etoile's 'Journal of the Reign of Henry IV.' throws some light upon the expression quoted from its title-page:—"Friday, the 1st of June, 1601, comes the intelligence that the false or true Don Sebastian (for as yet one knows not which to call him) has been sent to the galleys by order of the viceroy of Naples. . . . The Portuguese maintain that he is the true Don Sebastian: they have solicited various courts to obtain his liberty, and published several works in his favour. Among others Joseph Teixeira, a Dominican, has undertaken several journeys to Bavaria, England, Venice, and Rome, where he has disseminated his writings; and finally, he has caused to be printed at Paris a collection of prophecies current among the Portuguese, which foretold all that has happened to their king Sebastian." That Teixeira, whose writings show him to have been an accomplished scholar, whose confidential employment by Catherine de' Medici is a strong testimony in favour of his abilities, and whose high moral character is acknowledged on all hands, should have believed the individual here mentioned to have been the real Don Sebastian, appears upon first thoughts a strong testimony in his favour. But L'Etoile's account of the nature of the book weakens the presumption, and Teixeira's inveteracy against the Spaniards renders it probable that the account is correct. He is said to have declared from the pulpit, when preaching on the duty of loving one's neighbour, that "we are bound to love all men, of whatever religion, sect, or nation—even Castilians."

Teixeira died in the convent of the Jacobins at Paris, on the 29th or 30th of June 1604. L'Etoile, who mentions his death, says, "He has just returned from England, whither he had been sent by the king, who gave him a hundred crowns for the expenses of the journey. While there he had seen the king of England, to whom he presented his 'Genealogy' which he had compiled, and which was well received. He was on the eve of returning to England when he was taken ill."

Teixeira's frequent visits to England, both in the time of Elizabeth and James, gave rise to suspicions of his attachment to the Romish Church. For these there does not appear to have been any reasonable ground; he was opposed to the ultra-Romanist party of the League in France, because it was allied with Philip II., but his religious opinions never appear to have varied.

The published works of Teixeira are—1. 'De Portugallia Ortu, Regni Initii, denique de Rebus à Regibus universoque regno præclare gestis Compendium,' Parisii, 1582, in 4to, 77 pp., very rare; 2. 'De Electionis Jure quod competit viris Portugallensibus in augurandis suis Regibus ac Principibus,' Parisii, 8vo, 1590: this is a reprint of the answer to Nonius à Leone, printed and destroyed at Lyon in 1589: a third edition was published at Paris in 1595, with the title, 'Speculum Tyrannidis Philippi, Regis Castellæ, in usurpanda Portugallia;' 3. 'Exegesis Genealogica, sive Explicatio Arboris Gentilitiæ invictissimi ac potentissimi Galliarum regis Henrici ejus nominis IV.' This work was published at Tours in 1590; at Leyden, with additions, in 1592; again at Leyden in 1617, with the title, 'Stemmata Franciæ item Navarræ Regum à prima utriusque Gentis Origine;' all the three editions are in 4to.; 4. 'Explicatio Genealogiæ Henrici II. Condæ Principis,' Paris, 1596. An edition in 4to, and another in 8vo, and a translation into French by Jean de Montlyard, all appeared in the same year. To the edition of 1598 was appended 'Narratio in qua tractatur de Apparitione, Abjuratione, Conversione, et Synaxi Illustrissimæ Principis Charlotte Catharinæ Trimollie, Principissæ Condæ;' 5. 'De Flammula, seu Vexillo S. Dionysii, vel de Orimphla aut Auriflamma Tractatus,' Paris, 8vo, 1598; 6. 'Adventure admirable par devers toutes autres des Siècles passés et présents, qui contient un Discours touchant les Succès du Roi de Portugal, D. Sebastian, depuis son voyage d'Afrique, auquel il se perdit en la bataille qu'il eut contre les Infidèles en 1578, jusqu'au 6 de Janvier présent, an 1601;' traduit du Castillan, 8vo, Paris.

(This sketch has been compiled from the dictionaries of Bayle and Moreri, and Nicolaus Antonius; from the Prefaces to Teixeira's 'Genealogy of Henry IV.' and his reply to Nonius à Leone; and from Pierre de l'Etoile's 'Journal of the Reign of Henry IV.,' vol. ii., pp. 559-61, and vol. iii., pp. 194-6, edition published at the Hague in 1761, in 4 vols. 8vo.)

TEXEIRA, or TEXERA, PEDRO, a native of Portugal, one of the earliest cultivators of modern Persian literature. The place and date of his birth and death are alike unknown. The author of the notice of his life in the 'Biographie Universelle,' says that he was born in 1570, but does not mention the authority on which he makes the statement. Cotelendi, who translated Teixeira's work into French, states that his author, "instigated by a vehement desire to become acquainted with the history of Persia, passed several years in that country, and having made himself perfectly master of the language, devoted himself, by the advice of some able and enlightened Persians, to the study of Mirkhond." Teixeira himself has informed us that being at Malacca, in the beginning of 1600, he embarked in the month of May for the Philippine Islands, whence he took shipping for Mexico, and ultimately arrived at Lisbon on the 20th of October 1601. His correspondents in the East having failed to transmit him some money which he had left in their charge, he was obliged to undertake a voyage to Goa to recover it. Disgusted with the sea, he resolved to return overland; and having in pursuance of his determination sailed from Goa, on the 9th of February 1604, and arrived at Basrah on the 6th of August (being detained some time at Ormuz), he travelled by way of Meshed-Ali to Baghdad, and thence to Anna, Aleppo, and Scanderoon, where he took shipping for Venice. After a short stay in that city, he made the tour of Italy, crossed the Alps into France, and then retired to Antwerp, where he spent his time in compiling a book, which he published in 1610. After that event we again lose sight of him entirely.

His work, the first book of which, we are told by Antonio de Leon Pinelo, was composed in Portuguese, but translated into Spanish, and the rest written in that language with a view to publication, is entitled, 'Relacion de los Reyes de Persia y Ormuz: Viagi de la India Oriental hasta Italia por Tierra el año de 1604,' Antwerp, 1610. (N. Antonio says it was published in 4to; Antonio de Leon says it was published in 8vo.) It consists of three parts: the first is a history of the kings of Persia, compiled from Mirkhond with a brief continuation, down to the age of the compiler; the second is an abridgment of the history of Ormuz, by Turan-shah, one of the kings of that district (a work which appears to be known in Europe only from Teixeira's abstract), also with a continuation; the third, an account of Teixeira's overland journey from India to Europe. Alfonso Lasor translated the work into Italian, and inserted it in his 'Orbe Universal' the same year in which it was published; Schikhart, in his 'Tarich, seu Series Regum Persiæ,' published at Tübingen in 1628, speaks in the highest terms of Teixeira's learning and diligence; Van Laet appended a Latin translation of Teixeira's Itinerary from Ormuz to Basrah and Baghdad to his 'Persia,' published at Leyden in 1633; Cotelendi published a French translation of the entire book at Paris in 1681, which the writer in the 'Biographie Universelle' justly characterises as "assez mauvaise." In short, down to the time of Tavernier and Chardin, Teixeira appears to have been regarded as the principal authority respecting Persia. The historical part of his work is now of little

importance, but his voyage up the Persian Gulf, and his route from Basrah to Meshed-Ali, Baghdad, Anna, Aleppo, and Scanderoon, may still be studied with advantage.

Antonio and Leon Pinelo mention a book entitled 'Naufragio de Jorge Albuquerque e Prosopopeia a seu louvor,' published at Lisbon in 1601, by a Peter Texeira, but do not identify him with our author. A 'Certificacion del Descubrimiento de el Marañon,' by a Pedro Texeira, 'Capitan Maior del Pará,' is appended to the account of the discovery of that river, published at Madrid in 1641, by Christoval de Acuña: this was apparently a different person. A third geographer of the name of Pedro Texeira is mentioned by Antonio as alive at Madrid a few years previous to the publication of his dictionary (1672): this one compiled a map of Portugal and a 'Descripcion de la Costa de España,' neither of which appear to have been published.

Series Regum Persiæ ab Ardachir-Babekan, usque ad Jazdigerdem, a Chalifitius expulsum, auctore Wilhelmo Schikard, Tubinga, 4to, 1628; Persia, seu Regni Persici Status, Variæque Itinera in atque per Persiam, Lugd. Batav., 24mo, 1633.*)

TEZEL, or TETZEL, JOHANN, a Dominican monk, who lived about the end of the 15th and the beginning of the 16th century. His name would have been forgotten but for the scandalous manner in which he carried on the traffic in indulgences, which roused the indignation of the better part of his contemporaries, and thus led to the reformation in Germany. He was a native of Leipzig, where he studied theology, and afterwards entered the order of the Dominicans in the Pauliner Kloster. In the year 1502 the pope appointed him preacher of indulgences for Germany. He converted this office into a most lucrative traffic, and is said to have made use of the basest means for the purpose of obtaining money. His conduct too was so bad, that he was condemned at Inspruck to be sewed up in a sack and to be drowned, having been convicted of adultery. But the interference of his superiors caused the sentence to be changed into imprisonment for life. He was accordingly conveyed to Leipzig, and confined in a tower which stood in that city near the Grimmagat (Grimmaer-Thor) until the year 1534, when it was pulled down. He had however not been imprisoned long before he was set at liberty at the request of Albert, archbishop of Mainz, and other ecclesiastical dignitaries. Tezel now made a pilgrimage to Rome, and acted the part of a penitent so well, that Pope Leo X. not only absolved him of his sins, but appointed him commissarius apostolicus in Germany, in addition to which the archbishop of Mainz made him 'inquisitor hæreticæ pravitatis.' In his capacity of papal commissary he now carried on his traffic in indulgences more impudently than ever. He traversed Saxony in an open carriage, accompanied by attendants, and carrying with him two chests, one of which contained the indulgences, and the other the money raised from their sale. This latter chest is said to have had the following inscription:—

"Sobald das geld im kasten klinget,  
Sobald die seel' gen himmel springt."  
(So soon as the gold in the chest rings,  
So soon the soul to heaven springs.)

His reputation for sanctity had become so great, that in several places the population of towns met him in solemn procession, and this entry was accompanied with the ringing of the church-bells. He sold indulgences for all crimes, murder, perjury, adultery, and not only for crimes already committed, but also for those which a person might commit. At last, in the year 1517, Luther openly opposed him, in the celebrated theses which he fixed on the church-door of Wittenberg. Tezel made a reply in another set of theses, which however were immediately burnt by the students in the market-place of Wittenberg. Tezel seems to have acted contrary to the intention of his superiors, and to have gone beyond his instructions, for Karl von Miltitz, who was sent by the pope to settle the disputes which had arisen out of his conduct, reprimanded him severely. In the year 1518 however Tezel, notwithstanding all this, obtained the degree of Doctor of Divinity at Frankfurt on the Oder. After this event, he returned to Leipzig to his convent, where he died, in August 1519, of the plague, shortly after the celebrated theological disputation of Eck and Karlstadt. He was buried in the church of his convent (the present chapel of the university); but there is now no trace of his grave, as that part of the church which contained his remains was pulled down in the 17th century to make room for some fortifications. Compare P. Melancthonius, *Historia Vitæ M. Lutheri*, i. p. 153, &c.; Gieseler, *Lehrbuch der neuern Kirchengeschichte*, vol. iii. p. 20; Löscher, *Vollständige Reformations-Acta*, ii. p. 324; and more especially Hechtius, *Vita Tezelii*.

THAARUP, THOMAS, a Danish poet and dramatist, highly esteemed by his countrymen as one of the classics in their literature, was the son of an ironmonger at Copenhagen. He was born 21st August 1749, the very same day as Edward Storm, another poet. This coincidence would hardly deserve notice, if something of the marvellous had not been founded upon it, it being said that Thaarup's

mother dreamed that the wife of a clergyman at Guldbrandsdalen was delivered just at the same time of a son, who would be the rival of her own. If not great, both of them were popular and national poets; and though neither very numerous nor of very great extent, their productions, especially their lyric pieces, earned for them a reputation which does not always fall to the lot of writers of more ambition and of higher pretension. This was more particularly the case with regard to Thaarup, whose three little musical dramas, 'Höstgildet,' 'Peters Bryllup,' and 'Hiemkomsten,' are esteemed chefs-d'œuvre of their kind, and the songs and airs were known by heart by every one, and repeated over all Denmark. Their celebrity was not at all less than that of the 'Beggars' Opera' in this country. Thaarup succeeded Storm as one of the directors of the theatre at Copenhagen, in which situation he remained till 1800. But though he survived Storm a full quarter of a century, Thaarup's literary life did not extend much beyond that of Storm. If he did not entirely lay aside his pen at the commencement of the present century, all the productions by which he will be remembered had appeared in the preceding one. He continued to reside at Copenhagen, where he died in the summer of 1821. Some of his hymns have been translated into German by Voss.

THA'BET, BEN KORRAH, an eminent physician, philosopher, and geometrician, whose complete names, as given by Ibn Abi 'Ossaibiah ('Fontes Relationum de Classibus Medicorum,' cap. 10, § 3), were Abū 'l-Hasan Thābet Ben Korrah. He was born at Harrān in Mesopotamia, A.H. 221 (A.D. 835-6), where he at first followed the business of a money-changer; he afterwards however went to Baghdad to pursue his studies, which he carried on with so much zeal that he became one of the most celebrated literary and scientific men of his age. He belonged to the sect of the Sabians, but got entangled in some religious disputes, and was expelled from their communion. In consequence of this he left Harrān, where he had been residing for some time, and went to Baghdad with the celebrated astronomer Mohammed Ben Mūsa. There he lived in his house, and was introduced by him to Mo'tadhid Billah, sixteenth of the 'Abbaside Khalifs (A.H. 279-289, A.D. 892-902), who appointed him one of his astrologers, and ever afterwards, on account of his acquirements and his pleasing manners, continued on terms of great intimacy with him. He died on the 26th of Safar, A.H. 288 (February 18, A.D. 901), aged sixty-seven lunar, or sixty-five solar years. His sons Senān and Ibrahim, and their descendants, practised physic with much reputation at Baghdad for more than a century after his death. Thābet himself appears to have been a very learned man, and also a good practical physician, as he tells a story of the way in which he restored to life a man that was supposed to be dead. (Casiri, 'Biblioth. Arabico-Hisp. Escur.' tom. i. p. 389.) He was also a very voluminous author, as the bare titles of his works, as given by the anonymous author of the 'Arabica Philosophorum Bibliotheca,' take up about two folio pages in Casiri's Catalogue. They consist of mathematical, medical, and zoological treatises, written in Arabic, besides translations into that language of several of the works of Galen, Ptolemy, Autolycus, Euclid, &c. He wrote also several in Syriac, on the religious rites and ceremonies of the Sabians; but none either of these or his Arabic works have (as far as the writer is aware) been published or translated, though several of them still exist in manuscript in some of the European libraries. (Wüstenfeld, *Geschichte der Arabischen Aerzte*; Casiri, *loc. cit.*; Nicoll and Pusey, *Catal. MSS. Arab. Biblioth. Bodl.*, pp. 257, 295; De Rossi, *Dizion. Stor. degli Autori Arabi*.)

THA'BET BEN SENAN, the grandson of the preceding, whose names are given by Ibn Abi 'Ossaibiah ('Fontes Relationum de Classibus Medicorum,' cap. 10, § 5) as Abū 'l-Hasan Thābet Ben Senān Ben Thābet Ben Korrah. He was celebrated, like the other members of his family, as a physician, philosopher, and mathematician, and was superintendent of the hospital at Baghdad during the reign of Al-Motteia, the twenty-third of the 'Abbaside kalifs, A.H. 334-363 (A.D. 946-974). He expounded the writings of Hippocrates and Galen; but his principal work appears to have been a History of his Own Times, from the year A.H. 290 (A.D. 903) to the year of his own death, A.H. 363 (A.D. 973-74), which is highly praised by Abū 'l-Faraj ('Hist. Compend. Dynast.', p. 208), and was continued after his death by his nephew Heldāl, and by other writers. Dr. Sprenger, in the notes to his translation of El-Mas'ūdī's 'Meadows of Gold and Mines of Gems,' vol. i., p. 24, 8vo, London, 1841, corrects an anachronism of Haji Khalfa, who ascribes this work to his grandfather Thābet Ben Korrah. (Wüstenfeld, *Geschichte der Arabischen Aerzte*; Assemani, *Biblioth. Orient.*, vol. ii., p. 317.)

\*THACKERAY, WILLIAM MAKEPEACE, English novelist and essayist, was born, in 1811, at Calcutta. His father, the son of the Rev. Richard Thackeray, of Hadley, in Middlesex, was of an old Yorkshire family, and held a situation in the East India Company's civil service; his mother, who still (1857) lives, is, we believe, of Welsh descent. Mr. Thackeray was educated at Cambridge about the same time as the poet Tennyson, the late J. M. Kemble, and others since distinguished in various walks; but he left the university without taking a degree. He inherited a good fortune on coming of age; and his intention at first was to be an artist. In the course of his education for this profession he visited Italy and other parts of the Continent in his youth; and in Mr. Lewis's 'Life of Göthe' is a very interesting letter written by Mr. Thackeray to the author, in which he gives an

account of his residence for a time, with other young Englishmen, at Weimar, and of his reminiscences of Göthe, with some of the members of whose family he was on terms of intimacy. Recollections of his young artist-life are also to be found interwoven into his fictions; but, with the exception of the admirable illustrations executed by his own pencil for many of his writings, he has not given the world the means of judging what success he might have attained had he continued his devotion to art as a profession. It seems to have been between his twenty-fifth and thirtieth years that he abandoned the idea of becoming an artist and adopted the life of a man of letters. Although from the very first he exhibited those peculiar faculties as a writer which have latterly secured him his extraordinary reputation and influence, his progress towards popularity, or even towards general recognition, was slow. He is said to have written for the 'Times' during the editorship of Barnes; and it is certain that he was connected with other London journals at different periods. It was in 'Fraser's Magazine' however, that he worked his way into the esteem of those who were capable of discerning an original talent in brief magazine papers, and of inferring what it could accomplish when exercised on a large scale. Under the characteristic pseudonym of Michael Angelo Titmarsh, he wrote, for a series of years, tales, essays, and sketches for this magazine, all distinguished by shrewd observation, exquisite style, and the play of keen wit and delicate irony over a hard and subtle philosophic meaning. His first separate publications, also under the name of Michael Angelo Titmarsh, were 'The Paris Sketch-Book,' in 2 vols., in 1840, and 'The Second Funeral of Napoleon, in Three Letters to Miss Smith of London,' and 'The Chronicle of the Drum,' published together, in 1841. Neither these nor the 'Irish Sketch-Book,' in 2 vols., 1843, had any success with the public. Here and there however, individuals of deeper insight were noting the appearance of the new author as one who was sure at last to be recognised as one of the higher English humorists; and among these critics was the late John Sterling, who, as early as 1841, in speaking of Mr. Thackeray's story called 'The Great Hoggarty Diamond,' then being published in 'Fraser,' did justice to the author's genius and predicted his being better known (see Carlyle's 'Life of Sterling'). What perhaps accelerated Mr. Thackeray's progress towards recognition was his becoming a contributor to 'Punch.' His first papers there were those bearing the signature of The Fat Contributor; and these were followed by others, characterised by wit and satire of the finest and purest vein, and some of which—such as 'Jeames's Diary' and 'The Snob Papers'—attained an independent reputation and greatly enhanced the character of the periodical in which they appeared. Not a few of his contributions to 'Punch' were in verse. Meanwhile, Mr. Thackeray was publishing also, in a separate form, both new works and reprints. In 1846 appeared his 'Notes of a Journey from Cornhill to Grand Cairo by way of Lisbon, Athens, Constantinople, and Jerusalem, by M. A. Titmarsh' (these 'notes' being the result of an actual journey undertaken for the benefit of his health); in 1847, he published a short Christmas-Book, called 'Mrs. Perkins's Ball'; and at the same time (1846-48) he was writing and publishing in monthly numbers, after the fashion of which Dickens had set the example, his celebrated 'Vanity Fair: a Novel without a Hero: with illustrations on steel and wood by the author.' At the time when the first few numbers of this novel were appearing, Mr. Thackeray's name was still scarcely known to the general public; but before the novel was finished, it was widely diffused, and then began that association of the names of Thackeray and Dickens as the two rival novelists of the day, and that discussion in literary circles of the relative merits of their respective styles and methods, which has continued ever since. Mr. Thackeray however had still much to do to make up his leeway in respect of quantity, as compared with his distinguished contemporary whose career of fame had begun so much earlier in life. 'Our Street,' a little volume of the Christmas kind, appeared in 1848, and 'Doctor Birch and his Young Friends,' a volume of the same kind, in 1849; in which latter year appeared a reprint of 'The History of Samuel Titmarsh and the Great Hoggarty Diamond.' In this year also was begun 'The History of Pendennis; his fortunes and misfortunes, his friends and his greatest enemy, with illustrations by the author.' This, the second of Mr. Thackeray's serial fictions, was concluded in 1850; and in the same year was published the Christmas book entitled 'Rebecca and Rowena, a Romance upon Romance,' being a mock continuation in the Thackeray spirit of Scott's novel of Ivanhoe. Next year appeared 'The Kickleburys on the Rhine,' on the publication of which a critic in the 'Times' took the opportunity of repeating against Mr. Thackeray the charges already common in the critical world, that he delighted in representing the ugly side of human nature and seemed sceptical of the existence of amiability or real virtue in the world. This drew forth from Mr. Thackeray a very pungent reply in the form of an 'Essay on Thunder and Small Beer,' prefixed to the second edition of the sketch in question. Perhaps a more efficient answer to the charges above indicated was furnished by Mr. Thackeray in his 'History of Henry Esmond, Esq., written by himself' published, not serially, but entire in three volumes, in 1852. This beautiful and very peculiar novel, though deficient in some of the elements of popular interest, gave a new idea of the author's powers of conception and style. The scene being laid in the time of Queen Anne, and Addison, Steele, and other wits of the time being introduced as characters, the author had been obliged,

in preparing the novel, to make the social manners and the conspicuous men of Queen Anne's reign a subject of historical study; and out of these researches arose his 'Lectures on the English Humorists of the Eighteenth Century,' which were first delivered in Willis's Rooms, in London, before a very brilliant audience in the summer of 1851, afterwards in the provinces, and finally in America, where the author spent some months for the purpose, and was very heartily received. The 'Lectures' were published in 1853. Mr. Thackeray's subsequent publications have been his third serial work of fiction, 'The Newcomes,' and 'The Rose and the Ring, or the History of Prince Giglio and Prince Bulbo,' 1855. Within the last two years, also, a republication of his 'Miscellanies,' from 'Punch,' 'Fraser's Magazine,' &c., has been in progress; and now that his fame as an author is fixed, these papers are read with avidity. Mr. Thackeray's last literary appearance has been in his lectures on 'The Four Georges,' delivered first in America, to which he paid a second visit for the purpose in 1855-56, and, since his return, in Edinburgh, London, and other cities and towns in England and Scotland. Altogether, whether in respect of past achievement or of still unfulfilled power, which promises much to come, Mr. Thackeray stands conspicuous among those who are the admitted chiefs of British literature at the present day; and the question, still debated, as between him and Dickens is, in the main, a question as between two styles or theories of the art of prose fiction. In person, Mr. Thackeray is a somewhat large and tall man; with a fine head, the hair of which is prematurely white. Having nominally studied for the Bar at the time when his literary reputation was just being formed, he was entered at the Middle Temple, and called to the bar on the 26th of May 1848, though with no intention of practising. In July 1857 he became a candidate for the representation in Parliament of the city of Oxford, rendered vacant by the unseating of Mr. Neate; his opponent being Mr. Cardwell. In his address to the electors Mr. Thackeray declared himself an advocate for the ballot, and for all liberal measures generally, and, in particular, for the diminution of hereditary aristocratic influence in the government of the country. The election took place on July 21, and Mr. Thackeray was rejected by a majority of 1085 against 1018.

THALES was a native of Miletus, one of the chief cities of Ionia, and descended from a Phœnician family. Apollodorus, as quoted by Diogenes Laertius, fixes the year of his birth in the first year of the 35th Olympiad, or B.C. 640. Herodotus (i. 74) says that Thales the Milesian predicted the year of the great eclipse which took place while the armies of Cyaxares and Alyattes king of Lydia were engaged in battle. Alyattes became king of Lydia in B.C. 617. Herodotus also says (i. 75) that Thales was in the army of Croesus at the time of the battle of Pterie between Croesus and Cyrus in B.C. 547 or 546, at which time he would be ninety-four years old, if the date of his birth is correctly given by Apollodorus. There was a general tradition that he lived to a great age; and Lucian states that Solon, Thales, and Pittacus all lived to be a hundred years old.

In the Life of Thales by Diogenes we find numerous traditions attached to his name, the value of which it is somewhat difficult to estimate. Thales is enumerated among the Seven Wise Men, whose wisdom was not the theoretical wisdom of philosophers, but the wisdom of actual life. [BIAS.] Accordingly we find that Thales took an active part in the political affairs of his native country. Before Ionia fell under the Persian yoke, he advised the Ionians to have one common council, and to establish it at Teos, for Teos was in the centre of Ionia; and he further suggested that all the other Ionian states should be reduced to the condition of parts dependent on the government at Teos. Such a scheme, if carried into effect, might have checked the progress of the Persian arms. (Herod., i. 170.) Later writers say that he visited Egypt and Crete in order to improve his knowledge, and that he derived from Egypt his acquaintance with mathematics. There seems no reason for thinking that Thales left any writings. Aristotle at least was not acquainted with any philosophical writings by Thales. Various sayings of Thales are recorded: they are of that sententious character which belongs to the proverb, and they embody truths such as the general experience of mankind recognises; and for this reason they cannot safely be considered as the product of any one mind. Thales is generally considered the founder of the Ionian school; but it is perhaps hardly proper to consider him in any sense as the founder of a school. His traditional reputation rested on his physical discoveries and his philosophical speculations. He is said to have been the first astronomer (among the Greeks) who predicted eclipses; and to have discovered the passage (*παρόδος*) from tropic to tropic, or in other words, to have laid down the sun's orbit, and to have fixed the length of the year at 365 days. He determined the magnitude of the sun to be 720 times that of the moon; which is apparently the true version of the corrupt passage in Diogenes. His knowledge of geometry was said to be derived from Egypt, and Pamphila attributes to him the discovery of the right-angled triangle of the circle (*πρῶτον καταγράψαι κύκλου τὸ τρίγωνον ὀρθογώνιον*), which probably means the demonstration that the angle in a semicircle is a right angle—a discovery attributed also to Pythagoras. Hieronymus says that he measured the height of the pyramids of Egypt by observing the shadow which an object cast when it was of the same length as the height of the object.

The philosophical speculations of Thales, like the earliest efforts of philosophers in all countries, were an attempt to solve the problem

that admits of no solution—the real nature of the universe. He is considered by modern writers as the originator of the dynamic, as opposed to the mechanical philosophy. Aristotle ('*Metaph.*' i. 3) has explained in a short passage the general doctrine of Thales. "There must be," observes Aristotle, "some Nature (*φύσις*) either one, or more than one, to which all other things owe their origin, this one still subsisting. The number however and the character of such a first principle are not conceived by all in the same way. Thales, the founder of this philosophy, says it is water, and accordingly he taught that even the earth reposes on water, founding this notion probably on the observation that the nourishment of all things is moist, and that heat itself proceeds from water, and that animals live by it; but that from which things come is the origin of all things. He was thus led to this notion, and also by observing that the seeds of all things have a moist nature, and that water is the origin of their nature to all moist things." Thus the universe contained an active principle by the power of which all things were developed. He considered that the magnet had life, because it attracted iron. The universe then was pervaded by life, or as Thales expressed it, "full of gods" (*πάντα πλήρη θεῶν*).

The doctrine of Thales bears some resemblance to systems that have been promulgated in modern times, which have been viewed as atheistical. The assumption of an active power, such as gravitation for instance (though it is not here meant to affirm that gravitation has ever been viewed as a power sufficient for the production and conservation of all things), which is sufficient to maintain all things in a permanent condition (changes such as we observe in limited portions of time and space being only continued developments), may be viewed as an hypothesis made for the purpose of getting rid of the necessity of admitting the existence of God. Those who propound such an hypothesis, without further explanation, certainly do not take much pains to avoid the imputation of atheism. It does not appear however that the doctrine of Thales was anything more than a pure physical theory: and the traditions recorded of him by Diogenes make him a believer in a Deity. "The most antient of things existing is God, for he is uncreated; the most beautiful thing is the universe, for it is God's creation." It was one of the maxims of Thales that death did not differ from life. "Why don't you die then?" said an objector, more witty than wise. "Because there is no difference," was the reply.

(Diogenes Laertius, i., 'Thales;' Ritter, *Geschichte der Philosophie*, vol. i.)

THEDEN, JOHANN CHRISTIAN ANTON, a celebrated German surgeon, was born September 13, 1714, at Steinbeck, a small village not far from Wismar, in the duchy of Mecklenburg. His family had been ruined by the disasters of war, and his father died when he was young, which two melancholy events had an unfavourable influence upon his education and his first entrance into life. He had hardly received the bare elements of education, when, at the age of thirteen, he was reduced to the necessity of hiring himself out as a servant; but this occupation was so revolting to his feelings, that he determined to learn a trade. Accordingly his elder brother, who was a tailor, received him as an apprentice; but Theden did not find this employment more suited to his taste and talents than his former one, and, as he got nothing but reproofs from his brother, he finally determined to devote himself to the study of medicine. He was first placed by his friends with a surgeon at Butzow, where he spent four years in a barber's shop without any real advantage: and as soon as his apprenticeship was finished, he went to Rostock, Hamburg, Lübeck, and Danzig. In this last city he at length succeeded in obtaining some employment in the army of the king of Prussia, and was attached as surgeon to a squadron of cuirassiers. The zeal and punctuality with which he performed all his duties in this post soon gained him the esteem and friendship of his superior officers: the jealousy however of the chief surgeon prevented his profiting by the good-will shown him by king Frederick William I. at a review at Riesenburg, and the death of this prince put an end to all the hopes of promotion which he had at first entertained. In 1742 he went to Berlin, where the celebrated Schaarschmidt, who justly appreciated his talents, honoured him with his friendship, and procured for him the post of chief surgeon during the second war in Silesia. At the end of three years he returned to Berlin, and devoted himself with unremitting attention to the study of anatomy and surgery. The Seven Years' War afterwards furnished him with numerous opportunities of displaying the skill which he had acquired, and also the excellent qualities of his heart. Frederick the Great raised him gradually from one post to another, till he became at last his chief military surgeon. Theden, in this eminent position, improved all the branches of the service, and displayed an activity which contributed still more to gain him the good opinion of his sovereign. The successor of Frederick honoured him equally with his confidence, and Theden continued to enjoy to the end of his life the esteem and respect which his merit and eminent services had well earned. He died, October 21, 1797, at the age of eighty-three. The continual fatigue and agitation of war did not prevent his drawing up and putting in order the observations which an immense field of action had given him an opportunity of collecting. His works are not numerous, but they bear the stamp of experience, and one recognises in them the firm and bold touch of a man who did not venture to take up his pen till after thirty years of most extensive practice. From this

eulogium we must however except all the theoretical parts of his writings, which unfortunately, hold a prominent place in them, and which are only based upon the foundation of the antiquated principles of the humoral theory. The following is the list of his works given by M. Jourdan in the '*Biographie Médicale*,' from which work the preceding account has been taken:—'*Neue Bemerkungen und Erfahrungen zur Bereicherung der Wundarzneykunst und Medicin*,' Berlin and Stettin, 1771-1795, 8vo.; '*Unterricht für die Unterwundärzte bey Armeen*,' Berlin, 8vo, 1774, and 8vo, 1782; '*Sendschreiben an Richter, die neu erfundenen Catheter aus der Resina elastica betreffend*,' Berlin, 8vo, 1777.

THELWALL, JOHN, son of Joseph Thelwall, a silk-mercier, was born on the 27th July, 1764, in Chandos-street, Covent Garden, London. He was the youngest of three children, two sons and a daughter. At an early age he manifested so much talent for drawing, that he was intended for an artist, but his father's decease changed his prospects before he had completed his ninth year. He received the ordinary education of a tradesman's son, but as he was rather slow in acquiring knowledge and was removed from school at thirteen years of age, his attainments must necessarily have been limited.

The widow continued to carry on her deceased husband's business, and placed her son John in the shop, where he remained three years, but spent his time chiefly in reading, which was of a miscellaneous character, consisting of poetry, history, the drama, moral philosophy, metaphysics, and divinity. A distaste for the business, joined to family discord, induced him to leave it, and although he earnestly desired to be an artist or an actor he yielded to his mother, who apprenticed him to a tailor, with whom however he remained only a short time. At the suggestion of Mr. Holt of the Chancery bar, who had married his sister, he turned his attention to the law, but after several years' study he abandoned it in consequence of doubts arising in his mind on the morality of a hired advocate pleading to support a cause rather than to discover the truth; and now, in his twenty-second year, he embraced literature as a profession.

In 1787 he published by subscription poems on several subjects, in 2 vols., which introduced him to some valuable friendships and to the editorship of a magazine. He was now a rising and prosperous man, and on the 27th July, 1791, he married Miss Susan Vellum, of Rutlandshire, who was then seventeen years of age. He took a house near the Borough hospitals, and ardently studied anatomy, physiology, and chemistry, under Mr. Cline, Dr. Haighton, and Dr. Babington. He began his career as an orator, before he was twenty years of age, at the Society of Free Debate held at Coachmaker's Hall. He had been educated a churchman in religion and a Tory in politics, but on both subjects his opinions were changing, and he now joined in the political struggles of the period by becoming a member of the Corresponding Society, where his boldness and fluency of speech attracted the notice of the leading men of the day. With Thomas Hardy and John Horne Tooke [HORNE TOOKE] he was tried for high treason and acquitted. Thelwall's trial lasted five days. On his acquittal he lectured on politics and political history for several years, when, after a retirement of two years in Wales, made in order to disconnect himself from public affairs and to escape from extra-judicial persecution, he began his career in 1801 as a lecturer and tutor in elocution, and in the application of elocutionary science to the cure of stammering and other impediments to speech. His knowledge of anatomy and physiology, his habits of recitation, his practice of public speaking, and his accuracy of observation, eminently qualified him for his new profession, and his success was great. He communicated papers to the '*Medical and Physical Journal*,' on defective and difficult utterance, and to the '*Monthly Magazine*,' on elocution and its kindred sciences. In 1816 Mrs. Thelwall died, leaving a family of four children. Mr. Thelwall afterwards married Miss Cecil Boyle, by whom he left one son. He died at Bath after a few hours' illness, of disease of the heart, to which he had been long subject, on the 17th February, 1834, in his seventieth year.

The researches of Steele, Herries, and Walker, on human speech, had left little room for new and brilliant discovery, although much accurate observation was yet necessary to give exactness and fulness to their knowledge. Thelwall, unaware of Steele's researches, found himself anticipated on rhythmus. Steele had given the enquiry a musical direction, which Thelwall ardently followed out, and the extent and precision of his observations may be estimated by the fact that he anticipated nearly all that is new and valuable in Dr. Rush's '*Philosophy of the Human Voice*.' Mr. Thelwall's immature ideas were first sketched out in the syllabus of his lectures on elocution.

Thelwall was of a mild and amiable disposition, of domestic habits, open-hearted and generous, of high moral feeling, and of inflexible integrity. His sentiments were exalted by poetic feeling, and he was buoyed up by hope.

Besides magazine contributions and pamphlets, he wrote poems on several subjects, in 2 vols. already mentioned; '*Poems written in the Tower and in Newgate*,' 1 vol.; '*The Tribune*,' 3 vols., and '*Political Miscellanies*,' 1 vol.; '*A Letter to Mr. Cline, on Stammering*,' 1 vol.; '*The Peripatetic*,' 3 vols.; and a novel entitled '*The Daughter of Adoption*.'

THEMISON (Θεμισών), an ancient physician, who is probably best known to most persons from Juvenal's somewhat equivocal line ('Sat., x., v. 221)—

"Quot Themison ægros auctumno occiderit uno;"

but who was in reality the founder of a celebrated medical sect, and one of the most eminent physicians of his time. He was born at Laodicea in Syria, in the first century before Christ, and, from Juvenal's line above quoted, may be conjectured to have practised at Rome, though some writers believe the Themison of Juvenal to be a different person to the founder of the Methodici, and to have been in fact a contemporary of the satirist. The famous Themison was a pupil of Asclepiades, from whose opinions however he afterwards dissented, and finished by founding a new medical sect, called the Methodici. (Pliny, 'Hist. Nat.,' lib. xxix., cap. 5, ed. Tauchn.; Galen, 'Introd.,' cap. 4, tom. xiv. p. 683, 684, ed. Kühn; Cramer, 'Anecd. Gr. Paris,' vol. i., p. 395, l. 26.) The following is the analysis of the opinions of this school, which is given by Celsus in the historical introduction to his work:—"They assert that the knowledge of no cause whatever bears the least relation to the method of cure; and that it is sufficient to observe some general symptoms of distempers; and that there are three kinds of diseases, one bound, another loose (*lucens*), and the third a mixture of these. For that sometimes the excretions of sick people are too small, sometimes too large; and sometimes one particular excretion is deficient, while another is excessive. That these kinds of distempers are sometimes acute, and sometimes chronic; sometimes increasing, sometimes at a stand, and sometimes abating. As soon then as it is known to which of these classes a distemper belongs, if the body be bound, it must be opened; if it labours under a flux, it must be restrained; if the distemper be complicated, then the most urgent malady must be first opposed. And that one kind of treatment is required in acute, another in inveterate distempers; another when diseases are increasing; another when at a stand; and another when inclining to health. That the observation of these things constitutes the art of medicine, which they define as a certain way of proceeding, which the Greeks call method (*μέθοδος*), and affirm it to be employed in considering those things that are common to the same distempers: nor are they willing to have themselves classed either with the rationalists (*i. e.* the Dogmatici), or with those who regard only experiments (*i. e.* the Empirici): for they dissent from the first sect, in that they will not allow medicine to consist in forming conjectures about the occult things; and also from the other in this, that they hold the observation of experiments to be a very small part of the art." (Futvoys's 'Translation.') What we know of his mode of treating diseases does not give us a very high idea of his skill in therapeutics. He thought he could cure the most violent attacks of pneumonia by means of oil and baths; in pleurisy he permitted the use of wine mixed with sea-water (Cael. Aurel., 'De Morb. Acut.,' lib. i., cap. 16, p. 62, 63); he recommended also violent exercise in several acute diseases. (Id., *ibid.*, lib. ii. cap. 29, p. 144.) He is said by Sprengel ('Hist. de la Méd.') to have been the first person who made use of leeches. (Id., 'De Morb. Chron.,' lib. i., cap. 1, p. 286.) He is also said to have been himself attacked with hydrophobia, and to have recovered. (Id., 'De Morb. Acut.,' lib. iii. cap. 16, p. 232; Dioscor., 'Theriac.,' cap. 1, p. 423.) He wrote several medical works, of which nothing but the titles remain. (Cael. Aurel., 'De Morb. Chron.,' lib. i., cap. 1, p. 235; i. 4, p. 323; ii. 7, p. 387, &c.) His followers were very numerous, of whom the most eminent were Soranus [SORANUS], Thessalus [THESSALUS], Caelius Auresianus, whose work 'De Morbis Acutis et Chronicis' is one of the most valuable of antiquity; and Moschion, author of the work *Περὶ τῶν Γυναικῶν Παθῶν*, 'De Mulierum Passionibus.'

(Sprengel, *Hist. de la Méd.*; Fabricius, *Biblioth. Græca*; Haller, *Biblioth. Medic. Pract.*; Biog. Médicale; Dict. of Greek and Roman Antiq., art. 'Methodici'.)

THEMISTIOS, of Paphlagonia, was a distinguished orator in the fourth century after Christ, and was surnamed Euphrades, on account of his skill in his profession. He was much favoured by the Roman emperors. Constantius made him a senator; Julian appointed him prefect of Constantinople in A.D. 362, and corresponded with him by letters; and although he was a heathen, he was intrusted by Theodosius the Great with the education of his son Arcadius. In the year 384 he was appointed, for the second time, prefect of Constantinople; and during a period of almost forty years he was repeatedly employed in embassies and other state business. He was the teacher of Libanius and Augustin, and kept up a friendly intercourse with Gregory Nazianzen, who calls him in his letters "the king of arguments." Themistius had deeply studied the writings of Plato and Aristotle; and he taught the Peripatetic philosophy, as well as rhetoric, at Rome and Constantinople.

Of thirty-six orations composed by him which were known to Photius, thirty-three have come down to us in the original Greek, and one in a Latin translation. They have reference for the most part to public affairs, and several of them are panegyrics upon the emperors by whom the orator was patronised.

Editions of some of the orations were published by Aldus (fol. 1534), H. Stephens (8vo, 1662), Remus (4to, 1605), and Petau (8vo, 1613, and 4to, 1618). The most complete edition is that of Harduin (fol., Paris, 1684), which contains thirty-three orations, thirteen of

which had not been printed before. Another oration was discovered by Angelo Mai, and published by him at Milan, 1816, 8vo. W. Dindorf also published, in 1830, two orations of Themistius, corrected from a Milan manuscript, and an edition of the whole, 8vo, Lips. 1832.

The philosophical works of Themistius consist of commentaries, in the form of paraphrases, on some of Aristotle's works, in Greek, and two Latin translations of commentaries, one upon the work 'On Heaven,' and the other upon the twelfth book of the 'Metaphysics.' The paraphrases were first published in a Latin version by Hermolaus Barbarus, 1481, which has been several times reprinted: the Greek text of them forms part of the Aldine edition of Themistius. The two commentaries in Latin were printed at Venice in 1558, 1570, and 1574. There are some letters by Themistius in the collection of H. Stephens, 8vo, 1577.

(Schöll, *Geschichte der Griech. Litt.*, iii, 96, 388.)

THEMISTOCLES was born about the year B.C. 514. He was the son of Nicocles, an Athenian of moderate fortune, who however was connected with the priestly house of the Lycomedes; his mother, Abrotonon, or, according to others, Euterpe, was not an Athenian citizen; and, according to most authorities, not even a Greek, but either a native of Caria or of Thrace. The education which he received was like that of all Athenians of rank at the time, but Themistocles had no taste for the elegant arts which then began to form a prominent part in the education of Athenian youths; he applied himself with much more zeal to the pursuit of practical and useful knowledge. This, as well as the numerous anecdotes about his youthful wilfulness and waywardness, together with the sleepless nights which he is said to have passed in meditating on the trophies of Miltiades, are more or less clear symptoms of the character which he subsequently displayed as a general and a statesman. His mind was early bent upon great things, and was incapable of being diverted from them by reverses, scruples or difficulties. The great object of his life appears to have been to make Athens great. The powers with which nature had endowed him were quickness of perception, an accurate judgment of the course which was to be taken on sudden and extraordinary emergencies, and sagacity in calculating the consequences of his own actions; and these were the qualities which Athens during her wars with Persia stood most in need of. His ambition was unbounded, but he was at the same time persuaded that it could not reach its end unless Athens was the first among the Grecian states; and as he was not very scrupulous about the means that he employed for these ends, he came into frequent conflict with Aristides the Just, who had nothing at heart but the welfare of his country; and no desire of personal aggrandisement.

In the year 483 B.C., when Aristides was sent into exile by ostracism, Themistocles, who had for several years taken an active part in public affairs, and was one of the chief authors of the banishment of his rival, remained in the almost undivided possession of the popular favour, and the year after, B.C. 482, he was elected archon eponymus of Athens. The city was at that time involved in a war with Ægina, which then possessed the strongest navy in Greece, and with which Athens was unable to cope. It was in this year that Themistocles conceived and partly carried into effect the plans by which he intended to raise the power of Athens. His first object was to increase the navy of Athens; and this he did ostensibly to enable Athens to contend with Ægina, but his real intention was to put his country in a position to meet the danger of a second Persian invasion, with which Greece was threatened. The manner in which he raised the naval power was this. Hitherto the people of Athens had been accustomed to divide among themselves the yearly revenues of the silver-mines of Laurion. In the year of his archonship these revenues were unusually large, and he persuaded his countrymen to forego their personal advantage, and to apply these revenues to the enlargement of their fleet. His advice was followed, and the fleet was raised to the number of 200 sail. (Herodot., vii. 144; Plutarch., 'Themist.', 4.) It was probably at the same time that he induced the Athenians to pass a decree that, for the purpose of keeping up their navy, twenty new ships should be built every year. (Böckh, 'Public Economy of Athens,' p. 249, Engl. transl., 2nd edit.) Athens soon after made peace with Ægina, as Xerxes was at Sardis making preparations for invading Greece with all the forces he could muster. At the same time Themistocles was actively engaged in allaying the disputes and hostile feelings which existed among the several states of Greece. He acted however with great severity towards those who espoused the cause of the Persians, and a Greek interpreter, who accompanied the envoys of Xerxes that came to Athens to demand earth and water as a sign of submission, was put to death for having made use of the Greek tongue in the service of the common enemy.

After the affairs among the Greeks were tolerably settled, a detachment of the allied troops of the Greeks was sent out to take possession of Tempe, under the command of Themistocles of Athens and Eucletus of Sparta; but on finding that there they would be overwhelmed by the host of the barbarians, they returned to the Corinthian isthmus. When Xerxes arrived in Pieria, the Greek fleet took its post near Artemisium, on the north coast of Eubœa, under the command of the Spartan admiral Eurybiades, under whom Themistocles condescended to serve in order not to cause new dissensions among the Greeks, although Athens alone furnished 127 ships, and supplied the Chal-

cidians with twenty others; while the Spartan contingent was incomparably smaller. When the Persian fleet, notwithstanding the severe losses which it had sustained by a storm, determined to sail round the eastern and southern coasts of Euboea, and then up the Euripus, in order to cut off the Greek fleet at Artemisium, the Greeks were so surprised and alarmed that Themistocles had great difficulty in inducing them to remain and maintain their station. The Eubœans, who perceived the advantages of the plan of Themistocles, rewarded him with the sum of thirty talents, part of which he gave to the Spartan Eurybiades and the Corinthian Adimantus to induce them to remain at Artemisium. (Herodot., viii. 4, 5; Plutarch, 'Themist.', 7.) In the battle which then took place, the Greeks gained considerable advantage, though the victory was not decided. A storm and a second engagement near Artemisium, severely injured the fleet of the Persians, but the Greeks also sustained great losses, as half of their ships were partly destroyed and partly rendered unfit for further service. When at the same time they received intelligence of the defeat of Leonidas at Thermopylæ, the Greeks resolved to retreat from Artemisium, and sailed to the Saronic gulf. Xerxes was now advancing from Thermopylæ, and Athens trembled for her existence, while the Peloponnesians were bent upon seeking shelter and safety in their peninsula, and upon fortifying themselves by a wall across the Corinthian isthmus. On the approach of the danger the Athenians had sent to Delphi to consult the oracle about the means they should employ for their safety, and the god had commanded Athens to defend herself behind wooden walls. This oracle, which had probably been given at the suggestion of Themistocles, was now also interpreted by him as referring to the fleet, and his advice to seek safety in the fleet was followed. He then further moved that the Athenians should abandon the city to the care of its tutelary deity, that the women, children, and infirm should be removed to Salamis, Ægina, or Troezen, and that the men should embark in the ships. The fleet of the Greeks, consisting of 380 ships, assembled at Salamis, still under the supreme command of Eurybiades. When the Persians had made themselves masters of Attica, and Athens was seen in flames at a distance, some of the commanders of the fleet, under the influence of fear, began to make preparations for an immediate retreat. Themistocles and his friend Mnesiphilus saw the disastrous results of such a course, and the former exerted all his powers of persuasion to induce the commanders of the fleet to maintain their post: when all attempts proved ineffectual, Themistocles had recourse to threats, and thus induced Eurybiades to stay. The example of the admiral was followed by the other commanders also. In the meantime the Persian fleet arrived in the Saronic gulf, and the fears of the Peloponnesians were revived and doubled, and nothing seemed to be able to keep them together. At this last and critical moment Themistocles devised a plan to compel them to remain and face the enemy. He sent a message to the Persian admiral, informing him that the Greeks were on the point of dispersing, and that if the Persians would attack them while they were assembled, they would easily conquer them all at once, whereas it would otherwise be necessary to defeat them one after another.

This apparently well-meant advice was eagerly taken up by the enemy, who now hastened, as he thought, to destroy the fleet of the Greeks. But the event proved the wisdom of Themistocles. The unwieldy armament of the Persians was unable to perform any movements in the narrow straits between the island of Salamis and the mainland. The Greeks gained a most complete and brilliant victory, for they only lost forty ships, while the enemy lost two hundred; or, according to Ctesias, even five hundred. Very soon after the victory was decided, Xerxes with the remains of the fleet left the Attic coast and sailed towards the Hellespont. The battles of Artemisium and Salamis occurred in the same year, B.C. 480.

Coin of Salamis.

When the Greeks were informed of the departure of Xerxes, they pursued him as far as Andros without gaining sight of his fleet, and Themistocles and others proposed to continue the chase. But he gave way to the opposition that was made to this plan, and consented not to drive the vanquished enemy to despair. The Greek fleet therefore only stayed some time among the Cyclades, to chastise those islanders who had been unfaithful to the national cause. Themistocles, in the meantime, in order to get completely rid of the king and his fleet, sent a message to him, exhorting him to hasten back to Asia as speedily as possible, for otherwise he would be in danger of having his retreat cut off. Themistocles availed himself of the stay of the Greek fleet among the Cyclades for the purpose of enriching himself at the cost of the islanders, partly by extorting money from them by way of punishment, and partly by accepting bribes for securing them impunity for their conduct. His fame however spread over all Greece, and all acknowledged that the country had been saved through his wisdom

and resolution. But the confederate Greeks, actuated by jealousy, awarded to him only the second prize; at Sparta, whither he went, as Herodotus says, to be honoured, he received a chaplet of olive-leaves,—a reward which they had bestowed upon their own admiral Eurybiades,—and the best chariot that the city possessed, and on his return 300 knights escorted him as far as Tegea in Arcadia.

When the Persian army had been again defeated at Plataea and Mycale, in B.C. 479, and when the Athenians had rebuilt their private dwellings, it was also resolved, on the advice of Themistocles, to restore the fortifications of Athens, but on a larger scale than they had been before, and more in accordance with the proud position which the city now occupied in Greece. This plan excited the fear and jealousy of the rival states, and especially of Sparta, which sent an embassy to Athens, and under the veil of friendship, which ill concealed its selfish policy, endeavoured to persuade the Athenians not to fortify their city. Themistocles, who saw through their designs, undertook the task of defeating them with their own weapons. He advised his countrymen to dismiss the Spartan ambassadors, and to promise that Athenian envoys should be sent to Sparta to treat with them there respecting the fortifications. He himself offered to go as one of the envoys, but he directed the Athenians not to let his colleagues follow him, until the walls, on which all hands should be employed during his absence, should be raised to such a height as to afford sufficient protection against any attack that might be made upon them. His advice was followed, and Themistocles, after his arrival at Sparta, took no steps towards opening the negotiations, but pretended that he was obliged to wait for the arrival of his colleagues. When he was informed that the walls had reached a sufficient height, and when he could drop the mask with safety, he gave the Spartans a well-deserved rebuke, returned home, and the walls were completed without any hindrance. He then proceeded to carry into effect the chief thing which remained to be done to make Athens the first maritime power of Greece. He induced the Athenians to fortify the three ports of Phalerum, Munychia, and Piræus, by a double range of walls.

When Athens was thus raised to the station on which it had been the ambition of Themistocles to place it, his star began to sink, though he still continued for some time to enjoy the fruits of his memorable deeds. He was conscious of the services he had done to his country, and never scrupled to show that he knew his own value. His extortion and avarice, which made him ready to do anything, and by which he accumulated extraordinary wealth, could not fail to raise enemies against him. But what perhaps contributed more to his downfall was his constant watchfulness in maintaining and promoting the interests of Athens against the encroachments of Sparta, which, in its turn, was ever looking out for an opportunity to crush him. The great men who had grown up by his side at Athens, such as Cimon, and who were no less indebted to him for their greatness in the eyes of Greece than to their own talents, were his natural rivals, and succeeded in gradually supplanting him in the favour of the people. They also endeavoured to represent him as a man of too much power, and as dangerous to the republic. The consequence of all this was, that in B.C. 472 he was banished from Athens by the ostracism. He took up his residence at Argos, where he was still residing when, in the same year B.C. 472, Pausanias was put to death at Sparta for his ambitious and treacherous designs, and his fate involved that of Themistocles. [PAUSANIAS.] The Spartans, in their search to discover more traces of the plot of Pausanias, found a letter of Themistocles, from which it was evident that he had been acquainted with his plans. This was sufficient for the Spartans to ground upon it the charge that Themistocles had been an accomplice in his crime, and ambassadors were forthwith sent to Athens to demand that he should suffer the same punishment as Pausanias. This charge was no less welcome to his enemies at Athens than the discovery of his letter had been to the Spartans. Orders were consequently issued to arrest and convey him to Athens. But he had been informed in time of the proceedings at Athens, and foreseeing that his destruction would be unavoidable if he should fall into the hands of his enemies, fled to Corcyra, and thence to the opposite coast of Epirus, where he took refuge at the court of Admetus, king of the Molossians. On his arrival, the king was absent, but his Queen Phthia received him kindly, and pointed out to him in what manner he might win the sympathy of Admetus. When the king returned home, Themistocles, seated on the hearth and holding the child of Admetus in his arms, implored the king not to deliver him up to his persecutors, who traced him to the court of the Molossians. It is stated that Themistocles was here joined by his wife and children. The king not only granted his request, but provided him with the means of reaching the coast of the Ægean, whence he intended to proceed to Asia, and seek refuge at the court of the king of Persia. From Pydna he sailed in a merchant ship to the coast of Asia Minor. At Ephesus he received such part of his property as his friends had been able to wrest from the hands of his enemies at Athens, together with that which he had left at Argos.

A few months after his arrival in Asia, Xerxes was assassinated (B.C. 465), and was after a short interval succeeded by Artaxerxes. Various adventures are told of Themistocles before he reached the residence of the Persian king. On his arrival he sent him a letter, in

which he acknowledged the evils he had inflicted upon his predecessor, but at the same time claimed the merit of having saved him from destruction by his timely advice. He added that his present exile was only the consequence of his great zeal for the interests of the king of Persia. He did not ask for an immediate interview with the king, as he was yet unacquainted with the language and the manners of the Persians, to acquire which he requested a year's time. During this period he applied himself so zealously and with such success to these studies, that at the close of the year, when he was presented to the king, he is said to have excited the jealousy of the courtiers, and was most kindly received by the king, to whom he held out prospects of conquering Greece by his assistance. The king became so attached to him, that Themistocles was always in his company. After he had spent several years at the court, he was sent to Asia Minor, to wait there for an opportunity of carrying his promises into effect. A pension was now bestowed upon him after the Oriental fashion; three towns were given him, of which Magnesia on the Mæander was to provide him with bread, Myus with meat, and Lampsacus with wine. He took up his residence in the first of these towns, where he lived with a sort of princely rank. But death overtook him at the age of sixty-five, before any of his plans were carried into effect. Most of the ancient writers state that he put an end to his life by poison, or, according to another strange story, by drinking the blood of a bull, because he despaired of being able to fulfil his promises to the king. The motive for his suicide is very questionable. Reflections on his past life and upon the glory of his former rivals at Athens are much more likely to have rendered him dissatisfied with life. Before he took the poison he is said to have requested his friends to convey his remains secretly to Attica, and in later times a tomb which was believed to contain them existed in Piræus. In the market-place of Magnesia a splendid monument was erected to his memory, and his descendants in that place continued to be distinguished by certain privileges down to the time of Plutarch.

(Herodotus, vii. 143, &c.; viii. 4, &c.; Thucydides, i. 14, 135, &c.; Plutarch, *Themistocles*; Diodorus Sicul., xi. 2, 12, &c.; C. Nepos, *Themistocles*; Pausanias, i. 1, 2; compare Thirlwall and Grote, *Histories of Greece*.)

THEMISTOGENES, a writer to whom Xenophon refers (Hellen. iii. 1, § 2), as the writer of a history of the expedition of Cyrus, by which it is plain that he means the 'Anabasis' always ascribed to Xenophon himself. Various conjectures have been formed as to this Themistogenes—of whom nothing else is known—and his share in the 'Anabasis,' but the most probable opinion is that Xenophon spoke of his own history as the work of another person. [XENOPHON.]

THENARD, LOUIS-JACQUES, BARON, a distinguished French chemist, was born at Nogent-sur-Seine on the 4th of May 1777. He went to Paris early in life, and became a pupil of Vauquelin. He devoted himself with so much zeal and success to the study of chemistry that when he was only twenty years old he was appointed demonstrator of chemistry in the Polytechnic School of Paris. By his unwearied assiduity and great knowledge of his subject he was at last made professor of chemistry in the College of France and in the University. In 1824 he received the title of Baron on the occasion of the coronation of Charles X. In 1833 he was made a member of the Academy, and in the same year he was elevated to the dignity of a peer of France. In 1837 he resigned his professorship of chemistry in the Polytechnic School, and in 1840 he gave up his chair in the University of Paris. Baron Thenard was one of the most active chemists in the first half of the 19th century. His separate works however are not numerous. One of the best known of his literary productions he published in conjunction with M. Gay-Lussac; it is entitled '*Recherches physico-chimiques*.' This work was published after the discovery of the metallic nature of soda and potash by Sir Humphry Davy. Numerous experiments on the subject of the action of the galvanic pile are recorded, and methods of obtaining potassium and sodium independent of galvanism are indicated. Other subjects of high scientific interest were discussed in this work, which served to give its authors the first position amongst experimental chemists. In 1813 M. Thenard commenced the publication of his '*Traité de chimie élémentaire, théorique et pratique*.' This work is a valuable introduction to the science of chemistry, and has gone through several editions and been translated into German; the last edition was published in France in five volumes in 1836. The great contributions of Thenard to the science of chemistry are to be found in the scientific journals and transactions of scientific societies of his time. Of these there is a vast number, embracing the whole range of chemical science. There is indeed no branch of chemistry at which he did not labour, and there is no subject he has worked at on which he has not thrown considerable light. He died in the month of June 1857, and was buried publicly in Paris on the 23rd of that month. For many years before his death Baron Thenard had withdrawn from the active pursuit of chemical science. To the last however he took a deep interest in the development of the educational institutions of France. He was an administrator of the College of France and of the Faculty of Sciences, and vice-president for many years of the Superior Council of Public Instruction; and he has contributed more largely than any other individual since the death of Cuvier to the development of the scientific institutions of France.

THEOBALD, LEWIS, was born at Sittingbourne in Kent. We have no record of the date of his birth. His father was an attorney, and he was bred to his father's business. His first literary production was '*Electra*,' a tragedy, which appeared in 1714. As the writer of twenty very indifferent plays he is utterly forgotten. Those productions belong to an age in which the true spirit of dramatic poetry was for the most part lost, and Theobald possessed none of those brilliant qualities which could impart a lengthened existence to his attempts in portraying the manners of his age. But he has attained a celebrity of another description: he is most commonly known as the unhappy dunce whom Pope assailed with the most inveterate ridicule; but, after a century of prejudice against his name, he is now pretty generally acknowledged to have deserved an honourable reputation as an editor of Shakspeare, having brought to that task diligence, knowledge, and judgment, beyond comparison superior to the critical talents of his rival the author of the '*Dunciad*.' His '*bad eminence*' as the original hero of that poem was earned by a pamphlet in which he pointed out many of the errors of Pope's Shakspeare. '*Shakspeare Restored, or Specimens of Blunders committed and unamended in Pope's Edition of this Poet*,' was published in 1726. The first notice which Pope took of this pamphlet was in his second edition of Shakspeare, which appeared in 1723: "Since the publication of our first edition, there having been some attempts upon Shakspeare published by Lewis Theobald (which he would not communicate during the time wherein that edition was preparing for the press, when we, by public advertisements, did request the assistance of all lovers of this author), we have inserted in this impression as many of 'em as are judged of any the least advantage to the poet; the whole amounting to about twenty-five words." In the same year came out the '*Dunciad*.' The revenge of Theobald was the severest that could be inflicted, and it was unexceptionable. In 1733 he produced an edition of Shakspeare which utterly destroyed that of Pope. It has been asserted that of Theobald's edition, which was in 7 vols. 8vo, nearly 13,000 copies were sold. (Steevens's '*Shakspeare*,' 1793, vol. i.) In his preface, Theobald thus notices the attacks of his distinguished rival: "It is not with any secret pleasure that I so frequently animadvert on Mr. Pope as a critic, but there are provocations which we can never quite forget. His libels have been thrown out with so much inveteracy, that, not to dispute whether they should come from a Christian, they leave it a question whether they could come from a man. I should be loth to doubt, as Quintus Serenus did in a like case,

'Sive homo, seu similis turpissima bestia nobis  
Vulnera dente dedit.'

The indignation, perhaps, for being represented a blockhead, may be as strong in us as it is in the ladies for a reflection on their beauties. It is certain I am indebted to him for some flagrant civilities; and I shall willingly devote a part of my life to the honest endeavour of quitting scores; with this exception, however, that I will not return those civilities in his peculiar strain, but confine myself, at least, to the limits of common decency. I shall ever think it better to want wit, than to want humanity; and impartial posterity may perhaps be of my opinion." It is to be feared that it was rather a new hatred than a sense of justice, however tardy, which induced Pope in 1743 to dethrone Theobald from the heroship of the '*Dunciad*,' setting up Colley Cibber in his place. In the subsequent year both Pope and Theobald were at peace; death had for ever silenced their controversy. Theobald died in September 1744. On the 20th of the following October, his library, which included 295 old English plays, was sold by auction. He had collected these productions, now so rare and highly valued, at a time when our early drama was neglected, if not despised; and he made a judicious use of them in his edition of Shakspeare. When we speak of his edition with commendation, we of course look at those things which are of permanent value in it; and we pass over those ebullitions of offended pride, venting itself in self-commendation and acrimonious objection, which were natural to one who had been so hunted by satire as Theobald had been. Dr. Johnson says that Theobald, "by the good luck of having Pope for his enemy, has escaped and escaped alone with reputation from this undertaking [the undertaking of editing Shakspeare]. So willingly does the world support those who solicit favour against those who command reverence, and so easily is he praised whom no man can envy." This, we think, is mere phrase-making, and does not represent the world's opinion of any man at any period: reputations are not made upon the compassion of the world. Johnson has, a little before, stated the case with greater correctness, although not wholly correct. "Pope was succeeded by Theobald, a man of narrow comprehension, and small acquisitions, with no native and intrinsic splendour of genius, with little of the artificial light of learning, but zealous for minute accuracy, and not negligent in pursuing it. He collated the ancient copies, and rectified many errors. A man so anxiously scrupulous might have been expected to do more, but what little he did was commonly right." The great merit of Theobald as an editor is that he did not attempt too much, that he did not "do more," and that therefore he was "commonly right." The great fault of nearly all the editors of Shakspeare has been that they set themselves up above their author; that they would exhibit their own "native and intrinsic splendour of genius" in the improvement of what they did not understand, and the

adaptation of the verse of Shakspeare to the standard of another age. The most happy emendations of Shakspeare have been produced by the caution of Theobald. In his own preface he says, "I have not by any innovation tampered with his text, out of an ostentation of endeavouring to make him speak better than the old copies have done;" and then he adds, "Where, through all the former editions, a passage has laboured under flat nonsense and invincible darkness, if, by the addition or alteration of a letter or two, or a transposition in the pointing, I have restored to him both sense and sentiment, such corrections, I am persuaded, will need no indulgence." All subsequent editors have a debt to Theobald which has not always been acknowledged. Johnson himself says, "I have sometimes adopted his restoration of a comma, without inserting the panegyric in which he celebrated himself for his achievement."

There is a curious matter connected with the history of Theobald, which needs here only a slight mention. In his edition of Shakspeare in 1728, he printed a play, 'The Double Falsehood,' as an original by William Shakspeare, it having been a short time before produced on the stage. The play was stated to have been found in manuscript. One passage, which is certainly not in the manner of Shakspeare, is said to have been particularly admired:—

"Strike up, my masters;  
But touch the strings with a religious softness:  
Teach sound to languish through the night's dull ear,  
Till melancholy start from her lazy couch,  
And carelessness grow convert to attention."

The admiration was too much for the vanity of Theobald: he came forward to state that he certainly had written those lines, but that all the rest was genuine Shakspeare. Dr. Farmer holds that 'The Double Falsehood' was not Shakspeare's because the word *aspect* was wrongly accented, that is, not *aspect*, according to the usage of Shakspeare and of his time; and he holds the play to be Shirley's. It is not worthy even of that writer. The probability is that Theobald had a greater hand in the matter than he was subsequently willing to acknowledge. The restless vanity and love of notoriety which, according to his own account, impelled Psalmanazar to his impostures, has perhaps in nearly every case been the great motive to literary forgery. Theobald was the author of a 'Life of Sir Walter Raleigh;' and he also wrote the greater part of the periodical papers entitled 'The Censor,' which appeared as a separate work in 1717, having been previously published in *Mist's 'Weekly Journal.'*

THEOBALDUS, a bishop who probably lived in France, and whose name is sometimes written *TEBALDUS* or *TIBALDUS*, the reputed author of a didactic and theological poem entitled 'Physiologus de Naturis Duodecim Animalium.' It is written in hexameter, sapphic, and other kinds of verse, and describes first some one or more of the natural habits of twelve different animals, and then draws from each some moral and religious reflections. The twelve animals chosen are the lion, eagle, serpent, ant, fox, stag, spider, whale, siren and centaur, elephant, dove, and panther; and the whole poem appears to be borrowed in a great measure from the little work in prose by Epiphanius on the same subject. With respect to the author of the poem, as it is found in a Paris manuscript of the 13th century, containing the works of Hildebert, archbishop of Tours (who lived in the 12th century), and has also been ascribed to Hildebert himself, he may be supposed to have lived some time in the 12th century, or even as early as the 11th, if he is the person meant in an epitaph on 'Magister Theobaldus Dervensis,' written by Hildebert. (Hildebert, 'Opera,' p. 1322, edit. Beaugendre). The first edition of this work to which a date is attached is that of Antwerp, 4to, 1482, but five others are enumerated by Choulant ('Handbuch der Bücherkunde für die Aeltere Medicin,' which were probably printed before this year. The last edition, in a separate form, was published at Leipzig, 4to, 1510; but it is inserted in 'Hildeberti Cenomanensis Episcopi, Turonensis Archiepiscopi, Opera,' edit. Ant. Beaugendre, Paris, fol., 1708, and erroneously attributed to Hildebert. The 'Procemium' and the chapter 'De Elephante' are inserted by Freytag in the 'Analecta Litteraria de Libris Rarioribus,' Lips., 8vo, 1752. In some of the old editions there is appended to the poem a theological commentary, written in the style of the scholastic philosophy of the middle ages: the author is unknown, but it was not composed by Theobaldus himself. (Choulant, loco cit.)

THEOCRITUS was a son of Simichidas, or, according to others, of Praxagoras and Philinna. He was a native of Syracuse, where he also spent the greater part of his life. He is said to have been connected with Philetas of Cos and Asclepiades of Samos, and to have been their pupil, whence we may infer that he visited these islands. He was on very intimate terms with Aratus the poet, and it is highly probable that he formed this acquaintance in the island of Cos. (Wüstemann, 'Argument, ad Theocrit. Idyll., vii.) His exact period is not known, and we can only say that he lived in the reign of Ptolemæus, the son of Lagus, and Ptolemæus Philadelphus, and that the time of his greatest reputation was about B.C. 277. Some years before this time, probably about B.C. 284, he had visited Alexandria, and the influence of the court of that city is manifest in several of his poems. It has further been supposed that he spent some time at Croton in Southern Italy, because the scene of three of his poems is

laid in that place. Beyond these circumstances, which are little more than probabilities, we know nothing of the life of Theocritus.

The Alexandrine grammarians valued the works of Theocritus very highly, and assigned to him the second place in the pleiad of the seven miscellaneous poets, which comprised Lycophron, Theocritus, Callimachus, Aratus, Apollonius Rhodius, Nicander, and one Homer, the son of Moero of Byzantium. Several Greek grammarians also wrote commentaries on his works, some fragments of which are still extant in the scholia on his poems. There is extant by Theocritus a collection of various poems, which are written in what the Greek grammarians call the new Doric dialect, which is softer than the old Doric, and the softness of this new Doric is still increased in the poems of Theocritus by the admixture of epic and Ionic or Æolic forms. The particular species of poetry by which he has acquired most celebrity are the *Bucolics* (*μέλη Βουκολικά*). This pastoral poetry was very popular in Sicily, and having been originally cultivated by shepherds and rustics, was raised to a really artistic rank by several poets before Theocritus. He however brought this kind of poetry to perfection, and the ancient critics regard him as the model of bucolic poetry, and Virgil for this reason calls this poetry Syracusan ('Eclog.,' vi. 1). But the number of real bucolic poems still extant in the collection which bears the vague name of *Idyls* (*εἰδύλλια*), is only ten; the remaining twenty poems are either epic poems (such as *idyl* xiii., xxi., xxiv., and xxv.), or imitations of mimes (such as *idyl* ii. and xv.), or are of a mixed nature, and belong either to the lyric kind, or are mere exercises of a poetical imagination. Nine of these poems, xii., xvii., xviii., xix., xx., xxvi., xxvii., xxix., and xxx., and some portions of others, have been considered by modern critics not to be the work of Theocritus: as to some there can be no doubt that they are spurious, though they are not without great poetical merit, if we except *idyl* xxx. Besides these thirty *idyls*, there is a fragment of one poem called 'Berenice,' and twenty-two epigrams, which are ascribed to Theocritus.

All the poems which are genuine productions of Theocritus show him to have been a perfect master of his art. His power over the language is not less wonderful than his taste for the simple beauties of nature, and the skill with which he handled his subjects. His poems are indeed founded upon the national shepherd songs of Sicily in the form of dialogues, but he has added features of his own, and idealised his persons, without depriving them of their natural simplicity. We do not know whether Theocritus himself ever published a collection of his poems, but from an epigram in the 'Anthologia Graeca' (ix., n. 205), we might rather suppose that the collection was made by Artemidorus, the author of that epigram. It is however a curious fact that none of the manuscripts of Theocritus contain all the poems which are published in our modern printed editions under his name. The editio princeps, which appeared at Milan in 1493, folio, only contains eighteen *idyls* of Theocritus, with the works of Hesiod and Isocrates. The most important among the subsequent editions are those of J. J. Reiske, with a Latin translation, the Greek scholia and notes, 2 vols. 4to, Leipzig, 1765; Thomas Warton, with additional scholia and notes, 2 vols. 4to, Oxford, 1770; Valckenæer, Leyden, 1779 and 1781. The edition of Valckenæer, which also contains the poems of Bion and Moschus, is still valuable. In 1773 Valckenæer had published an excellent edition of select *idyls* of Theocritus. His complete edition was reprinted at Berlin, 1810, in 2 vols. 8vo, with additional notes by Brunck and Troup. After these followed the editions of Schaefer, folio, Leipzig, 1811; Kiessling, Leipzig, 1819; and J. Geel, 8vo, Amsterdam, 1821. An edition, which is very useful to students, is by E. F. Wüstemann, Gotha and Erfurt, in one vol. 8vo, 1830; the introductory essay gives a good account of the literature of Theocritus. There are also editions of Theocritus, Bion, and Moschus, by Lehrs and Dübner, Imp. 8vo, Paris, 1846, and by Meineke, 8vo, Berlin, 1856. The works of Theocritus have been translated into all the languages of modern Europe. There is an English translation by Creech, 8vo, 1681, &c.; by Fawkes, 8vo, 1767, and a translation, including Bion and Moschus, by Polwhele, 4to, 1786, and in 2 vols. 12mo, 1811. The best French translation is that of J. B. Gail, with explanatory and critical notes, 3 vols. 4to, Paris, 1808. The best German translations are those of J. H. Voss, 8vo, Tübingen, 1808; and Witter, 8vo, Hildburghausen, 1819.

(Respecting the character of the poems of Theocritus, see Eichstädt, *Adumbratio Quaestionis de Carminum Theocriteorum ad Genera sua Revocatorum Indole ac Virtutibus*, 4to, Lipsiae, 1793; and Reinhold, *De Theocriti Carminibus Genuinis et Supposititiis*, 8vo, Jena, 1819.)

THEODORE, or THEODORUS, of Mopsuestia, a learned bishop of the Oriental church. He was descended from a rich and distinguished family at Antioch, and was the brother of Polychronius, who became bishop of Apamea. He studied rhetoric, together with his friend John Chrysostom, under Libanius, who resided at Antioch from the year A.D. 354. His teacher of philosophy was Andragathus. After having finished his studies, he intended to marry a lady of Antioch (about 369); but his friend Chrysostom, who was then a monk, persuaded him to choose the monastic life. Theodore was for some time a priest at Antioch, and afterwards bishop of Mopsuestia, an ancient town of Cilicia (394). In the same year he was present at the council of Constantinople. He died in 429, at a very advanced age, and after he had discharged his episcopal functions during thirty-five years,

During fifty years he was known as one of the most distinguished writers of the Greek Church, especially by his works against the Nestorians, Pelagians, and other sectarians. His zeal however for the Catholic faith did not save him from the charge of being an adherent of the doctrines of the Nestorians, and he "was obliged to make a public apology." After his death the Nestorians continued to quote his works, and to call him the support of their faith; and this was the cause of his works, or perhaps only part of his works, being condemned by the fifth Council (553). Theodore of Mopsuestia is said to have written largely on divinity and morals. Few of his writings have come down to us: others exist in Syriac and Latin translations, and of the greater part there are only fragments. A treatise on the Magi of the Persians, and his commentaries on the Psalms, the Book of Job, and the Song of Solomon, are lost: his commentary on the twelve greater prophets is preserved in MS., according to Fabricius, under the title of Θεοδώρου Ἀντιοχείου ἐρμηνεία εἰς τοὺς Προφῆτας. A catalogue of the works which contain fragments of him is given in Fabricius, and the Syriac translations are mentioned in Assemanus's 'Bibliotheca Orientalis.' Theodorus of Mopsuestia is still one of the first theological authorities among the Syrian Christians.

(Fabricius, *Bibl. Græca*, x., p. 346-362; 346, note a; 347, note o; 352, note gg; 355, note kk; p. 748: Tillemont, *Memor. Eccles.*, vol. xii.; Cave, *Script. Eccles.*, vol. ii.)

THEODORETUS, or THEODORI'TUS, a theologian and church historian, was born about 393 A.D. He was brought up under the care of a pious mother, to whom he acknowledges his obligations in his writings; and he had instruction from Theodore of Mopsuestia and John Chrysostom in a monastery, to which he was sent to receive his education when not quite seven years old, and where he had for his fellow-pupils Nestorius and John, who were afterwards patriarchs of Constantinople and Antioch. Theodore became a deacon in the church at Antioch, and in the year 423 he was chosen bishop of Cyrus, a city in Syria, near the Euphrates. His diocese abounded with Marcionites and persons who held heretical opinions concerning the Trinity. Against the opinions of these heretics he directed his efforts with so much success, that according to his own statement he baptised ten thousand Marcionites.

In the year 431 Nestorius was condemned by the council of Ephesus [NESTORIUS], whose decision gave great offence to many of the Oriental Christians, who, without being avowed followers of Nestorius, were supposed to be not unfavourable to his opinions. Among these was Theodore, who was a personal friend of Nestorius; and he was one of those who assembled after the council of Ephesus had broken up, and condemned its proceedings. A reconciliation was however effected between Cyril, patriarch of Alexandria, the great enemy of Nestorius, and John, patriarch of Antioch, the leader of the Oriental party, who signed an agreement by which Cyril approved of John's statement of the controverted point of doctrine, while John gave his approval of the sentence passed on Nestorius. With this agreement Theodore and others of the Oriental party were greatly dissatisfied. Theodore approved on the whole of the doctrinal statements in the agreement, but he warmly protested against John's consent to the condemnation of Nestorius, as an act of unmitigated injustice. He expressed these feelings in a letter to Nestorius. But when John, armed with an imperial edict, proceeded to take measures against the more decided partisans of Nestorius, Theodore considered himself bound to submit, both for the sake of the peace of the church, and because of his own approval of the doctrine which it was John's object to enforce. He therefore used every means in his power to induce the friends of Nestorius, namely, Meletius, bishop of Mopsuestia, Alexander of Hierapolis, and Helladius of Tarsus, to submit to John; and, upon their rejection of his advice, he offered no opposition to their being deposed. But when, in the year 435, new and severe edicts were issued against the Nestorians, Theodore refused to carry his submission any further; and, by his firmness he incurred the hatred of Cyril, to whom he had already been opposed in this controversy, and between whom and Theodore such a bitter feeling existed, that when Cyril died, in 444, Theodore made no secret of his joy at the event.

If, as we are bound to conclude from the character of the man and from the Christian spirit with which he elsewhere speaks of Cyril's death, Theodore's joy on this occasion sprang from a belief that the divisions which had been kept alive by Cyril would die with him, and peace be restored to the church, he was doomed to bitter disappointment. Cyril was succeeded by Dioscurus, a man as haughty and impetuous as himself, and quite as unscrupulous. The new bishop followed up his predecessor's plan of enforcing upon the whole Eastern church the doctrine of the coalescence of the Deity and humanity into one nature in the person of Christ; and perhaps he also kept in view the object of obtaining a kind of supremacy for the see of Alexandria. Determined to admit of no compromise, he made his first attack upon the moderate party in the Syrian churches, which was headed by Theodore. Dioscurus was supported by a large party in Syria, chiefly consisting of monks, whose leader was an abbot named Barsumas; and at Constantinople many monks, the most remarkable of whom was the abbot Eutyches, were strongly in favour of the Cyrillian doctrine, on the ground that it alone was consistent with the simple letter of Scripture, "the Word became flesh," and other similar expressions.

These Constantinopolitan monks were a most important party in the

dispute, partly from their close connection with the anti-Nestorian monks of Syria, and still more from their great influence with the emperor Theodosius II., whom they had induced from the very first to espouse the party of Cyril. Theodore was, as usual, slow to take up the controversy. He wrote to Dioscurus in the hope of effecting a reconciliation between the two parties. In this attempt he failed; and then, looking upon the doctrine of Dioscurus and his allies as the sure road to the various heresies which denied the true humanity of Christ, he wrote a book against them in the year 447, entitled 'The Beggar, or the Many-shaped' (ἐρασιστής, or πολυμορφος). By this title he meant to imply that the Eutychian doctrine (as the views held by Cyril, Dioscurus, Barsumas, Eutyches, and the monks, are generally named for the sake of brevity) was borrowed from a variety of ancient heresies. The work consists of three dialogues: in the first, entitled ἀρεττος, he treats of the impossibility of the divine essence undergoing a change; in the second, ἀσύγχυτος, of the impossibility of the two natures (the divine and human) being mingled into one; and in the third, ἀραθής, of the impossibility of the divine nature suffering or dying. This work displayed great learning and power, together with a moderation which drew upon Theodore the reproaches of the zealots of his own party. His opponents however saw in his doctrines nothing less than a revival of Nestorianism; and Dioscurus accused him before Domnus, the patriarch of Antioch, of dividing the one Lord Jesus Christ into two sons of God, and wrote also a severe letter to Theodore, making the same charge. Theodore replied with great mildness and moderation, conceding as much of the disputed doctrine as he could conscientiously, and praying Dioscurus to consult for the peace of the church rather than for the views of a party. This letter only the more incensed Dioscurus, who permitted monks publicly to anathematise Theodore in the church, while he himself confirmed their anathemas. He also sent ambassadors to Constantinople to accuse the whole Eastern Church of Nestorianism before the emperor. Domnus also sent deputies to clear his church of this charge, and Theodore wrote with the same object to some of the most powerful ecclesiastics and statesmen. No immediate decision of the dispute took place, but the emperor ordered Theodore, as a troubler of the church, to confine himself within the limits of his own diocese. Theodore bitterly complained of being thus condemned unheard.

In the meantime the two parties grew more violent, and the imperial court itself became the scene of their disputes. In the year 448 Eutyches, in his zeal against Nestorianism, incurred the charge of an opposite heresy, of which he was condemned by the synod held by Flavianus at Constantinople, but again acquitted by the second Council of Ephesus, under the presidency of Dioscurus (A.D. 449). [EUTYCHES.] In convening this council every care was taken to exclude the anti-Eutychian party. With respect to Theodore, the emperor commanded that he should only be admitted in case his presence should seem good to the whole assembly. The hint was taken, and he was excluded. The emperor carried his dislike to Theodore still further, and intimated to the council that such men as Theodore should not only have no voice in it, but that they ought rather to be visited with its censures. Accordingly the council deposed Theodore from his bishopric, and he was compelled, by an imperial edict, to retire into the monastery where he had been educated. As he had been peaceful and moderate in prosperity, so he was resigned and cheerful in adversity: indeed his amiable spirit, and his firmness in obeying the dictates of his conscience, form a most agreeable relief to the strife and ambition which mark the character of most of the ecclesiastics of the age.

The only check to the triumph of Dioscurus and the Eutychians was the influence of Leo the Great, the then bishop of Rome, who had been already appealed to by Eutyches, after his condemnation by the synod of Constantinople, and whose aid was now sought by the opposite party. Flavianus and Theodore wrote letters to him, proposing to submit the whole controversy to an œcumenical council to be convened in Italy. To this arrangement the emperor (Theodosius II.) refused his consent, but his death in the following year (450) changed the state of affairs. In the next year (451) an œcumenical council was assembled, first at Nicea, but very soon removed to Chalcedon, to which Theodore was summoned, and in which he was received by his friends with the greatest enthusiasm. He petitioned the council for restoration to his bishopric; at the eighth sitting his petition came on for hearing; he rose to plead his cause, but the party of Dioscurus exclaimed that he must first condemn Nestorius. Theodore had never been a Nestorian, but had all along held a middle course between the parties of Nestorius and of Cyril; but he hesitated to pronounce the required condemnation till some clear definition of Nestorianism should be given. The bishops of the opposite party interrupted him with the shout, "He is a heretic: he is a Nestorian: thrust the Nestorian out!" Upon this Theodore exclaimed—"Anathema on Nestorius and on every one who denies Mary to be the mother of God, and who divides the only begotten Son into two sons. I have subscribed the confession of faith, and the letter of the bishop Leo; and this is my faith—Farewell!" He was pronounced to have established his orthodoxy, and the unanimous vote of the council restored him to his bishopric. In this transaction we perceive that Theodore's firmness had at length given way before the furious zeal of the Eutychians; and his courage appears never to have revived, for in his latest

work, which was a history of heresies (*Αἰρετικῆς κακομῆλας ἐκτροπῆς*), he speaks of his former friend Nestorius in the harshest terms.

After the council of Chalcedon, Theodoret returned to his diocese, where he devoted the rest of his life to literary labours. He died in the year 457. Even after his death he was looked upon as a formidable enemy by the Monophysites and the Origenists, who procured the condemnation of his writings against Cyril by the council of Constantinople in 553.

His works were—1, 'A History of the Church,' in five books, from 325 to the death of Theodoret of Mopsuestia in 429. Gennadius, a Latin writer, at the end of the 5th century, says that Theodoret's history consisted of ten books, and came down to the year 457, but no other writer mentions more than five books. It is a work of great learning and impartiality. 2, *Φιλόθεος ἱστορία*, an account of the lives of thirty celebrated hermits, ten of whom were his contemporaries and in some degree personally known to him. 3, The work against the Eutychians, already mentioned. 4, 'The History of Heresies,' also mentioned above. It is sometimes entitled, 'Against all Heresies, or a discrimination of falsehood and truth.' It consists of five books, and relates almost exclusively to the heresies respecting the person of Christ. 5, 'Ten Orations against the Heathen;' an 'Apology for Christianity;' besides 146 letters and commentaries on most of the books of the Old Testament and on all the epistles of Paul. The best edition of his works is that of Schulze, in 5 vols. 8vo, Halle, 1768-74.

(Mosheim, *Ecclesiastical History*, by Murdock and Soames, i, p. 443; Neander, *Geschichte der Christl. Religi. und Kirch.*, ii, passim; Schöll, *Geschichte der Griech. Litt.*, iii, 318.

THEODORIC or THEODERIC I, King of the Visigoths, was the elected successor, but not the son, of King Wallia, who died A.D. 419. During the latter years of the reign of the Emperor Theodosius II., Theodoric invaded Gaul, and in 425, just after the accession of Valentinian III., he laid siege to the city of Arles. Aëtius however relieved this town, and made peace with the Goths, who were obliged to come to terms because they were threatened by the Vandals, and they marched against the Vandals together with the Romans. After a peace of ten years a new war arose between the Romans and Theodoric, who in 436 besieged the city of Narbonne, which was only relieved in the following year, 437. The issue of this war proved unfortunate for the Romans, the inhabitants of their provinces in Gaul being reduced to despair by heavy taxes and other kinds of oppression, and the Goths being superior to the Romans in courage. Aëtius therefore enlisted several thousand Huns, in order to employ them against the Goths; but these auxiliaries were more destructive to the inhabitants than their enemies. A body of the Romans, together with these Huns, commanded by Litorius, the best of the generals of Aëtius, having made some progress, laid siege to Toulouse in 439. Theodoric proposed to conclude a peace, but Litorius, remembering his former victories over the Armoricans, refused all terms. Upon this the Goths made a sally; the Romans were entirely beaten, and Litorius himself was made a prisoner, and carried in triumph through the streets of Toulouse.

The whole country as far as the Rhône was now open to the Goths, and the inhabitants being well disposed, Theodoric made fresh conquests. The remainder of the Roman army was disorganised and in the greatest consternation. Nevertheless Avitus, who was then Præfectus Prætorio in Gaul, found means to make peace, which was certainly favourable to the Goths, though the conditions are not known. In 450 Gaul was invaded by Attila with his Huns and a numerous body of Teutonic auxiliaries. Attila pretended that his object was only to attack the Visigoths, but the Romans also took arms, and the united forces of Aëtius and Theodoric met the Huns at Châlons-sur-Marne (451). Theodoric commanded his army in person, and he was accompanied by his two sons, Thorismund and Theodoric. The battle was short, but bloody and disastrous for Attila, who fled on the following day, and thus escaped total destruction. King Theodoric was killed at the beginning of the battle. Prince Thorismund was proclaimed king in the camp of his father, whom he caused to be interred on the field of battle with great pomp. [ATTILA.]

(Mascov, *History of the Antient Germans*, ix, 11, 14, 27, 28.)

THEODORIC, or, more correctly, THEODERIK, surnamed 'the Great,' king of the Ostro-Goths, was the son of King Theodemir by his concubine Eralieva (Ehrlieb). He was born in 455, and he was seven years old when he was sent to Constantinople to the court of the emperor Leo Magnus (457-474) as a hostage, peace having just been concluded between this emperor and Theodemir, who had engaged to assist the Romans for an annual payment of two thousand pounds of gold. Theodoric received his education at Constantinople, and returned to his father in 472.

Without any orders from his father, he attacked and subjugated some Slavonian tribes on the Danube, and he afterwards accompanied Theodemir in his expedition to Thessaly, which was undertaken for the purpose of obtaining a larger territory for the Goths. This happened at the same time as the death of Leo (January 474); and Zeno Isauricus the elder, who became emperor in the month of February, hastily made peace with the Goths, and ceded to them the country of Pautalia, that is, the south part of Pannonia and the south-west part of Dacia (474). Theodemir died in 475, and Theodoric became king of the Ostro-Goths.

Zeno having been deposed by another Theodoric, the son of Triarius, a Gothic prince who had great influence in the Byzantine empire, King Theodoric marched to his assistance, and by his aid Zeno was again acknowledged as emperor (476-477). It seems that Zeno did not show himself so grateful as he ought, for serious differences broke out between him and the Goths. Theodoric, on the contrary, was loyal and generous, and he continued to be a faithful ally when the emperor had satisfied his just claims. He proved so serviceable, that Zeno created him Patricius and Magister Militie Præsentis in 483, and subsequently promoted him to the consulship in 484, a year which is still distinguished in the annals by his name. Jornandes affirms that Zeno adopted him as his son, and caused an equestrian statue to be erected in honour of him before the imperial palace. ('De Rebus Gothicis,' c. 57.)

Notwithstanding the honours which Zeno conferred upon the King of the Goths, Zeno showed his insincerity wherever he saw an opportunity. To avenge himself, Theodoric invaded Thrace in 488, dispersed the imperial troops, and besieged Zeno in Constantinople. It is said that Zeno saved himself by ceding to his adversary Italy, or his right to Italy, which was then in the hands of Odoacer, the chief of the Rugians. Perhaps he ceded only his claims on this country, hoping thus to get rid of a neighbour and friend whom he had changed by his own misconduct into a dangerous enemy. However this may be, the conditions of agreement are obscurely known. The Greeks afterwards pretended that Zeno had sent the Goths to Italy to re-annex that country to the empire: the Goths, on the contrary, affirmed that he surrendered Italy to their king. (Procopius, 'De Bello Gothico,' i. l.) Theodoric had certainly formed the plan of conquering Italy, and he was bent on carrying it into execution. If therefore he found it advisable to use the name of Zeno, he probably did so for the purpose of gaining those among the Romans who, although they detested foreigners, would submit to any conqueror whom they could consider as a delegate of the ancient legitimate authority.

Theodoric assembled his nation (489), that is, that part of the Ostro-Goths which obeyed the kings of the house of the 'Amali,' of which Theodoric was a descendant. Some Gothic tribes only remained in Thrace and in the Tauric Chersonese. A whole nation, men, women, and children, carrying all their moveable property with them, left their homes and took the road to Italy, following the Danube as far as the tract which lies between that river and the Lake of Balaton in Western Hungary. Trapstila, the king of the Gepidæ, appeared with an army to prevent them from passing through his dominions; but he was routed by Theodoric on the river Ulca (the present Szala), which flows into the western corner of the Lake of Balaton. Enduring hardships of all kinds, and fighting their way through the armed inhabitants, the Goths traversed the western part of Pannonia, crossed the Julian Alps, and reached Isonzo, where they met with the army of Odoacer, who was beaten in three battles—on the Isonzo, at Verona, and on the Adda (490). Odoacer, who fled to Ravenna, was forsaken by his best general, Tufa, and Frederik, a prince of the Rugians, and Epiphanius, bishop of Pavia, also came to Milan to pay homage to the king of the Goths. Odoacer was blocked up in Ravenna by one part of the Goths, and Theodoric, with another part, took possession of the whole peninsula of Italy, leaving Sicily, Sardinia, and Corsica to the Vandals. The siege of Ravenna lasted three years; but at last Odoacer surrendered to Theodoric, who, notwithstanding his oath to spare the life of his prisoner, ordered him to be put to death in his own palace (493). Odoacer's son and his whole family shared the same fate.

Theodoric was now acknowledged as king of Italy by the Emperor Anastasius, the successor of Zeno, who gave him the furniture of the palace at Ravenna, which Odoacer had sent to Constantinople. Theodoric did not assume the imperial title although he adopted the name of Flavius. In 500 he went to Rome and celebrated a triumph; he convened the senate 'ad palmam auream,' confirmed the immunities of the Romans, and gained the affection of the lower classes by his liberality and by the exhibition of magnificent spectacles.

Theodoric had already confirmed his power by alliances with the neighbouring kings. Gundobald and Godegisel, the kings of the Burgundians, having made an invasion into Italy and carried away many of the inhabitants, Theodoric sent Epiphanius, bishop of Pavia, and Victor, bishop of Turin, as ambassadors to Burgundy. They succeeded in delivering the captives, and concluded an alliance between these kings and Theodoric, who gave his daughter Ostrogotha in marriage to Sigismund, the son of Gundobald. He likewise kept peace with the Vandals, and gave his sister Amalfrida, then the widow of a noble Goth, in marriage to their king Thrasimund. His eldest daughter, Theodichusa, was married to Alaric II, king of the Visi-Goths; and his niece, Amalaberga, became the wife of Hermanfrid, the last king of the Thuringians. Theodoric himself took for his second wife Andolfeda, the sister of Clovis, king of the Franks.

In 504 Theodoric was at war with Trasaric, king of the Gepidæ, who, after many defeats, ceded his southern provinces as far as Sirmium, now Mitrowicz on the Save, near its junction with the Danube. The inhabitants of the eastern part of the Alemannian kingdom, which had been destroyed by Clovis, acknowledged Theodoric as their protector, who summoned Clovis to desist from any further

violence against the Alemanni. (His letter is contained in Cassiodorus, 'Variar.', ii. 41.) Meanwhile a war had broken out between Clovis and Alaric II., king of the Visi-Goths. Alaric fell in the battle of Vouglé in 507, in consequence of which the greater part of the dominions of the Visi-Goths in Gaul came into the hands of the Franks. Alaric's only legitimate son was a child named Amalaric, whom he had by his wife Theodichusa. As there was danger of all Spain being invaded by the Franks, the Visi-Goths intrusted the guardianship of their young king to Theodoric, who thus became the ruler over the Ostro-Goths and the Visi-Goths, or over Spain, southern Gaul, Italy with the dependent province of Illyricum, and parts of Rætia, Noricum, and Pannonia. Theodoric had previously sent an army into Gaul, commanded by Iba, who delivered Arles, which was besieged by the Franks (508); and the same general made a prisoner of Gesalic, the natural son of Alaric II., who was a dangerous rival of young Amalaric. Clovis was compelled to content himself with the northern and larger part of the Visi-Gothic dominions in Gaul. From this year, 511, is dated the regency of Theodoric in the kingdom of the Visi-Goths, who however styled himself king, and the councils which were held during his government are dated according to the years of his reign. He took possession of the cities of Provence, perhaps under the pretext of the expenses which he had been put to in saving the Visi-Gothic kingdom. He appointed Liberius his Lieutenant in Gaul, and Theudis in Spain.

The relation between Theodoric and the emperors of Constantinople was maintained to the satisfaction of both parties, until Justin published a severe edict against all who were not of the Catholic Church (523), and soon after deprived the Arians of their churches. About the same time this emperor had engaged with some members of the Roman Senate in designs against the Gothic dominion in Italy. Boëthius, then one of the first men in Italy, was charged with being a principal conspirator. He was imprisoned in 522, and during his captivity he wrote his Treatise on the Consolation of Philosophy. The conspiracy proved abortive, Boëthius was put to death in 524, and Symmachus, his father-in-law, shared the same fate in the following year at Ravenna. With regard to religious affairs, Theodoric, who was an Arian, like all the Goths, ordered Pope John with several bishops to go to Constantinople and to obtain better conditions for the Arians in the Eastern empire. The pope reluctantly obeyed, but it seems that in Constantinople he spoke rather according to his conscience than in favour of the Arians; for he was imprisoned at his return, by order of Theodoric, and died not many days after, on the 18th of May 526. On Theodoric's recommendation, Felix was elected pope, and his election was confirmed by Athalaric, the successor of Theodoric. This fact proves the great influence which Theodoric had in the affairs of his time. Not having obtained favourable conditions for the Arians in the East, Theodoric was about to retaliate on the Catholics in his dominions, when he died suddenly on the 26th of August 526, in the 72nd year of his age. His contemporaries have invented many fables about the sudden death of this great king. Procopius ('De Bello Gothico,' i. 1) says that the head of a large fish being served up at table, he fancied it to be the head of Symmachus, whom he had put to death, and whose participation in the conspiracy against Theodoric had not been proved; it is added that he was so terrified by his imagination, that he fell into a fever and shortly afterwards died. Others pretend that his death was the consequence of a divine judgment, because he had deposed and imprisoned Pope John: this story savours of its origin. Others dreamt that the ghost of Pope John and Symmachus had cast the soul of Theodoric into the burning crater of a volcano. The ashes of Theodoric were deposited in a porphyry urn, which still exists in the wall of the castle of Ravenna, and under it is an inscription on marble, bearing the date 563, which states that the urn once contained his remains. Theodoric having left no male issue, Athalaric, the son of his daughter Amalaswinth, succeeded him on the throne of Italy, and Amalaric became king of the Visi-Goths.

Theodoric generally kept his court at Ravenna, as the Roman emperors had done after the time of Honorius, and thus Ravenna became a centre of the arts and sciences, of no less importance than Rome. Among the high officers of Theodoric there were several very distinguished men, such as Cassiodorus, who was his private secretary, and Ennodius, who has written a eulogy of his master, which however is far from containing all the truth. He was celebrated as a hero in the old Teutonic songs, and in the 'Nibelungen-Lied' he appears as Diederich of Bern, that is, Verona.

Theodoric was not only a conqueror; he was also a legislator. It is his greatest glory that he was a friend of peace, of toleration, and of justice; a glory however which is somewhat obscured by some acts of rashness and violence. Whenever a war between Teutonic kings was threatening, he tried to prevent it by mediation; a fact which is proved by his letters to the kings of the Franks, of the Visi-Goths, of the Thuringians, of the Burgundians, of the Heruli, and of the Warni. He always reminded them that they were of one common origin, and that they ought to maintain peace and friendly intercourse. Theodoric was especially vigilant in preventing Clovis from invading the states of his neighbours; he protected the Thuringians and the remnant of the Alemanni, and he saved the kingdom of the Visi-Goths from destruction.

(Ennodius, *Panegyricus Regis Theodorici*, ed. Chr. Cellarius, 8vo, 1703; and also in his *Opera*, ed. Jac. Sirmondus, Paris, 8vo, 1611; Jornandes, *De Rebus Gothica*; Isidorus, *Chronicon Gothorum*, &c.; Procopius, *De Bello Gothico*; Cochlæus, *Vita Theodorici Reg. Ostrogoth.*, ed. Peringskjöld, Stockholm, 4to, 1699. Cochlæus has written without any just criticism; and Peringskjöld has shown no historical ability in his additions, which however contain very interesting matter relative to the language and the antiquities of the Goths. Maso's *Geschichte des Ost-Göthischen Reiches in Italien*, Breslau, 8vo, 1824, is a very valuable work.)

THEODORIC, a bishop and celebrated surgeon of the 13th century, was a pupil of Hugo of Lucca. He at first belonged to the order of the Preaching Friars (Frères Prêcheurs); afterwards he became chaplain to the Bishop of Valencia, and penitentiary to Pope Innocent IV.; and he was at last made bishop of Bitonti and Cervia successively. Towards the end of his life he settled at Bologna, where he died in 1298. He was especially distinguished from his contemporaries by not resting content with imitating his predecessors; on the contrary, he appears to have carefully studied the cases that presented themselves to his notice, and to have recorded in a great measure the results of his own observations. He also introduced several useful innovations in the practice of surgery, and was the first person who ventured to lay aside the cumbrous and frightful machines which had hitherto been used in the reduction of fractures and luxations. He left behind him a surgical work, entitled '*Chirurgia Secundum Medicationem Hugonis de Luca*,' which was published at Venice in 1490 and 1519, in folio. (Haller, *Biblioth. Chirurg.*; Sprengel, *Hist. de la Méd.*; *Biographie Médicale*.)

THEODORUS (Θεόδωρος), a native of Cyrene, was a philosopher of the Cyrenaic school, who lived towards the end of the 4th century B.C. He was a pupil of Arete, the daughter of Aristippus, and afterwards became the successor of Anniceris. His philosophical system, which was a kind of medium between that of Aristippus and Anniceris, appeared so dangerous to his fellow-citizens, among whom he had been held in very high esteem, that they banished him from their city. Theodorus went to Athens, where he would have experienced worse treatment if Demetrius Phalereus had not interposed and saved him; for here too his doctrines soon came into disrepute, and a public accusation was brought against him of moral and religious indifference. After the fall of Demetrius Phalereus, Theodorus thought it advisable to withdraw from Athens, and he went to Egypt, where he soon gained the confidence of Ptolemæus Soter, who, on one occasion, sent him as his ambassador to Lysimachus. On this mission Theodorus is said to have shown much courage and a strong feeling of independence towards Lysimachus, who taunted him for having been obliged to leave Athens. The time of his death is unknown.

We do not possess a complete view of the philosophical system of Theodorus, but he appears to have been one of the forerunners of Epicurus. His ideas of the deity were explained in a book which he wrote on the gods (*περὶ θεῶν*), and which earned him the name of atheist, though it is doubtful whether this opprobrious name was given him because he really denied the existence of gods, or merely because he was above the common prejudices of his countrymen. The following doctrines are especially mentioned as characterising his views of human affairs:—wisdom and justice are desirable, because they procure us the enjoyment of pleasure: friendship, on the other hand, has no real existence; for, in a person who is not wise, it ceases as soon as he ceases to feel the want of it, and a wise man is in want of nothing beyond himself. Patriotism is not a duty, because it would be absurd to make it incumbent upon a wise man to sacrifice himself for the ignorant, who form by far the majority of a state. His followers, who constituted one of the three branches into which the Cyrenaic school was divided, were called Theodorians.

(Diogenes Laert., ii. 86; vi. 97; Cicero, *Tusculan.*, i. 43; v. 40; *De Natura Deorum*, i. 1, 23, 43; Suidas, s. v. Θεόδωρος.)

From the philosopher Theodorus of Cyrene we must distinguish Theodorus the mathematician, who was a native of the same place, and is mentioned among the teachers of Plato. (Xenophon, *Memorab.*, iv. 2, 10; Maximus Tyrius, *Dissertat.*, 22.)

THEODORUS PRISCIANUS, the author of a Latin medical work, which is still extant, and which sometimes goes under the name of 'Octavius Horatianus.' He was a pupil of Vindicianus, and is supposed to have lived at the court of the emperors of Constantinople in the fourth century after Christ. He belonged to the sect of the Empirici, but appears to have also mixed up some opinions of the Methodici, and even of the Dogmatici. His work, which is not of much value, is entitled '*Rerum Medicarum Libri Quatuor*,' and is written in a barbarous Latin style. The first book treats of external disorders, the second of internal, the third of female diseases, and the fourth of physiology, &c. It was first published in 1532, fol., at Strasburg, and also in the same year at Basel, 4to; of these two editions, the former is the more complete, the latter the more correctly printed. A new edition was undertaken by J. M. Bernhold, of which the first volume was published in 8vo, without place or date, at Ansbach in 1791; but which, in consequence of the editor's death, has never been completed. Another work, entitled '*Diaeta, seu de Salutaribus Rebus Liber*,' has been attributed to Theodorus Priscianus, but (as Choulant thinks) incorrectly. It was first published together with 'Hildegardis

Physica, fol., Argentor., 1533. It first appeared in a separate form at Halle, 1632, 8vo, edited by G. E. Schreiner, and was afterwards inserted in Rivinus's collection of ancient physicians, 8vo, Leipzig, 1654. (Haller, *Biblioth. Medic. Pract.*; Sprengel, *Hist. de la Méd.*; Choulant, *Handbuch der Bücherkunde für die Aeltere Medicin.*)

THEODORUS, or DIODORUS, OF TARSUS, of a noble and very distinguished family, lived in the fourth century of our era, and was most probably born at Antioch. He studied under Sylvanus Tarsensis; and after having taken orders, he first became priest, and then Archimandrita at Antioch. The Catholic churches of this town having been shut up by order of the Emperor Valens (A.D. 364-378), who was an adherent of Arianism, Theodorus preached in the fields round the town, and he was always surrounded by a numerous congregation of Catholics. He also defended the orthodox faith with great intrepidity against the attacks of the Arians and the tyranny of Valens. Immediately after the death of Valens, he was appointed bishop of Tarsus (A.D. 378), Gratianus, the successor of Valens, being a zealous Catholic. In A.D. 381 Theodorus was at the Council of Constantinople. The year of his death is not known, but as Phalerius was chosen bishop of Tarsus in A.D. 394, it is probable that he died in this year. Theodorus was much esteemed by his contemporaries for his plain and lucid eloquence, but though he was known as the most zealous defender of the Catholic faith, he was accused of having shown himself favourable to the heretical doctrines of Nestorius. The same charge was made against his contemporary Theodorus of Mopsuestia. Theodorus of Tarsus wrote numerous works on theology and morals, none of which have come down to us. It is said however that one of his works on Politics, which Fabricius believes to be identical with another work on Providence, exists in a Syriac translation.

(Cave, *Script. Eccles. Historia Literaria*, vol. ii., p. 266, 267; Fabricius, *Bibl. Græca*, p. 380, 381.)

THEODORUS I., a native of Greece, and son of Theodorus, patriarch of Jerusalem, was elected bishop of Rome after the death of John IV., A.D. 641. Constans II. was then emperor of Constantinople, and Rotaris was king of the Longobards in Italy. The heresy of the Monothelites was disturbing the church, and it was supported by the Emperor Constans, and by Paulus, patriarch of Constantinople. Theodorus held a council at Rome in A.D. 648, in which Paulus was excommunicated. It does not seem proved however that Theodorus condemned, as some have asserted, the *typus* or edict of the Emperor Constans, in which he forbade all his clergy from disputing on the subject of the two wills in Christ, the Monothelites asserting that there was only one will in him. [EUTYCHES.] Theodorus built several churches at Rome. He died A.D. 649, and was succeeded by Martin I. (Muratori, *Annali d'Italia*; Panvinio, *Vite dei Pontefici*.)

THEODORUS II., a native of Rome, was elected pope after the death of Romanus, in August 897, and died three weeks after his election, and was succeeded by John IX.

THEODORUS LASCARIS, emperor of Nicæa, was descended from an ancient and noble Byzantine family, the early history of which is unknown. In 1198 he married Anna Angela-Comnena, the widow of Isaac Comnenus Sebastocrator, and the second daughter of the emperor Alexis III., Angelus-Comnenus, who usurped the throne of Constantinople, after having blinded and thrown into prison the emperor Isaac Angelus (1195). Alexis, the son of Isaac, fled to Italy and implored the protection of the Western princes, who, in 1203, were assembled at Venice for the purpose of a new crusade. They promised him assistance, and sailed to Constantinople with a powerful fleet, commanded by Dandolo, the doge of Venice. They laid siege to Constantinople, but although Theodore Lascaris prepared a vigorous resistance, Alexis III., who was of a mean and cowardly character, secretly left his capital and fled to Conrad, Marquis of Monteferrato, in Italy, who had married his sister Theodora. Assailed by bold and experienced troops, and abandoned by their emperor, the Greeks were struck with alarm; they surrendered their capital, and did homage to the blind Isaac and his son Alexis IV. (19th of July and 1st of August 1203), who reigned together under the protection of the Latin princes. However, Alexis Ducas Murzuphlus had made a party among the Greeks, who were enraged at the haughtiness of their foreign protectors. He murdered Alexis IV., Isaac died of grief, and Murzuphlus was proclaimed emperor under the name of Alexis V. (28th of January and 8th of February 1204). The Latins immediately laid siege to Constantinople, to avenge the murder of their ally and friend; and although the new emperor, assisted by Theodore Lascaris, defended the capital with skill and energy, the fall of this city became imminent. Suddenly Alexis V. fled with his treasures (April 1204), and the consternation which had reigned after the flight of Alexis III. once more discouraged the Greeks, and led to anarchy. During a period of six months, four, or as Isaac reigned twice, five emperors successively occupied the throne; and such was the passion for ruling among the Greek nobles, that in this critical moment, when the very existence of the empire was at stake, two candidates presented themselves to the people for the purpose of obtaining the crown.

These candidates were Theodore Lascaris and Theodore Ducas, who was of Imperial descent. Lascaris was proclaimed emperor, but fearing some sudden opposition from the adherents of the fugitive emperors, he declined the Imperial title, and declared he would content himself with that of 'despote' until he had re-established tranquillity.

However, while he encouraged the people to resist the besiegers, the Latins made an assault and succeeded in taking the town, the Greeks having in a cowardly manner abandoned their posts. During the confusion of plunder and violence, Theodore Lascaris escaped with his wife Anna, and fled to the opposite shore of Asia. The Latins chose Baldwin, Count of Flanders, Emperor of Constantinople, and gave him the capital and one-fourth of the empire; the remaining three-fourths were divided between Venice and the Frankish barons.

Meanwhile Theodore succeeded in raising troops in Asia, and, assisted by the Turks of Koniah, or Iconium, he made himself master of the important town of Nicæa and the greater part of Bithynia, proclaiming that he acted only as despote, and in the name of his father-in-law, the fugitive emperor Alexis III. (Autumn 1204). His conquests were soon taken from him by Louis, Count of Blois, who, in the division of the empire, had received Bithynia, and who defeated Theodore at Pæmanene, on the frontiers of Mysia and Bithynia (6th of December 1204). Theodore retired to Brusa, one of the few towns which had not fallen into the hands of the Count of Blois; but he was pursued and obliged to fight with Henry, Count of Flanders, the brother of the Emperor Baldwin, who defeated him.

Theodore would have been ruined but for the victories of the King of the Bulgarians and the revolted Greeks over the troops of the emperor, who was obliged to call for the assistance of the Count of Blois and the Latin troops in Bithynia. Theodore again became master of this country, and his father-in-law, Alexis III., being then kept a prisoner by the Marquis of Monteferrato, he himself assumed the title of emperor. He styled himself *Βασιλεὺς καὶ Αυτοκράτωρ Ῥωμαίων*, which was the title of the Emperors of Constantinople, and he thus showed that he considered himself as the only legitimate emperor of the East, having a right to the crown by his wife Anna, the daughter of Alexis III., who was prevented from ruling on account of his captivity, and all the other emperors of Greek extraction being then dead. In order to solemnise his accession to the Imperial throne, Theodore convoked a general assembly of the Greek bishops, who met at Nicæa. The president was the new patriarch, Michael Autorianus, who had been chosen patriarch for the special purpose of crowning Theodore, the patriarch Didymotichus having resigned.

Meanwhile several Greek nobles, profiting by the deep hatred of the Greeks against the Latin conquerors, had made themselves independent in Asia. Theodore, called Morotheodorus, reigned at Philadelphia, and Manuel Maurozomus, supported by Ghaiyâth-ed-din, sultan of Koniah, became powerful in Phrygia; but they were both defeated by the Emperor of Nicæa, as Theodore Lascaris is generally called. A third and more dangerous adversary was Alexis Comnenus, who had reigned as emperor at Trebizond from the year 1204, and whose brother David overran Asia Minor as far as the Propontis and the Ionian Sea. Theodore and David were equal in military skill, in activity, and in perseverance: neither of them was discouraged by defeats, nor made less vigilant by sudden success. After their first encounter, David, appreciating the character of his adversary, concluded an alliance with Henry of Flanders, emperor of Constantinople, who had succeeded his brother Baldwin. Theodore however defeated them both, and some time afterwards David was again completely beaten by Guido Andronicus, the general of the Emperor of Nicæa. After the truce between Theodore and Henry in 1210, David, who had hitherto carried on the war with various results, was compelled to give up all hope of keeping the field any longer. He lost all his conquests, and his brother Alexis was obliged to cede them to Theodore (1214), who thus became master of the greater part of Paphlagonia.

The truce between Theodore and Henry was the consequence of various victories obtained by Theodore over the troops of Henry. In 1207 the Emperor of Nicæa was besieged by the Franks in Nicomedia, but in a sally he made prisoner Count Thierry de Los, or more correctly Diedrik van Looz, a powerful baron from the Low Countries, and a descendant of the first Dukes of Lower Lorraine. Henry ransomed the count by surrendering several fortified towns to the Emperor of Nicæa, and arrangements were made which led to the truce of 1210. In this year the old Emperor Alexis III., who had escaped from the Marquis of Monteferrato, fled to Asia, to the court of Sultan Ghaiyâth-ed-din, and persuaded him to support his claims to the throne of Nicæa, or of any other part of the Eastern empire. The Sultan summoned Theodore to restore his father-in-law to the throne, and left Koniah at the head of 20,000 men. He was attacked in the neighbourhood of Antioch by Theodore, who had only 2000 men, but who charged the Turks with such impetuosity that their lines were broken, and they were entirely defeated. Ghaiyâth-ed-din himself was killed by Theodore, and old Alexis was made a prisoner (1210). He was confined to a monastery at Nicæa, where he died some years afterwards. Although Theodore had acted in his father-in-law's name while he was only despote, he had ascended the throne in his own name and at his own risk. Theodore's wife, Anna, the daughter of Alexis, was then dead.

It is said that in 1214 Theodore fell into the hands of Azed-din Key-kaus, the successor of Ghaiyâth-ed-din: but this is an error, and Palmerayer, in his work cited below, has shown that it was Alexis of Trebizond who was made prisoner by the Sultan. Except one short campaign against Henry in 1213, which was followed by a truce in

1214, Theodore reigned the last ten years of his life in peace, beloved by his friends and respected by his enemies. After the death of Anna he married Philippa, an Armenian princess, whom he repudiated after she had borne him a son; and he then chose for his third wife Maria, the daughter of Peter of Courtenai (Kortryk), Emperor of Constantinople after Henry, who was sister to Robert, the son and successor of Peter. Theodore wished to give his daughter Eudoxia in marriage to Robert, who was of a mild and amiable character, but this marriage was strongly opposed by the Greek patriarch Manuel, because the two emperors were brothers-in-law, and it was not carried into effect.

Theodore died in 1222, between forty-five and fifty years old, in the same year with Alexis I. of Trebizond. Although he left a son, his successor was his brother-in-law John Vatatzes. One of Theodore's daughters, Maria, was married to Andreas, King of Hungary.

(Nicetas, *Alex. Comm.*, and *Baldwinus*; Acropolita, especially cap. vi.; *Historia Franco-Byzant.*, lib. iii.; Gibbon, *Decline and Fall*; Le Beau, *Histoire du Bas Empire*; Falmerayer, *Geschichte des Kaiserthums Trapezunt*).

THEODOSIUS of Bithynia or of Tripolis in Lydia, for it appears that both these descriptions are applied to him (though there is another Theodosius of Tripolis, the author of an obscure poem), was a mathematician, of whom there is some question whether he lived about fifty years before Christ, or some centuries after. Strabo and Vitruvius both mention a Theodosius: the latter speaks of him as the inventor of a dial for every climate (or latitude): if this be the subject of our article, he must have lived before Christ. But on the other hand, Ptolemy does not mention him (though this tells little either way); and Suidas, enumerating under the head of Theodosius the works we shall presently mention, adds that he was also a commentator on some parts of Theudas: if this be the case, he must have lived after Christ. The balance of authorities seems to be in favour of the former supposition: if the writings only were looked at, there would be little reason to doubt that they were composed before the time of Ptolemy.

We have left of Theodosius—1, *Σφαῖρικά*, *Spherics*, in three books; 2, *περὶ νυκτῶν καὶ ἡμερῶν*, in two books; 3, *περὶ οὐχίσεων*. The first is a profound and accurate work on what we should now call spherical geometry; the second and third simply describe astronomical phenomena as they appear in different parts of the world. It is hardly a matter of certainty that the three works have the same author: the second and third add nothing to the fame of the author of the first.

The *Spherics* were translated by the Arabs, and from their version a Latin one (of little worth) was made at Venice in 1518, but whether it was published is not stated (Heilbronner). Another Latin version, probably also from the Arabic, was published by Vogelinius at Vienna, 1529, with scholia. John Pena gave the first Greek text, with Latin, Paris, 1557; and Barrow gave a Latin edition in 1675. But the best edition is the Oxford one, Greek and Latin, 8vo, 1707. The other works were published by Dasypodius, in Latin, 8vo, Strasburg, 1572. Joseph Auria published the third work in Latin, Rome, 1587; and ('Biogr. Univ.') the second, also in Latin, Rome 1591 (1587 according to Fabricius); but Heilbronner does not mention this last. (Weidler; Heilbronner; Delambre.)

THEODOSIUS I., FLAVIUS, surnamed the Great, was the son of the general Theodosius who had signalled himself greatly during the reign of Valens and Valentinian in Britain and Africa, but was put to death in A.D. 376 at Carthage through the envy of the courtiers. The Theodosii were an illustrious family of Spain, of the town of Italica, near the modern Seville. The great Theodosius was born in 345, and was educated by the ablest men of the time, while his father, himself one of the greatest generals, instructed his son in the art of war, and accustomed him to the strictest and severest discipline. He took him with him in his campaigns in Britain, Germany, and Africa, and made him acquainted with all kinds of warfare, so that the boy became early accustomed to the endurance of hardship. The various occasions on which he distinguished himself were not overlooked, and he was raised to the rank of duke of Moesia, with an independent command. Here again he distinguished himself above all the other military commanders. He vanquished the Sarmatians, and it was only owing to his intrepid character that the province was not lost altogether. (Ammianus Marcel., xxix. 6; Zosimus, iv. p. 219, &c.) After the death of his father, in 376, he obtained permission to withdraw from public affairs, and retired to Cauca in Spain, where he devoted himself to agricultural occupations on his extensive estates, and won the affection and esteem of all who came in contact with him, for he possessed no less the virtues of social and domestic life than the talents of a general. But he did not remain long in the enjoyment of his quiet happiness: his virtues and talents had made too deep an impression to be forgotten in the hour of need; and on the 16th of January, 379, the emperor Gratian raised Theodosius at Sirmium to the dignity of Augustus, with the command over Illyricum and all the eastern provinces of the empire. The immediate object of this elevation was the hope that he would save the empire from the Goths, who in the preceding year had totally defeated the Roman army near Adrianople, and were now ravaging the country. Theodosius established his head-quarters at Thessalonica in Macedonia, strengthened the garrisons in those parts of the empire, and restored discipline among the troops: but he only ventured upon partial engagements

with the enemy, and only on such occasions when he was sure of success. He thus convinced his soldiers that the barbarians were not invincible, and revived their courage and their confidence. The Visi-Goths were thus gradually and without any great battle driven out of Thrace. While at Thessalonica, Theodosius was seized with a severe illness. He was of a Christian family, but he had not yet been baptised, and he now celebrated this solemnity by the advice of his friends, in the hope that it would contribute to his recovery. When his illness had disappeared, he went to Constantinople, and the first acts of his administration were to expel all the Arians from the capital, to assign the churches they had occupied to the orthodox Christians, and to appoint Gregorius Nazianzenus archbishop of Constantinople (380). His persecution of the Arian sect was conducted with such zeal, that orthodoxy was soon restored throughout his dominions. He then held a council at Constantinople of 150 bishops to complete the system, the foundation of which had been laid at the council of Nicaea, and a number of edicts were successively issued, inflicting the severest punishments upon all kinds of heretics. The example of these rigid persecutions was imitated in the west by Gratian, and subsequently in the north also by the usurper Maximus.

As regards his Gothic enemies, Theodosius was indebted as much to his good fortune as his military talents; for after the death of Fritigern dissensions and hostilities broke out among the Gothic tribes themselves, and he succeeded even in engaging some of their chiefs in the service of the empire. The greater part however of the subjects of Fritigern, tired of their state of anarchy, made Athanaric their king, who concluded a treaty with Theodosius at Constantinople (381.) Athanaric indeed did not long survive the conclusion of this peace, but his subjects, who were pleased with the kind treatment they had received from Theodosius, willingly submitted to him, and numbers of them enlisted under the Roman standard. The treaty of the king and the submission of his army was followed by successive separate treaties of the Visi-Gothic chiefs, who promised to become the faithful allies of the Romans. Lands were then assigned to the Visi-Goths in Thrace and Lower Moesia (382). The Ostro-Goths on the banks of the Danube were conquered several years later (386), and received settlements in Phrygia and Lydia. The conditions on which the Goths became subjects of the Roman empire are imperfectly known: thus much only is certain, that they acknowledged the sovereignty of Rome without submitting to her laws or the jurisdiction of her magistrates; their chiefs also still continued to have the command of their respective tribes in peace and war, and an army of 4000 Goths was maintained for the perpetual service of the empire. Theodosius, although he had felt obliged, for the safety of his dominions, to make several concessions, yet succeeded in persuading the Goths that all were the voluntary acts of his own sincere friendship towards them. The conduct of the emperor, certainly the wisest that he could adopt under existing circumstances, was praised by some and blamed by others. There was certainly every reason for placing little confidence in the professions of the barbarians, although they called themselves the confederates of the Romans. Their whole nation soon became divided into two parties: the one, faithful to the empire, was headed by Fravitta; the other, which was only waiting in secret for an opportunity to revolt, was headed by Priulf, who, after he had disclosed his secret in the presence of Fravitta, was slain by him. Had it not been for the firm but temperate character of the emperor himself, the indomitable spirit of the barbarians could not have been restrained. On him alone the public safety depended.

In the year 383 Theodosius raised his son Arcadius to the rank of Augustus: in the same year his benefactor Gratian was murdered in a rebellion. Maximus, supported by the troops in Britain, had set himself up as emperor, and had conquered Gaul. Theodosius, who for the present was unable to carry on a war, concluded a peace with him, and left him in possession of the countries which he was occupying north of the Alps, on condition that he should not disturb Valentinian, the brother of Gratian, in his rule over Italy, Africa, and western Illyricum. The empire was thus divided among three emperors. But Maximus had no intention to keep the peace, and his ambition stimulated him to make himself master of Italy also. In 387 he broke in upon Italy, and took Milan, the residence of Valentinian, by surprise. The young emperor, his mother Justina, and his sister Galla, fled to Thessalonica, to implore the protection of Theodosius. The emperor of the East received the fugitives kindly, and as his own wife Flacilla had died, he married Valentinian's sister Galla, and thus established a direct interest for himself in protecting the exiled family. The opportunity of chastising the faithless Maximus was very welcome to him, and preparations for war were made throughout the whole extent of his dominions. In order to secure his empire on its south-eastern frontier, a treaty was concluded with Persia. A large fleet assembled in the ports of Epirus and Greece, and Theodosius placed himself at the head of a well-disciplined army, with which he marched into Pannonia to meet the enemy, who had pitched his camp in the neighbourhood of Siscia, on the Drave. A battle was fought, in which the Huns, Alani, and Goths, who served in the army of Theodosius, greatly distinguished themselves. Maximus was defeated and put to flight. Theodosius, determined to get possession of his enemy either alive or dead, pursued him as far as Aquileia, in which town Maximus shut himself up. The usurper,

who had no hold on the affections of the people, was dragged forth from his palace into the hands of the conqueror, who gave him up as a victim to the rage of the soldiers. Victor, the son of Maximus, was killed in Gaul by the hand or at the command of Arbogastes, the Frank, who made himself master of Gaul (A.D. 388).

After having thus easily and quickly terminated a war which had threatened the empire with long and serious calamities, Theodosius stayed for three years in Italy to regulate the state of the western provinces, and it was in this period that he showed his great and amiable character in the most brilliant light. He not only spared the lives of the friends and relatives of Maximus, but afforded them every support in their misfortunes, while, on the other hand, he restored to the oppressed people of the west their lands, and gave them compensation in money for the losses they had sustained. In the year 389 he entered Rome in triumph, together with his son Honorius and Valentinian.

During the period of his stay in Italy an insurrection broke out at Antioch, in which the people demanded redress of several grievances, especially a diminution of their heavy taxes. When these demands were haughtily refused by the imperial officers, the populace destroyed the statues of Theodosius, his wife Flaccilla, and of his sons Arcadius and Honorius. The insurrection however was soon put down, and when Theodosius was informed of the occurrences, he sent Hellebrius and Cæsarius to inflict the most severe punishment upon the city. But when messengers came soliciting a milder treatment, and assuring the emperor that the people sincerely repented of their crime, he granted them a general pardon. But this generous act was followed by another which was as rash as it was cruel. In 390 another insurrection broke out at Thessalonica, in which Botheric, the commander of the garrison, and several other officers, were cruelly murdered by the people, because they refused to give up a handsome boy to the unnatural lust of some dissolute favourite of the people. Theodosius was at first uncertain whether he should take vengeance upon the city or exercise clemency as he had done towards Antioch. Rufinus induced him to do the former, and commissioners were accordingly sent to punish the criminal inhabitants. Theodosius however soon regretted his step, and countermanded his orders; but it was too late: a general and indiscriminate massacre took place in the devoted city, in which no less than 7000 lives were sacrificed to the manes of Botheric. When Ambrose, the archbishop of Milan, was informed of this cruel massacre, he was seized with indignation and grief; and eight months later, when the emperor, on Christmas-day, wanted to attend the service in the great church of Milan, he was stopped in the porch by Ambrose, and was not admitted until he had promised to do public penance for this monstrous cruelty. [AMBROSIUS, Sr.] It was not till after the lapse of eight months from that day that the emperor, who had performed all the acts of public penance which the archbishop had imposed upon him, was restored to the communion of the faithful. An edict was at the same time issued that no capital punishment should henceforth be inflicted on any one till thirty days after it had been pronounced. During his stay in Italy Theodosius acted as a kind of guardian of the young emperor Valentinian, whom he might have deprived of his empire with the greatest facility and perfect impunity if he had been less magnanimous. When he left Italy for Constantinople in 391, he left Valentinian in the apparently secure possession of the western part of the empire. It was one of the characteristic features of Theodosius to carry into effect his great plans with the utmost vigour and energy, but when the object was attained he sank into a state of indolence, and gave himself up to the enjoyment of pleasures which, although harmless in themselves, in many cases prevented him from deriving all the advantages from his successful undertakings that he might have done. This was also the case after his return to Constantinople. The most important occurrence in the year of his arrival there was the final and total abolition of paganism throughout the Roman empire. In the following year (392) Valentinian was murdered at Vienna, in Gaul, by Arbogastes, who raised Eugenius, a rhetorician, to the imperial throne, in whose name he himself hoped to wield the sceptre. Theodosius, who had allowed himself to be deceived by the professed faithfulness of Arbogastes, was deeply moved when he heard of the fate of his brother-in-law and of the elevation of Eugenius. But he was at that moment not prepared for a civil war, and the ambassadors of Eugenius were consequently received with apparent favour, and dismissed in a friendly manner. Preparations for war however, which lasted for almost two years, were immediately commenced, and Stilicho and Timasius were charged with recruiting and disciplining the forces. In the spring of the year 394 Theodosius set out from Constantinople against Eugenius. The armies met in Pannonia, and, after a long and dubious contest, Eugenius was defeated on the banks of the Cold River, near Aquileia. Eugenius was put to death, and Arbogastes in despair put an end to his own life. Theodosius was now sole emperor of the Roman world, and was cheerfully acknowledged by all the provinces, even by those who had recently paid homage to Eugenius. The empire might now look forward to a period of peace and happiness under the administration of Theodosius. But he was suffering from dropsy, and his health was rapidly declining. He died on the 17th of January, 395, at Milan, whence his body was conveyed to Constantinople and buried there. His two sons Arcadius and Hono-

rius had been raised to the rank of Augustus, and the father had shortly before his death given to Honorius the empire of the West, while Arcadius was to occupy the throne of the East. The Roman empire henceforth remained divided into the Western and the Eastern empire.

(S. Aurelius Victor, *Epitome*, c. 48; Orosius, vii, 34, 35; Sozomen, vii, 2; Paulus Diacon., ii.; Compare Gibbon, *Hist. of the Decline and Fall*, c. 26, 27, and 28.)

THEODOSIUS II., or the Younger, was the son of Arcadius, and grandson of Theodosius the Great. He was born on the 10th of April, A.D. 401. His father died in A.D. 408 at Constantinople, and left his son, then a child seven years old, at the head of the Eastern empire. There is a statement that Arcadius in his will made Jezdegerd, king of Persia, the guardian of his son and regent of the empire during his minority. (Jornandes 'De Bell. Pers.', l. 2.) This isolated account however scarcely deserves credit, and it is a fact that Anthemius, the præfectus prætorio, from the very first assumed the government of the Eastern empire in the name of the young prince, and carried it on in a praiseworthy manner down to the year A.D. 414, when he voluntarily resigned it to Pulcheria, the sister of Theodosius, who was only two years older than her brother, and had shortly before received the title of Augusta. This woman continued to exercise the sovereignty in the name of her brother, not only after he had grown up to manhood and down to his death, but even three years later, until she herself died. During the early part of Theodosius's life Pulcheria herself conducted and superintended his education; but the prince seemed to possess no ambition, and not to aspire to the glory of a monarch: he passed his whole life in a perpetual infancy, surrounded by women and eunuchs, and he idled away his time in hunting, painting, carving, and making elegant transcripts of sacred books. The whole government was carried on in his name; but whether its acts deserve praise or blame, he can have no share in either, as he blindly acquiesced in all that his sister did. She also persuaded him, in A.D. 421, to marry Eudocia (before her baptism her name was Athenais), the daughter of Leontius, an Athenian sophist. This woman, who was no less distinguished for her beauty than for intellectual powers, soon gave birth to a daughter, Eudoxia, after which she was raised to the rank of Augusta. She lived with her husband till the year A.D. 444, when, after having drawn upon herself suspicion of some improper conduct, she was obliged to quit the court, and withdrew to Jerusalem.

In A.D. 421 a war broke out with Varanes, king of Persia, which was successfully concluded by Ardaburius, a general of Theodosius, and a peace was concluded for a hundred years, which lasted at least for thirty. With this exception the long reign of Theodosius was one of almost undisturbed peace. It was only during the last years of his life that the European parts of the empire were harassed by Attila and his Huns. [ATTILA.] The Asiatic provinces, by far the most extensive, continued to enjoy a profound and permanent repose. Theodosius died on the 28th July, A.D. 450.

(Paulus Diacon., iv.; Socrates, *Histor. Eccles.*, vii. 1, &c. Compare Gibbon, *History of the Decline and Fall*, c. 32, 33, 34.)

The reign of Theodosius II. is memorable in the history of jurisprudence through the collection of laws that was made in it, and bears the name of Codex Theodosianus. This code was completed and promulgated as law in the Eastern empire in the year 438.

THEODOSIUS III., surnamed Adramytenus, emperor of Constantinople. He succeeded Anastasius II. in the year A.D. 715, being proclaimed emperor in the fleet of his predecessor near Adramyttium in Troas. He was a man of obscure birth, and accepted the throne with reluctance. He is praised for his unblemished conduct, and for the protection he afforded to the orthodox faith. He had not enjoyed his elevation much more than one year, when Leo III., a man of superior abilities, was proclaimed emperor. Theodosius willingly withdrew, and spent the remainder of his life, together with his sons, in a monastery. (Theophanes, *Chronographia*; Georgius Cedrenus, *Compendium Historiarum*; Zonaras.)

THEODOTION, of Ephesus, the author of a Greek version of the Old Testament, was an Ebionite, and lived in the former part of the 2nd century after Christ. He is quoted by Justin Martyr, in his dialogue with Tryphon (A.D. 160), and by Irenæus (A.D. 177). His version appears to have been undertaken for the purpose of furnishing the Ebionites with a more exact translation of the Hebrew text than that of the Septuagint, and one therefore which would render them more service than the Septuagint in their disputes with the Jews. It agrees almost exactly with the Septuagint, except that it supplies the deficiencies of that version, and omits those parts of it which are not in the Hebrew text. Theodotion had not a competent knowledge of Hebrew. He has retained certain Hebrew words which appear to have been in use among the Ebionites. Theodotion's version of Daniel was substituted by the ancient church for the Septuagint version of that book. This version occupied one column of Origen's 'Hexapla.' [ORIGENES.]

THEOGNIS, an elegiac poet of Megara, the capital of the small state of Megaris, was living at the close of the 6th century B.C.; and it appears from his own writings that he lived to the date of the battle of Salamis, B.C. 480. In one of those revolutions which frequently occurred in the small Grecian states, the democratic body at Megara overpowered the aristocratic, to which Theognis belonged. Theognis

who was then absent from his country, lost his landed property in this revolution, which, with the rest of the Megarian territory, was partitioned among the successful party. It appears that he lived in exile at Thebes. The fragments of Theognis abound in allusions to the revolution by which he had suffered, and he expresses in bitter language his complaints against that base class which had usurped the station and property of the body to which he belonged. He had also the mortification of seeing a rich rival of mean birth preferred to him by the parents of a girl whom he courted, though he was in some measure indemnified for his loss by retaining the affections of the girl after she had married his ignoble rival.

It appears from his verses that he had been in Sicily, Eubœa, and Sparta; and it was in Sicily that he wrote one of his elegies which was addressed to the Sicilian Megarians, who were a colony from his native state. There seems no reason to doubt that his elegies were composed on various occasions and on particular subjects, and that so far they resembled the elegies of Tyrtaeus, Archilochus, and Solon. But as these elegies contained numerous general maxims or lessons for conduct, it is conjectured that in the course of time nearly everything was omitted from them which had a particular application, and thus the elegies of Theognis were formed into that general collection of gnōmæ such as we now have it, consisting of above fourteen hundred hexameter and pentameter verses. It is observed that nearly all the passages in this collection which have a political reference are addressed to a person named Cyrnus, the son of Polypas. Cyrnus appears to be a youth of noble family for whom Theognis has a tender regard, and whom he exhorts to the practice of virtue, to prudence in conduct, and to the enjoyment of life.

The verses of Theognis contain many allusions to the symposia, or entertainments, of the Greeks, in which it was usual, after the libation had been duly performed, for some of the guests to sing a poem, accompanied by the flute. This poem, or elegy, was addressed either to all the company, or, as appears to have been always the case with the elegies of Theognis, it was addressed to a single person.

The fragments of Theognis have been often printed. They were first printed in the Collection of Gnomic poets by Aldus, Venice, 1495; and they are contained in Gaisford's 'Poetæ Minores Græci,' Oxford, 1814-20; and in Schneidewin's 'Delectus Poesis Græcorum,' Göttingen, 1838. One of the best editions is by F. T. Welcker, Frankfurt-on-the-Main, 1826; and there is an edition by J. C. Orellius, 4to, Turin, 1840. They were translated into German verse, with short notes, by G. Thudichum (1828); and also by W. E. Weber (1834).

(Müller, *History of the Literature of Ancient Greece*, vol. i.; Hoffmann, *Lexic. Bibliograph.*; Fabricius, *Bibliotheca Græca*, vol. i.; Schneidewin, *Proœmium*, in his *Delectus Græci*.)

THEON, an eminent Greek painter, who was a native of Samos, and appears to have lived in the time of Philip and Alexander of Macedonia. He was reckoned one of the first masters of his age, on account of his powers of invention and the gracefulness of his execution. (Quintilian, xii. 10, 6.) We know the subjects of only a few of his works, but the execution is spoken of in such a manner that the excellence of the artist cannot be doubted. Pliny, 'Hist. Nat.' xxxv. 40, § 40, mentions two of them, the one representing Orestes in the act of killing his mother (compare Plutarch, 'De Audiendis Poet.', p. 18, ed. Frankf.), and the other Thamyris playing the cithara. A description of a splendid painting by Theon representing a youthful warrior, who, animated by a martial spirit and eager to fight, is hastening to meet the enemy, is given by Aelian ('Var. Hist.', ii. 44).

THEON, ÆLIUS, a rhetorician and grammarian of Alexandria, who, according to some critics, lived about A.D. 500, but, according to a more probable opinion, about A.D. 315. According to Suidas he wrote a commentary on Xenophon, on the orations of Demosthenes and Isocrates, a work on rhetoric, one on the structure of language, 'Progymnasmata,' and several other books. With the exception of the 'Progymnasmata' (Προγυμνάσματα), or practical rules on rhetoric, derived from the examples of the best Greek orators, there is no work extant that can be ascribed to him with certainty. Theon's 'Progymnasmata' excel those of Aphthonius in elegance, precision, and clearness, and were, like those of Aphthonius, long used as a text-book in schools. The first edition appeared at Rome, 4to, 1520; that of D. Heinsius at Leyden, 8vo, 1626. Scheffer's edition (Upsala, 1670 and 1680), is incorrect. The best edition of the text, accompanied by Greek scholia, is in Walz's 'Rhetores Græci,' vol. i., pp. 145-262.

Kuster (on Suidas, ii., p. 182) ascribes to Theon also the still extant scholia on Aratus, Apollonius Rhodius, Lycophron, and Theocritus. The ἐπιστολικὸν τύποι which are contained in Aldus's and Cujacius's collections of epistles, are likewise attributed by some writers to Theon, while others assign them to Libanius or Proclus. A separate edition of them appeared at Leyden in 1614, 12mo.

(A. Westermann, *Geschichte der Griech. Beredsamkeit*, p. 230, &c.)

THEON. Theon, the Elder, of Smyrna, was the contemporary of Ptolemy (who cites one of his observations), but a little older. Theon, the Younger, of Alexandria, the commentator on Ptolemy, and father of Hypatia, lived in the latter half of the 4th century.

Of THEON THE ELDER, or Theon of Smyrna, we know nothing but that he was a follower of Plato, and has left a work entitled τῶν κατὰ μαθηματικὴν χρῆσιν εἰς τὴν τοῦ Πλάτωνος ἀνάγνωσιν, or on the parts of mathematics which are useful towards a knowledge of Plato. Other

works have been mentioned written by some Theon (there are many of this name), but they are lost. This work consisted of four parts, treating on arithmetic, music, astronomy, and the harmony of the universe (περὶ τῆς ἐν κόσμῳ ἁρμονίας). Bouillaud (Gr. Lat., 4to, Paris, 1644), published the first two of these parts, or what he found of them, from a manuscript which came from De Thou's library, together with what he supposed to be a fragment of the third, from the king's library. Isaac Vossius assured Bouillaud that the third part was to be found in the Ambrosian library at Milan, but it has never appeared. Professor de Gelder, of Leyden, has recently (Gr. Lat., 8vo, Leyden, 1827) published the arithmetic, with ample notes and dissertations.

Of the private life of THEON THE YOUNGER (who was also a Platonist) we know nothing, except that he professed the ancient heathen doctrines, which led to the memorable fate of his daughter Hypatia (A.D. 415), a crime which will excite disgust and indignation to the end of time. [HYPATIA.] Theon of Alexandria is known as the commentator of Ptolemy and the editor of Euclid. There is a commentary on Aratus which is said to have been his, but Grotius is of opinion that it is the work of several hands, for which he gives good reasons. The whole of the commentary on the Syntaxis is preserved, except one or two books. A full account of it is given in Delambre's 'History of Ancient Astronomy,' who observes that it helps but little in the understanding of the Syntaxis, and gives none of that additional information which is usually expected from a commentator. This commentary was first printed in Greek in the Basel edition of Ptolemy (1538). J. Baptist Porta published two books only (Latin, Naples, first book 1588, first and second 1605), and Halma gave an edition of these same books (Greek and French, 2 vols. 4to, Paris, 1821). Besides the commentary, we have the κανόνες πρόχειροι, or manual tables, described by Delambre from the manuscript, and since published by Halma (Greek and French, 2 vols. 4to, Paris, 1822-23). They contain a description of the modes of astronomical calculation in use at the time.

It only remains to speak of Theon as a commentator on Euclid, a character which some still persist in giving him. The fact is, that Theon, as he himself informs us in the commentary on Ptolemy, gave an edition of Euclid, with here and there an additional proposition. Some manuscripts of Euclid call this a commentary, and our fathers of the middle ages got the notion that *all the demonstrations* were commentaries supplied by Theon, only the enunciations of the propositions being Euclid's. For instance, in the folio of 1516 (Stephens), in which the propositions are given twice, namely, Adelard's translation (called Campanus's) from the Arabic, and Zamberti's, from the Greek, in this work the enunciations are headed *Euclides ex Campano* and *Euclides ex Zamberto*, but the demonstrations are headed *Campanus* and *Theon ex Zamberto*. Again, in 'I quindici Libri degli Elementi di Euclide, di Greco tradotti in Lingua Thoscana,' Rome, 1545, we find nothing but the enunciations of the propositions. The editor has kept his word, and given all he believed to be Euclid's: had he meant to give demonstrations, his title would have been 'Euclid, with Theon's Commentary.' Many editions professing to give Euclid in Greek and Latin, have the enunciations only in Greek, a necessary warning to a person who wishes to buy Euclid in the original. Hence arises the pertinacious continuance of the assertion that Theon commented Euclid: so late as the article 'Theon' in the 'Biographie Universelle' we find this statement made; and even more, namely, that the commentary by Theon was published at the end of the Basel edition of 1533, in Greek, that it was translated into Latin by Commandine, and has been often republished. Any one who looks into the Basel edition will see that the commentary at the end is by Proclus, not by Theon.

Robert Simson, and other editors who alter according to their own ideas of perfection, and then declare that they have restored Euclid, always lay the blame of the supposed alterations upon Theon; Simson's phrase is, "Theon, or some unskilful commentator." There is no reason to suppose that Theon altered Euclid: all that is known is that he added occasionally, and, if we look at those additions which it is certain he made, judiciously.

THEOPHANES, a native of Mitylene, was a contemporary and friend of Pompey the Great. During the war between Rome and Mithridates, when the Mitylenæans supported the king and delivered up to him the Roman general Manius Aquilius, Theophanes, who refused to take any part in the revolt, was expelled, and went to the camp of Sulla. (Velleius Pat., ii. 18.) In Italy Theophanes became acquainted with Pompey, formed an intimate friendship with him, and henceforth accompanied him in all his expeditions. After the termination of the war against Mithridates, Theophanes endeavoured to perpetuate the exploits of his friend. His history, which is now lost, appears to have been a work of no mean order, for Strabo calls Theophanes the most distinguished Greek of his age. Although he is not charged with having sacrificed the truth, yet he was undoubtedly anxious to wipe off any stain that was attached to the family of his friend. Pompey is said to have been so delighted with the performance, that he procured Theophanes the rights of a Roman citizen. (Cicero, 'Pro Archia,' 10.) Although Theophanes had been exiled from Mitylene, he bore no grudge against his country, and on the return of Pompey from Asia he availed himself of his influence with the conqueror, and induced him to restore to the Lesbians their

liberty and the privileges of which they had been deprived for having supported the king of Pontus. In B.C. 59 Theophanes was sent by the senate of Rome as ambassador to Ptolemaeus Auletes of Egypt, to carry to him the decree of the senate, which guaranteed him the sovereignty of the country. His conduct on this mission is blamed, because he is said to have endeavoured to direct events according to the secret wishes of Pompey. During the civil war Theophanes continued faithful to his friend, and supported him with his advice, and it was on his well-meant suggestion that after the battle of Pharsalus Pompey fled to Egypt, where he was murdered. After this event Theophanes returned to Rome, where he appears to have spent the last years of his life in retirement. After his death the Lesbians paid divine honours to his memory for the benefits which he had conferred upon them. His son, M. Pompeius Macer, held the office of prætor in the time of Augustus, and was afterwards appointed governor of Asia; but in the reign of Tiberius he and his daughter put an end to their own lives, in order to avoid the punishment of exile to which they had been condemned.

Theophanes was the author of several works, both in prose and in verse, but very little of them has come down to us. Plutarch's Life of Pompey is chiefly based on the historical work of Theophanes, and we may thus possess more of it than we are aware; but besides this we have four or five fragments of it in Strabo, Plutarch, and Stobæus. The 'Anthologia Græca' (xv., n. 14 and 35) contains two epigrams of Theophanes, and Diogenes Laertius (ii. 104) mentions a work by Theophanes on painting, but of its nature and contents nothing is known, and it is probable that the writer was a different Theophanes to the friend of Pompey.

(Sevin, in the *Mémoires de l'Académie des Inscriptions et Belles-Lettres*, vol. xiv., p. 143, &c.)

THEOPHANES NONNUS. [NONNUS.]

THEOPHILUS, a Constantinopolitan jurist, who lived in the reign of the emperor Justinian (A.D. 527-565). He was a distinguished teacher of jurisprudence at Constantinople (antecessor), and, at the command of the emperor, he was employed among those who compiled the 'Digest,' and afterwards he undertook, along with Dorotheus and Tribonian, to compose the 'Institutes,' that is, the elementary treatise on jurisprudence, which was part of Justinian's plan. This Theophilus is generally supposed to be the author of the Greek paraphrase of the 'Institutes,' though it is maintained that the paraphrase is not the work of Theophilus himself, but was taken down from his lectures by some pupils. It was discovered in the beginning of the 16th century by Viglius ab Aytta Zuichemius at Louvain, who published and dedicated it to the Emperor Charles V. (fol., Basel, 1534). The work was frequently reprinted during the same century, but the last and best edition is that of W. O. Reitz, in 2 vols. 4to, Hagæ, 1761. It contains a Latin translation and the notes of previous editors, together with those of Reitz; and also a very interesting dissertation on the obscure and much disputed history of Theophilus. Theophilus also wrote a commentary on the first three parts of the 'Digest,' which however is now lost, with the exception of a few fragments which are incorporated in Reitz's edition of the 'Paraphrase of the Institutes.' The value of the paraphrase of Theophilus in establishing the text of the 'Institutes' may be estimated by an examination of the edition of the 'Institutes' of Gaius and Justinian by Klenze and Böcking, Berlin, 1829.

(*Institutionum D. Justiniani Sacrat. Princip. Proœmium*; P. B. Degen, *Bemerkungen über das Zeitalter des Theophilus*, 8vo, Lüneburg, 1808; Zimmer, *Geschichte des Röm. Privatrechts*.)

THEOPHILUS PROTOSPATHARIUS, the author of several Greek medical works, which are still extant, and some of which go under the name of 'Philothæus' and 'Philearetus.' Everything connected with his name, his titles, the events of his life, and the time when he lived, is uncertain. He is generally styled 'Protospatharius,' which seems to have been originally a military title given to the colonel of the body-guard of the emperor of Constantinople ('Spatharii,' or *σωματοφύλακες*). Afterwards however it became also a civil dignity, or at any rate it was associated with the government of provinces and the functions of a judge; they possessed great authority, and were reckoned among the Magnifici. In some manuscripts however he is called 'Philosophus' (Lambec, 'Biblioth. Vindob.', lib. vii., p. 352, ed. Kollar.); in others, 'Monachus' (id., ibid., lib. vi., p. 244, 494); 'Archiatr.' (Codd. MSS. Theoph. 'De Puls.' ap. Ermerins, 'Anecd. Med. Gr.');

or 'Iatrosophista' ('*Ιατροσοφιστου περι Ουρων*, ed. Fed. Morell, 12mo, Paris, 1608.)

Of his personal history we are told nothing. If, as is generally done, we trust the titles of the manuscripts of his works, and so try to learn the events of his life, we may conjecture that he lived in the seventh century after Christ; that he was the tutor of Stephanus Atheniensis (Lambec, 'Ibid.', lib. vi., pp. 198, 223, 492; lib. vii., p. 352), who dedicated his work, 'De Chrysopœia,' to the emperor Heraclius (Fabricius, 'Biblioth. Græca,' vol. xii., p. 695, ed. vet.); that he arrived at high professional and political rank, and that at last he embraced the monastic life. It must however be confessed that all this is quite uncertain, for, in the first place, Freind, in his 'History of Physic' ('Opera,' pp. 443, 449, ed. Lond., 1733), after remarking how little credit is sometimes due to the titles prefixed to manuscripts, doubts whether Theophilus was ever tutor to Stephanus, and

BIOG. DIV. VOL. V.

thinks, from the barbarous words that he makes use of (such as *φιδλιον*, *στομομανικον*, 'De Corp. Hum. Fabr.', p. 177, l. 1, 2, ed. Oxon.; *εποχή*, *πράνα*, 'Ibid.', p. 181, l. 11, 12; *απακία*, 'Ibid.', p. 193, l. 11; *χυμένη*, *ωμβραστος*, 'De Urin.', c. 6, p. 266, l. 34, ed. Ideler), that he probably lived later. And, secondly, even if Theophilus was the tutor of a person named Stephanus, still it seems probable that this was not the alchemist of that name. [STEPHANUS ATHENIENSIS.] His date is equally uncertain. Some persons ('Chronologia inconulta,' as Fabricius says, 'Biblioth. Græca,' vol. xii., p. 648, n., ed. vet.) think he was the person mentioned by St. Luke; others place him as early as the second century after Christ, and others again as late as the twelfth. He is generally supposed to have lived in the time of the Emperor Heraclius, who reigned from A.D. 610 to A.D. 641; but this opinion rests only on the conjecture of his having been the tutor of Stephanus Atheniensis. The Oxford editor thinks, from the barbarous words quoted above, that he may possibly be the same person who is addressed by the title Protospatharius, by Photius ('Epiat.', 123, p. 164, ed. Montac, Lond., 1651), and who therefore must have lived in the 9th century. He was a Christian, and a man of great piety, as appears from almost all his writings; in his physiological works especially, he everywhere points out with admiration the wisdom, power, and goodness of God as displayed in the human body. (See 'De Corp. Hum. Fabr.', pp. 1, 2, 25, 89, 127, 153, 185, 272; 'De Urin.', Pref., p. 262; c. 10, p. 273; c. 23, p. 283; 'De Excrem.', c. 19, p. 408; 'De Puls.', in fine, p. 77.) He appears to have embraced in some degree the Peripatetic philosophy. ('De Corp. Hum. Fabr.', pp. 2, 3, 4, 103, 105, 222, &c.; Mart. Rota, Pref. to Philothei 'Comment in Hippocr. Aphor.')

Five of his works remain, of which the longest and most interesting is an anatomical and physiological treatise, in five books, entitled '*Περί της του Ανθρώπου Κατασκευής*,' 'De Corporis Humani Fabrica,' It contains very little original matter, as it is almost entirely abridged from Galen's great work, 'De Usu Partium Corporis Humani,' from whom however he now and then differs, and whom he sometimes appears to have misunderstood. In the fifth book he has inserted large extracts from Hippocrates, 'De Genitura,' and 'De Natura Pueri.' He recommends in several places the dissection of animals, but appears never to have examined a human body; in one passage he advises the student to dissect an ape, or else a bear, or, if neither of these animals can be procured, to take whatever he can get, "but by all means," adds he, "let him dissect something." The work was first translated into Latin by J. P. Crassus, and published at Venice, 8vo, 1536, together with Hippocrates, 'De Purgantibus Medicamentis.' This translation was frequently reprinted, and is inserted by H. Stephens in his 'Medicæ Artis Principes,' Paris, fol. 1567. The manuscript from which Crassus made his translation is probably lost; but, though defective, it was more complete than that which was used by Guil. Morell in editing the original text, which was published at Paris, 8vo, 1555, in a very beautiful type, but without preface or notes. This edition is now become scarce, and was reprinted, together with Crassus's translation, by Fabricius, in the twelfth volume of his 'Biblioth. Græca,' p. 783, sq., Hamb., 1724 and 1740. Two long passages which were missing in the fourth and fifth books were copied from a manuscript at Venice, and inserted by Andr. Mustoxydes and Demetr. Schinas in their collection entitled '*Συλλογή Αποσπασμάτων Ανεκδότων Ελληνικών μετά Σημειώσεων*,' Venet., 8vo, 1817. The last and best edition of this work is that by Dr. Greenhill, which has lately been printed at the Oxford University press, Gr. and Lat., 8vo, 1842.

Another of the works of Theophilus is entitled '*Τρόχημα εις τους Ιπποκράτους Αφορισμούς*,' 'Commentarii in Hippocratis Aphorismos,' which also seems to be taken in a great measure from Galen's Commentary on the same work. It was first published in a Latin translation by Ludov. Coradus, at Venice, 8vo, 1549, under the name of 'Philothæus.' The Greek text appeared for the first time in the second volume of F. R. Dietz's 'Scholia in Hippocratem et Galenum,' Regim. Pruss., 8vo, 1834.

His treatise '*Περί Ουρων*,' 'De Urinis,' contains little or nothing that is original, but is a good compendium of what was known by the ancients on the subject, and was highly esteemed in the middle ages. It first appeared in a Latin translation by Pontius (or Ponticus) Virunius (or Virmius), in several early editions of the collection known by the name of the 'Articella.' It was first published in a separate form at Basel, 8vo, 1533, translated by Albanus Torinus, together with the treatise 'De Pulsibus,' and this version was reprinted at Strasburg, 8vo, 1535, and inserted by H. Stephens in his 'Medicæ Artis Principes.' The Greek text was published without the name of Theophilus, under the title 'Iatrosophista de Urinis Liber Singularis,' &c., at Paris, 12mo, 1608, with a new Latin translation by Fed. Morell, which edition was inserted entire by Chartier in the eighth volume of his edition of the works of Hippocrates and Galen. The best edition is that by Thom. Guidot, Lugd. Bat., 8vo, 1703, Gr. and Lat.; and again with a new title-page, 1731. The text is much improved by adopting the readings of a manuscript in the Bodleian Library at Oxford; there is a new Latin version by the editor, and also copious and learned prolegomena and notes. The Greek text only, from Guidot's edition, is inserted by J. L. Ideler in his 'Physici et Medici Græci Minores,' Berol., 8vo, 1841.

A short treatise, '*Περί Διαχωρημάτων*,' 'De Excrementis Alivinis,'

was first published by Guidot, in Greek, with a Latin translation by himself, at the end of the edition 'De Urinis' mentioned above: the Greek text alone is inserted by Ideler in his 'Physici et Medici Græci Minores.'

The last of the works of Theophilus that remains is a treatise, 'Περὶ Σφυγμῶν,' 'De Pulsibus,' which first appeared in a Latin translation, under the name of 'Philaretus,' in several of the old editions of the 'Articella.' It was first published in a separate form at Basel, 8vo, 1533; translated by Albanus Torinus, together with the treatise 'De Urinis' mentioned above. It was reprinted at Strasburg, 8vo, 1535, and inserted by H. Stephens in his 'Medicæ Artis Principes.' The Greek text was first published by F. Z. Ermerins in his 'Anecdota Medica Græca,' Lugd. Bat., 8vo, 1840, together with a new Latin translation. The text is taken from one manuscript at Leyden and four at Paris, and differs very considerably from the older Latin translation going under the name of Philaretus.

Gr.*; Choulant, *Handbuch der Bücherkunde für die Aeltere Medicin*; Greenhill's Notes to Theoph. *De Corp. Hum. Fabr.*)

THEOPHRASTUS was born at Eresus, in the island of Lesbos, but the year of his birth is uncertain: some writers state it to be B.C. 371; others place it much earlier. According to Hieronymus ('Epist.' 2, ad Nepotianum) he died in the year B.C. 285, and, as some say, at the age of eighty-five (Diogenes Laert., v. 40), or, according to others, at the age of 106 years. These different accounts of his age leave the date of his birth uncertain. When a youth his father Melantus sent him to Athens for the purpose of studying. Here he was first a pupil of Plato, and became an intimate friend of Aristotle, who, charmed with his talents and his beautiful pronunciation, is said to have given him the name of Theophrastus (one who speaks divinely): his real name was Tyrtamus. (Quintilian, x. 1, 83; Cicero, 'Orator,' 19.) After the death of Plato, when Speusippus had placed himself at the head of the Academy, Theophrastus, with a number of the former disciples of Plato, left the Academy. Plutarch has preserved a bare account of an event in the life of Theophrastus, which must perhaps be assigned to the time which he spent away from Athens after his withdrawal from the Academy. Plutarch says that he and Phidias delivered their country twice from the oppression of tyrants. After the battle of Cheronea, Theophrastus returned to Athens, from which he had been absent for many years; and as Aristotle had then just opened his school (the Lyceum), Theophrastus ranged himself among the hearers of his friend, and cultivated most zealously all the departments of philosophy and science of which Aristotle was then the great master. When Aristotle himself withdrew, Theophrastus became his successor in the Lyceum, and acquired great reputation in his new sphere, not because he created any new system of philosophy, but because he combined the knowledge and profundity of Aristotle with the fascinating eloquence of Plato. The number of his pupils on one occasion is said to have amounted to two thousand (Diogenes Laert., v. 37), who flocked around him from all parts of Greece. This popularity, and the influence which it gave him in the public affairs of Greece through the practical character of his philosophy, roused the indignation and envy of those who saw in him an obstacle to their designs. The consequence was that Agonides, who probably acted on behalf of many others, brought against him a charge of impiety. Theophrastus pleaded his own cause before the Areopagus with his usual eloquence, and convinced that court of his innocence. His accuser would have fallen a victim to his own calumny, if Theophrastus had not generously interfered and saved him. After this event he enjoyed undisturbed peace for several years, and he saw his school, which was visited by the most eminent men of the age, daily increase. The tranquillity which he enjoyed was however chiefly owing to the influence of Demetrius Phalereus, who had himself been a pupil of Theophrastus. After the fall of Demetrius the persecutions began afresh; and, in 305 B.C., Sophocles, son of Amphiclistes, carried a law which forbade all philosophers, under pain of death, to give any public instruction without permission of the state. (Diogenes Laert., v. 38; Athenæus, xiii., p. 610; J. Pollux, ix. 5.) Theophrastus left Athens; but in the following year, the law being abolished, and the mover condemned to pay a fine of five talents, Theophrastus and several other philosophers returned to Athens, where he continued his labours without interruption until his death. The whole population of Athens is said to have followed his body to the grave. His will, in which he disposed of his literary and other property, is preserved in Diogenes Laertius. His library was very valuable, as it contained the works of Aristotle, which this philosopher had bequeathed to Theophrastus. Theophrastus bequeathed them, together with his other literary property, to Neleus of Scepsis.

Theophrastus, as already observed, did not develop a new system of philosophy, but he confined himself to explaining that of his master Aristotle. With this view he wrote numerous works on various branches of philosophy and on natural history. His philosophical works may be divided into works on philosophy, in the narrower sense of the word, works on historical subjects, and works on certain arts, such as oratory, poetry, and the like. It is to be lamented that

most of his writings on these departments are now lost, and more especially those on politics (Πολιτικά), on legislators (περὶ νομοθετῶν), on laws, a work of which Cicero made great use, and his works on oratory, of which Theophrastus himself was so distinguished a master. A list of the lost books of Theophrastus is given in Fabricius ('Biblioth. Græca,' iii., p. 445, &c.). Andronicus of Rhodes, a Peripatetic philosopher of the time of Lucullus, made a list of all the works of Theophrastus, and arranged them in systematic order. The following philosophical works of Theophrastus are still extant:—

1. 'Characteres,' or ἥθικοι χαρακτῆρες, consisting of thirty, or, according to Schneider's arrangement, of thirty-one chapters. In this work the author gives thirty characteristic descriptions of vices, or rather, of the manner in which they show themselves in man. The descriptions however are mere sketches, and form a gallery of bad or ridiculous characters. Many modern critics have maintained that the work in its present form is not to be regarded as a production of Theophrastus, but that it is either an abridgment of a greater work of the philosopher, or a collection of descriptions of vicious characters, compiled either from the writings of Theophrastus, or from those of others. Neither of these opinions is incompatible with the statement of Diogenes Laertius, Suidas, and other late writers who mention ἥθικοι χαρακτῆρες among the works of Theophrastus; for the 'Characteres' which we now possess may have been compiled and published under the name of Theophrastus long before their time. Either of these hypotheses would also account for the fact that nearly all the definitions of the vices that occur in the book contain some error, which it must be presumed, would not have been the case if the work had been written by Theophrastus. Other critics, on the contrary, have vindicated the 'Characteres' as a genuine work of Theophrastus, and have attributed all its defects and inaccuracies to the bad manuscripts upon which the text is based. This opinion has received considerable support from the discovery of a Munich codex, part of which was published by Fr. Thiersch in 1832, in the 'Acta Philologorum Monascensium' (vol. iii., fasc. 3). This manuscript contains the titles of all the thirty chapters, but the text of only twenty-one. The first five chapters and the introduction, which were edited by Thiersch, are considerably shorter than the common text, the language is perfectly pure, and there is very little doubt that this is the genuine text of the work of Theophrastus, and that the common one is only a paraphrase, made perhaps by Maximus Planudes, who is known to have written a commentary on the 'Characteres' of Theophrastus. The editio princeps of the 'Characteres' was by Wilibald Pyrkheimer, 8vo, Nürnberg, 1527. This edition, which contains only fifteen chapters, was reprinted with a Latin translation by A. Politianus, 8vo, Basel, 1531, and fol., 1541. Chapters 16 to 23 were first added by Camotius, who published the works of Theophrastus in the sixth volume of his edition of Aristotle (Venice, 1551-52). These twenty-three chapters were increased by five new ones from a Heidelberg manuscript in the excellent edition of Casaubon, of 1599 (reprinted in 8vo, 1612 and 1617). The last two chapters were added in the edition which appeared at Parma, 4to, 1736. A still more perfect, and in fact the first complete edition is that of J. P. Siebenkees, which was edited by Goetz, 8vo, Nürnberg, 1798. In 1799 there appeared two new editions, the one by Coraes (8vo, Paris), and the other by Schneider (8vo, Jena). The last edition, which is very useful, is that of Fr. Ast, 8vo, Leipzig, 1816. The 'Characteres' have been translated into French by Jean de la Bruyère (12mo, Paris, 1696, often reprinted, and lastly edited by Schweighauser, Paris, 1802), and by Levesque (12mo, Paris, 1782). The best German translations are those of C. Rommel (12mo, Prenzlau, 1827), and of J. J. Hottinger (8vo, München, 1821). There are English translations by F. Howell, 8vo, London, 1824; by Eustace Budgell, 8vo, London, 1713; and by Taylor. There is also a translation into modern Greek by Larbaris, 8vo, Vienna, 1815.

2. A fragment of a work on Metaphysics, which consists of one book entire (Τὰ μετὰ τὰ φυσικὰ ἀποσπασμάτων ἢ βιβλίου δ). This book was not mentioned by Andronicus of Rhodes in his catalogue of the works of Theophrastus, but it is ascribed to him by Nicolaus Damascenus. It is printed in all the early editions of the works of Theophrastus in connection with those of Aristotle, as in those of Venice (1497), Basel (1541), Venice (1552), and in that of Sylburg (Frankfurt, 1587). The best edition is that of Ch. A. Brandis, who annexed it to his edition of Aristotle's 'Metaphysics,' 8vo, Berlin, 1823.

3. A Dissertation περὶ αἰσθήσεως, that is, on the Senses and the Imagination. There is a paraphrastic commentary on this work by Priscian, the Lydian, who lived in the 6th century of our era. It was first edited by Trincavelli (fol., Venice, 1536), with Priscian's paraphrase, and 'Quæstiones' by Alexander Aphrodisiensis. It is also printed in the above-mentioned collections of the works of Theophrastus, and in that published by Schneider, Leipzig, 1818-21.

The fragments of other philosophical works are too brief and numerous to be noticed here.

The 'History of Plants,' by Theophrastus, περὶ φυτῶν ἱστορίαις, is one of the earliest works on botany that was written with anything like scientific precision. The work is divided into ten books, of the last of which only a fragment is preserved. The matter is arranged upon a system by which plants are classed according to their modes of generation, their localities, their size as trees or shrubs and herbs, and

according to their uses as furnishing juices, potherbs, and seeds which may be eaten. The first book treats of the organs or parts of plants; the second of the reproduction of plants, and the times and mode of sowing. Here he mentions the sexes of plants, and describes the mode of reproduction in palms, and compares it with the caprifigation of figs. The third, fourth, and fifth books are devoted to a consideration of trees, their various kinds, the places they come from, and the economical uses to which they may be applied. The sixth book treats of undershrubs and spiny plants; the seventh of potherbs; the eighth of plants yielding seeds used for food; and the ninth, of those plants that yield useful juices, gums, resins, or other exudations. In this work there is much original and valuable observation, but at the same time it is intermixed with many absurd statements with regard to the functions and properties of plants. It is probable that much of the valuable matter recorded in this work was the result of his own observation, as he is known to have travelled about Greece, and to have had a botanic garden of his own, whilst he was probably dependent on the statements of soldiers and others connected with the armies of Alexander for his information on Indian, Egyptian, and Arabian plants.

Theophrastus wrote also another work, 'On the Causes of Plants,' *περὶ φύτων αἰτιῶν*. This work was originally in eight books, six of which remain entire. It treats of the growth of plants; the causes which influence their fecundity; of the times at which they should be sown and reaped; the modes of preparing the soil, of manuring it, and of the instruments used in agriculture; of the odours, tastes, and properties of many kinds of plants. In this, as in the 'History of Plants,' the vegetable kingdom is considered more in reference to its economical than to its medical uses, although the latter are occasionally referred to. In both works there is much valuable matter that deserves the attention of the botanist, and a very little knowledge of botany will enable the reader to separate the chaff from the wheat. Both Haller and Adanson complain of the errors which translators and editors of these works have fallen into for want of botanical knowledge. Both works have gone through several editions: they were printed together by the sons of Aldus at Venice, 8vo, in 1552, and again by Heinsius, at Leipzig, in 1613. The 'History of Plants' has been published separately more frequently than the 'Causes.' The best of the old editions is that of Bodæus à Stapel, which was published by his father after his death. It contains a preface by Corvinus; the Greek text, with various readings; the commentaries and remarks of Constantinus and J. C. Scaliger; the Latin translation of Gaza; very careful commentaries by Stapel; a very copious index; and the whole is illustrated by wood-cuts. The cuts however are very inferior, and are copies of those in the works of Dodonæus, which seem to have been copied into nearly all the works published on botany at this period. It appeared at Amsterdam in 1644, folio. An edition of this work was published at Oxford, in 1813, by Stackhouse. This edition is accompanied with a Syllabus of the genera and species of the 500 plants described by Theophrastus, also a glossary, and notes, with a catalogue of the editions of the botanical works of Theophrastus. It has also been edited by Schneider; but the most complete edition is that of F. Wimmer, Vrat, 8vo, 1842. The 'History of Plants' was translated into German by Kurt Sprengel, and published at Altona, 8vo, in 1822.

Besides his botanical works, Theophrastus wrote many others on various subjects of natural history, which are enumerated with his philosophical works in Diogenes Laertius (v. 42, &c.). One of them, on Stones (*περὶ λίθων*), from which Pliny, in his account of stones, derived the greatest part of his information, is still extant. De Laet has prefixed it, with a Latin translation and notes, to his work 'De Gemmis et Lapidibus,' 8vo, Leyden, 1647. A separate edition, with an English translation, was published by Hill, 8vo, London, 1746; another, with a French translation, appeared at Paris, 8vo, 1754; and a third, with a German translation, by Baumgärtner, 8vo, Nürnberg, 1770.

Of his two books on Fire (*περὶ πυρὸς*), only one is now extant; of his other works on natural history, which are now lost, we possess a considerable number of fragments.

The editio princeps of all the works of Theophrastus is that of Aldus, printed, together with the works of Aristotle, in 5 vols. fol., Venice, 1495-98. Theodorus Gaza published a Latin translation, which was made from the same manuscript from which the Aldine text was taken. The first edition of this translation is without date or place; a second appeared at Tarvisium in 1483. The last and best edition is that of J. G. Schneider, 5 vols. 8vo, Leipzig, 1818-21.

(Haller, *Bibliotheca Botanica*, tom. i., p. 31; Schulte, *Geschichte der Botanik*; Adanson, *Families des Plantes*; Bischoff, *Lehrbuch der Botanik*; Stackhouse, *Theoph. Hist. Plant.*; Fabricius, *Biblioth. Græc.*, iii., p. 408, &c.; Ritter, *History of Philosophy*; Krug, *Geschichte der Philosophie*, § 99.)

THEOPHYLACTUS SIMOCATTA, of Locri, an historian, sophist, and natural philosopher, who was living about A.D. 610-629. He wrote a 'Universal History' in eight books, from the death of the emperor Tiberius II., in 582, to the murder of Maurice and his children by Phocas, in 602. This work is known by the Latin title of 'Historie Rerum à Mauritio gestarum Libri VIII.' It was printed, with a Latin translation, by J. Pontanus, at Ingolstadt, 4to, 1604. An improved

edition was published by Fabrotti, fol., Paris, 1648, reprinted 1729. It is also contained in Niebuhr's collection of the Byzantine writers.

He also wrote eighty-five short letters, 'Epistolæ Morales, Rusticæ, et Amatoriæ,' which were published in the collections of Aldus, Cujacius, and Henry Stephens; and a work entitled 'Problems in Natural History' (*Ἀπορίας φυσικαί, Quæstiones Physicæ*), which was published at Leyden, 1596, and at Leipzig, 1653. The two last-mentioned works have been edited by Boissonade, Paris, 1835.

(Fabricius, *Bibliotheca Græca*; Schöll, *Geschichte der Griech. Litt.*) THEOPHYLACTUS, a native of Constantinople, was Archbishop of Achris, the chief city of Bulgaria, about the year 1070 or 1077. He wrote a work on the 'Education of Princes' (*Παιδεία βασιλική*), for the perusal of Constantinus Porphyrogenetus, the son of Michael VII. and the empress Maria. This work forms a part of the collections of Byzantine writers.

Theophylactus is better known by his valuable commentaries on the twelve minor prophets and the greater part of the New Testament, which are chiefly compiled from the works of Chrysostom. He also wrote seventy-five epistles and several tracts. These works were printed in Greek and Latin, at Venice, 1754-63, 4 vols., fol.

(Fabricius, *Bibl. Græc.*, vii., p. 765; Lardner's *Credibility*, pt. ii., c. 163; Schöll, *Geschichte der Griech. Litt.*, iii. 286.)

THEOPOMPUS, an eminent Greek historian, was a native of the island of Chios, son of Damasistratus, and brother of Caucaus, the rhetorician. He was born about B.C. 380, and was instructed in rhetoric by Isocrates during his stay in Chios. (Plutarch, *Vit. dec. Orat.*, p. 337 C.; Photius, *Cod.* 260, p. 793.) Photius in another passage states that Damasistratus and his son were obliged to quit their native island on account of their partiality towards Sparta: this seems to have occurred about B.C. 360, when Chios was distracted by two parties, the popular and the most powerful one being in favour of Thebes, while a small number of aristocrats supported the interest of Sparta. To the latter belonged Theopompus and his father. The influence of the instruction of Isocrates on Theopompus appears to have been very great, for although he did not apply his oratorical powers to politics or to speaking in the courts of justice, yet he wrote, like his master, a considerable number of orations, which were recited at rhetorical contests, and in which he is said to have even excelled his master. When he was obliged to leave Chios, he went with his father to Asia Minor, where he spent several years in travel and study, and acquired great celebrity for his eloquence. At the age of forty-five he obtained leave to return to his country through the interference of Alexander the Great. After this event he took an active part in the political affairs of his native island, and by his talents he became one of the principal supports of the aristocratic party. So long as Alexander the Great lived, his adversaries could not venture anything openly against him; but no sooner had the king died than the popular party again expelled Theopompus. He now took refuge in Egypt under the protection of Ptolemaeus, the son of Lagus, during whose reign he remained unmolested. But his successor Ptolemaeus Philadelphus was ill disposed towards him, and if Theopompus had not been advised by some friends to quit the country, he would have been put to death. Whither he now fled, what were his subsequent fortunes, and where he died, are questions to which no answer can be given, though it is highly probable that he died about or shortly after 308 B.C.

The loss of the works of Theopompus, of which we now only possess numerous fragments, is one of the greatest that ancient history has sustained. The following list contains the works he is known to have written:—

1. An abridgment of the work of Herodotus (*Ἐπιτομή τῶν Ἡρόδοτου ἱστοριῶν*). This epitome is mentioned by Suidas and several other grammarians. Modern critics think it highly improbable that Theopompus should have undertaken such a task, and that it was probably the work of some grammarian, who published it under the name of the historian. The reasons adduced for this opinion are not satisfactory, and it is not improbable that Theopompus may have made this abridgment as a first attempt at historical composition. A few fragments of it are still extant.
2. A more important work was a history of Greece (*Ἑλληνικαὶ ἱστορίαι, or Σύνταξις Ἑλληνικῶν*). It took up the history of Greece where Thucydides breaks off, B.C. 411, and carried the events down to the battle of Cnidus, B.C. 394. The work consisted of twelve books, and many fragments are still preserved.
3. The history of Philip of Macedonia and his time (*Φιλίππειά, or simply Ἱστορίαι*). It contained in fifty-eight books the history of Greece from the accession of Philip, or more properly from the foundation of Philippi, down to his death. Five books of it were lost as early as the time of Diodorus Siculus (xvi. 3), and they were probably the same which Photius (*Cod.*, 176, p. 390) mentions as being lost in his time, viz. books 6, 7, 9, 20, and 30. This voluminous work not only embraced the history of Greece in the widest sense of the word within the period mentioned, but also treated of those earlier parts of Greek history and of the history of such barbarous nations as he had occasion to mention. These things formed numerous and long digressions in the work, and of their extent we may judge from the fact that Philip III. of Macedonia, after cutting out these digressions, reduced the work from 58 to 16 books. (Photius, *Cod.*, 176.) We still possess many fragments of the work, which the ancient writers refer to and quote.

Besides these historical works, Theopompus wrote many orations,

and we know that he also composed Panegyrics on Mausolus, Philip, and Alexander. As regards his character as an historian, the ancients praise him as a lover of truth, but they also state that he was extravagantly severe in his censure, and unbounded in his praise. His ardent and vehement temper did not allow him to preserve that calmness which becomes the historian. He is also charged with having been too fond of the marvellous, and with having for this reason dwelt too much upon the mythical stories of Greece wherever he had occasion to mention them.

The fragments of Theopompus have been collected by Wichers: 'Theopompi Chii Fragmenta, collegit, disposuit, et explicavit, ejusdemque de Vitâ et Scriptis Commentationem præmisit,' &c., Lugduni Batavorum, 1829, 8vo. They are also contained in C. and J. Müller's 'Fragmenta Historicorum Græcorum' (Paris, 1841), p. 278-333. Compare F. Koch, *Prolegomena ad Theopompum Chium*, Stettin, 1803, 4to.; A. J. E. Plüggk, *De Theopompi Chii Vitâ et Scriptis*, Berlin, 1827, 8vo.; Aschbach, *Dissertatio de Theopompo Chio Historico*, Frankfurt, 1823, 4to.

THEOTOCOPULI, DOMINICO, called EL GRECO, was painter, sculptor, and architect. He is said to have been the scholar of Titian. In 1577 he was residing in Toledo, where he appears to have settled, though from his name and his surname of El Greco, the Greek, he was doubtless a native of Greece. He painted many pictures in Toledo, and acquired a great reputation in Spain. El Greco made the marble decorations of the altar (retablo), and the altarpiece of the Parting of Christ's Raiment before the Crucifixion, for the sacristy of the cathedral of Toledo, on which he was occupied from 1577 until 1587, when he was paid for the whole work 319,600 maravedis, of which 119,000 were for the picture; about 100l. sterling altogether, but owing to the change in the value of Spanish money it is now perhaps impossible to calculate the sum accurately. He was however not engaged exclusively on this work all this time; he painted other works in the meanwhile, and for Philip II. an altarpiece of the martyrdom of St. Maurice for the Escorial, which however Philip was dissatisfied with. It is now in the chapel of the college; a picture by Romulo Cincinnato was substituted for it over the altar of the chapel of St. Maurice in the Escorial. The objections to this picture were a certain hardness of colour and extravagance of design which El Greco is said to have introduced to prevent the picture being mistaken for a work of Titian, which it seems had been the fate of some of his best pictures.

As an architect he designed the Casa del Ayuntamiento, or mansion-house, of Toledo, and the churches of La Caridad and of the convent of the bare-footed Franciscans at Illescas; and he executed also a great part of the paintings and sculptures of these churches. In 1590 he designed the church of the Augustines at Madrid, called the Donna Maria de Aragon, and painted the principal altarpiece of their college. He designed also several monuments, which are among his best works. He died at Toledo in 1625, according to Palomino, seventy-seven years of age; and was buried with great pomp in the church of St. Bartholomew.

El Greco's pictures were still very numerous at the end of the last century; Cean Bermudez enumerates a great many in Toledo, Illescas, Escalona, Bayona, in Segovia, La Guarda, Mistoles, Casarubio, Sigüenza, Medina Celi, Valencia, Leon, at the Escorial, and in Madrid. Many have probably since been removed. Mr. Ford, in his 'Handbook of Spain,' notices only three pictures by this painter—Christ bearing his Cross, and a Nativity, and an Adoration, in the Salon de la Sacristia at Toledo. The pictures of El Greco are greatly praised; his best works have been considered to be the Preparation for the Crucifixion and the Parting of Christ's Raiment in the cathedral of Toledo; and the Entombment of Don Gonzalo Ruiz, Count Orgaz, in the church of Santo Tomé at Toledo. The burial of Conde de Orgaz was painted in 1584 for the archbishop of Toledo, Cardinal Don Gaspar de Quiroga, for the great sum of 2000 ducats according to Cumberland. The Count Orgaz was the founder of the Augustine convent of San Estevan at Toledo, and this picture was painted in honour of the foundation—the Saints Augustine and Stephen are represented depositing the count in his tomb, and the picture contains the portraits of many distinguished persons of the time.

His son GEORGE MANUEL THEOTOCOPULI, was also a sculptor and architect of eminence. He was appointed sculptor and architect to the chapter of the cathedral of Toledo in 1625: he died at Toledo in 1631. He was the architect of the octavo of the cathedral: it is an octagon decorated with precious marbles and a painted dome, and is used as the treasury-house of the Virgin, where her splendid dresses are kept, as well as many precious relics.

THERAMENES was a native of Ceos, and the adopted son of Hagnon, or Agnon, an Athenian. He acted a very prominent part about the close and after the end of the Peloponnesian war. He first appears in the history of Greece as taking a part in public affairs in B.C. 409, when, in conjunction with Antiphon, Phrynichus, and Pisander, he endeavoured to upset the democratical constitution of Athens. In B.C. 410 he took part with Thrasybulus in the battle of Cyzicus, and, in B.C. 406, in the celebrated battle of Arginusæ. On this occasion, on which the Athenians gained a glorious victory, many lives were lost in the wrecks of their ships, which it was thought might have been saved if proper care had been taken. Theramenes

and Thrasybulus had been commissioned by the Athenian generals to take care of the wrecks and to save the men, but they were prevented by a storm from accomplishing this object. The generals in their despatch to Athens concealed the commission they had given to Theramenes and his colleague, as it was clear that the latter would be severely punished for their apparent neglect. After the first report, the generals themselves were summoned to return to Athens, and in self-defence they were compelled to give an accurate account of the occurrence, and the more so as they had reason to believe that Theramenes and Thrasybulus were instigating the people against them. That their suspicion was not unfounded became evident afterwards, for when six of the generals were actually brought to trial, Theramenes was base enough to appear foremost among their accusers. The generals defended themselves; and the late hour of the day rendering it impossible to take the votes of the assembly, the business was adjourned to another day. During the interval, Theramenes and the other enemies of the generals exerted themselves to excite the indignation of the people. On the day appointed for the next meeting a number of persons hired by Theramenes appeared in the assembly dressed in mourning, to rouse the sympathies of the people for the loss of their friends and exasperate them against the alleged authors of their misfortune. After various debates eight of the generals were condemned to death, and six of them who were present at Athens, were executed immediately. The blame of this act of cruelty falls mainly upon Theramenes, "who had taken advantage of the uncommon forbearance and candour of his victims, and of his own reputation, which had never before been stained by any atrocious crime, to effect their destruction."

Soon after the execution of the generals, the eyes of the Athenians were opened, it is said, by Thrasybulus, to their innocence, and it was decided that those who had misled the people should be proceeded against, and that they should give security for their appearance at the trial. Theramenes however, either by his skill or by accident, not only avoided the prosecution, but retained his place in the popular favour. In the following year (B.C. 405), shortly after the battle of Ægos Potami, when an Athenian embassy had been rejected by the Spartan ephori, Theramenes, who, though he belonged to the oligarchical party, yet kept up the appearance of a friend of the people, offered to go as ambassador to Lysander, who was blockading the city, while famine was raging within. Theramenes promised to procure favourable terms, if the people would trust him. The majority readily acceded to his proposal, and he went to the camp of Lysander. Here he stayed for upwards of three months, hoping that in the meantime the city would be reduced to such a state of weakness as to accept any terms, or that in the interval the oligarchical party would gain the ascendancy. There is moreover no doubt that he made Lysander acquainted with the plans of the oligarchs. When he returned to the city, he declared that he had been detained by Lysander, who himself had no power to decide upon the terms of peace with Athens, and that at last he had been directed by the Lacedæmonian general to apply to the government at Sparta. He was accordingly sent thither with nine colleagues, and invested with full power to negotiate peace on any terms. Deputies of the Spartan allies met the ambassadors, and several of them insisted upon the total destruction of Athens; but the Spartans, with an air of generosity, declared themselves willing to grant peace on condition that the long walls and fortifications of Piræus should be demolished, that all ships of war with the exception of twelve should be delivered up to them, and that Athens should join the Peloponnesian confederacy, and follow Sparta both by land and sea. (Xenophon, 'Hellen,' ii. 2.) When Theramenes and his colleagues returned to Athens with these tidings, the famine had reached its height, but there were still some who refused to submit to the humiliating conditions. Theramenes and his party anxious to get rid of these few before the report was laid before the assembly, gained over a man of the name of Agoratus to bring accusations against them and get them all arrested. The plan succeeded, and the assembly was held in the theatre of Piræus, where Theramenes urged the necessity of concluding peace on the terms proposed. Notwithstanding the opposition of some citizens to the treaty, and the taunts of others, who saw through the plans of Theramenes, peace was ratified, and Lysander entered Piræus. [LYSANDER.]

After the withdrawal of the Spartan general from Athens, Theramenes, Critias, and their associates, who had assumed the supreme power, wishing to upset the democratical constitution, but to maintain some appearance of decency, invited Lysander to attend the assembly in which alterations in the Attic constitution were to be discussed. Theramenes undertook the management of the business, and proposed that the supreme authority should for the present be placed in thirty persons who should draw up a new code of laws. The presence of Lysander and the neighbourhood of the Peloponnesian troops overwhelmed all attempts of the friends of the people to maintain their constitution, and the proposal of Theramenes was adopted. Theramenes himself was one of the Thirty, and he nominated ten of the others. The outrages and atrocities committed by these Thirty spread general alarm in Attica, and the future was looked to with fearful apprehensions. Theramenes, perceiving the state of feeling at Athens, remonstrated with Critias, the most cruel among his colleagues. This was not from a feeling of humanity, but

simply because he saw that the measures of the Thirty would ruin them. Critias was unconcerned about all consequences, and Theramenes gave way. Repeated warnings on his part created some fear lest he should betray them and join the popular party, for he was notorious for his political inconstancy, from which he is said to have received the nickname of Cothurnus (the shoe which fits either foot). At the same time the Thirty became sensible of their dangerous position, and in order to strengthen themselves they made out a list of 3000 Athenians on whom a kind of franchise was conferred, while all the remaining Athenians were treated as outlaws. Theramenes again was dissatisfied with these proceedings, but the tyrants insisted upon disarming the Athenians, with the exception of the three thousand and the knights. The reckless cruelty and avarice of the Thirty grew worse every day, and it was determined that each of them should select out one rich alien who was to be put to death, and whose property should be taken by his murderer. Theramenes refused to have any share in this crime. This refusal increased the fears of his colleagues, and excited their hatred against him, and they resolved to get rid of him before he could become a dangerous enemy. An accusation was brought against him in the name of the Thirty by Critias before the council. He was charged with being hostile to the existing government, and with betraying its interests. Theramenes defended himself, and made such an impression upon the council, that it appeared willing to acquit him. Critias perceiving this, called into the council-chamber an armed band of his followers, whom he had kept in readiness outside, and conversed for a few moments with his colleagues. Hereupon he declared that with the consent of his friends he erased Theramenes from the list of the Thirty and of the three thousand, and that he might now be condemned to death without trial. Theramenes rushed to the Hestia (the altar of Vesta), and conjured the members of the council to protect him, and not to allow Critias to dispose of the lives of citizens; but the herald of the Thirty called in the Eleven (the executioners), who apprehended Theramenes and led him away to punishment. The council was struck with amazement at this bold movement, and Theramenes was hurried across the Agora by Statyrus and the Eleven to prison. When he had drunk the poison which was administered to him, he dashed the cup with the last few drops to the ground, and said, 'This is to the health of my dear Critias.' This happened in B.C. 404.

The manner in which Theramenes died has been admired by ancient and modern writers. But his fortitude was not based on the consciousness of a virtuous life, and he no more deserves admiration than a criminal to whom death is a matter of indifference. Thucydides (vii. 68) says of him that he was not wanting in eloquence and ability. Whether he wrote any orations is uncertain. (Cicero, 'De Orat.' ii. 22; 'Brut.' 7.) He is said to have instructed Isocrates (Dionysius Hal., 'Isocrat.' i.), and to have written on rhetoric. It may be true therefore, as Suidas says, that he wrote declamations; but it is much more probable that Suidas confounds him with a late sophist, Theramenes of Ceos. (Eudocia, 231; Fabricius, 'Biblioth. Græc.' ii. 748; Rubnken, 'Hist. Crit. Orat. Græc.' p. 40, &c.)

THESEUS (*Θησεύς*), the great national hero of Athens, is said to have been born at Troezen, where his father Ægeus, king of Athens, slept one night with Æthra, the daughter of Pittheus, king of the place. Ægeus, on his departure, hid his sword and shoes under a large stone, and charged Æthra if she brought forth a son, to send him to Athens with these tokens, as soon as he was able to roll away the stone. She brought forth a son, to whom she gave the name of Theseus, and when he was grown up, informed him of his origin and told him to take up the tokens and sail to Athens, for the roads were infested by robbers and monsters. But Theseus, who was desirous of emulating the glory of Hercules, refused to go by sea, and after destroying various monsters who had been the terror of the country, arrived in safety at Athens. Here he was joyfully recognised by Ægeus, but with difficulty escaped destruction from Medea and the Pallantids, the sons and grandsons of Pallas, the brother of Ægeus. These dangers however he finally surmounted, and slew the Pallantids in battle.

His next exploit was the destruction of the great Marathonian bull, which ravaged the neighbouring country; and shortly after he resolved to deliver the Athenians from the tribute that they were obliged to pay to Minos, king of Crete. Every ninth year the Athenians had to send seven young men and as many virgins to Crete to be devoured by the Minotaur in the Labyrinth. Theseus volunteered to go as one of the victims, and through the assistance of Ariadne, the daughter of Minos who became enamoured of him, he slew the Minotaur and escaped from the Labyrinth. He then sailed away with Ariadne, whom he deserted in the island of Dia or Naxos, an event which frequently forms the subject of ancient works of art. The sails of the ship in which Theseus left Athens were black, but he promised his father, if he returned in safety, to hoist white sails. This however he neglected to do, and Ægeus seeing the ship draw near with black sails, supposed that his son had perished, and threw himself from a rock.

Theseus now ascended the throne of Athens. But his adventures were by no means concluded. He marched into the country of the Amazons, who dwelt on the Thermodon, according to some accounts in the company of Hercules, and carried away their Queen Antiope. The Amazons in revenge invaded Attica, and were with difficulty defeated by the Athenians. This battle was one of the most favourite subjects of the ancient artists, and is commemorated in several works of art that are still extant. Theseus also took part in the Argonautic expedition and the Calydonian hunt. He assisted his friend Pirithous and the Lapithæ in their contest with the Centaurs, and also accompanied the former in his descent to the lower world to carry off Proserpine, the wife of Pluto. When Theseus was fifty years old, according to tradition, he carried off Helen, the daughter of Leda, who was then only nine years of age. But his territory was invaded in consequence by Castor and Pollux, the brothers of Leda; his own people rose against him; and at last, finding his affairs desperate, he withdrew to the island of Scyros, and there perished either by a fall from the cliffs or through the treachery of Lycomedes, the king of the island. For a long time his memory was forgotten by the Athenians, but he was subsequently honoured by them as the greatest of their heroes. At the battle of Marathon they thought they saw him armed and bearing down upon the barbarians; and after the conclusion of the Persian war, his bones were discovered at Scyros by Cimon, who conveyed them to Athens, where they were received with great pomp, and deposited in a temple built to his honour. A festival also was instituted, which was celebrated on the eighth day of every month, but more especially on the eighth of Pyanepsion.

The above is a brief account of the legends prevailing respecting Theseus. But he is moreover represented by ancient writers as the founder of the Attic commonwealth, and even of its democratical institutions. It would be waste of time to inquire whether there was an historical personage of this name who actually introduced the political changes ascribed to him; it will be convenient to adhere to the ancient account in describing them as the work of Theseus.

Before this time Attica contained many independent townships, which were only nominally united. Theseus incorporated the people into one state, removed the principal courts for the administration of justice to Athens, and greatly enlarged the city, which had hitherto covered little more than the rock which afterwards formed the citadel. To cement their union he instituted several festivals, and especially changed the Athenæa into the Panathenæa, or the festivals of all the Atticans. He encouraged the nobles to reside at Athens, and surrendered a part of his kingly prerogatives to them, for which reason he is perhaps represented as the founder of the Athenian democracy, although the government which he established was, and continued to be long after him, strictly aristocratical. For he divided the people into the tribes or classes of Eupatridæ, Geomori, and Demiurgi, of whom the first were nobles, the second agriculturists, the third artisans. All the offices of state and those connected with religion were exclusively in the hands of the first class. Each tribe was divided, either in his time or shortly afterwards, into three phratræ, and each phratría into thirty gentes (*γῑνῑ*). The members of the separate phratræ and gentes had religious rites and festivals peculiar to themselves, which were preserved long after these communities had lost their political importance by the democratical changes of Cleisthenes. [CLEISTHENES.]

(Plutarch, *Life of Theseus*; Meursius, *Theseus, sive de ejus Vita Rebusque Gestis Liber Postumus*, Ultraject., 1684, where all the authorities are quoted: Thirlwall, Grote, &c.)

\*THESIGER, SIR FREDERICK, M.P., D.C.L., is the youngest and only surviving son of Charles Thesiger, Esq., Collector of Customs in the island of St. Vincent, and nephew of Sir Frederick Thesiger who was aide-de-camp to Lord Nelson at the battle of Copenhagen. He was born in London in July 1794, and entered the navy in 1803 as midshipman of the Cambrian frigate. His elder brother however dying while he was still a boy, and his father's West India property having been destroyed by the eruption of a volcano, he abandoned the navy for the legal profession, and after keeping the necessary terms was called to the bar at Gray's Inn in 1818. For many years he went the Home Circuit, of which he became the undisputed leader. His principal practice was in Westminster Hall and the Surrey Sessions, where he was regularly retained by the parish of Christ Church. He greatly distinguished himself before the committee on the Dublin Election in 1835, which sat daily for several months. On this occasion he was counsel for Mr. O'Connell, and though unsuccessful in the issue, he conducted a hopeless case with a degree of perseverance and quiet confidence, and a readiness of resource which were the object of general admiration. In 1834 he became a King's counsel—and in March 1840 entered parliament as M.P. for Woodstock, which he represented until 1844. In this year, he was elected for Abingdon, on being appointed Solicitor-General under the administration of Sir Robert Peel, and in the following year succeeded the late Sir W. W. Follett as Attorney-General, but resigned on the retirement of his party in 1846. He continued to represent Abingdon down to the dissolution in 1852, when he was returned for Stamford, a borough in which the influence of the Marquis of Exeter greatly preponderates. He was re-appointed Attorney-General in 1852 under the Earl of Derby, of whose political opinions he is a leading supporter. The

most effective of his parliamentary speeches was that which he delivered on the Chinese war soon after entering St. Stephen's. His success as an advocate is thought to have depended less on his deep acquaintance with the principles of jurisprudence than on his singularly persuasive eloquence, joined with great earnestness on behalf of his client.

THESPIA, a native of Icaria in Attica, who lived in the time of Solon and Pisistratus, about 535 B.C. The ancient traditions unanimously represent him as the inventor of tragedy. The manner in which this invention is said to have originated is stated differently. According to one account, which is also adopted by Horace, it arose from Thespia travelling during the festival of Dionysus through Attica upon a waggon, on which he performed comic plays. This tradition however is based upon a confusion of tragedy with comedy, the invention of which is not ascribed to Thespia by any ancient authority. The invention of Thespia consisted in nothing else than in introducing a person who at the Dionysiac festivals in the city of Athens entered into conversation with the chorus, or related a story to it. The designation of this actor was Hypocrites (*ὑποκριτής*), that is, the 'answerer,' because what he said or acted answered or corresponded with the songs of the chorus. By means of masks, the invention of which was likewise ascribed to Thespia, he was enabled to act different characters one after another. Some writers who considered the chorus itself as a second actor, speak of two actors in the time of Thespia, and consequently state that Æschylus introduced a third actor. (Themistius, 'Orat.', xxvi., p. 382, edit. Dindorf.) Whether Thespia wrote his plays is not quite certain, although Donatus ('De Comed. et Traged.', in Gronovius' 'Thesaurus', viii., p. 1387) expressly says so, but the tragedies bearing the name of Thespia in the time of the Alexandrines cannot be considered as genuine. It is an historical fact that Heraclides Ponticus forged tragedies under the name of Thespia; and the few fragments of Thespia quoted by ancient writers are unquestionably passages of such supposititious works. The tragedies of Thespia must have fallen into oblivion and have perished at the time when the Attic drama reached its perfection: some of his choral songs however appear to have been known as late as the time of Aristophanes, as we may infer from the concluding scene of the 'Wasps.' We know the titles of four of his tragedies: 'Pentheus,' 'The Funeral Games of Pelias or Phorbas,' 'The Priests,' and 'The Youths,' but of their construction nothing is known, except that each seems to have commenced with a prologue. (Themist., 'Orat.', p. 382.)

Respecting the history of Thespia very little is known. Solon was present at the performance of one of Thespia's plays, and highly disapproved of dramatic performances, as tending to lead men to falsehood and hypocrisy. Towards the end of the career of Thespia tragic contests were introduced at Athens, and Thespia probably contended for the prize with Choerilus and Phrynichus, who is called his disciple. Thespia is also said to have distinguished himself in orchestric, or the art of dancing (Athenæus, i., p. 22), which however can only refer to his skill in instructing the chorus.

(Bode, *Geschichte der Dramat. Dichtkunst der Hellenen*, i., pp. 40-57; Müller, *Hist. of the Lit. of Greece*, i., p. 292, &c.)

THESALUS, an ancient Greek physician, son of the celebrated Hippocrates, appears to have lived at the court of Archelaus, king of Macedonia, about 360 years before Christ. He was one of the founders of the sect of the Dogmatists, who also took the name of the 'Hippocratic' school, because they professed to follow the doctrines of that great man. However, both he and his brother Dracon, and his brother-in-law Polybus, are accused by Galen in several passages of not only mixing up with the opinions of Hippocrates the principles of later philosophers, but also of altering and interpolating his writings. Several of the works that go under the name of Hippocrates are by many critics supposed to have been written by Thesalus, viz. 'De Morbis,' the second, fifth, sixth, and seventh books 'De Morbis Vulgaribus,' and the second book of the 'Prædictiones,' or 'Prothetica,' but this conjecture is uncertain.

(Le Clerc, *Hist. de la Méd.*; Fabricius, *Biblioth. Græca*; Haller, *Biblioth. Medic. Pract.*; Sprengel, *Hist. de la Méd.*; Ackermann, *Hist. Literar. Hippocr.*; Choulant, *Handbuch der Bücherkunde für die Ältere Medicin*.)

THESALUS, one of the founders of the ancient medical sect of the Methodists, was born at Tralles in Lydia, and lived in the reign of the emperor Nero, in the first century after Christ. He was the son of a weaver, and followed the same trade himself during his youth, by which means he lost the opportunity of receiving a good education, and was never afterwards able to overcome this disadvantage. He appears however to have soon given up this employment, and applied himself to the study of medicine, by which he acquired a great reputation, and amassed a large fortune. His whole character however, both intellectual and moral, is everywhere represented by Galen in a very unfavourable light; but it must be confessed that Galen himself appears to very little advantage in these passages, and goes beyond all bounds in his abuse of him.

Thesalus adopted the principles of the Methodists, but modified and developed them so much that he attributed to himself the invention of them. In fact on all occasions he appears to have tried to exalt himself at the expense of his predecessors; lavishing upon the ancients

the most insulting epithets; calling himself by the title *ιατρονίκης* (conqueror of physicians), because he thought that he himself surpassed all his predecessors as much as medicine is superior to all other sciences; boasting that he could teach the art of healing in six months; and telling the emperor Nero, in the dedication of one of his works, that none of those who had been before him had contributed anything to the advancement of medical science. By his boasting he attracted a great number of pupils, whom he took with him for six months to visit his patients; but most of them are said to have been common artisans and persons of very low extraction. Galen accuses him of knowing nothing of the action of drugs, though he had written on the subject. He did not care for inquiring into the causes of diseases, and was satisfied with certain problematical analogies; nor did he admit the value of prognostic signs. A further account of his opinions may be found in Le Clerc, 'Hist. de la Méd.'; Haller, 'Biblioth. Medic. Pract.'; Sprengel, 'Hist. de la Méd.'

THÉVENOT, MELCHISEDEC, is said by all his biographers to have died at the age of seventy-one; and as his death happened in 1692, this places his birth in the year 1621. An entry in the printed catalogue of Thévenot's library informs us that he was unde of the traveller Jean Thévenot, but beyond this we know nothing of his family or his circumstances. It is probable however, from the respectable missions to which he was appointed at an early age, from the large library he collected, and from his being able to devote himself to literary pursuits while apparently in the receipt of no pension, that his family was wealthy and well-connected.

It is stated that in his youth he visited several countries of Europe, but the earliest incidents of his life concerning which we have positive and authentic accounts are those mentioned in the brief autobiographical sketch prefixed to the printed catalogue of his library. He tells us that on his return from travelling in 1647, he was nominated resident at Genoa, but that the troubles of the Fronde interfering to prevent his taking possession of the post, he continued to follow the court till 1652. He was then sent to Rome, where he continued nearly three years; and being there at the commencement of the conclave which elected Alexander VII., the royal instructions respecting the part France intended to take on that occasion were addressed to him till the time of M. de Lionne's arrival. Thévenot alludes in mysterious phrase to a delicate and dangerous commission with which he was entrusted after the termination of the conclave, which he says he discharged to the perfect satisfaction of Mazarin and the other ministers. He attended Mazarin during the campaign in Flanders, 1655.

On his return to Paris, Thévenot devoted himself entirely to study. Frenicle, a mathematician, and Stenon, a naturalist, resided with him; and in the house adjoining his own he entertained a person to conduct chemical experiments. The meetings of scientific men which had been held in the houses of Père Mersenne and Montmort were transferred to Thévenot's mansion. The expenses thus incurred proved too heavy for his means, and he proposed to Colbert the establishment of a public and permanent association of scientific men under the patronage of the king. The suggestion accorded with the minister's inclinations, and a grand academy was projected, intended to embrace every branch of knowledge. The king's library was to be the place of meeting: the historians were to assemble there on the Mondays and Thursdays of every week; the amateurs of the belles-lettres on the Tuesdays and Fridays; the mathematicians and natural philosophers on the Wednesdays and Saturdays; and general assemblies of all the three classes were to be held on the first Thursday of every month. The historical class was allowed to drop, it being feared that its inquiries might occasion dangerous discussions; the Académie Française, instituted by Richelieu, remonstrated against the foundation of another literary academy; and the only part of Colbert's plan that was realised was the 'Académie des Sciences,' which commenced operations in the month of June 1666. Thévenot did not become a member of the Academy till 1685.

He had in the mean time however been diligently prosecuting his favourite studies. "Each of our company," he says, "had his task and occupation: mine was to collect and publish in French whatever useful arts were practised among other nations. About this time I invented an air-level, of which I caused the description to be printed, and it is now acknowledged to be the most accurate that has yet been tried. To render geography more perfect, I collected and published three large volumes of a collection of voyages, upon which I had been working for some time. I had the honour to present them to the king, who examined them for nearly half an hour, and, after asking several questions, commanded me to continue the work. M. Colbert informed me that he had his majesty's orders to furnish me with everything necessary to carry out the design." This distribution of tasks took place about 1659, before the Academy had received its definitive constitution. The first volume of Thévenot's Voyages was published at Paris, in 1662. The author's preface announces a translation of the Voyages and Travels published by Hakluyt and Purchas, with the addition of some translations from the Oriental languages. The second volume appeared in 1664: the preface intimates that for the use of the numerous trading companies that have of late been formed in the kingdom, he has added an account of the present state of the Indies, noting the principal commercial establishments

and places of resort of the Dutch and Portuguese; a report from one of the factors of the Dutch East India Company to the directors; and an extract of a letter from the governor-general of the East India Company of France. The third volume was published in 1666, and the fourth in 1672. In the preface to the fourth volume Thévenot informs the reader that the constant discovery of travels which had escaped his research has obliged him to abandon the attempt to classify the voyages inserted in his collection, so that all relating to one quarter of the world should appear together. These four volumes were in folio; and during the remainder of his life Thévenot published in the same form a number of separate accounts of voyages, which, together with some left half printed at his death, were bulky enough to form a fifth volume. The edition of his collection printed after his death at Paris, in 1696, professes to contain all these miscellanæ, but a complete copy is rarely to be met with. In 1683 Thévenot published a small book in 12mo, entitled 'Recueil de Voyages de M. Thévenot.' It contains 'A Discourse on the Art of Navigation, with some Problems which may supply in part the deficiencies of this useful art.' Among these problems he has inserted an account of the level above alluded to. The same volume contains an account of the museum of Swammerdam, with some memoirs by that naturalist, said on the special title-page to be 'Extracted, together with the travels which precede it, from the Transactions of the Society which met at the house of M. Thévenot.' It will be advisable to conclude the narrative of Thévenot's life before attempting to pronounce judgment on the merits of his publications.

Colbert died in 1683, and Louvois succeeding to the office of superintendent of buildings, succeeded likewise to the management of the royal library, which was regarded as belonging to that minister's department. Louvois appointed his son, afterwards known as the Abbé Louvois, who was then only nine years of age, librarian. It was necessary to find a deputy for so juvenile an officer: the Abbé Varés was first appointed, but he dying in September, 1684, the office was conferred upon Thévenot, on the understanding that such of his books as were not already in the royal library were to be purchased for it. The zeal which Colbert had manifested at the outset of his ministerial career for the augmentation of the royal collection had abated for some years before his death: from 1673 till his death no important acquisitions had been made. Thévenot found the library extremely deficient in English, German, and Dutch works, and he obtained permission to make arrangements for procuring from those countries their histories, laws, and accounts of their customs; in short, everything calculated to convey information regarding their governments and transactions. The inquiry after Greek and Oriental MSS. in the Levant, begun by Colbert, was continued by Louvois; and Thévenot, by that minister's directions, prepared and transmitted instructions to Messrs. Girardin and Galland and the Père Besnier for the prosecution of the search. It was also at his suggestion that a native of China, who had brought some Chinese books to Rome, was induced to visit Paris, and his books acquired for the king's library. On the death of Louvois a new arrangement was made for the management of the king's library, and about the same time Thévenot resigned or was dismissed from his appointment. There is reason to doubt whether he had given satisfaction as librarian: the historical memoir in the first volume of the printed catalogue of the king's library, which does ample justice to other officials, merely notices his appointment and resignation; and the notice of his life found in his own writing among his papers after his death, has very much the appearance of a defensive statement of his own merits.

Thévenot did not long survive the termination of his connection with the king's library: he died on the 29th of October 1692.

Thévenot, in addition to most European languages, was able to read Hebrew, Syriac, Arabic, Turkish, and Persian. He commenced a series of observations on the variation of the magnetic needle in 1663, and prosecuted them with great perseverance till 1681. He suggested in 1669 the measurement of several degrees of the meridian along the Gulf of Bothnia: he invented his air-level about 1660, and recommended its adoption to facilitate observations of the latitude at sea, and he endeavoured to discover a natural unit of linear measurement for all nations. He possessed however rather the taste than the talent for strict scientific observation and reasoning, and this peculiarity was the cause in the first place of his anxiety to have men of science for habitual visitors, and of his eagerness to collect books of travels, printed or in manuscript, such works being calculated to gratify a mind which, without a capacity for severe labour, was fond of acquiring knowledge. In books of travels he found information regarding statistics, history, commerce, natural history, and science; and he could relish all these branches of knowledge and appreciate their importance, though he could not task himself to master any one of them. He undertook to publish a systematic collection of voyages and travels, as the task best suited to his turn of mind; but even this required more continuous effort than he was capable of: in the fourth volume the systematic arrangement was abandoned, and only some fragments of the fifth part were published at long intervals. Thévenot was one of those who promote science by imparting a contagious spirit of activity to others more than by anything they accomplish themselves. His taste for collecting books has been the means of supplying the king's library at Paris with some of its not least valuable MSS., some of

which have yet to be turned fully to account. His collection of voyages too has been the means of preserving some curious and valuable narratives. If he did not make a good practical librarian, he at least pointed out the way in which the library might be rendered more complete; and besides preserving materials for geographers to work upon, he directed attention to the means of rendering the science more perfect. Some of his suggestions mentioned above were not without their influence in promoting the application of mathematics and astronomy to geographical research; and he was the first, by directing attention to the line of communication between the Caspian and China, and to the literature of China, to commence that series of investigations which has been so brilliantly carried on by the Jesuits of the 17th, and by the Remusat and Klaproths of the past and present century.

Sources from which this sketch has been compiled:—

1. 'Mémoire sur la Collection des grands et petits Voyages, et sur la Collection des Voyages de Melchisedec Thévenot,' par A. G. Camus, Paris, 4to, 1802. Owing to the incomplete condition of most copies of Thévenot's collection, this work is necessary to enable the reader to know what he has published.
2. 'Bibliotheca Thevenotiana sive Catalogus Impresorum et Manuscriptorum Librorum Bibliothecae viri clarissimi D. Melchisedecis Thévenot,' Lutetiae Parisiorum, 12mo, 1694. This volume contains the autobiographical sketch above referred to: the catalogue of Thévenot's library throws light upon his studies.
3. 'Recueil de Voyages de M. Thévenot,' Paris 1681. This volume contains the discourse on navigation, in which there are some incidental notices of Thévenot's pursuits.
4. 'Relations de divers Voyages curieux qui n'ont point été publiées ou qui ont été traduites de Hakluyt, &c., Paris, 1663-1672. The 'Avis' prefixed to the different volumes of this edition contain matter for the biography of Thévenot.
5. 'Histoire de l'Académie des Sciences.' Tome i. contains a corroboration of Thévenot's assertions regarding his share in the institution of the Académie des Sciences.
6. 'Catalogue des Livres Imprimés de la Bibliothèque du Roi: Théologie, première partie,' à Paris, 1739: supplies the dates of Thévenot's appointment as librarian, and of his demission of the office.
7. Le Long et Fontette; 'Bibliothèque Historique de la France,' iv. 66.

THEVENOT, JEAN, nephew of the preceding, was born at Paris the 7th of June, 1633. In the dedication of the first volume of his travels to his mother, he attributes to her exclusively the great care bestowed upon his education; and from this circumstance it may be inferred that his father died while he was a child. Thévenot distinguished himself as a student at the college of Navarre. The author of the sketch of his life, prefixed to the second volume of his travels, states that his attainments in the languages, physics, geometry, astronomy, and all the mathematical sciences, were respectable, and that he had studied with particular attention the philosophy of Descartes. But it is doubtful whether all these are to be understood as having been his college studies.

He left the college of Navarre before he had completed his eighteenth year. Possessing an independent fortune, his attention was for some time afterwards engrossed by the manly exercises which were then deemed indispensable accomplishments in a gentleman; but having contracted a taste for reading books of travels, he caught the contagious spirit of adventure, and commenced travelling himself in 1652. He visited in succession England, Holland, Germany, and Italy; and, making a prolonged stay at Rome (1654-55), witnessed the solemnities of the installation of Alexander VII. He had taken the pains to prepare an account of his observations during this tour, but judiciously resisted all persuasions to publish it, partly on account of his youth and partly on account of the want of novelty in the subject.

At Rome he became acquainted with the celebrated Orientalist d'Herbelot, who, being a good many years his senior, and already distinguished for his learning, acquired considerable influence over him. D'Herbelot freely communicated to his young friend the information he had collected regarding the East and its inhabitants, and the result of their conversations was that Thévenot determined to devote himself to exploring Asia. D'Herbelot proposed at one time to accompany him, but being prevented by some family matters, Thévenot set out alone.

Thévenot began his first journey from Malta on the 1st of November, 1655: he arrived at Leghorn, on his return, on the 8th of April, 1659. Having reached Constantinople in the beginning of December, 1655, he remained there till the end of August, 1666. Travelling through Brusa and Smyrna, and visiting Chio, Samos, and Rhodes, he arrived at Alexandria on the 29th of December. He proceeded without loss of time to Cairo, which he made his head-quarters for two years, making in the course of that time two excursions, the first to Suez and Mount Sinai, the other to Jerusalem and some of the adjoining districts of Syria. During his stay at Constantinople and Cairo he made himself master of the Turkish and Arabic languages. On his way from Egypt to Italy he touched at Tunis.

From Leghorn Thévenot visited several parts of Italy which he had not previously seen, and in particular resided for a short time at the court of Savoy, before he returned to France. The first volume of his travels, he says, was prepared for the press to gratify his friends, and especially his mother; and these were not with him mere words

of course, for [he was more intent upon travelling and observing than publishing. Before his book had passed through the press, and without giving his friends any warning of his intention, he left Paris to renew his researches in the East, and sailed from Marseille on the 6th of November, 1663.

This time his object was to visit Persia and the Indies. He arrived at Alexandria on the 4th of February 1664: from Alexandria he sailed in a few days to Sidon; and from Sidon he visited Damascus. After a stay of twenty-four days in that city he went to Aleppo, where he remained two months; and then, travelling by Bir and Orfa to Mosul, descended the Tigris to Baghdad. From Baghdad he travelled to Ispahan, by the way of Hamadan. Having remained five months at Ispahan, he left it, in company with Tavernier, for Schiraz and Gombroon, intending to sail for India from that port, but the jealousy of the Dutch agents obliged him to return to Schiraz. After examining the ruins of Tshelminar (Persepolis) he proceeded to Basrah, and embarked at that port for Surat, where he arrived on the 12th of January 1666. Surat continued his head-quarters till February 1667, during which time he made excursions to Guzerat, the court of the Mogul, and to the Deccan. On his return to Persia he spent five months at Ispahan. He had several attacks of illness in India, and having been wounded by the accidental discharge of one of his own pistols at Gombroon, his cure was tedious. His constitution was probably undermined; for, attacked by fever on his way from Ispahan to Tabriz, he died at Miana, on the 28th of November 1667. During this journey he had acquired a knowledge of the Persian language.

The narrative of Thévenot's first journey to the East was prepared for the press by himself, but was not published till after his departure from Persia. The account of his travels in Persia, and that of his travels in India, were published (the former in 1674, the latter in 1684) by an editor who is called, in the 'Privilège du Roi,' the Sieur Luisandre, and who states that he was Thévenot's executor, and employs expressions which would lead us to believe that he had married the traveller's mother. The editing of these two volumes has been respectably performed.

Thévenot possessed a natural talent for observation, and the power of expressing himself accurately and unaffectedly. Nothing of importance appears to have escaped his notice: his manner of telling his story impresses the reader with a confidence in his good faith, and his statements have been corroborated on many material points. His mastery of the Turkish, Arabic, and Persian languages gave him an advantage that scarcely any other Oriental traveller of his day possessed. His practice of residing for some time in the principal towns of the countries he visited familiarised him with the customs of the natives. His descriptions of external objects are distinct, and his routes accurate. He had collected a *Hortus Siccus* in India, and had laid beside each specimen an account of the habitat and characteristics of the plant, along with its name in the Portuguese, Persian, Malabar, and (what his biographer terms) the Indian and Banian languages. This collection came into the possession of Melchisedec Thévenot, and is mentioned in the printed catalogue of his library. Jean Thévenot had also made a collection of Persian and Arabic manuscripts, of which Tavernier says the *cadi* of Miana kept the best to himself. The matured judgment, and talent for observation and description, displayed in Thévenot's works, are astonishing in one who had been a wanderer from his twentieth year, and who died in his thirty-fourth. His travels, originally published in three volumes, in quarto, which appeared respectively in 1665, 1674, and 1684, were reprinted in Amsterdam, in five duodecimo volumes, in 1689, and at the same place, in the same form, in 1705, 1725, and 1727. A Dutch translation of them was published in 1681, an English translation in 1687, and a German translation in 1693.

This sketch has been compiled from the account of Thévenot's life prefixed to the second volume of his travels, from the travels themselves, and from some incidental notices in Tavernier.

THEW, ROBERT, was the son of an innkeeper at Patrington, in the East Riding of Yorkshire, where he was born, in 1758. His education was neglected, and at a suitable age he was bound apprentice to a cooper. After the expiration of his apprenticeship Thew continued for a time to work at the business to which he was brought up; and Chalmers states that, during the American war of independence, he served as a private in the Northumberland militia. According to the 'Gentleman's Magazine,' his attention was first directed to engraving about the age of twenty-six; when, it is stated, he happened to see an engraver at work, and although he had never practised drawing, he procured a copper-plate, and engraved an old woman's head, from a picture by Gerard Douw, with such extraordinary skill that he was, on the recommendation of Charles Fox, the Duchess of Devonshire, and Lady Duncannon, appointed historical engraver to the Prince of Wales. Whatever foundation there may be for this story, it must be received with some allowance, because a considerable degree of mechanical dexterity is indispensable for the production of a good copper-plate engraving. A more probable account is that about 1783 he settled at Hull, and became an engraver of shop-bills, cards, &c. Chalmers states that he engraved and published a plan of Hull, which is dated May 6, 1784; and that shortly afterwards he solicited subscriptions for two views of the dock at that place. The latter are large aquatint prints, drawn and engraved by Thew, with the assistance

of F. Jukes in the aquatinting department; and they were published in London by Thew himself, in May 1785. Copies of them are preserved in the collection of George III., now in the British Museum. In 1788 Thew was introduced to Alderman Boydell by the Marquis of Caermarthen (afterwards duke of Leeds), whose patronage he had obtained by the construction of a camera obscura on a new principle; and Boydell immediately commissioned him to engrave Northcote's picture of the interview between the young princes, from 'Richard III.,' act iii. sc. 1. This plate was published in 1791, at which time Thew held the appointment above alluded to, of engraver to the Prince of Wales. He subsequently engraved eighteen other plates for the Shakspeare Gallery, and part of a nineteenth. Several of these are among the best in the collection, and display a high degree of mechanical skill, as well as an unusual amount of spirit and expression. That of Cardinal Wolsey entering Leicester Abbey ('Henry VIII.,' act iv., sc. 2), from a picture by Westall, is deservedly celebrated as a fine specimen of the style known among artists as stipple engraving; and in consequence of its superior beauty, proof-impressions of it were, according to the 'Gentleman's Magazine,' charged double the price of any other in the whole work. Thew died in July 1802, at Stevenage (or Roxley, according to the 'Gentleman's Magazine') in Hertfordshire. (*Gent. Mag.*, Oct. 1802, p. 971; Chalmers, *Biog. Dict.*)

THIBAUT, fifth count of Champagne, and first king of Navarre of that name, occupies a respectable rank among the Troubadours. It has been pretty satisfactorily shown by recent writers on the subject that the scandalous stories told of this king by Matthew of Paris and others rest upon no satisfactory evidence. They have however been more successful in disproving the tales of their predecessors than in substituting anything in their place. They have rendered Thibaut's biography in a great measure negative.

He was born about the beginning of the year 1201, and has been called Theobaldus Posthumus, on account of his father having died before his birth. His mother, Blanche, daughter of Sancho the Wise, king of Navarre, took charge of and governed his extensive territories as regent for twenty years. A taste for literature was hereditary in the family of Thibaut. His grandmother, Marie of France, held, about the middle of the 12th century, one of the most celebrated 'Courts of Love,' and some of her judgments have been preserved by André le Chapelain. His mother Blanche induced by her commands Aubain de Sezane to compose several songs, after he had solemnly renounced the practice of poetry. With such examples before him it was natural enough that the young Count of Champagne should contract a taste for rhyming.

An attempt was made in the year 1214 to wrest the territories of Champagne from the widow and her son. The father of Thibaut was a younger son: his elder brother Henry followed Philippe Auguste to the Holy Land, and, marrying there a sister of Baldwin IV., king of Cyprus and Jerusalem, had by her two daughters, Alice, queen of Cyprus, and Philippa, who married Airard de Brienne. The father of Thibaut V., after his brother's departure for Palestine, took possession of Champagne and Brie, which were held without challenge by him, and by his widow in name of her son, till 1214. Airard de Brienne then claimed them in right of his wife. Philippe Auguste decided in favour of Thibaut, and the sentence was confirmed by the peers of France, in July 1216, on the ground that Henry, when departing for the East, had ceded all his lands in France to his brother, in the event of his not returning. In November 1221, the seigneur of Brienne was persuaded to abandon his claims upon receiving a compensation.

In the same year Thibaut took upon himself the management of his domains, which rendered him, by their extent, and the title of count palatine, which they conferred upon their holder, the most powerful vassal of the crown. During the brief and troubled reign of Louis VIII. (July 1223, to November 1226), Thibaut distinguished himself by nothing but the pertinacity with which he insisted upon his feudal rights. At the siege of Rochelle he consented to remain till the town was taken, but exacted in return a declaration from the king that by so doing he did not render himself liable on any future occasion for more than the 40 days' service in arms due by the vassals of the crown. In the crusade against the Albigenses (induced probably by regard for the Count of Toulouse, who was his kinsman) he resisted every entreaty of the king to remain with the army after the 40 days had expired; and his departure from it was one of the foundations for the stories afterwards circulated to his disadvantage.

On the death of Louis VIII. a league was formed by a number of the most powerful French nobles to prevent the queen from acting as regent. Thibaut was at the outset a party to this confederacy. There are extant letters of Pierre, duke of Bretagne, and Hugues de Lusignan (dated March 1226, which, as the year is now made to commence, would be called 1227) authorising him to conclude in their name a truce with the king. The regent however found means to detach the Count of Champagne from his allies; for an attempt which they made soon after to obtain possession of her person and the king's was frustrated by the opportune arrival of Thibaut at the head of a strong body of horse. The Duke of Bretagne and his coadjutors were much incensed at the desertion of the Count of Champagne, and appear to have soon after formed the project of harassing him by supporting the claims of the Queen of Cyprus upon Cham-

pagne and Brie. He was however, on account of his wealth, too desirable an ally to be lost without an endeavour to regain him. Overtures of reconciliation were made, in consequence of which Count Thibaut engaged in 1231, to take to wife the daughter of Pierre of Bretagne. Thibaut had been twice married before; in his eighteenth year to Gertrude, daughter of the Count of Metz, from whom he was divorced, and afterwards to Agnes de Beaujeau, by whom he had a daughter. The regent, fearing the consequences of this reconciliation, interfered to break it off. The marriage-day had been fixed, and the bridegroom was already on his way to the place where it was to be celebrated, when letters from the king, forbidding him to conclude the engagement, were delivered to him. He obeyed the royal mandate.

This insult determined the confederates to carry into execution their original project. They sent for the queen of Cyprus, and invaded Champagne, avowedly for the purpose of putting her in possession of it. The king marched to the assistance of Thibaut, and under his auspices a compromise was arranged. Thibaut ceded to the queen of Cyprus lands to the value of 2000 livres yearly, and paid her in addition 20,000,000 of livres in money. This sum was advanced by the king, who received in return the estates of Sancerre and others which Thibaut's father had held before he acquired Champagne.

Here seems the proper place to notice the stories told by Matthew of Paris regarding the loves of Thibaut and Queen Blanche, and the poisoning of Louis VIII., laid to the charge of the former. Matthew only mentions the accusation as a rumour he had heard. No other historian of equal antiquity mentions them. Had Thibaut been suspected of being the murderer of the king, the charge would probably have been urged against him by one or other of the rival factions, with whom he played fast and loose immediately after. There is not a passage in his poems that can be interpreted into a declaration of attachment to Blanche, who was moreover thirteen years his senior. But it is easy to see how the rumour mentioned by Matthew of Paris arose. A rhymed chronicle, apparently of the age of Thibaut, represents him as going about (1230) in disguise to learn how men spoke of him, and discovering he had no friends. About this time there were violent disputes between the University of Paris and the papal legate, and, the queen supporting the legate, the wild students made and sang ribald songs attributing this report to a guilty passion for his person. In times of civil dissension it is generally found that parties otherwise totally unconnected catch up and spread each other's scandalous reports when it suits their purpose. The queen, the legate, and the Count of Champagne were all unpopular; the dissolute students had circulated imputations against the chastity of the two former; and the interference of the king to prevent the marriage of the last-mentioned with the daughter of the Duke of Bretagne would, under such circumstances, be easily interpreted into a plot of the queen-mother to keep him for herself. It was amongst the students that the first story was invented, and that is the quarter whence Matthew of Paris most probably obtained much of his information regarding French affairs.

In 1232 Thibaut married a daughter of Archambaud VIII. of Bourbon. In April 1234, he succeeded to the throne of Navarre, on the death of Sancho the Strong. In 1235 he quarrelled with Saint Louis about the territories he had ceded to the king at the time of the arrangement with the queen of Cyprus, representing them as merely transferred to the king in security for the money he advanced, while the latter asserted that they had been sold to him for that sum. It came to blows, and Thibaut was beaten. In 1239 Thibaut took the cross and set out at the head of an expedition to the Holy Land. He displayed none of the talents of a general. Unable to procure ships to transport his forces to the scene of action, he marched through Hungary and Thrace. Arrived in the neighbourhood of Byzantium, his treasure was so completely expended, that his followers had to support themselves by plunder. In an engagement near Casarea the division of the army under his immediate command was beaten, although the other was victorious. He got involved in the defiles of Taurus, and lost two-thirds of his men. Lastly, at the final defeat at Ascalon, he fled ingloriously before the battle was ended, leaving his followers to their fate. He returned to Pampeluna, which he had made his capital, in 1242, and died in 1253, having done nothing worthy of notice in the interim, leaving a widow and six children.

The poems attributed to Thibaut are in number sixty-six, and there appears no reason for questioning the authenticity of any of them. Thirty-eight are devoted to the expression of passionate complaints and ecstasies; three recount his amorous adventures with peasant-girls; twelve are what may be called rhymed law-cases in matters of love; the rest are exhortations to engage in the Crusade, or invectives against the immorality of the age. The passion of the amorous poems is not very intense; there scarcely needed the few lines appended to most of them, addressed to some brother-troubadour, to show that they are mere displays of the author's cleverness. The cases for the Court of Love are ingenious and insignificant, like all other compositions of that kind. The fifty-fourth song, an exhortation to join the Crusade, is spirited. The sixty-fifth, in which the God of Christians is compared to the pelican feeding its young with its blood, is characterised by a blended tone of toleration and enthusiasm. In the sixty-sixth he starts a theory that the law of God is ripe and

wholesome fruit, and that Adam sinned by eating unripe fruit. Thibaut's versification is correct and sweet. There is a spirit of generosity about his poems that is creditable to himself: the neatness and finish of his verses are more attributable to the degree of perfection to which the art had been previously carried by others than to the author's own talents. Altogether his literary productions leave a more favourable impression of his character than the part he played as a warrior and politician.

(*Les Poésies du Roy de Navarre*, par Levesque de la Ravière, 12mo, Paris, 1742; *Histoire de S. Loys, IX. du nom, Roy de France*, par Messire Jean, Sire de Joinville; par M. Claude Menard, 4to, à Paris, 1617; *De Bello Sacro Continuata Historia Libri VI.*, Basilie, Johanne Herede autore, Basilie, fol. 1560; Bayle; Moreri; and *Biographie Universelle*, in voce 'Thibaut'.)

THIBAUT, ANTON JUSTUS FRIEDRICH, a celebrated German jurist, was born on the 4th of January 1772, at Hameln in Hanover. In 1792 he went to Göttingen to study the law; he continued his studies at Königsberg; and he finished them at Kiel, where he became acquainted with Niebuhr. In this university he took the degree of D.C.L., and in 1796 was admitted as a junior teacher of the law. He soon rose to eminence, and at the age of twenty-seven was appointed ordinary professor of civil law. In 1802 he went in the same capacity to Jena, where he published his 'System des Pandekten-Rechts,' the first systematical attempt of the kind that was written in the German language, the former works on that subject having been written in Latin. The merits of this excellent work were generally acknowledged, and Thibaut was chosen by the Emperor Alexander one of the foreign members of the commission of legislation for Russia, and in 1805 he was invited to the university of Heidelberg, where he remained till his death. Though scarcely past thirty, he was considered to be the first civilian in Germany after Hugo, Savigny having not yet attained his great reputation. Twice Thibaut was chosen prorector of the university of Heidelberg, and nine times he filled the office of dean of the faculty. He was also chosen deputy of the university in the first chamber of the States of Baden, but as his new duties interfered with those of a teacher, he resigned the office. In 1826 he was made a privy councillor. His fame and popularity among the students led to his receiving invitations from other universities, as for instance from Leipzig, where the place of professor primarius of law was offered to him with a very large income, besides a prebend in the chapter of Merseburg; but nothing could induce him to leave Heidelberg. In 1830 he was knighted by the Grand-Duke of Baden, his former pupil, who in 1834 appointed him judge for the grand-duchy, in the newly established tribunal of arbiters for the domestic affairs of Germany. In 1837 he was chosen Membre correspondant de l'Académie des Sciences Morales et Politiques, for the section of legislation and jurisprudence. Thibaut died on the 28th of March 1840, with the well-deserved reputation of being equal to Savigny as a civilian, and superior to him as a teacher and a practical jurist. The great object of Thibaut was to distinguish clearly between the obsolete portions of the Roman law, and those which were of real practical use. In his private life Thibaut was most amiable; to many a poor student he proved a kind father; to many who had talent a wise friend. His house was open to all his pupils, whether introduced to him by others or by themselves; but he showed particular attention to those who, besides their legal knowledge, showed proficiency in music, of which he was a profound judge. His little work on Purity of Music quoted below is a specimen of his refined taste in this respect.

The principal work of Thibaut is his 'System des Pandekten-Rechts,' mentioned above, of which the eighth edition was published at Heidelberg in 2 vols. 8vo, 1834; and a ninth edition was edited after the author's death, by Professor Buchholz, Jena, 1846. This work is in the hands of nine out of ten lawyers in Germany, but though of the highest value, it is rather a difficult book to beginners. The following are the other works of Thibaut according to the date of their publication:—1, 'De genuina Juris Personarum et Rerum Indole veroque hujus divisionis Pretio,' 8vo, Kiel, 1796, is a dissertatio inauguralis which brought the young author the honour of being attacked by Hugo. 2, 'Juristische Encyclopädie und Methodologie,' 8vo, Altona, 1797. 3, 'Versuche über einzelne Theile der Theorie des Rechts' (Essays on several Branches of the Theory of the Law), 2 vols. 8vo, Jena, 1798-1802; 2nd edit., 1817, translated into French by De Sandt et De Chassat, Paris, 1811. 4, 'Ueber Besitz und Verjährung' (On Possession and Prescription), 8vo, Jena, 1802, a work which caused a great sensation, but was afterwards thrown into the shade by Savigny's work on Possession. 5, 'Civilistische Abhandlungen' (Essays on Civil Law), 8vo, Heidelberg, 1814; 2nd edit., 1822. 6, 'Ueber Reinheit der Tonkunst' (On Purity of Music), 8vo, Heidelberg, 1825; 2nd edit., 1826. 7, 'Ueber die Nothwendigkeit eines Allgemeinen bürgerlichen Rechtes in Deutschland' (On the Necessity of a Common Code of Laws for Germany), 8vo, Heidelberg, 1814. This work placed its author at the head of a great legislative movement, and a short explanation is necessary in order that the reader may understand it. Ancient German laws and a large portion of the Roman law exist there together, the former referring principally to landed property, entailed estates, and others called 'noble estates,' the different hereditary and temporal tenements of the peasantry, the

succession to such estates, the legal consequences of marriage inasmuch as it effects complete communion of property, personal and real, between husband and wife, further the remnants of feudal institutions, and others; while contracts, the common succession to personal property and to land, except entailed estates either noble or villain, testaments (in a great measure) and many other things are regulated by the Roman law. In some parts of Germany the German and Roman elements of the law are knitted together by modern legislation into a regular code, civil and criminal, as the Austrian code; the Prussian, which is in force in the greater portion of the kingdom of Prussia; the Bavarian criminal code, the work of Feuerbach, in Bavaria and Oldenburg. But the civil law in the latter two countries and nearly the whole of Germany, except Austria and Prussia, is that compound of Roman and German elements which has been mentioned above. Besides the 'Common Law,' by which is meant the Roman-German compound aforesaid, there is a variety of provincial and local laws, among which the laws of the cities of Magdeburg, Hamburg, and Lübeck deserve a particular attention, especially the law of Lübeck, since it is not only shaped into the form of a code, but is the common law of nearly all the towns of North-Eastern Germany as well as those in the adjacent provinces of Eastern Prussia and the so-called German provinces of Russia, Courland, Livonia, and Esthonia. To augment the difficulties, the French code became the common law in the Rhenish provinces and in the grand-duchy of Baden.

This sketch, however imperfect, may be sufficient to show that the administration of the law in Germany is no easy matter; and that the difficulties increase in proportion to the extent of the jurisdiction of the different courts; and hence the strange, yet under such circumstances necessary fact, that the faculties of law in the various universities were, and partly still are, so many courts of justice before which cases used to be brought which require more learning, especially historical learning, than is generally possessed by the members of the common courts of justice. Thibaut's proposal was to fashion this legal chaos into a general code, as was done in France; and although he admitted that the task would be very difficult, he maintained that what had been done in France would diminish the difficulty. His plan soon became popular, but he also met with decided adversaries, among whom Savigny took the lead, who contended that Germany was not yet ripe "for a common legislation; that the idea itself was good, but that there were so many scientific (rather theoretical) differences among the jurists concerning the most important points, that every attempt would prove abortive till matters had previously been settled scientifically." Savigny also could refer to an example, the Prussian code (*Landrecht*), which, though only an experiment upon a portion of Germany, is yet considered to be a failure: he avoided to speak of the Austrian code. Thibaut has entered into many details concerning the important question of a common code for Germany, in several of his numerous essays, dissertations, and treatises in the principal legal reviews of his country. He was the founder of the '*Civilistisches Archiv*,' and the '*Heidelberg Jahrbücher*.'

(*The Life of Thibaut, in Heidelberg Jahrbücher*, year 1840.)

THIELEN, JAN PHILIP VAN, was born at Mechlin in 1618. He was of a noble family, and lord of Cowenburg. Though he received an education suitable to his rank, and was instructed in every branch of polite literature, his predilection for the art of painting induced him to become a disciple of Daniel Segers. Having voluntarily placed himself under so able an instructor, his improvement, as might have been expected, was rapid. His subjects were usually in the taste of Segers, garlands of flowers, with some historical design in the centre, or festoons twining round vases enriched with representations in bas-relief. He always copied from nature, and chose his flowers in the entire perfection of their beauty, grouping them with great taste. His pictures are very highly finished, with a light touch, perhaps less spirited than the works of Segers; but it is sufficient praise to say that his performances rivalled those of his master. He was much employed by Philip IV., king of Spain, for whom most of his finest performances were painted. Two of his capital pictures were at Mechlin; they represented garlands and flowers, and many insects of different kinds on the leaves, all finished with exquisite delicacy. The figure of St. Bernard is in the centre of the one, and that of St. Agatha in the other. Weyermann also highly commends one, which has in the centre a nymph sleeping, watched by a satyr, the figures being painted by Pœlemburg. He died in 1667. Von Thielen seldom inscribed his name on any of his works; he generally marked them J. or P. Couwenburg.

\* THIERRY, AMÉDÉE-SIMON-DOMINIQUE, was born at Blois, in the department of Loir-et-Cher, on August 2, 1797. After receiving a careful education, he at first devoted himself to teaching, and received from Vatineuil the appointment of Professor of History at Besançon, where, notwithstanding his moderation, his opinions were disapproved of by the government, and he experienced many official persecutions. Under the ministry of Polignac his lectures were suspended by order. After the revolution of July 1830, he was named prefect of the department of Haute-Saône. In 1831 he was elected a member of the Académie des Sciences. During the last ten years of the reign of Louis Philippe he filled the office of master of requests in the council of state, and he has been continued in the office under the Empire. In addition to the assistance afforded by him to his brother Augustin, he

is the author of an exceedingly interesting '*Histoire de la Gaule sous la domination romaine*,' 1826; of a '*Resumé de l'Histoire de la Guienne*,' 1828; of a '*Histoire d'Attila de ses fils et de ses successeurs en Europe, suivi de légendes*,' 1856; and a '*Histoire des Gaulois, depuis des temps les plus reculés jusqu'à la soumission de la Gaule*,' &c., 1857. He is also the author of a series of interesting essays upon various characters and events connected with Gallia during the Frankish domination, which have appeared within the last few years in the '*Revue des deux mondes*.'

THIERRY, JACQUES-NICHOLAS-AUGUSTIN, the distinguished historian, the elder brother of the preceding, was born at Blois on May 19, 1795. In 1805 he commenced his studies in the college of his native town; in 1811 he entered the normal school; and in 1813 he became a teacher in a provincial school. In 1814 he went to Paris, enlisting himself as an adherent of the socialist principles of the Count St. Simon, of whom he became the friend and assistant; and in 1816 published '*Des nations et de leurs rapports mutuels*.' He however shortly penetrated the fallacy and shallowness of his master's doctrines, abjured them, and became with Comte and Dunoyer the editor, in 1817, of the '*Censeur européen*,' a liberal political journal. It was at this time that he first formed the theory of the continued existence of two classes in England—the Norman masters and the Saxon servants,—whose successive struggles he traced down to the time of Charles I. in an essay in this paper, and which, with much perverted ingenuity, but with perfect honesty, and a rare and conscientious industry and perseverance in historical investigations which he then commenced, he has supported in all his subsequent works. On the suppression of the '*Censeur européen*' in 1820 he proposed to the editors of the '*Courrier Français*' a series of letters on the history of France, for he says of himself that he had then found that history was his true vocation, and he was accepted as a contributor. With the second letter commenced the official attacks on his writings. Much was erased, still he pursued his course; but on receiving several other letters of disapproval, the editors wished him to vary his subjects. This he declined doing, and he ceased his contributions in January 1821. He then returned to his historical studies, which however he had to pursue under increased difficulties as approaching blindness rendered him unable to read, but he bore the deprivation with philosophical calmness. In 1825 he published his '*Histoire de la conquête de l'Angleterre par les Normands*,' a work which, despite his false theory of the ever-enduring difference of classification of the two races, is of a high merit, as displaying great power of acute discrimination, the result of vast labour digested by a well-regulated mind, with pleasing and animated descriptions grouping the peculiarities of the time, and an animated style. It has gone through many editions and has been translated into English and German. In 1827 he issued his letters from the '*Courrier Français*' in an extended and collected form under the title of '*Lettres sur l'histoire de France*,' which have also been translated into English. In 1828 a nervous disorder, added to his now rapidly failing sight, occasioned his being sent by his medical adviser to Hyères, near Toulon, for the benefit of the sea-air of the Mediterranean. While residing here for nearly two years, he was elected a member of the Académie des Inscriptions et Belles-Lettres, and was created a member of the Legion of Honour, of which subsequently he was made an officer. The years 1831 to 1835 he passed partly at the warm baths of Luxeuil and partly at Vesoul in Haute-Saône, during which time, with the assistance of his brother, he composed his '*Dix ans d'études historiques*,' a series of excellent essays, the product of his previous investigations, which was published in 1835. At this time, he was called to Paris by Guizot, who was then minister of public instruction, who confided to him the editing of a '*Recueil des documents inédits de l'histoire du tiers-états*,' which forms a part of the '*Collection des documents inédits de l'histoire de France*.' In 1840 he published his '*Récits des temps Mérovingiens, précédés des considérations sur l'histoire de France*,' to which the Academy awarded their prize, and of which also there is an English translation. A collected edition of his works was published in 1853, and he died on May 21, 1856.

As an historian Thierry takes rank with Michelet and Guizot. Less profound in philosophical disquisition than Guizot, less eloquent and imaginative than Michelet, he excels both in the power of grouping large masses of detail, and of seizing and presenting every point of interest or importance; he combines picturesque effects with minute knowledge; and his style is earnest and lucid though not always elegant. He had also the merit of remaining consistently devoted to his vocation. While nearly every French writer of eminence looked forward to political influence or employment as his reward—and many contrived to attain them, too often by a sacrifice of their previous principles or opinions—Thierry held on his way undeviatingly. His consolation under various afflictions he has himself stated: "Blind and suffering, without hope and without intermission, I will give this testimony which from me no one will disbelieve; there is something in the world better than physical enjoyments, better than property, better even than health; it is a devoted attachment to a science."

JULIE THIERRY, whose maiden name was Quérangal, became the wife of the subject of the preceding notice in 1831, and was of the most essential service to him in his then state of total blindness. In 1836 she published '*Scènes de mœurs aux 18<sup>me</sup> et 19<sup>me</sup> siècles*,'

for which her husband wrote an introduction. She was also the author of a number of clever essays in the 'Revue des deux mondes.' She died on June 10, 1844.

\*THIERS, LOUIS-ADOLPHE, French statesman and historian, was born at Marseille on the 16th of April 1797. His father was a working locksmith; his mother was of a mercantile family of the town which had fallen in circumstances, but could boast of having given birth to Joseph and Andrew Chenier. Through the influence of his mother's family, Thiers was admitted when a boy to the Lyceum of Marseille, where he was one of those who received a gratuitous education at the imperial expense. It was intended that he should proceed from the school to the École Polytechnique, in order to be educated for the military service of the empire; but the fall of the empire and the restoration of the Bourbons having put an end to this design, he resolved to become an 'avocat' and went to Aix to study jurisprudence. It was at the college of Aix that he formed his acquaintance with M. Mignet, then also a student of law there, and between whom and M. Thiers there has ever since been a close intimacy both personal and political. At Aix young Thiers distinguished himself by his vivacity and talent, and his fondness for historical and economical studies. A curious story is told illustrative of his cleverness while at college. The authorities of the college had offered a prize for the best éloge on Vauvenargues; and Thiers had given in an éloge which was found to be the best. At that time, however, political feeling ran high among the authorities of the college—some being eager liberals, and others eager royalists; and, it having transpired, before the opening of the sealed packets containing the competitors' names, that the author of the successful éloge was the young liberal M. Thiers, the royalist party among the judges were strong enough to prevent the prize being awarded. No prize was given, and the same subject was prescribed for competition in the following year. That year Thiers again sent in the identical éloge which had in his opinion been unfairly treated in the former year. It was pronounced to be second in merit, the prize being awarded to another essay which had been sent from Paris. It remained to ascertain who was the author of this piece; and greatly to the discomfiture of the judges, when the sealed packet containing the name was opened, it was found that the writer of this éloge also was M. Thiers, who had resorted to this trick, partly by way of revenge, partly by way of frolic.

His education having been finished, M. Thiers began practice as an 'avocat,' but had little success. He therefore, turned his attention to literature, and removed to Paris. Many stories are told of his extreme poverty at this time, and of the shifts to which he was put; but these are contradicted by his friends, who assert them to be the calumnies of political animosity. At all events, about the year 1823, M. Thiers having made the acquaintance of M. Manuel, whose political influence was then at its highest, was by him introduced to M. Etienne, the conductor of the 'Constitutionnel,' and began to contribute regularly to that journal on political and other subjects. While thus earning a moderate livelihood as a liberal journalist under the Restoration, he was privately engaged in authorship of a more ambitious kind. As early as 1823 he had written a sketch entitled 'The Pyrenees and the South of France during the months of November and December 1822,' of which a translation appeared in English; and about the same time, assisted by information on financial subjects supplied him by M. le Baron Louis, a great authority on such matters, he wrote an account of Law and his schemes, which appeared in a review. But the work which he had prescribed for his leisure was a 'History of the French Revolution.' He had diligently gathered documentary materials; and, in order to inform himself on special topics, he made it his business to become acquainted with survivors who had acted special parts in that great crisis. The first volume appeared in 1823, and the others were successively published, till the work was completed in 1830. At first the work did not attract much attention; but before it was concluded, it had produced a powerful sensation. Since that time there have been many histories of the French Revolution; but, published as the work of M. Thiers was during the Restoration, the sympathies which it showed with the Revolution, and the boldness with which it endeavoured to revive the reputations of the great actors in that extraordinary drama, were something original in French historical literature. Even now, though its accuracy has been assailed in many points, and though there are many rival-histories of the Revolution, characterised by merits of a different kind, the work, by reason of its fullness of detail, and its vivacity of style, retains a high place both in France and in other countries.

It was the Revolution of 1830 however that brought M. Thiers into prominence in the active politics of France. M. Cormenin, one of his bitterest critics, thus sarcastically sums up the tenor of the life of M. Thiers prior to this epoch, in one of his well-known sketches published under the name of Timon. "Born poor, he required fortune; born obscure, he required a name; an unsuccessful 'avocat' he became a 'littérateur,' and threw himself into the liberal party rather from necessity than from conviction." At the Revolution of 1830, he continues, M. Thiers was nothing, "neither elector nor eligible, neither deputy nor minister, nor even academician;" and but for this event, he says, "he would have grown old in the esteem of a literary clique."

These are the expressions of a satirist, and the same might be said of many other men who have been eminent in France since 1830. There can be no doubt that Thiers contributed powerfully to the preparation for the Revolution. Both in consequence of his history and of his writings as a journalist he was already recognised some time before the Revolution as one of the most active men of the revolutionary party among the French liberals, as distinct from the 'doctrinaire' party, of which the Duc de Broglie, M. de Remusat, Duvergier de Lévi, and Guizot were the heads. He was on intimate terms with Lafitte, Manuel, Beranger, and Armand Carrel; and when the last of these projected the famous journal called the 'National,' as an organ of the more revolutionary form of liberalism, he associated Thiers and Mignet with himself for the purpose of carrying it on. It was agreed that the three should be editors in turn, each for a year; and Thiers was chosen editor for the first year. The first number appeared on the 1st of January 1830, and no journal did more to damage the cause of Bourbon legitimacy during the first half of that year. The main idea of the journal under the management of Thiers, say the French writers, was "guerre à la royauté, mais guerre légale, guerre constitutionnelle, guerre au nom de la charte." In other words, the opinions of M. Thiers were not those of the Republic; and what he wanted was something in France that should be tantamount to the Revolution of 1688 in England—i.e., that should secure constitutional sovereignty with a change of person. The natural issue of such views was Orleanism; and, accordingly, after the three days of July (during which the office of the 'National' was the headquarters of the opposition to government, though M. Thiers was afterwards accused of having consulted his personal safety when affairs were at the worst by withdrawing from the immediate scene of danger), M. Thiers had an important share with Lafitte and others in the arrangements which brought Louis Philippe to the throne. This solution exactly answered his views, which were as adverse to a pure Republic as to legitimacy; he prepared the public mind for it by placards and the like; and it was he who undertook the mission to Neuilly to invite Louis Philippe to assume the government.

M. Thiers was, of course, a prominent man in the new system of things which he had helped to bring about. He first held an office in the Finance ministry under his old patron M. le Baron Louis, and showed such talent in the office that, when this first cabinet of Louis-Philippe resigned in November 1830, the minister recommended Thiers as his successor. M. Thiers prudently declined so sudden a promotion, and contented himself with an under-secretaryship in the Lafitte ministry, which lasted from November 1830 till March 1831. In this ministry he still made financial administration his speciality; while as deputy for Aix he began his career as a parliamentary orator. At first his attempts in this latter character were not very successful, his extremely diminutive, and even odd and mean appearance operating to his prejudice in the tribune; but very soon he acquired that wonderful volubility and that power of easy, familiar, anecdotic and amusing, and yet bold and incisive rhetoric which have characterised his oratory since, and which contrast so markedly with the graver and more earnest eloquence of Guizot. On the accession of the Casimir Perier ministry in March 1831, M. Thiers went out of office, and had even to contest the election at Aix with an adherent of the ministry; but very soon he deserted the opposition and astounded the Chamber by a speech against its policy. The consequence was, on the one hand, that he was appointed chief of the commission on the budget, in whose name he presented the report; and that, on the other hand, he lost his popularity, and was assailed everywhere as a traitor to liberalism and a mere political charlatan. It was at this time that he visited Italy on a political mission, and conceived the idea of writing a history of Florence. On the accession of the Soult ministry in October 1832 it was with some difficulty that M. Thiers was placed to his mind: at last however he was fixed in the Ministry of the Interior, M. Guizot being appointed Minister of Public Instruction, and M. le Duc de Broglie being also in the cabinet. As Minister of the Interior M. Thiers planned and executed the arrest of the Duchesse de Berry. On the subdivision of the Ministry of the Interior he chose the Ministry of Commerce and Public Works; and it was while holding this office that he declared himself in various important questions affecting the internal politics of France. His interest in the railway system and in the question of tariff reform led him to visit England; and the result was that though he advocated a political alliance with England, he deprecated a commercial alliance, and declared in favour of a Protectionist policy. "As for freedom of commerce," says one of his biographers, "M. Thiers had little faith in the theories of the cosmopolite dreamers." He also favoured all measures tending to centralisation in France. "M. Thiers," says the same biographer, "loves to cite those two acts of his life which he regards as great services rendered to his country—his having saved the national industry by maintaining the protective system, and the French unity by centralisation." In general politics the part taken by M. Thiers was such that he was no longer regarded as a popular liberal, but rather as a decided Orleanist and therefore Conservative. His hostility to political associations increased his unpopularity with the Republican or advanced liberal party. In short, Thiers had made up his mind to live and die as a minister of Louis-Philippe. This position he retained after the re-construction of the Soult ministry in April 1834. He

then resumed the Ministry of the Interior, in which capacity he had to direct measures for the suppression of the Lyon insurrection. He retained the same ministry, under Marshal Gerard and M. le Duc de Broglie till February 1836; and he was at the side of Marshal Mortier when that general lost his life by the explosion of Fieschi's infernal machine (July 28, 1835). At length, on the dissolution of the Broglie ministry, Thiers attained the highest political position to which he could aspire, in being named by Louis Philippe to the presidency of the council and the ministry for Foreign Affairs (Feb. 22, 1836). He remained at the head of the government till August 1836, when a difference with the king on Spanish affairs obliged him to resign. He was again chief minister in 1840, and then showed himself rather against the English alliance and eager for a war-policy which would gratify the military passions of France; but Guizot at length succeeded in adapting himself to the tastes and wishes of Louis-Philippe, and during the last years of this king's reign, the Thiers party was one of the elements of the opposition—in its own opinion, the most powerful element, though not in reality such. It was at this time that M. Thiers, relieved from official duty, returned to authorship and produced, in continuation of his former work, his well-known 'History of the Consulate and the Empire' (1845). While the literary merits of this work are acknowledged, its accuracy has been impeached on various hands.

The revolution of 1848, proving as it did that there were deeper forces at work in France than were represented by the alternative of a Thiers ministry or a Guizot ministry, seems to have terminated the political existence of M. Thiers as well as that of his rival. During the Revolution, indeed, Thiers was for a moment seen exerting himself as the man to whom it fell of right to be called in when Guizot had disappeared; but he was immediately swept away along with the Orleanism which he represented, and the Republicans had the use of the victory which the people had gained. While the republic lasted, Thiers, so far as his influence was openly exerted at all, appeared chiefly as the opponent of the Socialist party, and of the tendencies of the Republic generally. He spoke against the "right to labour" and the "ateliers nationaux" in the National Assembly (of which, as well as of the Constituent Assembly, he was a member); and he wrote at the same time his treatises 'Du Droit de Propriété' (1848) and 'Du Communisme' (1849) by way of answer to the theories of the Socialists. His real political aim at this time was doubtless the restoration of the Orleans dynasty in some form or other; and, it was supposed to be in the interest of this aim that in 1851, during the Presidency of Louis Napoleon, he visited the exiled Orleans family in England. The coup d'état came to destroy all Orleanist schemes as well as those of the Republicans and the Legitimists; and M. Thiers found himself an exile for a time. He resided first in Brussels; and was afterwards again in London. He now resides in Paris, acquiescing in the Empire like so many others once prominent in active French politics, but not reconciled to it so as either to be offered or to accept employment under it. He is understood to be engaged in literary labour, like his old rival Guizot; for whom however now that the lives of both are seen in retrospect, men in general seem to entertain on the whole a far higher degree of respect than they accord to the nimble and volatile Thiers. Want of earnest principle is a common charge against politicians; but against no politician of modern times has the charge been so incessantly repeated both by French and by foreign writers as against M. Thiers; and among numerous French sketches of his life and character there are few that are not hostile in spirit.

\* THIERSCH, FRIEDRICH-WILHELM, privy counsellor and professor of ancient literature in the University of Munich, was born on June 17, 1784, at Kirschheidungen near Freiburg, in the Grand Duchy of Baden. After being prepared at school he was sent to the college at Naumburg. He then went to the University of Leipzig in 1804, where he studied theology and philosophy, which last became his favourite pursuit. In 1807 he removed to Göttingen, studied under Heyne, and received a degree in 1808 after delivering an essay, 'Specimen editionis Symposii Platonis,' and was appointed a teacher in the Gymnasium of that town. The remarkable talent for instruction which he here displayed occasioned his being appointed professor in the newly-established Gymnasium at Munich, where he became, by his active exertions, the great promoter of philological studies in Bavaria. The appointment however of a foreigner as he was then considered, caused much dislike among many, and the opposition was carried on with extreme virulence, while a paper which he published in 1810 on the recognised difference between North and South Germany, increased it to such an extent that it is asserted his life was attempted, and it no doubt disturbed, though it could not altogether impede, his exertions. Of this contest, which however he lived down, Jacobs has given a trustworthy account in his 'Personalien,' published in 1840. Towards the end of this unworthy quarrel he established a philological institute, which in 1812 was united with the Munich Academy, and at the same time, to unite the talent of the scholars, he commenced publishing the 'Acta philologorum monacensium,' which contained papers by several eminent men besides himself, and was continued from 1811 to 1825, forming three volumes. During the war of Liberation he took an active part in the military organisation of the students. In 1813 he journeyed to Paris, where he formed an intimacy with Visconti; thence he visited England; and

was then sent as commissioner from Bavaria to demand the restitution of the objects of art of which it had been despoiled. He also, at this time, took a warm interest in the re-establishment and liberation of Greece, endeavouring to promote a scientific union with Germany by means of the Munich Academy, and by the constitution of an Athenæum in which young Greeks might be educated. To further his object he visited Count Capo d'Istria at Vienna in 1815, but took no part in his political designs. At this time all his literary activity took this direction, either in reference to the language or the antiquities of that country. In 1812 he published a Greek grammar, particularly of the Homeric dialect, in which the syntax is explained from its simplest to the most complicated forms, and which has gone through several editions. In 1820 he published an edition of Pindar's Odes, with an introduction, explanatory notes, and a German translation in verse, a work that was received with great approbation, as was also that 'Ueber die Epochen des bildenden Kunst unter den Griechen' (On the Epochs of the Plastic Art among the Greeks), between 1816 and 1825, in 4 vols., and which has been since reprinted. To extend and improve his archaeological knowledge he visited Italy in 1822, and the result was given to the world in 1826 in his 'Reisen nach Italien,' in which he was assisted by Schorn, Gerhard, and Klenza. In 1831 he made a journey to Greece, where he was warmly welcomed, and his exertions had no doubt considerable influence in procuring the settlement of the crown of Greece on the head of Otho, the son of the king of Bavaria. On his return, he published in 2 vols., in 1833, 'De l'état actuel de la Grèce et des moyens d'arriver à sa restauration,' a work written in French, of which language he was by no means a complete master. The first volume contains an account of the administration of Capo d'Istria, and of his own proceedings for the promotion of Otho's election, both the facts and the opinions propounded therein being liable to considerable doubt. In the second volume, 'On the situation of Greece, and the Means to be adopted to restore it to tranquillity,' the most valuable parts are those in which he treats of the antiquities, his political schemes being very vague and indefinite.

In the meantime he had become involved in a fresh subject of controversy. He had been commissioned to make an investigation of the state of the Gymnasiums (or higher schools) in Bavaria, and in 1826 he published his first not very favourable report of them—'Ueber gelehrte Schulen, mit besonderen Rücksicht auf Baiern' (On Classical Schools, particularly as to those of Bavaria), and which by 1837 was increased to three volumes, and to which another, 'Ueber die neuesten Angriffe auf die Universitäten' (On the latest Attacks on the Universities), forms a necessary appendix, for there he warmly supports the old classical studies, and he has had a host of antagonists who advocate in preference the Real schools. [The Real schools, it may be necessary to state, are schools in which the study of the classics is not made imperative, and to some extent they resemble the proprietary or commercial schools of England, in which what is called a more generally useful system of instruction is pursued.] It is not necessary to detail this controversy, which is not ended, though Thiersch continues to maintain his position. In 1847 he rendered considerable service by repressing, by his influence and advice, an outbreak of the ultramontane party among the students of the University. Thiersch, in addition to the works above mentioned, has been a frequent and valuable contributor to the publications of the Munich Akademie der Wissenschaften, and has written and published pamphlets on some subjects of exciting though temporary interest; one, in which he supported the exemption of Protestants from the necessity of bowing the knee on certain ceremonies, is highly valued by his fellow-believers. His contributions to classical literature, his activity in advocating the freedom of Greece, and his strenuous exertions for the promotion of education of a high order, not only in Bavaria but throughout the whole of Germany, have acquired him a high and well-deserved estimation among the whole of his fellow-countrymen.

THION DE LA CHAUME, CLAUDE-ESPRIT, an eminent French physician, was born at Paris, January 16, 1750. His father, who was a banker, gave him an excellent education, and destined him originally for the bar, but he himself preferred the study of medicine. He commenced his studies at Paris with great success, but, for some unknown reason, took his Doctor's degree at Rheims. In 1773 he was appointed physician to the military hospital at Monaco in Italy, which was then occupied by a French garrison; and in 1778 to that at Ajaccio in Corsica. His zeal and talents were rewarded by the rank of chief physician to the troops destined to lay siege to Minorca and shortly afterwards to Gibraltar. Here he had to treat a fatal epidemic which prevailed among the combined French and Spanish forces in a typhoid form, the description of which same disease immortalised the name of Pringle towards the middle of the last century. This same squadron had already put ashore and left at Cadiz a great number of Frenchmen that had been attacked by the disease, when, in the beginning of September 1782, it came to the bay of Algeiras. Here the naval hospital could only receive fifty of their sick, while as many as five hundred were in want of admission; and to place these in private houses was not only a very difficult, but also an undesirable proceeding. In these embarrassing circumstances Thion de la Chaume conceived the happy idea of making the sick encamp under tents as soon as they landed, an arrangement which was

dictated by the climate, the season, and the nature of the disease, and of which the boldness was justified by success. La Chaume himself was attacked by the epidemic, and a great number of medical officers of all ranks, as well as the nurses, were carried off by it. When peace was concluded La Chaume returned to France, and was received with distinction by the Comte d'Artois (afterwards Charles X.), who had been a witness of his self-devotion and success at Algeiras, and who appointed him to be one of his own physicians. Shortly afterwards he married, but in the winter of 1785-86 he found that, in consequence of the rapid progress made by a pulmonary disease which had for some time threatened him, it was necessary for him to go to the south of France. Here he met with the kindest attentions from the officers of the regiment which he had formerly taken charge of at Ajaccio, who were at this time in garrison at Montpellier; at which place he died, October 28, 1786, at the early age of thirty-six. Thion de la Chaume wrote but little, though he is said to have carefully noted down every night whatever he had seen during the day worth recording; he nevertheless occupies a high rank in the list of army surgeons. His writings consist almost entirely of articles in medical dictionaries and periodicals, of which the most interesting is the account of the epidemic at Algeiras, which was published in the second volume of the *'Journal de Médecine Militaire.'* (*Biographie Médicale.*)

\*THIRLWALL, RT. REV. CONNOP, Bishop of St. David's, was born in 1797, at Stepney, in Middlesex. His father was rector of Bowers-Gifford, Essex. He was educated at Trinity College, Cambridge, where he took his degree of B.A. in 1818, and M.A. in 1821, and of which he became a Fellow. He was called to the bar of Lincoln's Inn in 1825, but withdrew from the legal profession, was ordained, and became rector of Kirby-under-Dale, Yorkshire. In 1828 appeared the first volume of *'The History of Rome,'* by G. B. Niebuhr, translated by Julius Charles Hare, M.A., and Connop Thirlwall, M.A., Fellows of Trinity College, Cambridge, 8vo, and they

translated also the second volume, but the third volume, published in 1832, after Niebuhr's death, was translated by Dr. W. Smith and Dr. L. Schmitz. In 1835 Mr. Thirlwall published in *'Lardner's Cabinet Cyclopædia'* the first volume of his *'History of Greece,'* and the work was completed in 8 vols. 12mo. It commences with a series of learned inquiries into the early history and antiquities of Greece, and extends to the capture of Corinth by Mummius, B.C. 146, and the transformation of Greece into a Roman province. A few pages on the future state of the country completes the work. In 1840 he took the degrees of B.D. and D.D., and in the same year was created Bishop of St. David's. He was formerly an Examiner of the University of London, and is now Visitor of St. David's College, Lampeter.

In 1845 Bishop Thirlwall commenced the publication of a new edition of his *'History of Greece,'* the plan of the work being considerably enlarged, as well as the materials improved and expanded—*'The History of Greece,'* by Connop Thirlwall, D.D., Bishop of St. David's, 8 vols. 8vo, 1845-52. In 1851 was published *'A History of Greece, from the Earliest Times to the Destruction of Corinth, B.C. 146, mainly based upon that of Connop Thirlwall, D.D., Bishop of St. David's,'* by Leonhard Schmitz, F.R.S.E., Rector of the High School of Edinburgh, 12mo, London. In the preface to this work Dr. Schmitz makes the following remarks:—"Within the last fifty years more has been done by both English and foreign scholars to elucidate the history of Greece than at any former period since the revival of learning; and the results of all these labours are two English works on the history of Greece such as no other nation can boast of." These two works, he observes, "have been executed by Bishop Thirlwall and Mr. Grote in a manner which throws all previous attempts of a similar nature into the shade."

Bishop Thirlwall has not written any other work of importance. A few of his Sermons and of his Charges to the clergy of his diocese have been published in a separate form.

END OF VOLUME V.

THE following is a list of the names of persons who have died since the publication of the 'Penny Cyclopædia,' and of "those living names" which, in accordance with the announcement in the Prospectus, are included in the fifth volume of the Biographical Division of the 'English Cyclopædia.' The asterisk is prefixed to names of living persons :—
